

**APPENDIX 1.1 – STATEMENTS OF AUTHORITY TO PARTICIPATE**

# Statement of Authority - Participating

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update - 2012

Lead Agency: Monmouth County Sheriff's Office  
Office of Emergency Management  
300 Halls Mill Road  
Freehold, New Jersey 07728  
Michael E. Oppegaard, Coordinator  
Contact: Margaret Murnane, Deputy Coordinator

This document is prepared as a statement of the authority advising Monmouth County Sheriff's Office, Office of Emergency Management, that the Township of Aberdeen has opted to participate in the first update of the Monmouth County Multi-Jurisdictional Hazard Mitigation Plan. Our municipality has committed to participating in the development of an updated county-wide, multi-jurisdictional hazard mitigation plan. We have authorized the following two individuals: John Powers and Robert Brady ("Representative" and "Alternate", respectively) as local members serving on the Multi-Jurisdictional Core Planning Group and to actively participate as requested throughout the planning process.

We understand that our municipal Local Emergency Planning Committee (LEPC) will serve as its own local hazard mitigation planning committee ("Jurisdictional Assessment Team").

At the end of the project, when FEMA approves the plan, it is understood that our municipality will need to pass a resolution formally adopting the final plan, which is a requirement if we wish to apply for future funding for mitigation projects. This resolution will be provided immediately to the Monmouth County Sheriff's Office, Office of Emergency Management for submittal to FEMA, who requires the resolution on file.

This document is prepared as a statement of the authority advising Monmouth County Sheriff's Office, Office of Emergency Management, that the (Borough, Township, City, Village) of FARMINGDALE has opted to participate in the first update of the Monmouth County Multi-Jurisdictional Hazard Mitigation Plan. Our municipality has committed to participating in the development of an updated county-wide, multi-jurisdictional hazard mitigation plan. We have authorized the following two individuals: RONALD SANASAC and ROBERT HOTMAR ("Representative" and "Alternate", respectively) as local members serving on the Multi-Jurisdictional Core Planning Group and to actively participate as requested throughout the planning process.

We understand that our municipal Local Emergency Planning Committee (LEPC) will serve as its own local hazard mitigation planning committee ("Jurisdictional Assessment Team").

At the end of the project, when FEMA approves the plan, it is understood that our municipality will need to pass a resolution formally adopting the final plan, which is a requirement if we wish to apply for future funding for mitigation projects. This resolution will be provided immediately to the Monmouth County Sheriff's Office, Office of Emergency Management for submittal to FEMA, who requires the resolution on file.

Our municipality has committed to participating in the development of an updated county-wide, multi-jurisdictional hazard mitigation plan. We have authorized the following two individuals: Daniel Drogin and Richard M. Kachmar ("Representative" and "Alternate", respectively) as local members serving on the Multi-Jurisdictional Core Planning Group and to actively participate as requested throughout the planning process.

We understand that our municipal Local Emergency Planning Committee (LEPC) will serve as its own local hazard mitigation planning committee ("Jurisdictional Assessment Team").

At the end of the project, when FEMA approves the plan, it is understood that our municipality will need to pass a resolution formally adopting the final plan, which is a requirement if we wish to apply for future funding for mitigation projects. This resolution will be provided immediately to the Monmouth County Sheriff's Office, Office of Emergency Management for submittal to FEMA, who requires the resolution on file.

## Press Releases

### 06/29/2012 - MONMOUTH COUNTY TO HOLD HAZARD MITIGATION PLAN MEETING

Monmouth County is in the process of updating its 2009 Multi Jurisdictional Natural Hazard Mitigation Plan after receiving grant funding from the Federal Emergency Management Agency (FEMA).

The Multi-Jurisdictional Natural Hazard Mitigation Plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur. The plans identify an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss of life and property damage. "Hazard mitigation measures are taken today so communities are more protected tomorrow," said Michael Oppegaard, Coordinator of the Monmouth County Office of Emergency Management. "By gathering the data from previous natural disasters, and applying it to what kind of impact a future event would have, helps create a safer and more sustainable community."

The Multi-Jurisdictional Natural Hazard Mitigation Plan for Monmouth County was initially prepared to meet the requirements of the Disaster Mitigation Act of 2000 (DMA 2000). The Act requires all states and local governments to have mitigation plans in place in order to be eligible to apply for certain types of federal disaster mitigation project funding.

In 2009, Monmouth County and its jurisdictions successfully participated in the process and ultimately adopted the plan. After a plan is approved by FEMA, each of its participating jurisdictions must work to implement the hazard mitigation actions that they outlined in their respective mitigation strategies, and participate in a process to update the plan every five years. Monmouth County continues its 'multi-jurisdictional' approach by inviting all of the municipalities within the County to continue to participate in this important endeavor. A project kickoff meeting with Monmouth County and participating municipalities will be held on July 31, 2012.

For more information please contact Michael E. Oppegaard, Coordinator, Monmouth County Sheriff's Office, Office of Emergency Management (phone: 732-431-7400; e-mail: moppegaard@mcsonj.org) or Deputy Coordinator, Margaret Murnane-Brooks (phone: 732-431-7400; e-mail: mmurnane@mcsonj.org). Additionally, a Multi-Jurisdictional Hazard Mitigation Planning Page is on the web site at: [www.monmouthsheriff.org](http://www.monmouthsheriff.org) , OEM link.

"We cannot prevent natural disasters from happening," said Sheriff Shaun Golden. "That's why the continued efforts of a hazard mitigation plan are critical. It will reduce the impact associated with natural hazard events and help maintain public safety throughout Monmouth County."

## Monmouth County Starts Updates To Natural Hazard Mitigation Plan

By [Iyo Herlin](#) | 2 days ago

Photo Courtesy of NAGA

If a natural disaster happens, Monmouth County wants to make sure barriers are already in place.

The County will be holding a meeting on Tuesday for its Multi-Jurisdictional Natural Hazard Mitigation Plan. The plan, which was last updated in 2009, evaluates the hazards which a community is susceptible to and plans appropriate methods for mitigation.

Michael Oppegaard, Coordinator for the Monmouth County Sheriff's Office with the Office of Emergency Management says the plan identifies the hazards that residents would be exposed to, and it tries to identify some of the mitigation actions to lessen the impact.

"In essence this plan would us identify some of the actions that we may take and apply for funding through the FEMA programs to acquire properties that are in this repetitive loss program if they've had multiple flood claims, properties that may want to be elevated because their yards flood, putting in larger storm drains, and things like that."

Director Oppegaard says that for Monmouth County it means looking at natural disaster like hurricanes, flooding, and snowstorms, however there will be new topics added this year.

"We are looking at some new topics this round, such as the effects of climate change on the natural hazards we're affected by."

Once the planning process is complete the drafts are sent to the State Mitigation Unit for Approval by FEMA.

Oppegaard says all 53 of Monmouth County's municipalities have a say in the plan.

"What happens is that under the Disaster Mitigation Act of 2000, every jurisdiction in the state is required to have a mitigation plan. So by us doing a multi jurisdictional plan, we better use the federal dollars that are given out to better build this plan."

## Mommouth County Municipalities Begin Natural Hazard Mitigation Plan [AUDIO]

By Ilya Hemlin | 2 weeks ago

Fifty three towns within **Monmouth County** are all collaborating simultaneously to create this year's Multi-Jurisdictional Natural Hazard Mitigation Plan.

Damage from Hurricane Irene (Flickr User emilydickinsonridesabmx)

Damage from Hurricane Irene (Flickr User emilydickinsonridesabmx)

The plan, which was last updated in 2009, sets up the what actions municipalities county can take in order to safeguard themselves against a plethora of hazards from hurricanes to inland flooding. The final draft of the plan is approved by FEMA which uses the strategy to dole out funding for the various projects.

The kickoff meeting for the 2012 plan started Tuesday July 31 st at the Monmouth County Fire Academy, where County Office of Emergency Management Director Michael Oppengaard briefed the dozens of municipalities in attendance.

With over fifty different municipalities participating in the plan, in addition to the County needing to establish its protocols, one of the main issues lies in creating a system in which the suggestions can be submitted.

Like in 2009, the county is hiring a third party contractor to create a web portal, which participants can then submit their information to, and a draft of the plan will be compiled for review by the County, then the state, before ultimately getting to the desk of FEMA.

*"As we continue to go along we will be reviewing all that stuff so we don't have to read this giant three size phone book plan at the end so we'll have that all done," says Oppengaard.*

Under the Disaster Mitigation Act of 2000, every jurisdiction in the state is required to have a mitigation plan, however Monmouth County's decision to do the plan in a multi jurisdictional fashion, rather than let every municipality submit its own plan to the state, is a decision that sacrifices ease for a larger ultimate payout from FEMA.

"Doing it in a multi jurisdictional way] does add a little more to the workload upfront and then for us," acknowledges Oppengaard, "but with the dollars and cents that are out there and the money that we got for this as we did in the last round, it just makes better sense to do it that way."

Neptune Township CFO and OEM coordinator Michael Bascom spoke during the presentation on Tuesday, talking about the success Neptune had with the some of the mitigation projects in the past thanks to the plan.

The city constructed bulk heads and flood valves at the entrance of outflow pipes at the Shark River section, which helped reduce flooding which plagued them roughly thirty days out of the year.

The 675,000 dollar project had 508,000 funded by FEMA grants, and Bascom notes even though it's not a hundred percent complete, there's still noticeable improvements.

"It's greatly reduced flooding in that area already."

Bascom says while the County's plan encompasses all of the municipalities, Neptune, like every other municipality has to consider their own natural hazards when submitting their portion.

So what is on Neptune's list of concerns?

"Flooding is the number one problem." Says Bascom "Flooding is a repetitious problem, we're a community that's surrounded on multiple sides by water, the Atlantic Ocean, shark river, and we have multiple lakes."

Once the final draft of the plan is complete, it will be open to the public for review.

### **RESIDENTS BEING ASKED TO PARTICIPATE IN ONLINE SURVEY THAT WILL HELP WHEN DEALING WITH NATURAL HAZARDS**

Has your home ever been flooded? Or have you been affected by any other type of natural disaster? Monmouth County residents can now learn more about a comprehensive all natural hazards-mitigation plan for the county and its 53 municipalities, and, complete an online citizen questionnaire at [www.monmouthsheriff.org](http://www.monmouthsheriff.org).

Through a grant, provided by the Federal Emergency Management Agency (FEMA), the Board of Chosen Freeholders contracted with URS Corp. Inc. of Clifton, N.J., to work with county emergency management staff and municipal representatives to update the All Natural Hazards Mitigation Plan. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur.

Background information about the plan is available on the sheriff's website, and residents are being encouraged to complete the online survey that will help a study team better assess the nature, extent and probability of various hazards in Monmouth County.

The 15-question survey will take five minutes to complete.

*(con't)*

## **RESIDENTS BEING ASKED TO PARTICIPATE IN ONLINE SURVEY THAT WILL HELP WHEN DEALING WITH NATURAL HAZARDS**

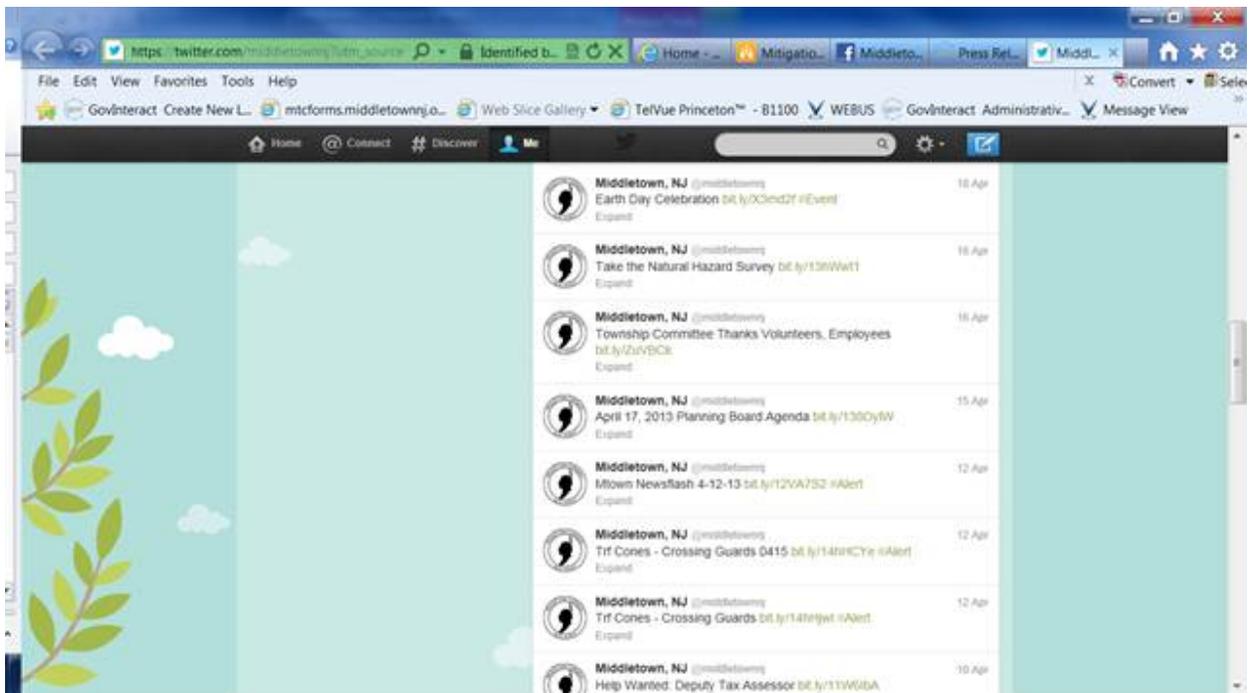

The goal of the plan is to identify projects that can reduce damages from future natural hazards. The plan will include a risk assessment and a hazard-mitigation strategy.

The primary hazard in Monmouth County is flooding, but other potential hazards to be analyzed include drought, extreme cold, extreme heat, snow, ice, hail, windstorms Nor'Easters, Hurricanes, tropical storms and tornadoes, among others.

### **Earth Day Celebration April 20**

Green activities abound as part of Middletown's Earth Day on Saturday, April 20. Start the day by helping at one of three township parks from 10 am to 2pm. Volunteers are needed to help with trail maintenance at the Coe Property located at 89 Sleep Hollow Road; trail mapping and establishment at the Campo Property located near Cottage Gate, Rt 36 southbound and for park pick-up at the Lincroft Village Green on Newman Springs Road. Closed toed shoes are required. Bug spray, bottled water and gloves are suggested.

Head over to Porcey Park, 345 Oak Hill Road from 4:00 pm to 7:00 pm for an afternoon of fun, games and education. The afternoon will include a musical performance by Miss Sherri featuring Go Go Green; gardening tips and money-saving hints provided by Rutgers' New Jersey Agricultural Experiment Station; native garden plant identification; the Follow a Drop of Water Workshop & Hike; a recycled arts and crafts display and workshop; and recycled

be collected at the event include electronics and crayons.

This special day is hosted by the Middletown Recreation Department, Middletown Cultural and Arts Council and the Poricy Park Conservancy. Visit [www.middletownnj.org](http://www.middletownnj.org), [middletownarts.org](http://middletownarts.org), or [poricypark.org](http://poricypark.org) or call 732-615-2260 for more information.

**Daddy-Daughter Dance - Friday, April 26**  
**In-Person Registration Deadline: Monday, April 22**  
**Online Registration Closed**

Join us for a night of fun! Girls (Grades K - 5) will have the opportunity to dress up and be escorted by their Dads for an evening of dinner, dancing and great fun (limited seating available). Open to Middletown residents only. Girls may be escorted by a relative or family friend, 21 or older. As with all township events, alcohol is prohibited. Your evening includes DJ Music, Fun and Games, a complete buffet dinner, dessert, coffee and soda, souvenir photo with frame and special keepsake. Optional candid shots will also be taken and available for purchase through our photographer's website.

**Veterans Job Fair – April 24 10:00 am to 1:00 pm, Middletown VFW**  
Hiring our Heroes, a Job Fair for Veterans, will be held on Wednesday, April 24 from 10 am to 1 pm at Middletown VFW Post 2179. The post is located at 1 Veterans Lane in the Port Monmouth section of town.

The fair, which is organized by the Middletown Veterans Affairs Committee, is free for both employers and job-seekers. Employers across all sectors will be recruiting for currently-available positions. Interested employers and veterans can register for the event at [hoh.greatjob.net](http://hoh.greatjob.net). A resume writing class for veterans will be held in advance of the event at 8:30am.

Also at the job fair will be a Mobile Health Outreach Unit from the US Department of Veterans Affairs that will provide basic health screenings as well as representatives from the Monmouth County Veterans Service office who will assist veterans with benefits and claims information.

### **Unwanted Medication Drop Off April 27**

Got Drugs? Turn in unwanted or expired medication for safe disposal at the Middletown Police Department on Saturday, April 27th from 10 a.m. to 2 p.m. Police Headquarters is located at Town Hall, 1 Kings Highway. The collection is part of the National Take Back Initiative. Call 732-615-2039 for local information. Call the DEA at 1-800-882-9539 for program inquiries. Medications only. No needles please.

### **Business to Business Night April 30**

Middletown's 5<sup>th</sup> Annual Business to Business Night will be held on Tuesday, April 30<sup>th</sup> from 6:00 pm to 8:30 pm at the Middletown Arts Center, 36 Church Street. All Middletown business owners are invited to meet and network in a relaxed atmosphere with light fare from Chiafullo's. The event will also represents Middletown's official kick-off for the Paint the Town Pink campaign. Pink-up kits for businesses interested in participating will be available. The event is hosted by the Community Affairs Council and sponsored by Chiafullo's, Suzie's Sweet Shoppe, CMDS, The Write Angles LLC and Gateway Press. Reservations are suggested. RSVP to Lori Anne Oliwa at [LoriAnne@TheWriteAngles.com](mailto:LoriAnne@TheWriteAngles.com).

### **Mother-Son Carnival – Saturday, June 8 Registration Open**

Join us for an afternoon of fun! Boys (Grades K - 5) will have the opportunity to play unlimited carnival games with mom all afternoon. Boys and Moms may compete in fun relay races such as a three-legged race and water balloon toss for the chance to be their grade's champion! Boys may be escorted by a relative or family friend, 21 or older. Your carnival ticket includes DJ music, unlimited carnival games and prizes, hot dog, chips and a drink (additional food may be purchased separately), popcorn, Italian ice, 1<sup>st</sup>, 2<sup>nd</sup>, and 3<sup>rd</sup> place prizes for each Grade Champion, souvenir photo with frame and special keepsake.

**Carnival Location:** Croydon Hall Football Field – 900 Leonardville Rd, Leonardo. In the event of inclement weather, Carnival will be held in the Croydon Hall

to the Recreation Department to pick up your tickets. The Recreation Department Administrative Offices are being relocated. Please call prior to coming.

**Traffic Advisory - Rt 520 Bridge Construction**

Traffic will be reduced to one lane traffic in each direction on Route 520 bridge between Half Mile & Hance Avenue while Monmouth County preforms bridge repairs. The lane closures are expected to last for 4-6 months. There is no pedestrian bridge access during this time. Please seek alternate routes. Delays are expected especially during commuting hours.

**Township Committee Thanks Volunteers, Employees**

The Mayor and Township Committee issued several proclamations at the April meeting to thank residents and employees for their exemplary service to the community.

*National Volunteer Week April 21-29, 2013*

The Mayor and Township Committee proclaimed April 21-29, 2013 as National Volunteer Week and expressed their gratitude to many residents who volunteer their time to a wide variety of community programs, emergency service organizations including the all-volunteer Fire Department and Emergency Medical Services Department and nearly two dozen boards, committees and commissions. **Read more**

**Disaster Assistance Deadline Extended to May 1**

[www.disasterassistance.gov](http://www.disasterassistance.gov)

**MDRF Assistance Program**

The Middletown Disaster Relief Fund, an independent registered 501(c)3, and the New Monmouth Baptist Church has announced a joint grant program aimed to help residents of Middletown who were severely affected by Superstorm Sandy. Applications are due July 15, 2013. All inquiries and questions should be sent to [middletownrelief@gmail.com](mailto:middletownrelief@gmail.com) or the New Monmouth Baptist Church at [www.newmonmouthbaptistchurch.org](http://www.newmonmouthbaptistchurch.org)

Township of Middletown. Forms can be found on the Middletown Disaster Relief Website ([www.middletownrelief.com](http://www.middletownrelief.com)), at Middletown Town Hall at the Clerk's Office or by contacting the New Monmouth Baptist Church at [nmbchurch.org](http://nmbchurch.org). Income and other verification will be required.

### **Registration for Just for Toddlers Fall Session**

The Middletown Recreation Department's Just For Toddlers program is a preschool playgroup for children ages 18 months to 4 years old. Classes meet one, three or four times a week, depending on the age class. Three, 10-week sessions are offered September thru May for each class – Fall, Winter and Spring sessions. Fall session registration are now being accepted Visit [www.middletownnj.org](http://www.middletownnj.org) or call 732-615-2260 for details.

### **Take the Natural Hazard Survey**

Has your home ever been flooded? Or have you been affected by any other type of natural disaster? Monmouth County residents can now learn more about a comprehensive all natural hazards-mitigation plan for the county and its 53 municipalities, and, complete an online citizen questionnaire at [www.monmouthsheriff.org](http://www.monmouthsheriff.org).

Through a grant, provided by the Federal Emergency Management Agency (FEMA), the Board of Chosen Freeholders contracted with URS Corp. Inc. of Clifton, N.J., to work with county emergency management staff and municipal representatives to update the All Natural Hazards Mitigation Plan. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur. Middletown Township is participating in this update along with other municipalities. Read More

# Monmouth County re-examines its hazard mitigation plan

comments

Monmouth County and municipalities are holding a public information session on the area's hazard mitigation plan. The plan will address issues like regular flooding in Sea Bright, shown here in March, and how infrastructure projects and planning can minimize the risks such hazards present. (File Photo)

## HAZLET (<http://www.nj.com/hazlet>) –

When the time is ripe, the wise are prepared to harvest – and six months after Hurricane Sandy is certainly the right time to consider how Monmouth County's natural hazards are dealt with.

Tonight, the county will hold an informational session for its Multi-Jurisdictional Natural Hazard Mitigation Plan at the Rave Movie Theater, 2821 Rt. 35 in Hazlet, starting at 7 p.m.

While it may seem like a perfect time to discuss Monmouth County's plans to alleviate natural hazards and revise its emergency response

procedures, it is merely coincidence that the process is occurring so soon after the storm's impact.

"Sandy will definitely influence the end result of the plan," said Michael Oppegard, emergency management coordinator with the Monmouth County Sheriff's Office. "The experiences from Sandy will change some of the mitigation priorities that are outlined within the plan."

Monmouth County and its municipalities began the process of revising the Multi-Jurisdictional Natural Hazard Mitigation Plan last summer. The plan was originally written in 2000 when some state and local funding was tied to its establishment. By updating the plan now, governments can be eligible for grants and loans for newly identified projects.

The plan documents risks caused by each community's landscape and suggests opportunities to reduce those risks by infrastructure upgrades.

Rather than create one over-arching plan from the top down on the state or county level, individual municipalities develop their own lists of projects, which become part of the larger county plan.

<p><b>CONNECT WITH US</b></p> <ul style="list-style-type: none"> <li>• <b>Follow us on Twitter</b> (<a href="https://twitter.com/monmouth_nj">https://twitter.com/monmouth_nj</a>)</li> <li>• <b>Like us on Facebook</b> (<a href="https://www.facebook.com/njmonmouthcounty">https://www.facebook.com/njmonmouthcounty</a>)</li> <li>• <b>NJ.com/monmouth</b> (<a href="http://www.nj.com/monmouth/">http://www.nj.com/monmouth/</a>)</li> </ul>
---

"The reason that we feel this works is because each community is unique in their landscape, development priorities and infrastructure maintenance and enhancements," Oppegard said. "In some instances yes it would be easier to establish priorities by county/region but in situations such as this allowing each community to develop their own priorities and controlling the projects and programs associated with mitigation they are able to address their vulnerabilities and hazards based on their local expertise, knowledge and over all community master plans."

The local priorities may be as simple as educating the public about disaster response or coastal storms like hurricanes and nor'easters, or as complicated as dredging lakes and rivers or burying power lines.

While most of the projects relate to flood control or storm damage, hazards like drought, wildfire, extreme heat and mosquito control are also discussed.

([http://ads.nj.com/RealMedia/ads/click\\_ix.ads/www.nj.com/monmouth/2013/05/monmouth\\_county\\_re](http://ads.nj.com/RealMedia/ads/click_ix.ads/www.nj.com/monmouth/2013/05/monmouth_county_re)

## Bayshore residents turn Hazlet hazard mitigation plan info session into Sandy forum

[Christopher Robbins, NJ.com](#) By [Christopher Robbins, NJ.com](#)

on May 23, 2013 at 6:44 AM, updated May 23, 2013 at 8:42 AM

They always talk about rebuilding the shore from Sandy Hook to Cape May - they never talk about Union Beach

**HAZLET** – During a week when much of the Jersey Shore is celebrating the grand re-opening of boardwalks and beaches and preparing for the onslaught of Memorial Day tourists, a group of residents who suffered the wrath of Hurricane Sandy are feeling neglected and ignored.

Tempers flared at a Thursday night information session on Monmouth County's multi-jurisdictional Natural Hazard Mitigation Plan, so much so that much of the discussion in Hazlet's Rave Cinemas turned from the plan to freewheeling criticism of the hurricane response and recovery.

Michael Opegard, emergency management coordinator with the Monmouth County Sheriff's Office, said the frustration was unsurprising.

"Understandably, there's a lot of frustration and angst out there," Opegard said. "The plan allows us to apply for funds after a storm, but it does not control when money is released – the Governor releases the money."

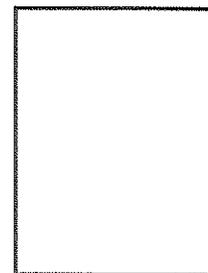

On a day when [Governor Chris Christie](#) was in Belmar to celebrate the re-opening of that borough's [boardwalk](#), residents of the Raritan Bayshore accused his administration and the federal government of putting too much focus on tourist areas.

"All the other towns are getting money," said one attendee from Union Beach. "They always talk about rebuilding the shore from Sandy Hook to Cape May – they never talk about Union Beach."

The attendees didn't single out politicians, some accused the media of focusing on boardwalks and beaches while area residents continue to struggle, whitewashing over extant issues.

**One massive storm.**

Some living in Union Beach, Port Monmouth, Keansburg and Atlantic Highlands have endured six months of homelessness.

"A lot of our houses no longer exist, nobody has any answers," Carol Trigg, of Union Beach, said.

● Like us on Facebook

● NJ.com/monmouth

Others complained that information on how to rebuild their houses, specifically whether to elevate their homes, was yet to come – extending their homelessness as another hurricane season begins in less than two weeks.

Charles Rogers, Middletown emergency management coordinator, sympathized with complaints about the slow and confusing movement of information.

"We don't have all the answers," Rogers said. "We go into meetings, and people tell us things, but by the time we walk out the door they're telling us something else."

Compounding their misery is the increase in federal flood insurance rates.

"My flood insurance has gone from \$1,350 to \$1,800," said a Belford resident. "If I don't elevate my home, in 2018 it will be \$9,500 – in five years, my flood insurance will cost more than my mortgage."

The emergency management officials, many of whom were also displaced by Sandy, were patient, answering the audience's questions as best they could, but in the end they were unable to steer the discussion back to the plan – which is essential in securing state and federal grants in the aftermath of a natural disaster.

"The requirement by FEMA is for us to be in compliance," said Michael Harriott, Union Beach emergency coordinator. "If we don't belong to the plan, we won't see a penny."

The funds will pay for both preparation and mitigation ahead of potential disasters, and for response and recovery needs afterwards – including raising the houses of bayshore residents.

"When we're talking about mitigation, we're talking about lessening the impact of natural disasters," Opegard said.

The plan itself is a series of projects proposed by municipalities, ranging from disaster response plans and culvert widening to floodgates, sea walls or elevating street levels, that may receive funding at Congress's discretion.

"The plan is being funded through a FEMA grant," Opegard said. "We collect history based information and then try to anticipate potential impacts based on history."

Oppegard said Sandy's impact, which tied up area emergency management officials, delayed the planning process.

"This was supposed to be done in September, but under our current projections it will be done in January," Oppegard said.

Oppegard said many projects on the last plan, adopted in 2009, were not funded by Congress.

## Flood of frustration at mitigation meeting

BY KEITH HEUMILLER  
Staff Writer

Union Beach residents look over the remains of a bayside townhome shortly after it was leveled by flooding during superstorm Sandy. Municipalities throughout Monmouth County are working on long-term mitigation plans, which will now include storm-related priorities. KEITH HEUMILLER

HAZLET — As municipalities throughout Monmouth County work toward longrange flood mitigation strategies to protect against future storm events, residents still struggling to recover from Sandy are demanding answers.

Nearly 75 residents from Union Beach, Middletown, Keansburg and other Bayshore towns filled a movie theater in Hazlet on May 22 for a meeting on the county-wide Hazard Mitigation Plan. Less than 20 minutes into the meeting, the crowd changed the topic of conversation.

“Some of our neighbors are up in the air — like, 10, 12 feet up in the air,” said Sherrie Jarius, a storm-impacted Port Monmouth resident.

“This is a little ridiculous, and I’m concerned that these people are not only doing this out of sheer fear, but because no one is telling them what to do and what they should be waiting for. They are doing this with their own money.”

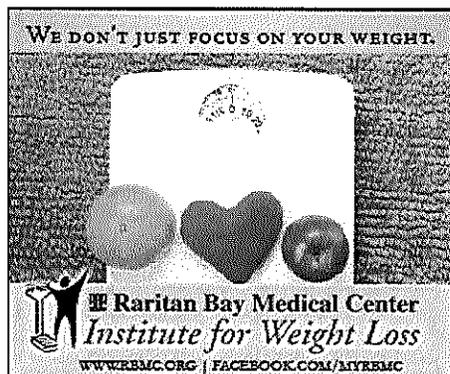

The meeting, which was held two days before the state began accepting applications for the federal Hazard Mitigation Grant funds, became a communal discussion on the problems and obstacles residents are facing more than 200 days after the superstorm.

Emergency management officials from Monmouth County, Union Beach, Atlantic Highlands, Aberdeen, Hazlet, Middletown, Keansburg, Holmdel, Keyport and Matawan attended the meeting — some of whom attempted to provide answers.

“I know exactly what you’re saying,” said Union Beach Emergency Management Coordinator (OEM) Michael Harriot, who chaired the meeting.

“I’m the guy who is sitting out there at 3 [a.m.], making the decision whether to take you out of your bed or not. I don’t want to make that phone call to you anymore.”

Last updated in 2009, the county mitigation plan must be updated every five years.

Participating towns submit lists of individual needs and necessary mitigation projects to the county, whose emergency officials collate them and present a unified plan to the state.

Before the plan is finalized in early 2014, municipal and county officials are hosting multiple public meetings to seek input from residents, attempting to identify which areas of which towns need additional protection from flooding, fire, blizzards or other natural disasters.

However, the grant process is competitive, as only some of the work listed in Monmouth County's plan has been funded by FEMA since 2009.

The remaining projects, such as some substantial flood control initiatives slated to be performed by the Army Corps of Engineers in Middletown and Union Beach, have yet to be completed.

"If that action had taken place in 2000 — like it was planned — none of this would have happened to Union Beach," said Union Beach resident Carol Trigg, referring to an Army Corps floodgate project that was first initiated more than 10 years ago.

"The houses would all still be standing."

Harriot said the Union Beach flood control project, akin to one that has been pending in Port Monmouth for a similar amount of time, is beyond the means of the borough.

"That's a \$138 million project. The borough of Union Beach could never afford to take that on," he said. "All of the legwork was done, all the engineering was done, everything was done. The president failed to fund the project. Without funding, you have no project."

Though the borough has been assured that the project will now be fully funded out of the multibillion-dollar congressional Sandy aid bill, Harriot said it would take years to complete.

Additional mitigation projects, such as beach replenishment and the creation of new berms in towns such as Keansburg, are slated to begin later this summer, according to one municipal engineer.

But residents said they are afraid to rebuild homes that will still be vulnerable to future flooding.

"I did all the work on my house and I'm saying, 'For what?'" a Union Beach resident said. "Because if we have another storm, there is no protection for me."

Others said they were frustrated with continually changing and overly complicated information, such as FEMA's flood elevation maps. After releasing advisory maps early this year, the agency plans to provide updated maps in August.

"It's been said that those maps will not be as severe," T&M Associates engineer Lori Thompson said.

Further complicating the issue, federal mitigation grants are not reimbursable, meaning that homeowners who elevate their houses prior to applying for the funds will not be eligible to recoup their expenses.

"If you have the opportunity to wait until August, you have the availability of more money," Thompson said. "Plus you have the base flood elevations available at that time, and you can make an informed decision."

However, a number of residents said they were tired of waiting.

"You're already paying the mortgage, whether you're living in the house or not," one Union Beach woman said. "And you're paying rent wherever you live. How long do they expect us to keep that up?"

Other concerns included the new elevations themselves, which in some instances will require seniors and parents with young children to climb 12 feet of stairs, and other federal mitigation programs — such as buyouts — that seem to have as many negative impacts as positive ones.

“The more they buyout in a town, the less tax ratables each town has,” Middletown OEM Coordinator Charlie Rogers said.

“Every town that has had major losses wants to get everybody back, or you’re not going to have a tax base. You just can’t survive that way.”

In the end, towns can only provide as much information as they can to residents while working to protect their communities and navigate the myriad bureaucratic hurdles that accompany federal funding, he said.

“We go to an awful lot of meetings. We walk in there, people tell us a lot of things, and by the time we’re walking out the door, they are telling us something else,” he said.

“It’s difficult for us to face a crowd and say, ‘You are going to get this, you are going to get that.’ If I told you that tonight, by the time we walk out the door, somebody will change the program. You need to file for everything you can.”

### Press Room » Multi-Jurisdictional Natural Hazard Mitigation Plan for Monmouth County UPDATE

06/19/2013 at 07:00 PM

#### Multi-Jurisdictional Natural Hazard Mitigation Plan for Monmouth County UPDATE

Natural hazards have the potential to cause property loss, loss of life, economic hardship, and threats to public health and safety. While an important aspect of emergency management deals with disaster recovery (the actions that a community takes to repair damages), an equally important aspect of emergency management involves **hazard mitigation** - sustained actions taken to reduce long-term risk to life and property. They are things we do today to be more protected in the future. For example, elevating buildings in flood hazard areas, installing hurricane clips and storm shutters, relocating critical facilities out of hazard areas, using fire-resistant construction materials in wildfire hazard areas, etc. Hazard mitigation actions are essential to breaking the typical disaster cycle of damage, reconstruction, and repeated damage. With careful selection, they can be long-term, cost-effective means of reducing risk and helping to create a more sustainable and disaster-resilient community.

A **hazard mitigation plan** describes an area's vulnerability to the various natural hazards that are typically present, along with an array of actions and projects for reducing key risks. This project list is known as a "mitigation strategy." While natural disasters cannot be prevented from occurring, the continued implementation of mitigation strategies identified in the plan will gradually, but steadily, make our communities more sustainable and disaster-resilient.

The **Multi-Jurisdictional Natural Hazard Mitigation Plan for Monmouth County** was prepared between 2007 and 2009 to meet the requirements of the Disaster Mitigation Act of 2000 (DMA 2000), which requires all states and local governments to have a hazard mitigation plan in order to be eligible to apply for certain types of federal hazard mitigation project grants. FEMA grant monies were received to cover the costs of the plan's development. Monmouth County used a 'multi-jurisdictional' approach, inviting all of the municipalities within the County to participate in the plan. At that time, 52 of the County's 53 jurisdictions opted to participate. This opened the door for the County and each of its 52 participating jurisdictions to apply to FEMA for hazard mitigation project funding, including monies which became available under recent Federal disaster declarations for Hurricane Irene and the remnants of Tropical Storm Lee in 2011, and Superstorm Sandy in 2012. All plan participants have been working since the plan was initially approved by FEMA in 2009 to complete the projects that were listed in their mitigation strategies.

Hazard mitigation plans must be: (a) implemented on an ongoing basis, and (b) updated every five years to ensure that they remain applicable representations of local risk and locally-preferred risk reduction strategies. Monmouth County and its jurisdictions initiated the first formal **plan update** last summer; the process is ongoing. The updated plan is expected to be reapproved by FEMA and adopted by all communities in 2014. The County has once again obtained FEMA grant funding to cover the cost of the plan update, and has opted to continue its 'multi-jurisdictional' approach. This time, all 53 municipalities in the County are participating. Each jurisdiction is attending meetings, providing feedback in a series of topic areas, reaching out to the public and other key stakeholders in the community, and developing an updated mitigation strategy. Successful participation in the plan update process is required to maintain eligibility to apply for mitigation project grants.

For questions or other feedback, or to find out how you can become involved, please contact your community's local elected official or Emergency Management Coordinator. At the County level, please feel free to reach out to Michael E. Oppegard, Coordinator, Monmouth County Sheriff's Office, Emergency Management Division (phone: 732-431-7400; e-mail: [moppegard@mcsnj.org](mailto:moppegard@mcsnj.org)) or his Deputy Coordinator, Margaret Murnane-Brooks (phone: 732-431-7400; e-mail: [mmurnane@mcsnj.org](mailto:mmurnane@mcsnj.org)). More information about the project is maintained on the County Sherriff's Office web site at: [www.mcsnj.org/sections-read-144.html](http://www.mcsnj.org/sections-read-144.html)

### Press Releases

**06/22/13 - MONMOUTH COUNTY CONTINUES WORK ON ALL NATURAL HAZARD MITIGATION PLAN**

Monmouth County and its 53 municipalities are continuing to review and update the Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan. The first county wide plan was finalized in 2009, after two years of development.

Through a grant, provided by the Federal Emergency Management Agency (FEMA), the Board of Chosen Freeholders contracted with URS Corp. Inc. of Clifton, N.J., to work with the Monmouth County Office of Emergency Management team and representatives from municipalities to update the mitigation plan. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur. It includes a risk assessment and a hazard-mitigation strategy. In addition, it identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss.

"The revision of this plan in the wake of Superstorm Sandy is vitally important," said Sheriff Shaun Golden, who oversees the Monmouth County Office of Emergency Management. "Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters."

While the primary hazard in Monmouth County is flooding, other potential hazards that are being analyzed are droughts, extreme cold, extreme heat, snow, ice, hail, windstorms, nor'easters, hurricanes, tropical storms and tornadoes.

Once the hazards and the assets within Monmouth County are evaluated, a mitigation strategy to increase the disaster resilience of the county, along with procedures for monitoring, evaluating and updating the plan will be completed.

Residents can learn more about a comprehensive all natural hazard-mitigation plan for the county and its 53 municipalities by visiting: [www.monmouthsheriff.org](http://www.monmouthsheriff.org), click on the OEM icon and select Hazard Mitigation Planning.

08/25/14 - Foreclosure Sales Auction

09/2/14 - Foreclosure Sales Auction

The county and its municipalities are reviewing and updating the Multi-Jurisdictional Natural Hazard Mitigation Plan.

After receiving a grant from FEMA, the Board of Chosen Freeholders contracted with URS Corp. of Clifton to work with the county Office of Emergency Management to update the mitigation plan, which evaluates potential hazards. It includes risk-assessment and hazard mitigation strategy as well as identifies vulnerable areas and the goals, objectives and actions required to minimize future loss.

"The revision of this plan in the wake of Superstorm Sandy is vitally important," said Sheriff Shaun Golden, who oversees the Monmouth County Office of Emergency Management. "Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters."

The primary hazard in Monmouth County is flooding, but droughts, extreme cold, extreme heat, snow, ice, hail, windstorms, nor'easters, hurricanes, tropical storms and tornadoes are also being analyzed. Once these hazards are evaluated, a plan will be created.

Residents can learn more about the plan by visiting [www.monmouthsheriff.org](http://www.monmouthsheriff.org) and clicking the OEM icon. Then select Hazard Mitigation Planning.

# 'Sandy: Our Next Steps' and Mobile Cabinet help residents

**Oceanport** — The Borough of Oceanport's Office of Emergency Management will hold a Community Meeting for residents on Monday October 21, between 6:30 and 9:30 p.m. at Maple Place School. The theme of this meeting is "Sandy: Our Next Steps".

Prior to the meeting, Oceanport has arranged for the state to host the Mobile Cabinet between 3:30 and 7 p.m. at Maple Place School. Oceanport residents, neighboring towns and business owners can go to check the status of their grants (Renew

- Department of State - Business Action Center
- Department of Banking and Insurance
- Department of Environmental Protection
- Department of Children and Families
- New Jersey Division of Consumer Affairs - Office of Consumer Protection
- National Flood Insurance Program/FEMA

The community meeting will have representatives from:

- Oceanport Cares
- Borough Construction Office-permitting process
- Monmouth County Health Department-Mold issues
- New Jersey Hope and Healing
- American Red Cross Community Recovery Specialist
- Sandy Long Term Recovery Program
- Catholic Charities- Case management assistance
- Deborah Heart and Lung Hospital-free testing to residents for potential respiratory problems

Information regarding renewal of the Monmouth County All-Hazard Mitigation Plan will be available and public comments will be welcomed.

Three manufacturers of flood barrier products to reduce the potential of flooding to homes and property will have products on display, video presentations, along with sample handouts and informational brochures. These products are state of the art in dealing with flooding.

## Meeting to focus on post-Sandy issues Oct. 21

**OCEANPORT** — The Borough Office of Emergency Management will hold a community meeting for residents 6:30-9:30 p.m. Oct. 21. Themed "Sandy: Our Next Steps," it will be held at Maple Place School.

Prior to the meeting, the borough has arranged for the state to host a mobile cabinet session 3:30-7 p.m. at the school. Residents of Oceanport and neighboring towns and business owners can attend the cabinet session to check the status of reNew Jersey Stronger applications and speak to representatives of state departments about concerns and casework. Representatives of the Federal Emergency Management Agency and the National Flood Insurance Program will also be present to answer questions.

State agencies that will send representatives to the cabinet session include the following: Governor's Office of Constituent Relations; Economic Development Authority/Stronger NJ Business; Department of Community Affairs/reNew Jersey Stronger; Department of State – Business Action Center; New Jersey Division of Consumer Affairs – Office of Consumer Protection; and the departments of the Treasury, Human Services, Banking and Insurance, Environmental Protection, and Children and Families.

The community meeting will have representatives from Oceanport Cares; the borough Construction Office for permitting issues; the Monmouth County Health Department for mold issues; New Jersey Hope and Healing; an American Red Cross community recovery specialist; Catholic Charities for case management assistance; and Deborah Heart and Lung Hospital for free testing to residents for potential respiratory problems.

Information regarding renewal of the Monmouth County Hazard Mitigation Plan will be available, and public comments will be welcome.

Three manufacturers of flood-barrier products will have samples, video presentations, handouts and informational brochures.

# A year after Sandy, many of the same problems

by Neil Schulman

**ceanport** — Nearly a year ago, residents from Oceanport met in Maple Place School. Generators provided light and heat as officials gave advice on issues such as dealing with mold, engineering construction, getting financial assistance, and similar issues for those who had suffered damage to their homes.

A year later, many still have the same problems. The electricity was working at the school, but many of the same problems were addressed at Monday's "Our Next Steps," a meeting for residents on Monday evening.

The meeting had been preceded by the New Jersey Mobile Cabinet, which brought many state government services to the residents, agencies ranging from Economic Development Authority's Stronger NJ Business Department of Community Affairs' Renew Jersey Stronger Programs to the Department of Children and Families and Department of Environmental Protection.

Mayor "Buzz" Baldanza, director of the Oceanport Office of Emergency Management, said that "Sandy: Our Next Steps" was organized for residents to learn what was happening with storm damage cleanup, and continue to help with problems they were facing.

services included:

- The Monmouth County Health Department, which was there to explain how to test for mold in homes that may have suffered flooding.

- Members of the Oceanport engineering and construction offices, to help residents meet the legal guidelines of rebuilding.

- Representatives from Red Cross Long Term Recovery, helping people suffering economic hardships as a result of the disaster get financial aid.

- Catholic Charities, offering case management.

- Several vendors offering materials and techniques to make homes more flood resistant.

- County representatives showing the Monmouth County Hazard Mitigation Plan, and asking for feedback, "so we can update the plan and make it better for the public," Baldanza said.

Mahon also briefly discussed the future of Borough Hall, which was damaged by flood waters in the storm. They have hired an architectural firm to review the costs of floodproofing.

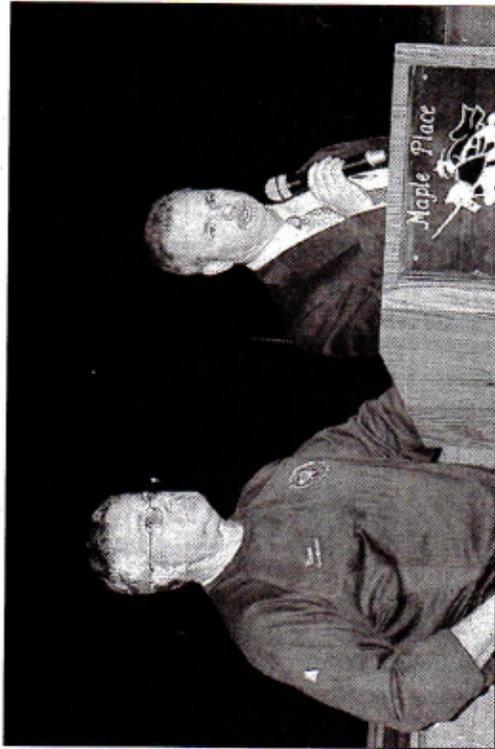

Mahon said that planning work on Borough Hall started relative-

ly recently because officials wanted to focus on addressing the problems residents were having from the storm before looking at this.

Estimates to fix the building say the work could be in excess of \$3 million — and the land it's on could still flood again with a major storm.

Mahon said that the borough is investigating whether it would be more cost effective to find another location for Borough Hall, either on Fort Monmouth or elsewhere in Oceanport. He said that they've looked at sites on Port Avenue, Peck Avenue, and borough owned parkland. If that was used, they would need to find other spots to turn into parks as part of a Green Acres property swap.

Mahon said that one of the big issues that would guide their decision making process is how much FEMA is willing to reimburse the borough to construct a new facility.

Mayor Michael Mahon addresses residents of Oceanport as Office of Emergency Management Director Mauro "Buzzy" Baldanza looks on at a workshop to help people deal with lingering issues from Sandy.

**Monmouth County Mitigation Plan Update**

The Monmouth County hazard mitigation plan describes the hazards that can occur in a community and the risks that these hazards pose, and then presents a list of actions and projects that the community would like to do to reduce these risks. The project list is known as a "mitigation strategy." Natural disasters cannot be prevented from occurring. But, if we tackle some of the biggest risks with hazard mitigation projects, a little at a time, we can be

safer the next time one happens and eventually, the 'disasters' won't have such a big impact on us. A good example of this might be in the case of flooding - if you have four feet of water in a residential area, you have a big problem and people are going to be recovering for months or years afterward. But if you have four feet of water on an empty lot, or in a neighborhood where the homes are elevated, things get back to normal fairly quickly. The flood ends up being less of a 'disaster', and more of a nuisance. That's what the goal is of hazard mitigation and hazard mitigation planning - to mitigate wherever we can so that our *hazards* don't become *disasters*.

The Multi-Jurisdictional Natural Hazard Mitigation Plan for Monmouth County was prepared between 2007 and 2009 to meet the requirements of the Disaster Mitigation Act of 2000 (or "DMA 2000"). This Act requires all states and local governments to have a hazard mitigation plan in order to be able to apply for certain types of FEMA mitigation project grants. Development of the first plan was led by the County, under a FEMA planning grant that covered the costs of its development. Though it wasn't required, Monmouth County used what FEMA calls a 'multi-jurisdictional' approach for the plan - meaning that instead of it just being a plan for the County government, every municipality was invited to participate as equal partners with the County. This opened the door for all municipalities to be able to apply to FEMA for hazard mitigation project grants, including monies that became available under recent Federal disaster declarations for Hurricane Irene, the remnants of Tropical Storm Lee, and of course - Superstorm Sandy. The Borough is part of this process and continues to work with the County during this update. More information about the project is maintained on the County Sherriff's Office web site at: [www.mcsonj.org/Sections-read-144.html](http://www.mcsonj.org/Sections-read-144.html)

Another project we are working on through the County OEM and NJ State Police is called Register Ready. This is an on-line tracking system that allows our residents to register with the State Police if they may need assistance with evacuating during storms or other emergencies. This program is computer-based and allows the local OEM to print out a list of our residents that may need assistance. You can find details about the program on the internet at [www.registerready.nj.gov](http://www.registerready.nj.gov).

The Avon-By-The-Sea Office of Emergency Management is always available to answer your questions or concerns regarding emergency preparedness for both the Borough and your family.

Avon Flood Map Services: The first thing you should do is check your flood hazard. Flood protection references are available at the Avon Public Library. You can also visit the Office of Emergency Management or Building Department Borough Hall to see if you are in a mapped floodplain. If so, we can give you more information, such as depth of flooding over a building's first floor and past flood problems in the area. If requested, we will visit a property to review its flood problem and explain ways to stop flooding or prevent flood damage. Call the Department at 732-502-4510. This service is free.

Monmouth University Polling Institute is conducting a survey in regards to the recovery efforts as result of Hurricane Sandy. They are interested in knowing if you are or were displaced as a result of the storm and your overall impression of the recovery efforts. This information will also be beneficial to the Borough as we continue to look for areas to improve in regards to recovery. The survey can be found at: [www.monmouthpoll.org/sandy](http://www.monmouthpoll.org/sandy). If you have any questions regarding the survey please contact Tim Tracey at 732-263-5860 or [pollingz@monmouth.edu](mailto:pollingz@monmouth.edu).

## Press Room » MONMOUTH COUNTY SHERIFF'S OFFICE, OEM CONTINUES HAZARD MITIGATION PLAN UPDATE PROCESS

03/04/2014 at 07:00 PM

### MONMOUTH COUNTY SHERIFF'S OFFICE, OEM CONTINUES HAZARD MITIGATION PLAN UPDATE PROCESS

**Freehold:** Sheriff Shaun Golden is pleased to announce that work continues on the Monmouth County Sheriff's Office, Office of Emergency Management (OEM) Hazard Mitigation Plan update process. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur.

On Thursday February 27, OEM held two workshop sessions as part of the ongoing Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan update process. The work sessions included a presentation from the consulting firm URS Corporation, who was hired through a FEMA grant. The sessions provided municipalities with assistance on the development and documentation of the mitigation strategy. Monmouth County's mitigation strategy is designed to reduce and eliminate risks to people and property from natural hazard events. The need for mitigation strategies has increased due to the increase in natural hazard occurrences.

"As a result of Superstorm Sandy, this plan and the information contained within it has never been more important," said Sheriff Shaun Golden, whose agency oversees the Office of Emergency Management. "Based on the hazards and risks, the projects identified by each town and Monmouth County will help shape the mitigation planning for the next several years."

The current Hazard Mitigation Plan was adopted by Monmouth County and municipalities in 2009. Under FEMA guidelines it is required to be updated every five years. The County has taken the lead on the overall planning process to guide the fifty-three municipalities in an effort to meet the FEMA requirements and therefore be able to officially adopt the plan.

Upon completion, Monmouth County OEM will submit the plan to New Jersey OEM and FEMA for final approval. Once approved by those two agencies, each municipality will be required to formally adopt the plan. They will then continue to be eligible for pre and post disaster mitigation grant funding. The County anticipates the draft plan will be available and ready for public comment by late spring of 2014. It will then be posted to the Office of Emergency Management's website.

*SHAUN GOLDEN/SHERIFF*

### **MONMOUTH COUNTY SHERIFF'S OFFICE, OEM CONTINUES HAZARD MITIGATION PLAN UPDATE PROCESS**

**Freehold:** Sheriff Shaun Golden is pleased to announce that work continues on the Monmouth County Sheriff's Office, Office of Emergency Management (OEM) Hazard Mitigation Plan update process. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur.

On Thursday February 27, OEM held two workshop sessions as part of the ongoing Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan update process. The work sessions included a presentation from the consulting firm URS Corporation, who was hired through a FEMA grant. The sessions provided municipalities with assistance on the development and documentation of the mitigation strategy. Monmouth County's mitigation strategy is designed to reduce and eliminate risks to people and property from natural hazard events. The need for mitigation strategies has increased due to the increase in natural hazard occurrences.

"As a result of Superstorm Sandy, this plan and the information contained within it has never been more important," said Sheriff Shaun Golden, whose agency oversees the Office of Emergency Management. "Based on the hazards and risks, the projects identified by each town and Monmouth County will help shape the mitigation planning for the next several years."

## **MONMOUTH COUNTY SHERIFF'S OFFICE, OEM CONTINUES HAZARD MITIGATION PLAN UPDATE PROCESS**

The current Hazard Mitigation Plan was adopted by Monmouth County and municipalities in 2009. Under FEMA guidelines it is required to be updated every five years. The County has taken the lead on the overall planning process to guide the fifty-three municipalities in an effort to meet the FEMA requirements and therefore be able to officially adopt the plan.

Upon completion, Monmouth County OEM will submit the plan to New Jersey OEM and FEMA for final approval. Once approved by those two agencies, each municipality will be required to formally adopt the plan. They will then continue to be eligible for pre and post disaster mitigation grant funding. The County anticipates the draft plan will be available and ready for public comment by late spring of 2014. It will then be posted to the Office of Emergency Management's website.

###

## **Hazard Mitigation Plan Update**

Middletown's Emergency Management Office continues to work with the Monmouth County OEM to update the Multi-Jurisdictional Hazard Plan. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur. Monmouth County's mitigation strategy is designed to reduce and eliminate risks to people and property from natural hazard events. The need for mitigation strategies has increased due to the increase in natural hazard occurrences.

The current Hazard Mitigation Plan was adopted by Monmouth County and municipalities in 2009. Under FEMA guidelines it is required to be updated every five years. ### MONMOUTH COUNTY MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN UPDATE

Monmouth County and its 53 municipalities have been working on the update of the Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan since August of 2012. The draft of the updated plan is expected to be released in the early fall. The first county wide plan was completed in 2009. The plan is a documented evaluation of the natural hazards to which a community is susceptible and the extent to which these events will occur. It identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss. Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters.

This plan allows the county and the participating municipalities to apply for pre and post disaster mitigation grant funding through FEMA.

Once released, residents can review the draft of the multi-jurisdictional plan for the county and its 53 municipalities by visiting: [www.monmouthsheriff.org](http://www.monmouthsheriff.org), click on the OEM icon and select Hazard Mitigation Planning.

### **Natural Hazard Mitigation: What Roosevelt Residents Can Do**

*by Michael Ticktin*

The Monmouth County Sheriff's Office has issued the following notice:

"Monmouth County and its 53 municipalities have been working on the update of the Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan since August of 2012. The draft of the updated plan is expected to be released in the early fall. The first county wide plan was completed in 2009. The plan is a documented evaluation of the natural hazards to which a community is susceptible and the extent to which these events will occur. It identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss. Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters.

"This plan allows the county and the participating municipalities to apply for pre and post disaster mitigation grant funding through FEMA.

"Once it is released, residents can review the draft of the all natural hazard-mitigation plan for the county and its 53 municipalities by visiting: [www.monmouthsheriff.org](http://www.monmouthsheriff.org), click on the OEM icon and select Hazard Mitigation Planning.'

The Sheriff's Office goes on to state as follows on its website: "Natural hazards have the potential to cause property loss, loss of life, economic hardship, and threats to public health and safety. While an important aspect of emergency management deals with disaster recovery those actions that a community must take to repair damages and make itself whole in the wake of a natural disaster an equally important aspect of emergency management involves hazard mitigation. Hazard mitigation measures are efforts taken before a disaster happens to lessen the impact that future disasters of that type will have on people and property in the community. They are things you do today to be more protected in the future. Hazard mitigation actions taken in advance of a hazard event are essential to breaking the typical disaster cycle of damage, reconstruction, and repeated damage. With careful selection, hazard mitigation actions can be long-term, cost-effective means of reducing the risk of loss and help create a more disaster-resistant and sustainable community."

Unlike the many other municipalities in Monmouth County that suffered extensive damage during Superstorm Sandy, Roosevelt does not have to deal with the hazard of flooding. While the potential for loss of electrical power remains a concern, it is one that is beyond our control and has to be addressed by JCP&L. The one hazard listed by FEMA and the Sheriff's Office, however, that we can do something about is the potential for wildfire. Every spring and autumn, the Borough arranges for fallen branches to be picked up and disposed of. In the interest of reducing the potential for danger to life and property from wildfire, it is imperative that all residents cooperate in the collection of dead branches from the own properties and, to the extent that they are able to do so, from adjacent woodlands. The next branch collection is planned for early October. Please note the date when it is announced and do your part to ensure that the wildfire hazard is reduced.

## NEWS RELEASE

FOR IMMEDIATE RELEASE  
October 20, 2014

CONTACT: CYNTHIA SCOTT, PIO  
PHONE: 732-431-6400 ext. 1113

### **SHERIFF'S OFFICE OEM TO RELEASE DRAFT OF HAZARD MITIGATION PLAN**

**Monmouth County:** Sheriff Shaun Golden is pleased to announce the release of the Draft Monmouth County Multi-jurisdictional Natural Hazard Mitigation Plan. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events may occur.

The plan includes a hazard mitigation strategy which is designed to reduce and eliminate risks to people and property from natural hazard events. In addition, it identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss. The need for mitigation strategies has become more essential due to the increase in natural hazard occurrences.

“The revision of this plan is highly important as we approach the two year anniversary of Superstorm Sandy,” said Sheriff Shaun Golden, who oversees the Office of Emergency Management. “Mitigation is preparation and planning now to reduce the loss of life and property later, by lessening the impacts of future disasters.”

The current Hazard Mitigation Plan was adopted by Monmouth County and the municipalities in 2009. Under FEMA guidelines it is required to be updated every five years.

*(con't)*

## **SHERIFF'S OFFICE OEM TO RELEASE DRAFT OF HAZARD MITIGATION PLAN**

Monmouth County has taken the lead on the overall planning process to guide the fifty-three municipalities in an effort to meet the FEMA requirements and therefore be able to officially adopt the plan.

Beginning Oct. 21, the draft plan will be posted to [www.monmouthsheriff.org](http://www.monmouthsheriff.org) and can be found under the OEM tab, for a 28 day review and public comment period. Public comments can be sent to [uemmitigation@mcsonj.org](mailto:uemmitigation@mcsonj.org). As part of the process, the draft plan will be submitted to New Jersey OEM and FEMA for review.

Once applicable comments are compiled into the plan and the draft is approved by those two agencies, each municipality will be required to formally adopt the plan. They will then continue to be eligible for pre and post disaster mitigation grant funding.

## Office of Emergency Management

### Monmouth County's Multi-Jurisdictional Natural Hazard Mitigation Planning Project

Natural hazards have the potential to cause property loss, loss of life, economic hardship and threats to public health and safety.

An important aspect of emergency management deals with disaster recovery and the actions that a community must take to repair damages and make itself whole in the wake of a natural disaster. However, an equally important aspect of emergency management involves hazard mitigation and the efforts that can be taken before a disaster happens to lessen the impact that future natural disasters will have on people and property in the community.

Information about [Monmouth County's hazard mitigation planning process](#) is available on the Monmouth County Sheriff's Web site at [www.monmouthsheriff.org](http://www.monmouthsheriff.org)

### 3/17/2014 - Hazard Mitigation Plan Update Process

**Freehold:** Sheriff Shaun Golden is pleased to announce that work continues on the Monmouth County Sheriff's Office, Office of Emergency Management (OEM) Hazard Mitigation Plan update process. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur.

On Thursday February 27, OEM held two workshop sessions as part of the ongoing Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan update process. The work sessions included a presentation from the consulting firm URS Corporation, who was hired through a FFMA grant. The sessions provided municipalities with assistance on the development and documentation of the mitigation strategy. Monmouth County's mitigation strategy is designed to reduce and eliminate risks to people and property from natural hazard events. The need for mitigation strategies has increased due to the increase in natural hazard occurrences.

"As a result of Superstorm Sandy, this plan and the information contained within it has never been more important," said Sheriff Shaun Golden, whose agency oversees the Office of Emergency Management. "Based on the hazards and risks, the projects identified by each town and Monmouth County will help shape the mitigation planning for the next several years."

The current Hazard Mitigation Plan was adopted by Monmouth County and municipalities in 2009. Under FEMA guidelines it is required to be updated every five years. The County has taken the lead on the overall planning process to guide the fifty-three municipalities in an effort to meet the FEMA requirements and therefore be able to officially adopt the plan.

Upon completion, Monmouth County OEM will submit the plan to New Jersey OEM and FEMA for final approval. Once approved by those two agencies, each municipality will be required to formally adopt the plan. They will then continue to be eligible for pre and post disaster mitigation grant funding. The County anticipates the draft plan will be available and ready for public comment by late spring of 2014. It will then be posted to the Office of Emergency Management's website.

Every Wednesday is Garbage day. They come very early in the morning so it is suggested that trash be placed at the curb, after 4pm, the night before.

Recycling is collected every OTHER Tuesday. It should also be placed at the curb, after 4pm, the night before.

## Welcome to Allentown, NJ

The Borough of Allentown, is a small historic village located in central New Jersey. It's located around the Mill Pond and along Doctor's Creek and Indian Run (believed to be part of the underground Railway). The village was originally settled in the 17th Century. Like most country villages in colonial days, Allentown developed around its mills. As the farms in the area grew, so did the need for blacksmith shops, wheelwrights, carriage makers, chair makers, shoemakers, seamstresses and tailors. By the end of the 18th Century more than 24 commercial enterprises existed within the village boundaries. The Borough of Allentown was and is today a center for travel across New Jersey. Main Street was a main route of travel from the Amboy's Port to Burlington during the 18th Century. Allentown has produced from its residents, six United State Congressman, a New Jersey Governor, a governor of the Washington Territory and the first Chief Justice of New Jersey, who was also a signer of the U.S. Constitution. There are currently 220 buildings and homes in the village that date prior to 1860. The Borough of Allentown continues to be a strong regional village providing employment opportunities, a variety of housing choices, is centrally located and is able to provide public services. Today, Allentown strives to maintain it's past history while attempting to offer the best in unique community living.

**Monmouth County and its 53 municipalities have been working on the update of the Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan since August of 2012. The draft of the updated plan is expected to be released in the early fall. The first county wide plan was completed in 2009. The plan is a documented evaluation of the natural hazards to which a community is susceptible and the extent to which these events will occur. It identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss. Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters.**

**This plan allows the county and the participating municipalities to apply for pre and post disaster mitigation grant funding through FEMA.**

**Once released, residents can review the draft of the all natural hazard-mitigation plan for the county and its 53 municipalities by visiting: <http://www.monmouthsheriff.org/Sections-read-144.html>**

**Ken Child, Coordinator, Steven Kegelman, Dept. Coordinator**  
 732-502-4510  
[avonoem@gmail.com](mailto:avonoem@gmail.com)

The Office continues to focus on the recovery efforts related to Hurricane Sandy. Currently we have one full time employee who is tasked with working with our County, State and Federal response and recovery partners. If you have any Sandy or flood related questions please contact the office.

**Monmouth County Mitigation Plan Update**

The Monmouth County hazard mitigation plan describes the hazards that can occur in a community and the risks that these hazards pose, and then presents a list of actions and projects that the community would like to do to reduce these risks. The project list is known as a "mitigation strategy." Natural disasters cannot be prevented from occurring. But, if we tackle some of the biggest risks with hazard mitigation projects, a little at a time, we can be

safer the next time one happens and eventually, the 'disasters' won't have such a big impact on us. A good example of this might be in the case of flooding – if you have four feet of water in a residential area, you have a big problem and people are going to be recovering for months or years afterward. But if you have four feet of water on an empty lot, or in a neighborhood where the homes are elevated, things get back to normal fairly quickly. The flood ends up being less of a 'disaster', and more of a nuisance. That's what the goal of hazard mitigation and hazard mitigation planning – to mitigate wherever we can so that our hazards don't become disasters.

The Multi-Jurisdictional Natural Hazard Mitigation Plan for Monmouth County was prepared between 2007 and 2009 to meet the requirements of the Disaster Mitigation Act of 2000 (or "DMA 2000"). This Act requires all states and local governments to have a hazard mitigation plan in order to be able to apply for certain types of FEMA mitigation project grants. Development of the first plan was led by the County, under a FEMA planning grant that covered the costs of its development. Though it wasn't required, Monmouth County used what FEMA calls a 'multi-jurisdictional' approach for the plan – meaning that instead of it just being a plan for the County government, every municipality was invited to participate as equal partners with the County. This opened the door for all municipalities to be able to apply to FEMA for hazard mitigation project grants, including monies that became available under recent Federal disaster declarations for Hurricane Irene, the remnants of Tropical Storm Lee, and of course - Superstorm Sandy. The Borough is part of this process and continues to work with the County during this update. More information about the project is maintained on the County Sheriff's Office web site at: [www.nj-coi.org/Sections-read-144.html](http://www.nj-coi.org/Sections-read-144.html)

Another project we are working on through the County OEM and NJ State Police is called Register Ready. This is an on-line tracking system that allows our residents to register with the State Police if they may need assistance with evacuating during storms or other emergencies. This program is computer-based and allows the local OEM to print out a list of our residents that may need assistance. You can find details about the program on the internet at [www.registerready.nj.gov](http://www.registerready.nj.gov).

The Avon-By-The-Sea Office of Emergency Management is always available to answer your questions or concerns regarding emergency preparedness for both the Borough and your family.

**Avon Flood Map Services:** The first thing you should do is check your flood hazard. Flood protection references are available at the Avon Public Library. You can also visit the Office of Emergency Management or Building Department/Borough Hall to see if you are in a mapped floodplain. If so, we can give you more information, such as depth of flooding over a building's first floor and past flood problems in the area. If requested, we will visit a property to review its flood problem and explain ways to stop flooding or prevent flood damage. Call the Department at 732-502-4510. This service is free.

Monmouth University Polling Institute is conducting a survey in regards to the recovery efforts as result of Hurricane Sandy. They are interested in knowing if you are or were displaced as a result of the storm and your overall impression of the recovery efforts. This information will also be beneficial to the Borough as we continue to look for areas to improve in regards to recovery. The survey can be found at: [www.monmouthpoll.org/sandy](http://www.monmouthpoll.org/sandy). If you have any questions regarding the survey please contact Tim Tracey at 732-263-5860 or [polling@monmouth.edu](mailto:polling@monmouth.edu).

## Press Room » Multi-Jurisdictional Natural Hazard Mitigation Plan for Monmouth County UPDATE

06/19/2013 at 07:00 PM

### Multi-Jurisdictional Natural Hazard Mitigation Plan for Monmouth County UPDATE

Natural hazards have the potential to cause property loss, loss of life, economic hardship, and threats to public health and safety. While an important aspect of emergency management deals with disaster recovery (the actions that a community takes to repair damages), an equally important aspect of emergency management involves **hazard mitigation** - sustained actions taken to reduce long-term risk to life and property. They are things we do today to be more protected in the future. For example, elevating buildings in flood hazard areas, installing hurricane clips and storm shutters, relocating critical facilities out of hazard areas, using fire-resistant construction materials in wildfire hazard areas, etc. Hazard mitigation actions are essential to breaking the typical disaster cycle of damage, reconstruction, and repeated damage. With careful selection, they can be long-term, cost-effective means of reducing risk and helping to create a more sustainable and disaster-resilient community.

A **hazard mitigation plan** describes an area's vulnerability to the various natural hazards that are typically present, along with an array of actions and projects for reducing key risks. This project list is known as a "mitigation strategy." While natural disasters cannot be prevented from occurring, the continued implementation of mitigation strategies identified in the plan will gradually, but steadily, make our communities more sustainable and disaster-resilient.

The **Multi-Jurisdictional Natural Hazard Mitigation Plan for Monmouth County** was prepared between 2007 and 2009 to meet the requirements of the Disaster Mitigation Act of 2000 (DMA 2000), which requires all states and local governments to have a hazard mitigation plan in order to be eligible to apply for certain types of federal hazard mitigation project grants. FEMA grant monies were received to cover the costs of the plan's development. Monmouth County used a 'multi-jurisdictional' approach, inviting all of the municipalities within the County to participate in the plan. At that time, 52 of the County's 53 jurisdictions opted to participate. This opened the door for the County and each of its 52 participating jurisdictions to apply to FEMA for hazard mitigation project funding, including monies which became available under recent Federal disaster declarations for Hurricane Irene and the remnants of Tropical Storm Lee in 2011, and Superstorm Sandy in 2012. All plan participants have been working since the plan was initially approved by FEMA in 2009 to complete the projects that were listed in their mitigation strategies.

Hazard mitigation plans must be: (a) implemented on an ongoing basis, and (b) updated every five years to ensure that they remain applicable representations of local risk and locally-preferred risk reduction strategies. Monmouth County and its jurisdictions initiated the first formal **plan update** last summer; the process is ongoing. The updated plan is expected to be reapproved by FEMA and adopted by all communities in 2014. The County has once again obtained FEMA grant funding to cover the cost of the plan update, and has opted to continue its 'multi-jurisdictional' approach. This time, all 53 municipalities in the County are participating. Each jurisdiction is attending meetings, providing feedback in a series of topic areas, reaching out to the public and other key stakeholders in the community, and developing an updated mitigation strategy. Successful participation in the plan update process is required to maintain eligibility to apply for mitigation project grants.

For questions or other feedback, or to find out how you can become involved, please contact your community's local elected official or Emergency Management Coordinator. At the County level, please feel free to reach out to Michael E. Opegaard, Coordinator, Monmouth County Sheriff's Office, Emergency Management Division (phone: 732-431-7400; e-mail: moppegard@mcsonj.org) or his Deputy Coordinator, Margaret Murnane-Brooks (phone: 732-431-7400; e-mail: mmurnane@mcsonj.org). More information about the project is maintained on the County Sheriff's Office web site at: [www.mcsonj.org/Sections-read-144.html](http://www.mcsonj.org/Sections-read-144.html)

### HAZARD MITIGATION PLAN UPDATE

8/15/2014

#### MONMOUTH COUNTY MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN UPDATE

Monmouth County and its 53 municipalities have been working on the update of the Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan since August of 2012. The draft of the updated plan is expected to be released in the early fall. The first county wide plan was completed in 2009. The plan is a documented evaluation of the natural hazards to which a community is susceptible and the extent to which these events will occur. It identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss. Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters.

This plan allows the county and the participating municipalities to apply for pre and post disaster mitigation grant funding through FEMA. Once released, residents can review the draft of the multi-jurisdictional plan for the county and its 53 municipalities by visiting: [www.monmouthshariff.org](http://www.monmouthshariff.org), click on the OEM icon and select Hazard Mitigation Planning.

monmouth county hazard mitigation plan update

**Borough of Englishtown**

**Borough of Englishtown**  
**Office of Emergency Management**  
**Coordinator: Lt. Peter S. Cooke Jr.**  
**(732) 446-9235**

The Emergency Management Act of 1989, originally known as the Civil Defense Act of 1942, makes it possible to coordinate resources, manpower, equipment and financial assistance from county, state and federal agencies in the event of a local catastrophe.

The State Office of Emergency Management issues guidelines, in the form of a checklist, for development of county and municipal Emergency Operations Plans. These plans are reviewed and updated every four years.

An Emergency Operation Plan describes the organization, responsibilities, capabilities and procedures for municipal response during an emergency. An emergency is an unusual incident by natural or human causes that is too large to be handled by regular municipal services. A natural disaster includes hurricanes, flood or snow storms. An unnatural disaster could be a plane crash, a train derailment, chemical spill or fire.

The Emergency Operation Plan is initiated by the municipal emergency coordinator, who notifies the office of Emergency Management if an emergency or disaster overwhelms local emergency capabilities ( police, fire department, public health, public works and social service agencies) and county assistance is needed. Gary McTighe, the Acting Monmouth County Coordinator of the Office of Emergency Management, coordinates the necessary county, state and federal resources to address the crisis.

As of 2000, all of the 53 municipalities in Monmouth County received state approval of their Emergency Operations Plans (EOP). Monmouth County is the largest county with 100% compliance in New Jersey. This shows that cooperation between the Office of Emergency Management and local municipalities brings tangible results to the residents and businesses of Monmouth County.

**Cpl. Jeffrey K. Jarvis**  
**1st Deputy Coordinator**

**Sgt. Jesse J. Dykstra**  
**2nd Deputy Coordinator**

Emergency Management is responsible for the Borough's all-hazard Emergency Operations Plan. The plan outlines how Fair Haven will function during emergency or disaster conditions.

The office regularly conducts preparedness drills, assists organizations with their emergency plans and seeks to educate the public about the value of emergency preparedness. OEM is actively involved with several county projects including the Hazard Mitigation Plan, Registry Ready, and a Mass Distribution Plan.

Fair Haven OEM is looking for volunteers to assist during an emergency. Volunteers must be at least 18 years of age. For more information contact Lt. Joseph McGovern at 732-747-0241, extension 324.

## Borough of Farmingdale

Known as "Today's Town...with Yesterday's Touch", Farmingdale, and its Main Street, dates back to an Indian path toward the Manasquan River. The town of Farmingdale started out with two stores, two taverns, and 10-12 dwellings.

In 1903, Farmingdale was incorporated into its own independent municipality, encompassing one-half square mile, it was known primarily as a residential and light industrial community. Now, more than a century later, governed by a Mayor and Borough Council, Farmingdale, at 0.5 square miles in land area, is an established residential and light industrial community of approximately 1600 residents. Its vibrant, small town commercial district meets the needs of its citizens, whose well-maintained homes on small lots evoke memories of days gone by. A look around Farmingdale today still speaks of yesterday.

All Hazards Mitigation Plan

The Freehold Township Office of Emergency Management is working with Monmouth County Emergency Management officials to develop a comprehensive Natural Hazards Mitigation Plan. The plan will identify Natural Hazards facing Freehold Township, as well as the entire county, and identify county and local mitigation efforts to reduce damage from future natural hazards.

Among the Natural Hazards identified in the plan are flooding, drought, extreme cold or heat, snow, ice, high winds and tornadoes. The completed plan will include risk assessment and a strategy for mitigating existing or anticipated problem areas.

To view a draft version of the plan, [Click Here](#) to visit the Monmouth County Emergency Management web site. While at the site, you also may complete a 15-question survey regarding Natural Hazards.

**MONMOUTH COUNTY MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN UPDATE**

Monmouth County and its 53 municipalities have been working on the update of the Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan since August of 2012. The draft of the updated plan is expected to be released in the early fall. The first county wide plan was completed in 2009. The plan is a documented evaluation of the natural hazards to which a community is susceptible and the extent to which these events occur. It identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss. Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters.

This plan allows the county and the participating municipalities to apply for pre and post disaster mitigation grant funding through FEMA.

Once released, residents can revise the draft of the plan by visiting [www.monmouthsheriff.org](#), click on the OEM icon and select Hazard Mitigation Planning.

**MONMOUTH COUNTY SHERIFF'S OFFICE, OEM CONTINUES HAZARD MITIGATION PLAN UPDATE PROCESS**

MIAMI GOLDEN SHERIFF

**NEWS RELEASE**

FOR IMMEDIATE RELEASE: CONTACT: MIAMI GOLDEN SHERIFF'S OFFICE  
March 1, 2014 989A6 70277402

**MONMOUTH COUNTY SHERIFF'S OFFICE, OEM CONTINUES HAZARD MITIGATION PLAN UPDATE PROCESS**

MIAMI GOLDEN SHERIFF'S OFFICE (MIAMI GOLDEN SHERIFF'S OFFICE) is pleased to announce that work continues on the Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan update process. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events occur. It identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss. Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters.

"On Thursday February 27, OEM had two working sessions as part of the ongoing Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan update process. The first session included a presentation from the consulting firm URS Corporation, who was lead through a FEMA grant. The session provided municipalities with assistance on the development and documentation of the mitigation strategy. Monmouth County's mitigation strategy is designed to reduce and eliminate risks to people and property from natural hazard events. The next two mitigation strategy sessions will be held in the near future.

"As a result of September 2013, this plan and the information contained within it has been been revised," said Miami Golden, whose agency oversees the Office of Emergency Management. "Based on the needs and risks, the program identified by each town and Monmouth County will help shape the mitigation strategy for the next several years."

#### MONMOUTH COUNTY SHERIFF'S OFFICE, OEM CONTINUES HAZARD MITIGATION PLAN UPDATE PROCESS

Freehold: Sheriff Shaun Golden is pleased to announce that work continues on the Monmouth County Sheriff's Office, Office of Emergency Management (OEM) Hazard Mitigation Plan update process. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur.

On Thursday February 27, OEM held two workshop sessions as part of the ongoing Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan update process. The work sessions included a presentation from the consulting firm URS Corporation, who was hired through a FEMA grant. The sessions provided municipalities with assistance on the development and documentation of the mitigation strategy. Monmouth County's mitigation strategy is designed to reduce and eliminate risks to people and property from natural hazard events. The need for mitigation strategies has increased due to the increase in natural hazard occurrences.

"As a result of Superstorm Sandy, this plan and the information contained within it has never been more important," said Sheriff Shaun Golden, whose agency oversees the Office of Emergency Management. "Based on the hazards and risks, the projects identified by each town and Monmouth County will help shape the mitigation planning for the next several years."

#### MONMOUTH COUNTY SHERIFF'S OFFICE, OEM CONTINUES HAZARD MITIGATION PLAN UPDATE PROCESS

The current Hazard Mitigation Plan was adopted by Monmouth County and municipalities in 2009. Under FEMA guidelines it is required to be updated every five years. The County has taken the lead on the overall planning process to guide the fifty-three municipalities in an effort to meet the FEMA requirements and therefore be able to officially adopt the plan.

Upon completion, Monmouth County OEM will submit the plan to New Jersey OEM and FEMA for final approval. Once approved by those two agencies, each municipality will be required to formally adopt the plan. They will then continue to be eligible for pre and post disaster mitigation grant funding. The County anticipates the draft plan will be available and ready for public comment by late spring of 2014. It will then be posted to the Office of Emergency Management's website.

Please do not hesitate to contact this office with any questions.

Thank you!

## Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan

*Monmouth County and its 53 municipalities have been working on the update of the Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan since August of 2012. The first county wide plan was completed in 2009. The plan is a documented evaluation of the natural hazards to which a community is susceptible and the extent to which these events will occur.*

The plan identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss. Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters.

This plan allows the county and the participating municipalities to apply for pre and post disaster mitigation grant funding through FEMA.

The Draft Monmouth County Multi-Jurisdictional Hazard Mitigation Plan will be available for review beginning October 17, 2014. Residents can view the draft plan for the county and its 53 municipalities by visiting: [www.monmouthsheriff.org](http://www.monmouthsheriff.org), click on the OEM icon and select Hazard Mitigation Planning.

### Hazard Mitigation Plan

Work continues on the Monmouth County Office of Emergency (OEM) Hazard Mitigation Plan update process. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur.

The Monmouth County OEM held several workshop sessions as part of the ongoing Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan update process. The work sessions included a presentation from the consulting firm URS Corporation, who was hired through a FEMA grant. The sessions provided municipalities with assistance on the development and documentation of the mitigation strategy. Monmouth County's mitigation strategy is designed to reduce and eliminate risks to people and property from natural hazard events. The need for mitigation strategies has increased due to the increase in natural hazard occurrences.

The current Hazard Mitigation Plan was adopted by the Monmouth County and municipalities in 2009. Under FEMA guidelines it is required to be updated every five years. The County has taken the lead on the overall planning process to guide the fifty-three municipalities in an effort to meet the FEMA requirements and therefore be able to officially adopt the plan.

Upon completion, Monmouth County OEM will submit the plan the New Jersey OEM and FEMA for final approval. Once approved by those two agencies, each municipality will be required to formally adopt the plan. They will then continue to be eligible for pre and post disaster mitigation grant funding. The County anticipates the draft plan will be available and ready for public comment by summer 2014. It will then be posted to the Office of Emergency Management's website.

### Monmouth County Multi-Jurisdictional Hazard Mitigation Plan

"In 2009 Neptune Township joined with the County of Monmouth and our neighboring communities to develop the "Monmouth County Multi-Jurisdictional Hazard Mitigation Plan".

Natural hazards have the potential to cause property loss, loss of life, economic hardship, and threats to public health and safety. While an important aspect of emergency management deals with disaster recovery those actions that a community must take to repair damages and make itself whole in the wake of a natural disaster an equally important aspect of emergency management involves hazard mitigation. Hazard mitigation measures are efforts taken **before a disaster happens** to lessen the impact that future disasters of that type will have on people and property in the community. They are things you do today to be more protected in the future.

FEMA requires regular updates of approved Hazard Mitigation Plans. The update process has begun in Monmouth County. Part of this process includes public outreach. The Township's Office of Emergency Management is providing this link to the County's Hazard Mitigation Plan Update page as part of the public outreach process.

Neptune OEM will be conducting a number of public presentations on the Hazard Mitigation Plan as the update process continues.

### Office of Emergency Management

#### Organization

The Emergency Management Act of 1989, originally known as the Civil Defense Act of 1942, makes it possible to coordinate resources, manpower, equipment and financial assistance from county, state and federal agencies in the event of a local catastrophe. The State Office of Emergency Management issues guidelines, in the form of a checklist, for development of county and municipal Emergency Operations Plans. These plans are reviewed and updated every four years.

An Emergency Operation Plan describes the organization, responsibilities, capabilities and procedures for municipal response during an emergency. An emergency is an unusual incident by natural or human causes that is too large to be handled by regular municipal services. A natural disaster includes hurricanes, flood or snow storms. An unnatural disaster could be a plane crash, a train derailment, chemical spill or fire. The Emergency Operation Plan is initiated by the Director of Emergency Management or his Deputies, who notifies the county office of Emergency Management if an emergency or disaster overwhelms local emergency capabilities (police, fire

### Natural Hazard Mitigation: What Roosevelt Residents Can Do

by Michael Ticktin

The Monmouth County Sheriff's Office has issued the following notice:

"Monmouth County and its 53 municipalities have been working on the update of the Monmouth County Multi-Jurisdictional Natural Hazard Mitigation Plan since August of 2012. The draft of the updated plan is expected to be released in the early fall. The first county wide plan was completed in 2009. The plan is a documented evaluation of the natural hazards to which a community is susceptible and the extent to which these events will occur. It identifies an area's vulnerability to the effects of natural hazards and the goals, objectives and actions required to minimize future loss. Mitigation is preparation and planning now to reduce loss of life and property later, by lessening the impacts of future disasters.

"This plan allows the county and the participating municipalities to apply for pre and post disaster mitigation grant funding through FEMA.

"Once it is released, residents can review the draft of the all natural hazard-mitigation plan for the county and its 53 municipalities by visiting: [www.monmouthsheriff.org](http://www.monmouthsheriff.org), click on the OEM icon and select Hazard Mitigation Planning."

The Sheriff's Office goes on to state as follows on its website:

"Natural hazards have the potential to cause property loss, loss of life, economic hardship, and threats to public health and safety. While an important aspect of emergency management deals with disaster recovery those actions that a community must take to repair damages and make itself whole in the wake of a natural disaster an equally important aspect of emergency management involves hazard mitigation. Hazard mitigation measures are efforts taken before a disaster happens to lessen the impact that future disasters of that type will have on people and property in the community. They are things you do today to be more protected in the future. Hazard mitigation actions taken in advance of a hazard event are essential to breaking the typical disaster cycle of damage, reconstruction, and repeated damage. With careful selection, hazard mitigation actions can be long-term, cost-effective means of reducing the risk of loss and help create a more disaster-resistant and sustainable community."

Unlike the many other municipalities in Monmouth County that suffered extensive damage during Superstorm Sandy, Roosevelt does not have to deal with the hazard of flooding. While the potential for loss of electrical power remains a concern, it is one that is beyond our control and has to be addressed by JCP&L. The one hazard listed by FEMA and the Sheriff's Office, however, that we can do something about is the potential for wildfire. Every spring and autumn, the Borough arranges for fallen branches to be picked up and disposed of. In the interest of reducing the potential for danger to life and property from wildfire, it is imperative that all residents cooperate in the collection of dead branches from their own properties and, to the extent that they are able to do so, from adjacent woodlands. The next branch collection is planned for early October. Please note the date when it is announced and do your part to ensure that the wildfire hazard is reduced.

### ELECTRONICS RECYCLING

State law now prohibits disposal of computers and TVs with trash. Free drop-off. Program open to all Monmouth County residents, small businesses, and institutions. Limited to one pick-up truckload.

Items accepted:

- Computer cases, CPUs
- Keyboards, Mice
- Monitors, Scanners
- Printers, Cables
- Laptops, Peripherals
- Televisions
- Radios, Cameras
- Telephones
- Copiers, Fax Machines
- VCRs, DVD Players
- Stereo Components

Location:  
MILLSTONE TOWNSHIP  
Dept. of Public Works Garage  
Recycling Center  
899 Perrineville Rd.  
Open on Saturday & Sunday  
8:00 a.m. - 1:00 p.m.

For additional sites within Monmouth County, please visit  
[www.vistmonmouth.com/page.aspx?ID3021](http://www.vistmonmouth.com/page.aspx?ID3021)

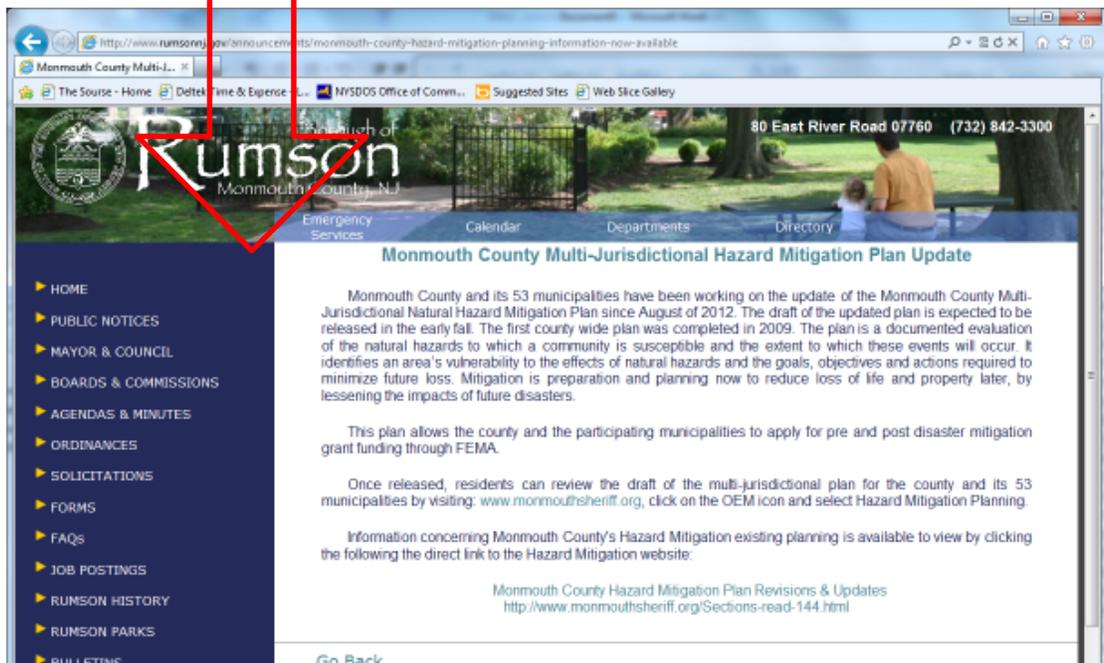

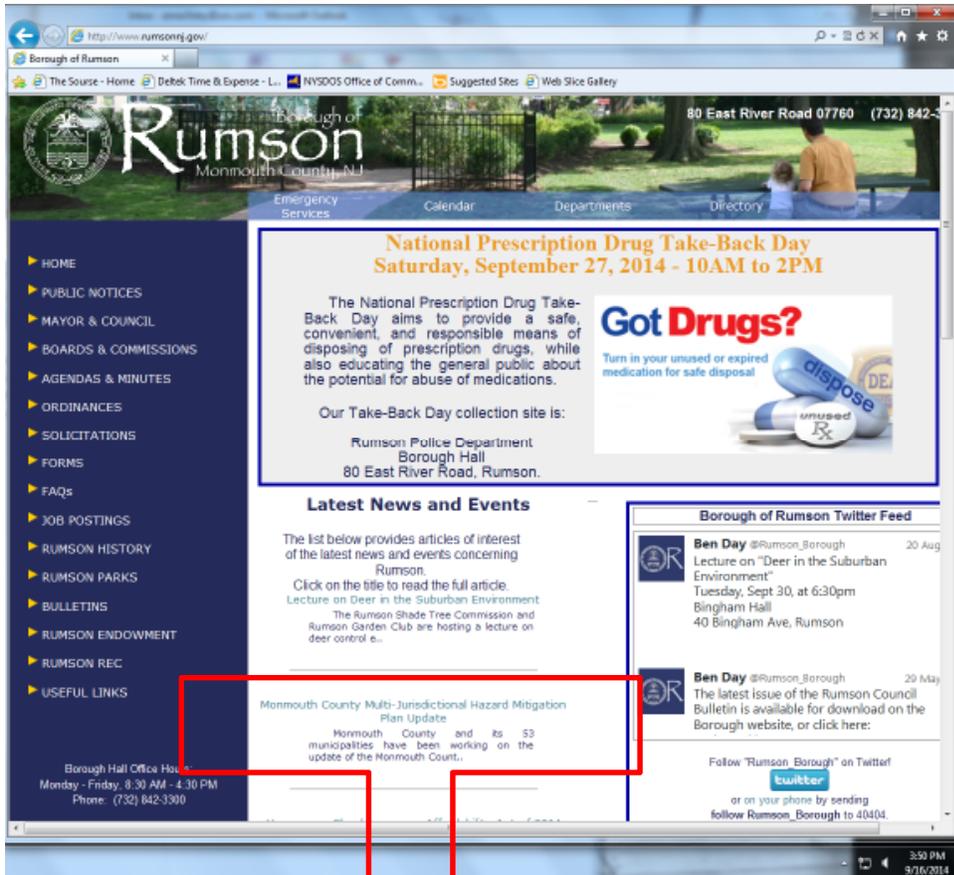

### REMINDER FOR RECYCLING:

Always leave at least 3 feet between your garbage can and recyclable container(s). The arm that lifts the garbage can needs enough room to operate so it can avoid knocking over other containers.

**JCP&L Critical Care List Program**

JCP&L customers who use electrically operated life support equipment or depend on private well water can register their account with the company to get updates on potential interruptions to their electric service, such as weather-related outages during the summer storm season. JCP&L maintains a critical care list of customers who depend on electrically operated life support equipment. To be included on this list, every year customers must complete and submit an authorization form signed by their physician. The list is used to contact customers should an outage affect their electric service for more than 24 hours. JCP&L also has a list of homes and businesses that depend on electrically operated private wells for water. These customers also are notified if a power outage is expected to affect their electric service for more than 24 hours, in which case they would be advised of locations where water and ice are available.

Both the critical care customer and private well customer lists are provided to county and municipal Offices of Emergency Management. To receive additional information and register accounts for the programs call 1-800-662-3115.

**Hazard Mitigation Planning**

Natural hazards have the potential to cause property loss, loss of life, economic hardship, and threats to public health and safety. While an important aspect of emergency management deals with disaster recovery those actions that a community must take to repair damages and make itself whole in the wake of a natural disaster an equally important aspect of emergency management involves hazard mitigation. Hazard mitigation measures are efforts taken before a disaster happens to lessen the impact that future disasters of that type will have on people and property in the community. They are things you do today to be more protected in the future. Hazard mitigation actions taken in advance of a hazard event are essential to breaking the typical disaster cycle of damage, reconstruction, and repeated damage. With careful selection, hazard mitigation actions can be long-term, cost-effective means of reducing the risk of loss and help create a more disaster-resistant and sustainable community.

The following documents are available to view concerning Monmouth County's Hazard Mitigation planning by clicking the appropriate links. Shrewsbury Borough is one of 52 municipalities in Monmouth County that in 2009 has completed a Natural Hazard Mitigation Plan which has been approved by FEMA.

Starting in 2012 all previously approved plans have to be updated. This process is expected to take until May 2013 at which point a draft will be submitted again for approval by FEMA. Below are links to the Plan and plan update resources:

Monmouth County Office of Emergency Management

NOAA Weather for Spring Lake | National Hurricane Center

NJ Office of Emergency Management

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**

The Spring Lake Office of Emergency Management is responsible for the preparation, implementation and oversight of emergency preparedness for the Borough and its residents, the Office is under the direction of the Borough Emergency Management Coordinator and Chief of Police, Edward M. Kerr. Chief Kerr is assisted by borough resident and firefighter, Peter Meade. They are also assisted by representatives of our emergency services, including Police, Fire and First Aid, as well as the Department of Public Works and the Administration. The Office of Emergency Management is committed to constantly improving the safety of our residents. As a part of that effort, the OEM has developed a number of emergency warning methods as described below.

**Warning Systems** - The Borough of Spring Lake has several emergency warning capabilities provide timely information to Spring Lake families in case of emergency.

These warning systems include:

- An AM broadcast station (1640 AM) that broadcasts NOAA weather radio updates daily, and which will include emergency warning messages when appropriate.

### Office of Emergency Management

This page is in the process of being developed. Please visit our Facebook page at <https://www.facebook.com/UFTOEM>

**Remember to properly identify your house for emergency responders: please adhere to the following from our Building and Housing code 11-4.4:**

The street numbers to be displayed for each building shall be visible from the street on the improved premises in question and otherwise separately mounted in an approved manner upon the face of a wall or upon a post in the front yard of the premises. Same shall be sufficiently legible as to contrasting background arrangement, space and uniformity so as to be clearly visible from the street both night and day and reflective or illuminated numbers are required. The numbers shall be so placed that trees, shrubs and other obstructions do not block the line of sight of the numbers from the center of the street (and the property owner shall be responsible for maintaining same and the line of sight). The numbers shall be mounted at a height between four (4) feet and ten (10) feet above the street and adjacent grade.

If the house or building has a setback location of greater than fifty (50) feet, then the owner, occupant or lessee shall also provide a post, rod or other type of fixture of a substantial nature including a mailbox with the number affixed thereon and so located on the premises near where the driveway enters the street so that the numbers shall be conspicuous and visible from both directions of the street upon which the building fronts and comply with all provisions of this section.  
(Ord. No. 17-1993 § 4)

**WALL TOWNSHIP RESIDENTS BEING ASKED TO PARTICIPATE IN ONLINE SURVEY THAT WILL HELP WHEN DEALING WITH NATURAL HAZARDS**

Has your home ever been flooded? Or have you been affected by any other type of natural disaster? Monmouth County residents can now learn more about a comprehensive all natural hazards-mitigation plans for the county and its 53 municipalities, and, complete an online citizen questionnaire at [www.monmouthsheriff.org](http://www.monmouthsheriff.org).

Through a grant, provided by the Federal Emergency Management Agency (FEMA), the Board of Chosen Freeholders contracted with URS Corp. Inc. of Clifton, N.J., to work with county emergency management staff and municipal representatives to update the All Natural Hazards Mitigation Plan. The plan is a documented evaluation of the hazards to which a community is susceptible and the extent to which these events will occur.

Background information about the plan is available on the sheriff's website, and residents are being encouraged to complete the online survey that will help a study team better assess the nature, extent and probability of various hazards in Monmouth County. The 15-question survey will take five minutes to complete.

The goal of the plan is to identify projects that can reduce damages from future natural hazards. The plan will include a risk assessment and a hazard-mitigation strategy.

The primary hazard in Monmouth County is flooding, but other potential hazards to be analyzed include drought, extreme cold, extreme heat, snow, ice, hail, windstorms Nor'easters, Hurricanes, tropical storms and tornadoes, among others.

For more information visit [www.monmouthsheriff.org](http://www.monmouthsheriff.org)

# Mitigation projects would like to see

Nothing from tax money

Tree pruning and maintenance to prevent power outages from downed limbs due to severe summer or winter storms. Cleaning of sewer and drains to help ensure proper drainage during heavy rains.

duck bill type valves placed on drain pipes to prevent backflow of water that drains into the river to prevent roadway flooding

1. identifying & resolving flood-prone roads 2. having tree, snow & ice removal equipment and operators nearby and readily available for response 3. more underground utility lines for electric, phone and TV services

more storm drains and dredging in small creeks and streams

Better drains systems, road grade changes and curbing in Colts Neck on County and State Roads.

I do not believe that we should allot taxes for people who choose to live on the water and have their houses destroyed by a natural disaster, it is their responsibility! I also disagree with providing sand to private beach clubs and limiting sea wall access when our taxes paid for these benefits.

removal of dead trees from around my house

overhead power lines changed to underground; prohibiting excessive building on land that could absorb water to prevent flooding;

My town needs to upgrade its storm water drainage and pumping facilities.

improved curbs, sewers and drain lines starting in residential neighborhoods closest to the coastline

A secured well stocked (food, water, heat, electricity, etc.) off site shelter in the case of a major disaster.

hazardous tree removal.

?

Management of lakes within Matawan Borough.

tree trimming which would protect property and people, reduce down lines, and keep trees from falling on people and their houses.

I am not a homeowner --- I am the sole resident of a rented apartment. No dependents.

stream cleaning and rehabilitation

my house raised

more detention basins and clearing or widening of local rivers that flood. cleaning detention basins. cleaning streets and sewer grates of leaves

sump pump installation in all homes / buildings with basement; ensure drinking water sources are protected from contaminated intrusion

Groundwater contamination

Municipality making sure storm drains are free of debris. Pick up leaves BEFORE storms hit. Advise residents to help by keeping landscape wastes OUT OF THE STREET GUTTERS

We lose power much too often. There should be better resilience in the power grid; perhaps bury more electrical lines underground especially where many trees that could take them down in a storm.

Build levees

People should not be allowed to build homes in high flood areas or close to the ocean. More money should be spent on educating the public about areas that are prone to natural hazards. I'm in favor of letting the land in natural hazard areas go back to it's natural state and stop building in those areas.

Analyze the electricity infrastructure and why 950 JCP&L utility poles were downed; demand that the utility company replaces them with taller, steel poles more resilient to tree damage. Do not allow any new circuits be just hanged low on wooden poles, thus increasing the weight load, and the risk od falling trees catching them. Request the utility company reports in real time the status of individual circuits, with history of any incidents for the component parts.

Improved tree management.

Explore community protection works for inland areas that may be prone to wildfires.

Lifting a house to meet the updated building codes to lesson the risk of flooding

Picture the worst and address it, BEFORE disaster strikes! Spend our money on our Infrastructures and stop wasting it on foreign aid. Send regular mailings and e-mails to residents, reminding them of steps to take and resources available, before, during and after crisis.

te

I would like to see a home I could afford to live in on the salary I make...

More projects for renters and the disabled to help us during disasters. The NJ special needs registry did nothing with these last storms.

Unsure..but educar=tion is #1.

Tree trimming, cleaning trash from streams that may cause flooding, flood control projects, improve electrical grid, more emerency generators

Land preservation to lower risks profiles - off shore buffer zones to reduce wave energy - house raising or buyouts.

Wall around the river, better storm drain system, better protection for borough hall, decrease building on river and ocean

aLLOW BEACH REBUILDING AT EXORBINATELY HIGH INSURANCE RATES A MUST.

Selected neighborhoods that are in harms way, and have had flooding, or other natural disasters that disturb health or living conditions in community.

I would like to see approval in municipal zoning laws to raise houses. I would like to see higher bulkheads around town owned parks, etc.

Stop redeveloping areas/properties that are damaged or destroyed again and again.

NFIP and ICC grants provided to raise structures out of flood elevations due to the increase in frequency of these storms and height of storm surges caused by altering weather patterns.

Whatever makes the community safer. Personally, we would like to further elevate our home, but require financial assistance in order to accomplish this.

upgrade power system

Loss of power is a real problem that I have experienced during severe weather events. Improvements in this area would be beneficial to me to allow me to stay in my home and be informed of what was going on.

Dwelling elevating

back creeks cleaned out of over growth and trash. Beach replenishment and dune replacement

OPEN SPACE / REDUCTION OF HOMES BUILT
fix Shrewsbury River flooding that occurs every full moon!
Flood, power
Flood control projects in Port Monmouth, Belford and Leonardo.
Fix se bright bulk heads, beach replenishment, fix pumps
Cover the streams with proper drainage and clean outs bays need to have some form of barriers and not allow building too close to any of it
Dredge pews creek. Anything to stop flooding in Port Monmouth.
Stop building so the water has somewhere to go...
Making living by the shore more safe and secure for year round residents.
sand dunes, sea walls. buyouts of low lying ares
Remove trees that pose a threat to the electrical lines on the telephone poles and replace poles that have lived their life expectancy.
If I were to raise my home it still wouldn't protect my property. Fences, decks, lawn furniture, these items are not covered with a flood policy. We are in fear of a flood every time there is moderate rain. You can contace me at 732-239-1675.
Stream Flood mitigation
River and stream dredging. Storm drain clean up.
Flood mitigation, roadway improvements
raising homes
house lifting
Buyout programs. I do not believe in rebuilding where a severe disaster has occurred.
Better flood control for the bayshore.
Put a shutoff valve in Port Monmouth near Crown Tire so the bay water doesn't come up through the storm drains. Plus clean them once a year.
flood control/protection/sand dunes/dikes.
Flood control for Port Monmouth and Keansburg Nj.
town wide radio statio not just bayshore
Flood Walls and Locks
Storm Surge Protection, Street Drainage Repairs by flood areas
rezone hirisk areas so that they can not be built on.Help people move out of harms way.
Depends on the situation. Elevations are feasible in some areas, buyouts are the only viable option in others, specifically when the town is victimizing a resident by negligence of their municipal drainage system and using their property as a detention basin.
flood wall house was not in flood area 35 yrs ago when I bought it
a civilian relief project where civilians are trained to be better responders
Less building on coastlines; more land left vacant to become wetlands or marshes; dunes created along beach areas;
Better energy efficiency measures for all homes in Monmouth County. More use of off-grid solar systems when the electric goes off w/battery backups rather than the use of generators.
House Raising Funds for those that can't afford them.
sea walls
Sand dunes/ Flood gates
buyouts

Repair/upgrade of Keansburg beach front (dunes) and flood gates. In my opinion the flood gate and draining the creek during Sandy was a BIG factor in saving the West Keansburg section of Hazlet. My thanks to who ever had that idea!!
I would like to see a mitigation project that protects my family from future storm damage. we would do whatever it takes if we had the funds to do it. We currently have a mortgage besides other bills and can not afford another monthly bill to raise our home
Funding supplemental to ICC coverage. \$30K does not cover costs. There is a typo in your questionnaire #6 MOST EFFICTIVE
sea walls in the ocean to lessen the impact of the water & flooding
Govt buying properties
eliminating flooding conditions
Shore protection, power line protection
I don't know. Nature is more powerful than all of us... nothing protects us from tornados or earthquakes.... stronger windows,elevation in flood zones
get rid of shade tree restrictions in Fair Haven so homeowners don't need a permit to remove trees on their property that endanger their home and power lines
This is a test
TEST ENTRY FROM DANIELLE GARSKE IN DEPARTMENT OF PUBLIC INFORMATION & TOURISM. PLEASE DISREGARD ANY INFORMATION ENTERED
John Zaranka - this is a test - disregard
Meaningful Flood protection measures along the Bayshore area of Monmouth County. Stormwater improvements projects that would assist local towns that are impacted by neighboring community issues.
drainage, upgrade utilities, power and internet recovery
dredging of river and creek/streams that feed into the river storm drains and other measures to move water planting of vegetation
Dunes that are constructed properly; not like the previous ones which were too high and not deep enough; sand ended up in/on beachfront, 1st avenue and inlet homes and made the water more powerful when it hit our homes and so it did more damage; put temporary barriers or sandbags along the inlet to prevent damage.
The town built higher. The sea wall built higher. The roads raised higher. The bulkheads built higher. The whole town higher. The Beach sand raised higher still. A 300 year plan
Buyouts of areas like Seabright that are rebuilt again and again.
Sea walls, Sea gates at inlet to ocean, reinforced dunes on beaches
Dunes!
Our emergency services are great they have a radio station and many other things. I would want a engineered dune system our dune was gone on the morning tide on day of the storm never was around for the night high tide
Beach replenishment
Sustainable Designed Mitigation Projects that work WITH the landscape and not AGAINST it. Projects that take note of how nature wants to act and then allows it to do so. Projects that dont fight nature with mans engineering. Nature will always do what it wants and in time will succeed as we saw from Sandy.
Engineered dunes. I have been told that my house cannot be raised. Therefore sand bags available for purchase would be helpful.

Better electrical back-up systems. HELPFUL National Guard and police acting concerned and not acting like you are a criminal for not evacuating the neighborhood. Better control of information across the agencies. Faster Response time from local governments.

Sump pumps should not be allowed to drain into the street - as "standing water" is illegal, this is the same thing. The water sits on the side of Brielle Rd. & smells horribly, also drawing mosquitos which is a health hazard.

Dune replenishment

Schoene Seite :)

Interessante Website. Das Design und die nuetzlichen Informationen gefallen mir besonders.

Ich bin gerade zufaellig auf Ihrer Webpage gelandet (war eigentlich auf der Suche nach einer anderen Homepage). Ich moechte diese websiete nicht verlassen, ohne Dir ein Lob zu dieser gut strukturierten und schick designten Seite zu hinterlassen!

Flood protection storm mitigation

**APPENDIX 1.14 – COMMENTS ON THE OCTOBER 2014 DRAFT PLAN**

#	Comment	Comment Submitted By	Disposition (Concur; non-concur)	Response	Responsible Party	Action taken
1	<b>SECTION 2: Hazard Identification</b> Land subsidence is not identified in the HMP as one of the significant hazards facing Monmouth County. I have made a number of inquiries on this topic. At this time, a formal study has not been performed to effectively document the extent to which land subsidence is or is not taking place in Monmouth County. Rutgers University is planning to quantify Sandy Hook subsidence and other areas of Monmouth and Ocean County under renewal of a sea grant proposal. If subsidence is taking place, it could accelerate the effect of sea level rise. Although the threat from land subsidence does not appear eminent at the moment, until such time that a study is conducted that provides more data and insight into the situation, the Division of Planning suggests reserving this discussion to the County's Comprehensive Master Plan within the context of a "Long Range Challenge". This issue should be revisited during the next HMP update.	County Official	concur	County will ask URS to review their source for the information provided in the Hazard ID section; County will revisit and review as appropriate during annual revisions as well as the 5 year plan update	County/URS	Submitted to URS 11/21/14; will send CD of comments CD. <b>URS: no new information on land subsidence identified; no edits made to HMP.</b>
2	<b>SECTION 3A: Risk Assessment- Hazard Profiles</b> There are discrepancies between the data presented in Table 3a.11 and the map shown in Figure 3a.6. Millstone Township: The table shows two events, one EF0 and one EF1 whereas the map displays two F1 storms; Manalapan Township: The table shows one EF2 event whereas the map does not indicate or show the location of a storm event in the Township; Middletown Township: The table shows one EF0 event whereas the map does not indicate or show the location of a storm event in the Township; Highlands Borough: The table shows an EF0 event whereas the map indicates an EF1 event.	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS 11/21/14; will send CD of comments CD. <b>URS: Concur; edit made to Figure 3a.6 to match table. Note: the location for the Highlands/Middletown tornado is shown on the border of the two communities, as the tornado affected both.</b>
3	<b>SECTION 3D: Land Use and Development Trends</b> There have been a number of data updates since this section of the HMP was completed early in the documentation process. Upon request, our office can provide the updated "point-in-time" information prior to final HMP approval including the current amount of County open space, number of farms preserved, and the amount of farmland preserved.	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS 11/21/14; will send CD of comments CD. <b>URS: This comment was forwarded to Mike Oppgaard to request information from County Planning; if available, information can be added to the final HMP or to the next update of the HMP.</b>

4	<p><b>SECTION 3D: Land Use and Development Trends</b> Since this HMP's inception, the Division of Planning's organization structure has been somewhat modified compared to what is presented in the draft plan. Upon request, our office would be glad to modify this section for you prior to final HMP approval</p>	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS 11/21/14; will send CD of comments CD. <b>URS: This comment was forwarded to Mike Oppgaard to request information from County Planning; if available, information can be added to the final HMP or to the next update of the HMP.</b>
5	<p><b>SECTION 3D: Land Use and Development Trends</b> We suggest adding a discussion about the County Master Plan Update which will eventually replace the existing County Growth Management Guide. Upon request, our office can provide you with appropriate language</p>	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS 11/21/14; will send CD of comments CD. <b>URS: This comment was forwarded to Mike Oppgaard to request information from County Planning; if available, information can be added to the final HMP or to the next update of the HMP.</b>
6	<p><b>SECTION 3D: Land Use and Development Trends</b> Although growth in Monmouth County is expected to continue through 2040, it is anticipated to occur at a slower rate than that which was projected in the 2005 Cross Acceptance report. Therefore, the HMP should only rely on the latest NJTPA 2040 projections for the discussion on population projections.</p>	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS 11/21/14; will send CD of comments CD. <b>URS: In preparing the HMP, the source of population projections to 2040 was a 2012 forecast prepared by the North Jersey Transportation Planning Authority (NJTPA) in November 2012 in consultation with the Monmouth County Department of Planning. (See Table 1.1 for an example).</b>
7	<p><b>SECTION 3D: Land Use and Development Trends</b> During the next decade, there will be a shift away from the traditional suburban growth patterns we have been experiencing in Monmouth County since the 1940s to more of a redevelopment focus. Most of this redevelopment is expected to occur in coastal communities. In order for the HMP to be consistent with the conversation being framed in the County Master Plan update, it is suggested that less emphasis be placed on the term "growth" and more in terms of growth coinciding with redevelopment. Therefore, it is important that the first sentence under the section Development Trends (p 3.d-21), "Monmouth County can be characterize in one word: growth" must be removed.</p>	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS 11/21/14; will send CD of comments CD. <b>URS: Edit made to page 3.d-14.</b>

8	<p><b>SECTION 6: Mitigation Strategies</b> This section does not identify the NFIP CRS Program nor does it include CRS as an Action for any of the Goals. Identifying CRS as an Action can most likely fit under: Goal 1: Promote disaster resilient development; Goal 2: Build and support local capacity to enable the public to prepare for, responds to and recover from disasters; Goal 4: Reduce the possibility of damage and losses due to flooding caused by floods, hurricanes and nor' esters.</p>	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS 11/21/14; will send CD of comments CD. URS: text describing CRS participation as an new Action added to Table 6.1, under Goal 1.
9	<p><b>EXECUTIVE SUMMARY</b> Please indicate on p. iii that the HMP was also mentioned at the 10/20/14 meeting of the MCPB.</p>	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS 11/21/14; will send CD of comments CD. URS: edit made to Executive Summary, page iii.
10	<p><b>STRATEGIC RECOVERY PLANNING REPORTS (CDBG-DR)</b> The New Jersey Department of Community Affairs is administering grants through the HUD Community Development Block Grant-Disaster Recover (CDBG-DR) fund to support long range planning for community redevelopment in Sandy affected communities. In order for a town to be eligible for the grant, it must produce a Strategic Recovery Planning Report. The purposed of this report is to evaluate the impacts of the disaster on the community and identify actions for recovery and reduced vulnerability. Numerous towns in Monmouth County have conducted these studies. It is important that the HMP discuss DCA's Post Sandy Assistance Grant and incorporate the findings of each municipal Strategic Recovery Planning Report into the overall HMP, recognizing the local hazard mitigation activities identified in each report.</p>	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS 11/21/14; will send CD of comments CD. URS: this comment was forwarded to Mike Oppogard to request copies of Strategic Recovery Planning Report; if available, a summary can be added to the final HMP or to the next update of the HMP.
11	<p>Appendix 1.3: FEMA Mitigation Strategy Workshops, 1c-Mid Monmouth, on Pg 2 change Bayshore to Mid Monmouth</p>	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS on 11/21/14. URS: edit made.

12	Appendix 1.3: FEMA Mitigation Strategy Workshops, 1d-South region, on Pg 2 change Western Region to South Region	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS on 11/21/14. <b>URS: edit made.</b>
13	Appendix 1.3 Meetings; 12/16/13 Steering Committee Meeting, no sign in sheet available, take out placeholder info	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS on 12/8/14. <b>URS: Placeholder note removed.</b>
14	Appendix 1.3 Meetings; 4/3/14 Steering Committee Meeting, no sign in sheet available, take out placeholder info	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS on 12/8/14. <b>URS: Placeholder note removed.</b>
15	Revisions to County Worksheet #7's. Completed revisions to #13, #17 and #19 on SharePoint	FEMA/State Official	concur	URS will review and revise as appropriate	URS	Submitted to URS on 12/8/14. <b>URS: Revised worksheets 13, 17, and 19 added to County worksheets in Appendix 1.9</b>
16	County Worksheets #7's: #10 and #11 are more preparedness/response than mitigation	FEMA/State Official	non-concur	County revised wording on #10 and #11, keep these two actions in the plan as part of the County Mitigation Strategy.	County/URS	Submitted to URS on 12/8/14. <b>URS: no edits made to HMP.</b>
17	Revisions to County Worksheet #7's. Completed revisions to #10, #11 and #15 on SharePoint	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS on 12/8/14. <b>URS: Revised worksheets 10, 11, and 15 added to County worksheets in Appendix 1.9.</b>
18	Revisions to County worksheet #6 (Plan Integration)	County Official	concur	URS will review and revise as appropriate	URS	Submitted to URS on 12/8/14. <b>Revised Worksheet 6 added to Appendix 1.8.</b>

#	Comment	Comment Submitted By	Disposition (Concur; non-concur; will evaluate)	Response	Responsible Party	Action taken
1	In Table 3d.3, and in an earlier table of population data, the number of which I did not note at the time, there is a projected increase of 8 in the population of Roosevelt from 2010 to 2040. However, the table then gives the total of 882 plus 8 as 902, when it should be 890, unless the intention was to say that the population would increase by 20, rather than 8. Actually, given that the population went down from 2000 to 2010, and no new housing is going to be built, it is quite likely that even an increase of 8 might not happen.	Roosevelt Municipal Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 10/31/14. URS: Table entry has been changed to correct value of 900 (Table 3d.1-2, Appendix 3.1)
2	In Table 3b.3, it says that Roosevelt has one police station. This is incorrect. Roosevelt has no local police and no police station.	Roosevelt Municipal Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 10/31/14. URS: edit made to HMP.
3	In Table 3b.4, it says that Roosevelt has two schools or childcare facilities. There used to be a separate pre-school in another building, but it is now part of the public school, which is now the only school or childcare facility in Roosevelt.	Roosevelt Municipal Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 10/31/14. URS: edit made to HMP.
4	Table 3c.27 refers to loss from coastal erosion. Since we are nowhere near the coast, we are not likely to have any loss from coastal erosion.	Roosevelt Municipal Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 10/31/14. URS: Concur; Table 3c.27 has a dollar value of \$0 for coastal erosion losses in Roosevelt.
5	Table 3d.10 refers to ten developable parcels, some of which are in flood-prone areas. Since the only flood-prone areas shown by the maps are in publicly-owned open space, and I can think of only five possible lots, or potential lots, where houses could be built in the whole municipality, I would be interested to know where those developable parcels are.	Roosevelt Municipal Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 10/31/14. URS: Concur; Roosevelt's entry in table has been removed.
6	How was the \$37,000 exposure of existing improvements for flood loss determined? Would this be at the sewage treatment plant? If you can, please provide more information about the risk that the plan identifies.	Roosevelt Municipal Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 10/31/14. URS: Yes, the sewage treatment plant is the existing improvement identified in the floodplain. The dollar amount shown in Table 3c.25 is the assessed building value in the floodplain (in this case, the sewage treatment plant).

7	In reviewing the plan, I see Oceanport is expected to have an increase in population of 35/39% over the next 30 years. That prompted this question: in doing Oceanport risk, was the property within Fort Monmouth, which is within our borders and will be add to our tax rolls, included in all matters?	Oceanport Official	Will evaluate; concur	URS will review	URS	URS: The parcel data GIS file we received from the County includes eleven parcels belonging to Fort Monmouth within Oceanport. Nine of these have a value in the Building Assessment field. The total building assessment value for the Fort parcels within Oceanport is \$15.4 million. These parcels were included in the analysis and are within the reported 'total assessed value of improvements' of \$518.6 million and taken into account when estimating damages. The population projections in Table 1.1 for year 2040 were provided to us by County Planning staff; (estimated by NJTPA, in consultation with County Planning).
8	Table 1.6 - I attended a meeting on August 12, 2013 that does not appear in the chart	Loch Arbour, Official	Will evaluate	No meeting scheduled on that date	County/URS	submitted to URS 11/7/14. URS: Per County response, no edit made to HMP.
9	Table 3c.23 - The Municipal Building should be included as a critical structure. It is within FIRM zone AE 10	Loch Arbour, Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/7/14. URS: While it is an important public facility, a Municipal Building does not meet the FEMA definition of a critical facility, which was applied to the HMP.
10	Table 4.4 - Missing: "In review of the capability assessment, the Village has classified all community response as moderate to high. The Village has actively worked to protect the shoreline along Edgemont Drive (Bulkhead replacement). To help protect future construction and residents, the Borough has adopted the State Model Flood Damage Prevention Ordinance	Loch Arbour, Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/7/14. URS: Edit made to Table 4.1 in HMP.
11	Table 4.3 - Missing items	Little Silver, Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/7/14. URS: Added check marks to "Capital Improvements Project Funding" and "Incur Debt through General Obligation Funds" categories
12	The Borough of Little Silver would like to add an additional worksheet 7 to support a regional dyke improvement to the Sandy Hook Inlet. The regional dyke system would protect the Navesink and Shrewsbury Rivers municipalities from storm surge	Little Silver, Official	Will evaluate; concur	Request URS include the additional worksheet 7 into the revised draft plan as an additional worksheet in Little Silver's mitigation strategy	County/URS	submitted to URS 11/7/14. URS: The additional worksheet for Little Silver has been added to Appendix 1.9.

13	<p>Table 3e.6 identifies the following Key Risk for Monmouth County: "... There is a disconnect in some communities between local master plans and floodplain management issues." Sometimes new hazard information and flood maps are not used to update zoning, resulting in poor land use decisions. This should be accounted for in the plan by encouraging a review and update of land use policies. Only 18 of the 54 municipalities indicated that they would update or change local planning and regulations as a mitigation action. This should be central to preparing townships for the increased hazards expected to occur with climate change. Some municipalities have developed ordinances to prevent development in the floodplain to reduce the number of people and structures at risk. This is a difficult but necessary change for municipalities to undertake and should be encouraged in all municipalities affected by flooding.</p>	NY/NJ Baykeeper	Will evaluate; concur	The County will work with the NY/NJ Baykeeper and the municipalities to clarify jurisdictional responsibility and cost of implementation for future action.	County and municipalities	submitted to URS 11/17/14. URS: No edit made to HMP.
14	<p>Although most municipalities are in compliance with the NFIP and require, or are now beginning to require, one foot of freeboard above base flood elevation (BFE), this does not provide a buffer against increasingly severe storms and flooding due to climate change and sea level rise. The Bayshore and coastal towns need to begin requiring a minimum of two feet of freeboard as a hazard mitigation action. This was seen as an efficient flood protection measure in Sea Bright where the houses that were raised to BFE plus two feet freeboard saw minimal, if any damage, even though flood water exceeded the state minimum one foot freeboard mark.</p>	NY/NJ Baykeeper	Will evaluate; concur	The County will work with the NY/NJ Baykeeper and the municipalities to clarify jurisdictional responsibility and cost of implementation for future action.	County and municipalities	submitted to URS 11/17/14. URS: No edit made to HMP.

15	Keansburg identified a project to buy vacant properties that were repetitively damaged and convert the land to open space. Keyport identified 9 flood-prone properties for acquisition. The state Blue Acres program was not listed as a potential funding source. The municipalities should look into working with Blue Acres to acquire the properties	NY/NJ Baykeeper	Will evaluate; concur	Forwarded to Keyport and Keansburg officials for review and consideration	Keyport and Keansburg	submitted to URS 11/17/14. <b>URS: No edit made to HMP.</b>
16	Section 3a page 59 discusses repetitive loss properties. These properties are a strain on already taxed financial resources and all municipalities with repetitive loss properties should have action plans on how to address these properties.	NY/NJ Baykeeper	Will evaluate; concur	The County will work with the NY/NJ Baykeeper and the municipalities to clarify jurisdictional responsibility and cost of implementation for future action.	County and municipalities	submitted to URS 11/17/14. <b>URS: No edit made to HMP.</b>
17	The county as well as a small portion (~30%) of municipalities included a proposed action of starting a public outreach program to inform residents of natural hazard risks and how to prepare themselves and their property. We highly support this initiative and are pleased to see that so many municipalities are taking action on this. The majority of municipalities, however, did not include an outreach action of this nature. What is the reason that these municipalities have not included this low cost initiative? Do they already have such programs in place?	NY/NJ Baykeeper	Will evaluate; concur	The County will work with the NY/NJ Baykeeper and the municipalities to clarify jurisdictional responsibility and cost of implementation for future action.	County and municipalities	submitted to URS 11/17/14. <b>URS: No edit made to HMP.</b>
18	P3a-13: The Township of Neptune had several wind issues as a result of Sandy. Two (2) radio towers had the top section sheared off as a result of Sandy, the Ocean Grove Auditorium lost a portion of the roof as a result of Sandy and the Unexcelled Fire Company located along Highway #33 suffered roof damage and partial collapse as a result of Sandy	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. <b>URS: Text added to page 3a.13 to describe wind issues related to Sandy.</b>

19	P 3a-30: Neptune Township suffered Beach Erosion during the 1992 Northeast. Ocean Grove also lost portions of the boardwalk during this storm and there was localized flooding. There were evacuations along North Island/South Concourse area along with localized flooding. In the Shark River Hills area there were road closures and localized flooding along with property damage	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: text added to page 3a.30.
20	P3a-33: Table 3a.11 Revise Table to show magnitude one (1) Tornado EF0	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Table 3a.11 revised to show one EF0 tornado in Neptune Township.
21	P3a-55: Under "other notable events" add the following for Neptune: The Shark River Hills and North Island section of Neptune frequently floods on moon high tides, heavy rains and certain storm events. There are been some recent mitigation projects in this area, but more mitigation is needed to protect both homes and infrastructure. The Ocean Grove Section of Neptune experiences flooding during certain tidal and heavy rain events. The coastal lakes, Fletcher and Wesley also present issues during high tides and heavy rains	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Text added to describe flooding events on page 3a.58.
22	P 3a-61: The map does not show repetitive losses in the Neptune area. Based on current information there are repetitive loses in both the Ocean Grove and the Shark River Hills area of Neptune.	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: map revised to show repetitive loss clusters in Ocean Grove and Shark River Hills sections of Neptune Township.
23	P3a-68: Historical Occurrences-Wave Action: Sections of Shark River Hills in Neptune Township experienced wave action during Sandy. The wave action encroached this area for approximately one (1) block. The Ocean Grove section of Neptune Township experienced wave action during Sandy and also during the 1992 Northeast storm. This wave action took out the fishing pier portions of the boardwalk and dunes during Sandy. During the 1992 Northeast sections of the boardwalk were lost along with some dune damage	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Text added to describe historical occurrences of wave action, page 3a.73.

24	P3b-1 Table 3b.1: Neptune Township has 11125 parcels, 10730 are improved and the total assessed value of improvements is \$1,631,836,200. These updated numbers shall be carried through all the tables and calculations	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Valuations and parcel counts for all municipalities were taken from 2012 parcel data provided by Monmouth County. These values have not been updated to 2014 levels.
25	P3b-3 Table 3b.2: Neptune Townships has one (1) EOC and six (6) fire Stations	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Edit made to Table 3b.2.
26	P3b-4 Table 3b.3: Neptune Township has one (1) Potable Water Treatment Facility and zero (0) airports	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Edit made to Table 3b.3.
27	P3-6 Table 3b.4: Update charts for Schools/Child Care to fifteen (15) and Senior Care Facilities to four (4)	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Edit made to Table 3b.4.
28	P3c-34 under Flood Impacts Add the following: In the Township of Neptune there are several areas that experience flooding for different reasons. In Shark River Hills section high tides, moon tides and heavy rain produce flooding along low lying roadways and properties. There are residential properties and critical infrastructure, pump stations in this area that experience flooding	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Text added to page 3c-34.
29	P3c-34 under Flood Impacts Add the following: In the Township of Neptune, North Island along South Concourse, this area also experiences flooding due to high tides, winds, moon tides and heavy rains. Residents frequently have to be evacuated. The flooding impacts businesses, residents and critical infrastructure, pump stations, in this area.	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Text added to page 3c-34.
30	In the Ocean Grove section of Neptune Township the area around Fletcher Lake frequently floods during heavy rains and high tides	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Text added to page 3c-34.
31	P 3c-41: The use of the decimal point for the Table is confusing. No other tables have the decimal point for the cents and it makes the numbers look unusually large. Just a comment	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Concur; decimal points for cents have been removed.

32	P 3c-65 Table 3c.23: There are five (5) public works buildings located in the Flood Zone, two (2) located in the Storm Surge Area, one (1) in the Coastal Erosion zone, two(2) in the wildfire zone.. For Schools/Child Care Facilities there are zero (0) in the Storm Surge area and one (1) in the Wildfire area. There are two (2) Senior Care Facilities in the Storm Surge area	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Table 3c.23 has been revised.
33	P 3c-72: Table 3c.24: Ocean Grove is defined as the entire community from the Atlantic Ocean to the east to Highway #71 to the west, Fletcher Lake to the south and Wesley Lake to the North. The following columns should be checked: Flood/Wave Action /Storm Surge/Coastal Erosion/and Added if Moderate Sea Level Rise by 2050	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: The geographic description of Ocean Grove has been added to the table.
34	Page3d-7: Table has no header	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: This has been fixed in the text.
35	Page 3d-14: The total number of Open Space is 212.04 acres based on the 2012 ROSI. Table 3d.6 should be updated with this information	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Table 3d.6 lists parcels of open space, and not acreages. For further information on methods used, please see footnote on page 3d.32, Section 3 - Land Use and Development Trends.
36	Page 3d-33: Add the following to Regulations/Codes/Ordinances to Protect New Development from Natural Hazards," All applicable development has to also comply with stormwater regulations."	Neptune Township Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Text added to HMP, page 3d-27, Table 3d.4.
37	See revision to Community Action #2 - added some verbiage about Flood Risk Reduction Infrastructure Improvements along the creek.	Atlantic Highlands Official	Will evaluate; concur	URS will review and revise as documented	URS	submitted to URS 11/17/14. URS: Revised worksheet has been added to appendix.
38	Under military installations, why doesn't it list NWS Earle?	Ocean Twp. Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: Text has been added to Section 1 to include NWS Earle in the description of military installations.
39	Table 1.6 states that Ocean is a part of the steering committee and failed to attend a meeting. I didn't realize I was a part of that committee nor did I receive any emails about attending a meeting.	Ocean Twp. Official	Will evaluate; concur	County responded directly regarding this comment. Ocean Township was not part of the Steering Committee, therefore, there would be no check mark for Ocean Township in those columns.	County	Explanation emailed directly to Ocean Township official. URS: no edit made to HMP.

40	Why wasn't hailstorm added to the Hazard ID and if it's not listed and we get a damaging hail storm, would that affect mitigation money HMGP?	Ocean Twp. Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: From the review of historical hazards and events, hailstorm was not found to be a significant hazard in Monmouth County.
41	Table 3A.1....dam failure...we had an issue with the Mayer Dam where it didn't breach but it didn't work properly causing a flooding issue. Would that count?	Ocean Twp. Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/17/14. URS: No, "dam failure" is defined as breaching of the dam structure. No edits made to HMP.
42	Add additional project worksheet to address Flooding on Sea Girt Avenue at Rt. 71	Sea Girt Official	Will evaluate; concur	Request URS include the additional worksheet 7 into the revised draft plan as an additional worksheet in Sea Girt's mitigation strategy	County/URS	Emailed worksheet to URS on 11/17/14; submitted on spreadsheet 11/19/14. URS: The additional Worksheet 7 has been added to Appendix 1.9
43	Worksheet #1: Remove Stephen Pfeffer as CFO and replace with Thomas Fallon. The email address should also be updated to tfallon@tintonfalls.com; Remove Gerald Turning as Administrator and replace with Michael Muscillo. The email address should also be updated to mmuscillo@tintonfalls.com; Remove Mike Skudera as Mayor and replace with Gerald M. Turning Sr. The email address should also be updated to mayor@tintonfalls.com	Tinton Falls Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS on 11/19/14. URS: Edits made to Worksheet #1.
44	Worksheet #6: Line Item #6.A, page 3 of 5, I recommend the activity be checked as undertaken in the past five years; Line Item #6.B, page 3 of 5, I recommend the following text be inserted "The OEM has been significantly overhauled and strengthened in recent years. Response during emergency situations has improved dramatically. The Borough has made significant investments and commitments to equipment, policy updates, training, and personnel."; Line Item #8.A, page 3 of 5, I recommend the activity be checked as undertaken in the past 5 years; Line Item #7, page 5 of 5, I recommend that activity be unchecked; Line Item #12, page 5 of 5, I recommend that activity be unchecked	Tinton Falls Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS on 11/19/14. URS: Edits made to Worksheet #6 as indicated.
45	Red-lined Worksheet #1 with recommended updates	Rumson Official	Will evaluate; concur	URS will review and revise as appropriate	URS	Forwarded email directly to URS 11/17/14; submitted with spreadsheet on 11/19/14; will send CD of comments. URS: Red-lined Worksheet #1 has been added to Appendix 1.2

46	Red-lined Worksheet #6 with recommended updates	Rumson Official	Will evaluate; concur	URS will review and revise as appropriate	URS	Forwarded email directly to URS 11/17/14; submitted with spreadsheet on 11/19/14; will send CD of comments. <b>URS: Red-lined Worksheet #6 has been added to Appendix 1.8.</b>
47	Red-lined Worksheet #7, Community Action Numbers 1 through 11 with recommended updates	Rumson Official	Will evaluate; concur	URS will review and revise as appropriate	URS	Forwarded email directly to URS 11/17/14; submitted with spreadsheet on 11/19/14; will send CD of comments. <b>URS: Revisions to worksheets have been made to Appendix 1.9</b>
48	Worksheet #7 Community Action Numbers 12 through 21 recommended 'New Actions'	Rumson Official	Will evaluate; concur	<i>Request URS include the additional worksheet 7 into the revised draft plan as an additional worksheet in Rumson's mitigation strategy</i>	URS	Forwarded email directly to URS 11/17/14; submitted with spreadsheet on 11/19/14; will send CD of comments. <b>URS: New worksheets have been added to Appendix 1.9</b>
49	PDF Page 52 – Table 2.2 states that FEMA Q3 data was used for the hazard identification, however Section 3 indicates that the newer Preliminary Maps from 2013 were used. Suggest revision to Table 2.2 to be consistent with Section 3.	Rumson Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS on 11/19/14; will send CD of comments. <b>URS: Concur, Table 2.2 edited to be consistent with Section 3. Reference to Q3 mapping replaced with reference to 2013 Preliminary maps.</b>
50	PDF Page 104 – First paragraph, first sentence, change word "bother" to "both"	Rumson Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS on 11/19/14; will send CD of comments. <b>URS: Edit made.</b>
51	PDF Page 114 – Revise number of Non Mitigated Repetitive Loss Properties in Table 3a.15 from 86 to 41 to reflect Post-Sandy mitigation success in Rumson. Other loss information in the table will need to be revised as well. The Borough can provide a list of RL and SRL properties that have been mitigated via elevation or demolition.	Rumson Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS on 11/19/14; will send CD of comments. <b>URS: Table has been edited to change number of repetitive loss properties from 86 to 41.</b>
52	PDF Page 190 – Table 3c.14, suggest rounding the Estimated Potential Losses to reflect the same level of precision as the other information in the table.	Rumson Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS on 11/19/14; will send CD of comments. <b>URS: Edit made to remove cents from dollar amounts.</b>
53	New Project worksheet #7 Action 8-Flood barrier at the mouth of the Shrewsbury River	Highlands Official	Will evaluate; concur	<i>Request URS include the additional worksheet 7 into the revised draft plan as an additional worksheet in mitigation strategy</i>	URS	worksheet emailed to URS on 11/19/14. <b>URS: New worksheet added to Appendix 1.9.</b>
54	New Project worksheet #7 Action 9-Flood barrier at the mouth of the Shrewsbury River	Oceanport Official	Will evaluate; concur	<i>Request URS include the additional worksheet 7 into the revised draft plan as an additional worksheet in Oceanport's mitigation strategy</i>	URS	worksheet emailed to URS on 11/3/14 directly from Oceanport Official. <b>URS: New worksheet added to Appendix 1.9.</b>

55	<p><u>Table 3c.11</u> Using MOD IV parcels extracted on 04/02/14 and the Preliminary FIS from 01/21/2014, we have calculated building exposure values in the same way as in the Multi-Jurisdictional Natural Hazard Mitigation Plan. The building assessment value referenced in the document comes from the Building Assmnt field in the parcel data. Our calculations differ. The likely reason for the difference between the two tables stems from the different data inputs used in the analysis. The parcel layer, MOD-IV assessment values and floodplain boundaries used in the original analysis for the Mitigation Plan are older versions and, therefore, yield different results as compared to newer datasets. We feel that the discrepancy in data presented in these results warrants a re-analysis by the consultant, URS.</p>	Keansburg Official	Will evaluate; concur	URS will review and revise as appropriate	URS	<p>submitted to URS 11/19/14; comments will be sent on CD. <b>URS: The hazard analysis performed on all municipalities was done using 2012 data (most current available at that time). To keep consistency in report, no reanalysis with 2014 data has been done. The County can incorporate 2014 (or later) data in the next update to the HMP.</b></p>
56	<p><u>Table 3c.26</u> Using Census Blocks from 2010 and the Preliminary FIS from 01/21/2014, we also calculated the number of at-risk people the same method as in the Multi-Jurisdictional Natural Hazard Mitigation Plan. In addition to the Preliminary FIS, the storm surge data comes from the SLOSH surge model. Our calculations, using the aforementioned data, differ from the calculations in the Draft Plan. The percentages are extremely close, within a percentage point to be exact. This shows that the values represented in the Multi-Jurisdictional Natural Hazard Mitigation Plan represent Keansburg well in comparison to other jurisdictions. The method used in the plan is not meant to give the exact population in the floodplain, but can give a rough estimate and means to compare the municipalities. The discrepancies between two tables are due to the fact that the Multi-Jurisdictional Natural Hazard Mitigation Plan used a 2013 floodplain. The numbers used to check the plan are based on the 2014 Preliminary FIS which is likely a later, more refined version of the 2013 floodplain used in the plan.</p>	Keansburg Official	Will evaluate	URS will review and revise as appropriate	URS	<p>submitted to URS 11/19/14; comments will be sent on CD. <b>URS: Concur, no edits made to HMP.</b></p>

57	<p><u>Table 3c.28</u> Without re-running HAZUS to obtain the multiple returns, the only statement that can be made on this table is that the values in the table appear to be accurate in comparison to other jurisdictions. For example, the Annualized Loss Ratio for Storm Surge in Keansburg is the highest in the county. As shown in Figure 1, most of Keansburg is inundated with a Category 1 Hurricane. Additionally, The Annualized Loss Ratio for Riverine Flooding is the 2<sup>nd</sup> highest in the county. Wave action losses are low simply because there is little area covered by VE zones in Keansburg. The flood zones in Keansburg are represented in Figure 2.</p>	Keansburg Official	Will evaluate	URS will review	URS	submitted to URS 11/19/14; comments will be sent on CD. URS: No edits made to HMP.
58	<p><u>Table 3d.8</u> The Land Uses and Development Trends in this table appear to accurately reflect those of the Borough. The Regulations/Codes/Ordinances to Protect New Development from Natural Hazards should be revised to note that the Borough has enacted a Floodplain Management Ordinance, and that it was most recently amended on March 27, 2013. This Ordinance establishes area of Coastal Hazards and Coastal High Hazards. It institutes the need for a development permit for any development within any area of special flood hazard, lists provisions for Flood Hazard Reduction as it relates to Anchoring, Construction Materials and Methods, Utilities, Subdivisions and Enclosures. The Floodplain Management Ordinance sets specific requirements, including minimum elevations and other such building standards for Residential and Non-Residential Construction to the most restrictive current standards. It should also be noted that the Borough is currently moving forward with DCA funded updates to the current Floodplain Management Ordinance.</p>	Keansburg Official	Will evaluate	URS will review and revise as appropriate	URS	submitted to URS 11/19/14; comments will be sent on CD. <b>URS: Text provided in comment has been added to Table 3.d4.</b>
59	<p><u>Table 3d.18</u> Storm Water Ordinance 1422 has been adopted and is currently being enforced within the Borough; therefore Keansburg should be receiving credit for this column. The column header reads "Adopt (or continue to enforce) a local stormwater management plan/ordinance." By this language, the Borough qualifies to be credited in this column as they have the ordinance and it is still enforced.</p>	Keansburg Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/19/14; comments will be sent on CD. <b>URS: A dot has been added to Table 3d.18 to the column "Adopt (or continue to enforce) a local stormwater management plan/ordinance" for Keansburg. NOTE: Dots added to columns 2b, 4c, 8, 14, and 15 (see comments below).</b>

60	<u>Section 7, Pages 7 – 9 2b:</u> This should be credited based on the fact that mitigation projects have been formulated for Keansburg and are present in the appendix of the master plan. Additionally, the Borough is currently moving forward with DCA funded Master Plan Updates, including Hazard Mitigation	Keansburg Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/19/14; comments will be sent on CD. <b>URS: A dot has been added to page 7-9.</b>
61	<u>Section 7, Pages 7 – 9 4c:</u> Keansburg has received written confirmation that will join the NFIP's Community Rating System at the class 7 level effective May 1, 2015, therefore Keansburg should be given a dot for this column.	Keansburg Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/19/14; comments will be sent on CD. <b>URS: A dot has been added to page 7-9.</b>
62	<u>Section 7, Pages 7 – 9: 8:</u> As a line has been included in the Borough of Keansburg Municipal Budget for mitigation projects, this column should receive a dot.	Keansburg Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/19/14; comments will be sent on CD. <b>URS: A dot has been added to page 7-9.</b>
63	<u>Section 7, Pages 7 – 9: 14:</u> The Borough has held several meetings regarding technical assistance with natural hazard mitigation activities with the Jacques Cousteau National Estuarine Research Reserve of Rutgers University, therefore this column should receive a dot.	Keansburg Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/19/14; comments will be sent on CD. <b>URS: A dot has been added to page 7-9.</b>
64	<u>Section 7, Pages 7 – 9: 15:</u> As Keansburg is currently and will continue to enforce the previously adopted ordinance, this column should receive a dot.	Keansburg Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/19/14; comments will be sent on CD. <b>URS: A dot has been added to page 7-9.</b>
65	<u>Monmouth County Multi-Jurisdictional Hazard Mitigation Plan – Action Worksheet Revision Action Work Sheet</u> regarding Community Action Number 7 for the Borough of Keansburg has been revised to reflect that the Blue Acres Grant Program is a potential funding source for the Purchasing of vacant homes throughout the Borough for flood mitigation. The Borough is currently actively pursuing the use of Blue Acres Grant funding for this purpose, and currently has ongoing coordination with the Blue Acres Grant Program regarding same.	Keansburg Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/19/14; comments will be sent on CD. <b>URS: Worksheet 7 for Community Action 7 has been revised to note Blue Acres as a potential funding source.</b>
66	pg: 3b-3 We only have 1 fire station not 2	Sea Bright Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/24/14. <b>URS: Table edited.</b>
67	pg: 3c-58 I see no possibility of loss by wildfire	Sea Bright Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/24/14. <b>URS: The wildfire analysis showed areas of "Low" risk along waterfront, comprising 4% of the building improvement value in the community. No edits made to HMP.</b>

68	pg:3c-66 We have no landslide exposure	Sea Bright Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/24/14. URS: Concur; Table 3c.23 has been edited.
69	pg:3d-5 We have substantially more open space than stated if you consider our beach	Sea Bright Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/24/14. URS: HMP cites open space totals provided in Monmouth County Profile, 2012. County officials have stated that the category "County-owned Parkland, Conservation Areas, and Golf Courses" does not include beaches. Municipal totals may include beaches, and County planning staff will provide further clarification on this point.
70	pg: 3d-14 Again this leaves the beach out of the equation	Sea Bright Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/24/14. URS: Please see response to Comment #69.
71	pg: 3d-51 I think that the parcel count on wave damage may be too high if they are talking about direct wave impact, all of our damage was due to wave run up	Sea Bright Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/24/14. URS: Parcel counts were obtained used VE-zones as mapped in FEMA's Preliminary DFIRM flood mapping. VE zones are areas where a 3-foot breaking wave (or higher) can impact structures.
72	Page 141: EOC(1) Fire(6) Police(1)	Wall Official	Will evaluate; concur	URS will review and revise as appropriate	URS	submitted to URS 11/24/14. URS: Edits made to table.

1	<b>Flood Mitigation in Shrewsbury and Navesink Watershed Area</b>	Resident, Oceanport	County	10/29/2014	Email to County	Municipalities should evaluate	Sent to municipal officials for response	Numerous Municipalities	Oceanport completed a worksheet 7 to document the project and include in their Mitigation Strategy. Submitted to URS 11/7/14. <b>URS: new Worksheet 7 added to Appendix 1.9.</b>
2	I live in Aberdeen (Strathmore) and my home borders Mohingson Creek. The water level in the creek rises a bit during big storms, but it's never been a concern for me. However, during Hurricane Irene in 2011, the water level got extremely high and almost reached my backyard which rises well above the normal water level in the creek. I've walked along the creek and there are many large downed trees and other things blocking the flow of the water in the creek. There are times when the water appears almost stagnant near my house due to the many downed trees that are blocking the normal flow of the water.	Resident, Aberdeen	County	10/30/2014	Email to County	Aberdeen should evaluate	Sent to Aberdeen officials for review	Aberdeen Township	Aberdeen Officials will evaluate the area in question; submitted to URS 11/7/14. <b>URS: no edits made to Hazard Mitigation Plan (HMP).</b>
3	Table 6.1 Subset of Action Types Considered to Achieve Mitigation Goals. Page 6-4 (pdf p. 338). 4.H. Implement identified stormwater recharge, rate or volume projects identified in Regional Stormwater Management Plans to decrease "flash" in streams during/after storm events. Add: "Municipal Stormwater Management Plans" as well as regional. Rationale: there are only a few RSMPs in Monmouth County, but every municipality has a MSMP.	Resident, Middletown	County	11/6/2014	Email to County	County to evaluate; the County concurs	Request URS make the change in Table 6.1	County	Request URS make the change in Table 6.1; submitted to URS 11/7/14. <b>URS: added "Municipal Stormwater Management Plans" to Table 6.1, item 4.H.</b>
4	Table 6.1 Subset of Action Types Considered to Achieve Mitigation Goals. Page 6-3 (pdf p. 337). 2.D Support and fund Community Emergency Response Team (CERT) programs that also include a mitigation component. Add to 2.D (or as a new Action Number 2.H): "Support and fund policies and programs that require all government workers to report to work during a declared emergency as an essential component of a mitigation strategy."	Resident, Middletown	County	11/6/2014	Email to County	County to evaluate; non concur	Sounds like a viable option, but at this time proposed legislation S1717, which is in direct contradiction, has been discussed with the NJ Association of Counties and until which time the pending legislation is revised or resubmitted, no action will be taken on this comment.	County	No action taken at this time; submitted to URS 11/7/14. <b>URS: no edits made to HMP.</b>
5	Lack of seawall protection in front of Monmouth Beach Bathing Pavilion, in the southern end of town. There is considerable seawall protection immediately north and south of this small section (only about 650 linear feet), concentrating the local vulnerability to this small section of town (potentially affecting homes from the ocean all the way west to the river) in the event of another serious storm. This gap in the seawall can be seen on the current Google Earth image from 2013, immediately after beach replenishment. Also evident in the Google Earth image is the lack of dunes in this area; the small dunes that had been there previously were destroyed by Sandy. The Army Corp of Engineers will not consider dunes in Monmouth County. Monmouth Beach's submission in the Draft Multi-Jurisdictional Hazard Mitigation Plan, includes six Action Worksheets, however, noticeably absent is any consideration of extension of the seawall across this 650 foot gap, despite the request for funds to raise the height of the seawall that protects the entire eastern border of town (except for this gap) by three feet.	Resident, Monmouth Beach	County	11/18/2014	Email to County	Monmouth Beach officials should evaluate	Email forwarded to Monmouth Beach officials for review and consideration	Borough of Monmouth Beach	Submitted to URS 11/19/14. <b>URS: no edits made to HMP.</b>

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## *Project Kickoff Meeting*

July 31, 2012

Two Sessions: 2:45 pm and 7:45 pm

Monmouth County Fire Academy, Auditorium, 1027 Route 33 East, Freehold, NJ

---

### AGENDA

- **Welcome and Opening Remarks** ..... *Michael Oppegaard and Margaret Murnane Brooks, MCOEM*
- **Importance of the Project**.....*Anna Foley and Richard Franks, URS*
- **Overview of the Project**.....*Anna Foley and Richard Franks, URS*
  - Overview of the Current Plan
  - Benefits of Continued Participation in the Plan Update
  - Key Steps of the Plan Update Process
  - Participation Requirements for the Update
  - Project Timeline
  - Near Term Action Items for Participating Jurisdictions
    - Outreach to the Public and Other Stakeholders
  - Long Term Action Items for Participating Jurisdictions
    - Expanded Mitigation Strategies
  - Questions & Answers
- **FEMA's Perspective and Expectations**.....*Howard Wolfe, FEMA*
  - Participation
  - Outreach
  - Municipal Mitigation Strategies
- **Closing Remarks** ..... *Michael Oppegaard and Margaret Murnane Brooks, MCOEM*
- **Questions and Answers**.....*All*
- **Adjourn**

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

*Kickoff Meeting*  
*July 31, 2012*  
**2:45 pm and 7:45 pm**  
Monmouth County Fire Academy

## Today's Agenda

- Welcome and Opening Remarks.....MCOEM
- Importance of the Project.....URS
- Overview of the Project.....URS
- FEMA's Perspective and Expectations.....FEMA
- Closing Remarks.....MCOEM
- Questions.....All
- Adjourn

## Importance of the Project

Natural hazards are a part of our past, and they will be a part of our future.

Damages and impacts from an event can be staggering and often have long-term consequences.

Federal dollars are not always available to aid in the recovery process for *every* occurrence.

## Importance of the Project

Mitigation Planning allows us to understand our vulnerabilities, and develop targeted mitigation strategies to reduce these vulnerabilities.

Implementing mitigation strategies will, over time, work toward a goal of ensuring that future hazard event occurrences do not become 'disasters' for our communities.

## Importance of Regular Plan Maintenance

5year updates to reflect CURRENT conditions

Assessment of current development patterns and development pressures

Evaluation of new hazard or risk information

Progress in local mitigation efforts

Assess previous goals and actions

Evaluate progress in implementing actions

Adjust actions to address current realities

Changes in priorities

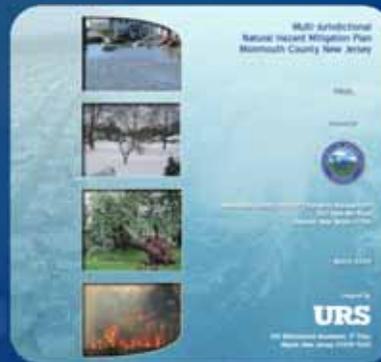

## Importance of the Project

Updating the Hazard Mitigation Plan regularly will ensure that it:

remains applicable to present-day understanding of vulnerabilities based on most recent studies, reports, event histories, etc.; and

continues to present the best path forward for reducing future damages when hazard events, inevitably, occur.

## Importance of the Project

When natural hazard events take place in undeveloped areas, no disaster occurs.

The magnitude of a disaster depends on the intensity of the event, the number of people and structures exposed, and the effectiveness of predisaster mitigation actions in protecting people and property.

Hazard mitigation is the key to becoming a more sustainable and disaster resistant community.

## Importance of the Project

## Overview of the Current Plan

Initial planning process was conducted between 2007 and 2008

Plan was approved by FEMA early in 2009

Addressed natural hazards

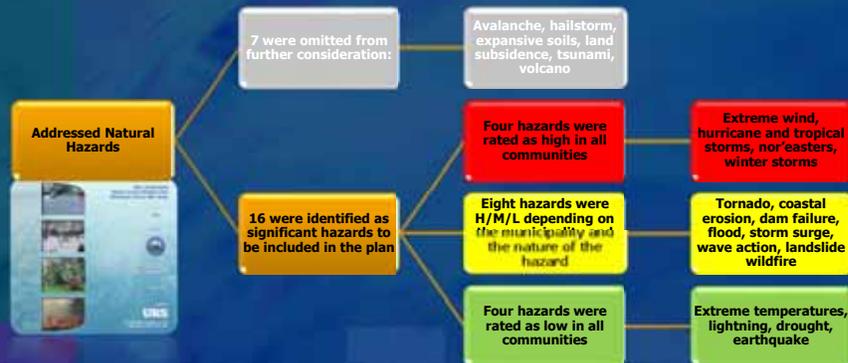

The County and 52 of its 53 municipalities met participation requirements to be included in the plan

All participants ultimately adopted the final 2009 Plan

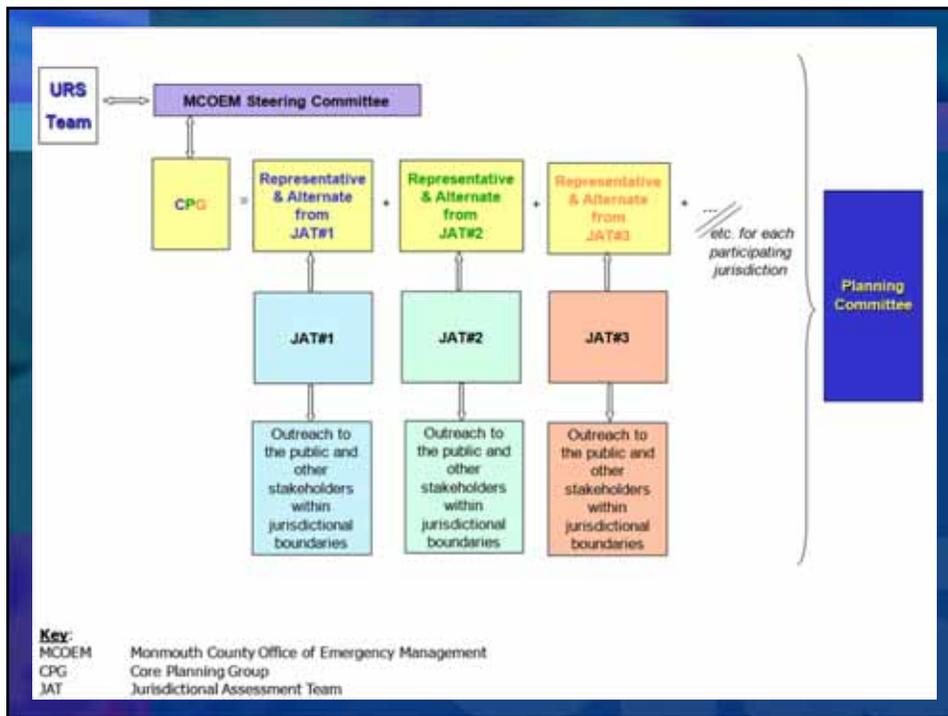

## Overview of the Current Plan

## Overview of the Current Plan

## Benefits of Continued Participation

Continued  
Compliance with  
DMA 2000

- All jurisdictions who participate in the process will maintain compliance with DMA 2000 once FEMA approves the final updated plan and the jurisdiction's local governing body formally adopts it.
- Maintain eligibility to apply for hazard mitigation project grants.

Partnerships

- Multi-jurisdictional planning committees can provide a forum for engaging in partnerships that could provide technical, financial, and/or staff resources in your effort to reduce the effects, and hence the costs, of hazards.

## Benefits of Continued Participation

Collaboration

- Multi-jurisdictional hazard mitigation plans are practical for addressing issues best dealt with on a larger scale, which do not recognize political boundaries.

Resource-  
Sharing

- Smaller jurisdictions can benefit from the additional resources and expertise that collaboration can bring.

Economies  
of Scale

- Multi-jurisdictional planning creates economies of scale.

## Benefits of Continued Participation

Implemented hazard mitigation measures will reduce:

- risk of damage to lives and property
- the impacts of a hazard event on the economic and social fabric of a community
- response time and costs

## Benefits of Continued Participation

- According to a study by the Multihazard Mitigation Council (part of the National Institute of Building Sciences:

***Every \$1 paid toward mitigation saves an average of \$4 in future disaster-related costs***

## Benefits of Continued Participation

Once the plan is approved, jurisdictions that participate fully will remain eligible to apply for grant funding for projects like these (few examples):

- Acquire/elevate/floodproof/relocate structures
- Road raising/relocation
- Culvert upgrades
- Bridge retrofits
- Utility system protective measures
- Wind retrofits for buildings
- Minor localized flood reduction projects (inc. retention/detention basins)
- Soil stabilization (geotextiles, rip rap, etc.)
- Wildfire mitigation (defensible space, ignition-resistant construction, fuel reduction)

## Benefits of Continued Participation

- Programs and Federal Share
  - ◆ HMGP 75%
  - ◆ PDM 75%
  - ◆ FMA 75%
  - ◆ RFC 100%
  - ◆ SRL 90%

## Mitigation Works!

## Key Steps of the Plan Update Process

The plan is updated and re-approved every five years

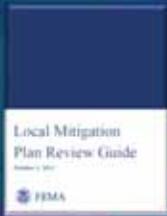

The plan must be expanded upon to address:

New guidance since the plan was first approved

Unique requirements for plan updates

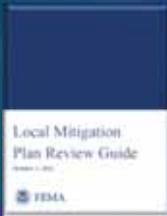

## Key Steps of the Plan Update Process

- Planning process just as with the original plan, including more outreach to the public and other stakeholders
- Update hazard and vulnerability data to reflect recent events, new data/studies/reports, etc.
- Update NFIP data (i.e., RLP, SRL, DFIRMs)
- Updates to reflect changes in development in hazard prone areas

## Key Steps of the Plan Update Process

- Update/expand mitigation strategies
  - to ensure a comprehensive range of mitigation actions covering *identified risks* in each jurisdiction
- Describe status of each action in previous plan
  - Completed?
  - Still relevant?
  - Will it be included in the updated action plan (if not, why)
  - Have any priorities changed? If so, how/why?

## Key Steps of the Plan Update Process

Additional Elements

Climate change / sea level rise

BCA's on the county's top 5 projects

HAZUS Level 2

GLOBAL FORECASTING INSTITUTE

According to this report, climate change may cause serious flooding! Well, we'll cross that bridge when we come to it.

\* cartoon by Chris Madden

## Participation Requirements

Each municipality must directly participate in the update in order to receive re-approval from FEMA and maintain compliance with DMA 2000 and eligibility to apply for hazard mitigation project grants.

## Participation Requirements

Participating jurisdictions must:

- Attend meetings
- Conduct outreach
- Provide feedback
- Update their municipal mitigation action plans
- Review and comment on the Updated Plan Draft

# Participation Requirements

## Outreach to the Public and Other Stakeholders

Required to be done by each participating municipality

See Guidance Memo #1 for tips

Use Outreach Log on page 5 of the memo to keep track of activities

**MEMORANDUM #1**  
**OUTREACH TO THE PUBLIC AND OTHER STAKEHOLDERS**  
 Summary of Outreach Activities

**TO:** Board of Selectmen, Town of [Name]  
**FROM:** [Name], [Title]  
**DATE:** [Date]

**OBJECTIVE:** To ensure that the public and other stakeholders are informed of the proposed updates to the Hazard Mitigation Plan and to provide an opportunity for public input.

**BACKGROUND:** As part of the annual 200 Hazard Mitigation Plan Update process, the Board of Selectmen is required to conduct outreach to the public and other stakeholders. This memorandum provides guidance on the required outreach activities.

**THE PLAN:** The Hazard Mitigation Plan Update process involves a series of steps, including public outreach, review of the plan, and adoption of the plan. The public outreach activities are a critical part of this process.

**RECOMMENDATION:** It is recommended that the Board of Selectmen approve the following outreach activities:

**DATE OF MEETING:** All outreach activities should be completed by May 1, 2013.

**ADDITIONAL NOTES:** Please refer to the attached Outreach Log for more details on the required activities.

Memorandum #1: Outreach to the Public and Other Stakeholders

**OUTREACH LOG:**  
 Summary of Outreach Activities to the General Public and Other Stakeholders

PARTICIPATING JURISDICTION: \_\_\_\_\_

DATE OF ACTIVITY	TYPE OF ACTIVITY	ACTIVITY DETAILS	LEAD DEPARTMENT AND/OR STAFF TITLE WHO UNDERTOOK ACTIVITY

Please add additional pages as needed and return via email by May 1, 2013 to Anne Foley at: [anne.foley@jura.com](mailto:anne.foley@jura.com). For questions, please call 873-883-8388.

# Participation Requirements

## Outreach to the Public and Other Stakeholders

### Who Are Other Stakeholders?

#### Must include:

- ◆ Neighboring communities
- ◆ Local and regional agencies involved in hazard mitigation activities
- ◆ Agencies that have authority to regulate development
- ◆ Other interests

#### Other interests, include:

- ◆ Non-profit organizations (i.e., Red Cross, Salvation Army)
- ◆ Environmental groups
- ◆ Historic preservation groups
- ◆ Church organizations
- ◆ Parks organizations
- ◆ State, federal, and local government offices
- ◆ Business and development organizations
- ◆ Transportation entities
- ◆ Emergency service providers
- ◆ Academic institutions
- ◆ Utility providers
- ◆ Hospitals
- ◆ Tribal groups
- ◆ Large businesses
- ◆ Regional planning organizations

# FACT SHEET

**Monmouth County**  
Multi-Jurisdictional Hazard Mitigation Plan Update  
*PLAN FACTS* July 2012

Monmouth County has recently received grant funding from the Federal Emergency Management Agency (FEMA) to update its 2000 Multi-Jurisdictional Hazard Mitigation Plan.

**WHY IS HAZARD MITIGATION?**  
Natural hazards have the potential to cause property damage, loss of life, economic hardship, and threats to public health and safety. Hazard mitigation measures are the things you do today to be more protected in the future. They are measures taken before a disaster happens to reduce the impact that future disasters will have on people and property in the community. Mitigation reduces the risk of loss and creates a more disaster-resistant and sustainable community. Hazard mitigation measures are essential to breaking the typical disaster cycle of damage, reconstruction, and repeated damage.

After a plan is initially approved by FEMA, each of its participating jurisdictions must work to implement the hazard mitigation actions that they outlined in their respective mitigation strategies, and participate in a process to update the plan every five years. This marks the first of the plan's biennial updates since its inception. Monmouth County has once again obtained FEMA grant funding to cover the cost of this first plan update, and has agreed to continue its multi-jurisdictional approach, inviting all of the municipalities within the County to continue to participate in this important endeavor to become more sustainable and disaster-resistant. Participation will again involve attending meetings, providing feedback, and reaching out to the public and other key stakeholders in the community.

Hazards of all types have the potential to cause property loss, loss of life, economic hardship, and threats to public health and safety. While an important aspect of emergency management

Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Plan-Fact1

deals with disaster recovery (those actions that a community must take to repair damages and make itself whole in the wake of a natural or man-made disaster) an equally important aspect of emergency management involves hazard mitigation. Hazard mitigation measures are efforts taken before a disaster happens to lessen the impact that future disasters of that type will have on people and property in the community. They are things you do today to be more protected in the future. Hazard mitigation actions taken in advance of a hazard event are essential to breaking the typical disaster cycle of damage, reconstruction, and repeated damage. Cost-effective hazard mitigation actions can be long-term, cost-effective means of reducing the risk of loss and help create a more disaster-resistant and sustainable community.

A Hazard Mitigation Plan is a well-organized and well-documented evaluation of the hazards that a jurisdiction is susceptible to, and the extent to which these events will occur. Hazard Mitigation Plans identify an area's vulnerability to the effects of the natural hazards typically present in a certain area, as well as the goals, objectives, and actions required for minimizing future loss of life and property damage as a result of hazard events. The primary purpose of mitigation planning is to systematically identify policies, actions, and tools that can be used to implement those actions.

Hazard mitigation plans are developed before a disaster strikes. They identify community policies, actions, and tools for long-term implementation to reduce risk and potential for future losses.

Adopted, implemented and maintained on an ongoing basis, these plans will gradually, but steadily, lessen the impacts associated with hazard events throughout Monmouth County.

A project kickoff meeting of the County and participating jurisdictions will be held on July 11, 2012. Elected and appointed government officials, business leaders, volunteers of non-profit organizations, citizens, and other stakeholders are being invited to participate in the multi-jurisdictional plan update process as part of the Monmouth County Natural Hazard Mitigation Planning Committee (the "Planning Committee").

While natural disasters cannot be prevented from occurring, the continued implementation of a hazard mitigation plan over the long-term will gradually, but steadily, lessen the impacts associated with natural hazard events in Monmouth County.

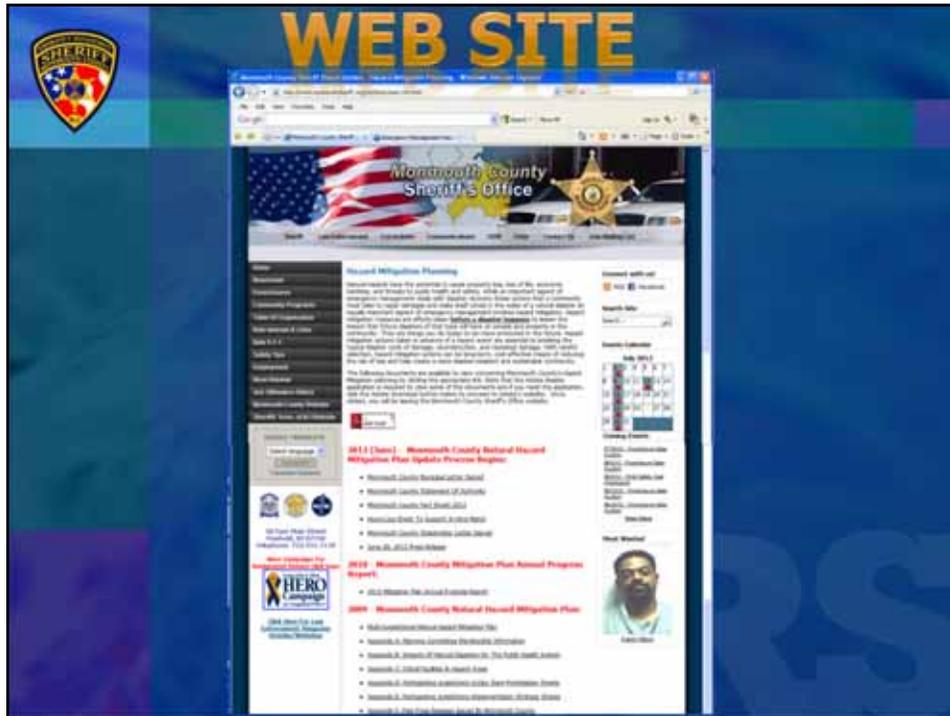

**HELPING**  
The mitigation plan update process began in June 2011. A draft of the updated plan is targeted for release at the end of May 2012.

**OUR MESSAGE**  
A Multi-Jurisdictional Hazard Mitigation Planning Page is on the County's Office of Emergency Management web site. We encourage you to check back for additional information and updates at: [www.monmouthnj.org](http://www.monmouthnj.org) - CDH-ENR.

**FOR MORE INFORMATION**

For questions or other feedback, or to find out how you can become involved in the process, please contact:

<p>Michael E. Capparedo Coordinator Office of Emergency Management Phone: 732-421-7400 E-mail: <a href="mailto:mcapparedo@monnj.org">mcapparedo@monnj.org</a></p>	<p>Margaret Marano Brovly County Coordinator Monmouth County Office of Emergency Management Phone: 732-421-7400 E-mail: <a href="mailto:dmurphy@monnj.org">dmurphy@monnj.org</a></p>
---	--

## Participation Requirements

*Outreach to the Public and Other Stakeholders*

Make the Fact Sheet available if, for example, your municipality has a booth at a local fair/festival.

Publish information about the municipality's participation in the plan update in a local newspaper/newsletter, if possible.

Ensure that the public and other stakeholders are invited to review and provide comments on the Draft Plan Update, when it becomes available.

Consider using radio announcements, press advisories/releases, and local television.

## Participation Requirements

*Outreach to the Public and Other Stakeholders*

Targeted outreach to key stakeholders can be as simple as a phone call, letter or email sent to a list of a few key stakeholders that:

- Alerts them to the plan update;
- Provides them with a link to the upcoming County web site for more information on the process;
- Identifies a point of contact for more information if they have detailed questions or would like to become involved;
- Offers to send them copies of meeting minutes and a notification when the Draft is released, on request.

## Project Timeline

## Near Term Actions for Participating Jurisdictions

To Do:

Be ready to complete and return worksheets that will start to arrive via email in the coming weeks from Margaret

To Do:

Begin your outreach efforts:

- Discuss the plan update at regularly scheduled council/board meetings
- Post the plan update Fact Sheet on notice boards
- Establish a link on your jurisdiction's web site to the overall County Hazard Mitigation Plan Update page
- Targeted outreach to key local stakeholders

## Long Term Actions for Participating Jurisdictions

To Do:

Continued outreach

To Do:

Continued worksheet completion

To Do:

Start thinking about improvements to your mitigation strategies now

## Questions

URS

FEMA

## FEMA'S PERSPECTIVE & EXPECTATIONS

- Goal:
  - More sustainable and disaster-resistant communities
  - While natural disasters cannot be prevented from occurring, the continued implementation of good mitigation projects over the long-term will gradually, but steadily, lessen the impacts associated with hazard events in your communities.

## FEMA'S PERSPECTIVE & EXPECTATIONS

- Participation
  - Direct participation from each jurisdiction throughout the process
    - Meetings
      - Core Planning Group
      - Your Jurisdictional Assessment Team (JAT)
    - Worksheets providing feedback – vital

## FEMA'S PERSPECTIVE & EXPECTATIONS

- Outreach
  - General public and other stakeholders
  - Throughout the update process and during the plan maintenance stages
  - Meetings with your own municipal staff members are not 'outreach'
  - Make a concerted effort using various avenues

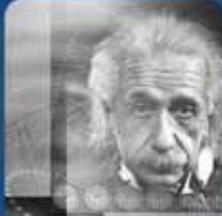

## FEMA'S PERSPECTIVE & EXPECTATIONS

- Municipal Mitigation Strategies
  - Hazard Mitigation: 'Recovery with Foresight'
  - True 'mitigation', as opposed to preparedness/ response
  - Improvement and expansion from the 2009 Plan

## Closing Remarks / Questions

► "The world we have created today as a result of our thinking thus far has problems which cannot be solved by thinking the way we thought when we created them."

Albert Einstein

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Core Planning Group Meeting #2 - Working Session

September 28, 2012

10:00 am

Monmouth County Fire Academy, 1027 Route 33 East, Freehold, NJ

### AGENDA

- **Welcome and Opening Remarks**..... *Michael Oppegaard and Margaret Murnane Brooks, MCOEM*
- **Natural Hazards and Monmouth County**
  - **What are the hazards?**
    - URS will present the list of hazards identified as significant for the plan update.
    - CPG members (County and municipal representatives) will be expected to consider URS' hazard identification assessment, and indicate concurrence with findings by a show of hands.
  - **What is at stake?**
    - URS will highlight certain key issues with regard to natural hazard risks in the County, including: the NFIP and repetitive / severe repetitive loss properties; sea level rise; coastal erosion; hurricane risks; etc.
    - CPG members (County and municipal representatives) will be expected to participate in group discussion.
- **Incentives to Participate**
  - **Engaged participants → Approved Plan; Implementing Projects → Safer Communities**
    - URS will:
      - Reminder of the benefits of participating;
      - Highlight programs that are accessed by having an approved plan;
      - Provide an overview of typically eligible project types under these programs; and
      - Introduce some key information from the State Plan, including:
        - Goals
        - Project ranking system for HMGP
- **Viable Projects for Your Municipality Based on Past Experiences**
  - **Past Experiences - What are the problems?**
    - What happened during Hurricane Irene? What has happened during other types of hazard events?
      - URS will facilitate a group discussion and takes notes for incorporation into the plan.
      - CPG members (County and municipal representatives) will be expected to participate in the group discussion. The County will be the first to provide

feedback; other municipalities will follow. Be prepared to offer your perspective on things such as:

- What happened? Were these things expected? In expected locations? Were any impacts unanticipated, or with unanticipated consequences?
- Was the problem simply repaired to pre-disaster conditions, or was it mitigated?
- Did Irene highlight any areas in need of immediate attention (mitigation)?

- **Past Experiences - What are the solutions? (What can be done to mitigate?)**

- URS will facilitate a group discussion and takes notes for incorporation into the plan.
- CPG members (County and municipal representatives) will be expected to brainstorm about types of projects will provide solutions to the above discussed problems (keeping in mind project types that are potentially fundable, 'shovel-ready' actions that may also align well with State goals and rank competitively.

- **Food for Thought: What are other communities doing?**

- **Other New Jersey Communities / World View**

- URS will discuss some examples of community mitigation.
- CPG members (County and municipal representatives) will be expected to participate in group discussion of how these things may apply to Monmouth County communities.

- **Questions and Answers**.....All
- **Closing Remarks**..... *Michael Oppegard and Margaret Murnane Brooks, MCOEM*
- **Adjourn**

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**

**Core Planning Group Meeting #2**  
**September 28, 2012**  
 10:00 am  
 Monmouth County Fire Academy

**Opening Remarks**

**Today's Agenda**

- Welcome and Opening Remarks
- Natural Hazards and Monmouth County  
*What are the hazards? What is at stake?*
- Incentives to Participate
- Viable Projects for Your Municipality based on Past Experiences  
*What are the problems? What are the solutions?*
- Food for Thought: What are other communities doing?
- Questions and Answers
- Closing Remarks
- Adjourn

**Working toward disaster resistance.....**

- ...is easy?
- ...can be accomplished quickly?
- ...requires limited resources?

**Hazard mitigation.....**

...requires the commitment of limited resources

- staff members
- their time
- local funding

.....but.....

Over the long term, it will cost more if we don't.

**2009 Plan Estimates of Average Annual Damages**

- Extreme wind \$ 0.5 M
- Hurricane and tropical storm \$ 12.5 M
- Riverine flood \$ 14.5 M
- Storm surge \$129.0 M

....and the list goes on for other hazards....

**Question:**  
Will these estimates go up? down?  
remain the same?

"...each locality controls the character of its disasters...the decisions they make today will determine future losses."

- Dennis Mileti, University of Colorado at Boulder, "Disasters by Design"

**Today's Agenda**

- Welcome and Opening Remarks
- Natural Hazards and Monmouth County  
*What are the hazards? What is at stake?*
- Incentives to Participate
- Viable Projects for Your Municipality based on Past Experiences  
*What are the problems? What are the solutions?*
- Food for Thought: What are other communities doing?
- Questions and Answers
- Closing Remarks
- Adjourn

**Natural Hazards and Monmouth County - What are the hazards?**

List of hazards identified as significant for the plan update = List of hazards identified as significant for initial plan development

**Natural Hazards and Monmouth County - What are the hazards?**

CPG concurrence with findings by a show of hands

**Natural Hazards and Monmouth County - What are the hazards?**

Summary Results of the Hazard Identification and Evaluation Process

--	---

☑ = Hazard considered significant enough for further evaluation through Monmouth County's multi-jurisdictional hazard risk assessment

Note: Tsunamis will be addressed briefly in the context of the flood hazard discussion.

## Natural Hazards and Monmouth County - What is at stake?

### Flooding

- More than half of all federal disaster declarations for Monmouth County have involved flooding.
- NCDC and SHELUDS report that:
  - Monmouth County has been affected by 96 flood events between April 1993 and December 2011.
  - These events in total caused an estimated \$79.8M in property damages.

## Natural Hazards and Monmouth County - What is at stake?

### Flooding

- New Jersey is:
  - 5<sup>th</sup> in the country in terms of NFIP Payouts (1/78-3/11)
    - LA: \$16,041,923,827
    - TX: \$5,475,442,711
    - FL: \$3,602,905,854
    - MS: \$2,867,988,741
    - NJ: **\$970,512,663**
  - 4<sup>th</sup> in the country in terms of total # Repetitive Loss Properties
    - LA: 23,758
    - TX: 15,956
    - FL: 13,511
    - NJ: **12,089**

## Natural Hazards and Monmouth County - What is at stake?

### Flooding

- From 1972-2012, NFIP policy holders (>22,000) in Monmouth County have incurred 9,603 losses totaling \$109,494,629 in paid claims
- Real cost is likely to be even more (unpaid claims, uninsured losses)

## Natural Hazards and Monmouth County - What is at stake?

### Flooding

- Repetitive Loss Property:
  - two or more claims
  - of more than \$1,000 each
  - in any rolling 10-year window since 1978

## Natural Hazards and Monmouth County - What is at stake?

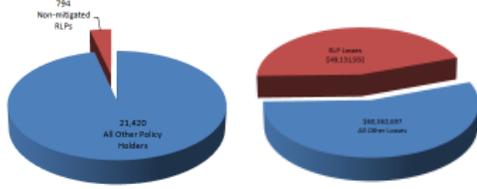

### Flooding

- As of May 31, 2012 Monmouth County has:
  - 22,214 NFIP policies with \$109,494,629 paid claims
  - 794 RLPs<sup>1</sup> with \$49,131,932 paid claims

<sup>1</sup> an additional 27 are mitigated RLPs

## Natural Hazards and Monmouth County - What is at stake?

### Flooding

**4% of NFIP insured properties contribute to 45% of losses**

## Natural Hazards and Monmouth County - What is at stake?

### Flooding

- Since May 2008:
  - The total value of all claims paid county-wide has increased by **42%** (\$76.8M in 2008 to \$109.5M in 2012)
  - The total value of all claims paid to RLPs has increased by **64%** (\$30M in 2008 to \$49.1M in 2012)

Average total losses = 2.81

### WHAT ARE THE ODDS OF BEING FLOODED?

The term "100-year flood" has caused much confusion for people not familiar with statistics. Another way to look at flood risk is to think of the odds that a 100-year flood will happen sometime during the life of a 30-year mortgage—a 26% chance for a structure located in the SFHA.

Chance of Flooding over a Period of Years

Time Period	10-year	25-year	50-year	100-year
1 year	10%	4%	2%	1%
10 years	65%	34%	18%	10%
20 years	88%	50%	33%	18%
30 years	96%	71%	45%	26%
50 years	99%	87%	64%	39%

Even these numbers do not convey the true flood risk because they focus on the larger, less frequent, floods. If a house is low enough, it may be subject to the 10- or 25-year flood. During a 30-year mortgage, it may have a 26% chance of being hit by the 100-year flood, but the odds are 96% (nearly guaranteed) that it will be hit by a 10-year flood. Compare those odds to the only 1-2% chance that the house will catch fire during the same 30-year mortgage.

## Natural Hazards and Monmouth County - What is at stake?

### Flooding

- The assessed value alone of property in Monmouth County's 100-year floodplain is roughly **\$3 billion**.

## Natural Hazards and Monmouth County - What is at stake?

### Wind

- Monmouth County is located in a climate region that is highly susceptible to numerous types of extreme wind events including:
  - severe thunderstorms,
  - hurricanes,
  - tropical storms,
  - nor'easters, and
  - severe winter storms.

## Natural Hazards and Monmouth County - What is at stake?

### Wind

- 267 significant wind events for Monmouth County between October 1968 and December 2011.
- These events have resulted in recorded estimates of 7 deaths, 98 injuries and more than \$34 million in property damage.

## Natural Hazards and Monmouth County - What is at stake?

### Tornados

- NCDC and SHELUDS report 9 tornado events in Monmouth County between August 1952 and December 2011.
- These events have resulted in no recorded deaths or injuries but have caused \$1.5 million in property damage with the most severe being an F2 that struck northern Manalapan and extreme southwest Marlboro Townships in May 2001.

## Natural Hazards and Monmouth County - What is at stake?

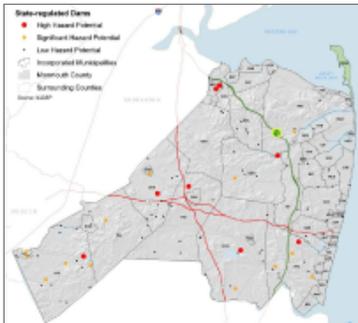

### Dam Failure

- **High hazard** - failure may cause probably loss of life or extensive property damage
- **Significant hazard** – failure may cause significant damage to property, but loss of life not anticipated
- **Low hazard** – failure may cause loss of the dam itself, but property damage and loss of life not anticipated

## Natural Hazards and Monmouth County - What is at stake?

### Dam Failure

- 106 dams
- 9 high hazard<sup>1</sup>
- 3 significant hazard
- 84 low hazard

<sup>1</sup> of which 3 are major dams

## Natural Hazards and Monmouth County - What is at stake?

### Dam Failure

- Overall probabilities are relatively low due to routine inspection, repair & maintenance
- However – they do happen

**DAM BREACH**  
A portion of Millard Avenue, in the River Place section of Middlesex collapsed from the weight of water that came through with when the Wreck Pond dam burst during Hurricane Irene. Credit: Monmouth County

## Natural Hazards and Monmouth County - What is at stake?

### Dam Failure

- **October 2005 – Heavy rains, minor dam failures**
  - Dams failed at Spring Lake, Mill Pond, Deal Lake, Wreck Pond
  - >1,000 people evacuated
  - States of emergency declared
  - In Wall Township, the cost of repairing the Wreck Pond Dam alone was estimated at \$4.2 million.

## Natural Hazards and Monmouth County - What is at stake?

### Storm Surge

- Storm surge during events including:
  - hurricanes
  - tropical storms
  - nor'easters
- Likely affects of climate change
  - more frequent events
  - larger area of impact (higher water levels)
- New development → more exposure (buildings, people, infrastructure)

## Natural Hazards and Monmouth County - What is at stake?

### Storm Surge

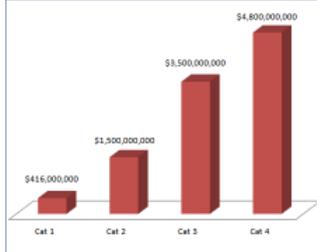

- "Ash Wednesday Storm" 1962 – through 5 high tides!
- 1992 Nor'easter
- February 2006 - \$900,000 in damages in Monmouth County (as recorded by NOAA NCDC)
- Irene
- ....and many more....

## Natural Hazards and Monmouth County - What is at stake?

### Storm Surge

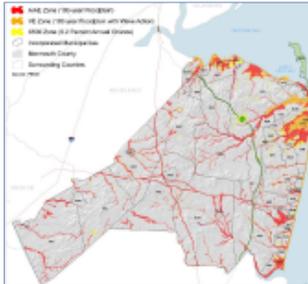

- HAZUS estimated potential losses from Category 1, 2, 3 and 4 storm surge events – Monmouth County

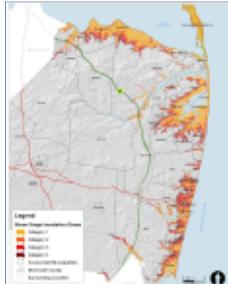

Storm Category	Estimated Potential Losses
Cat 1	\$415,000,000
Cat 2	\$1,500,000,000
Cat 3	\$3,500,000,000
Cat 4	\$4,800,000,000

## Natural Hazards and Monmouth County - What is at stake?

### Flooding

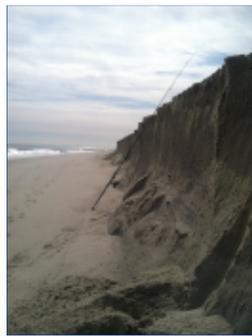

### Storm Surge

## Natural Hazards and Monmouth County - What is at stake?

### Coastal Erosion

- "Ash Wednesday Storm" 1962
- 1992 Nor'easter
- ..and many more...

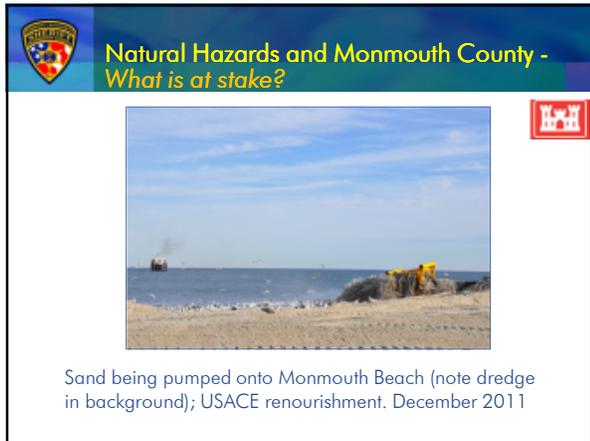

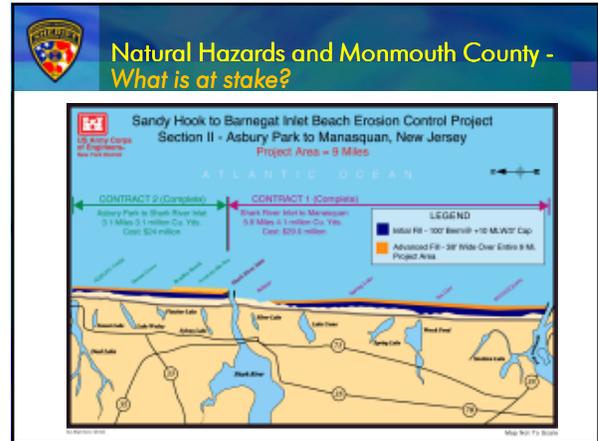

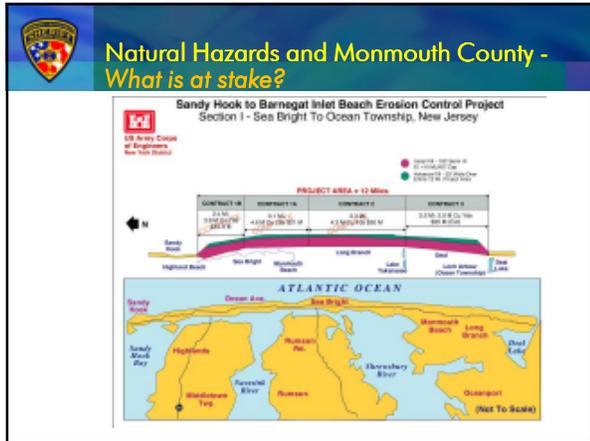

## Natural Hazards and Monmouth County - What is at stake?

### Coastal Erosion

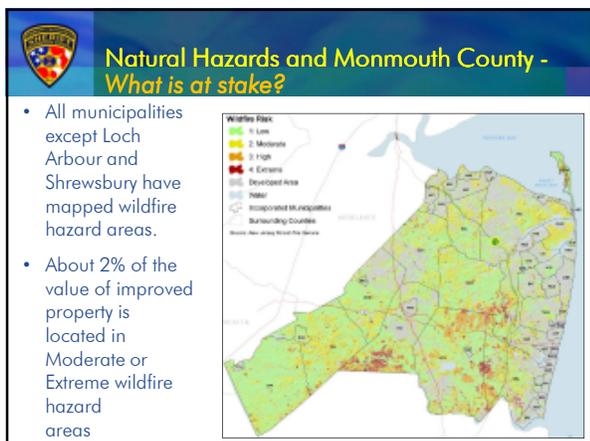

#### USACE Project - Sandy Hook to Barnegat Inlet, NJ

- Covers 21 miles of shoreline
- Largest beach nourishment project ever undertaken by the USACE
- Largest beachfill project, in terms of volume, in the world.
- The highly populated communities from the Town of Sea Bright to the Manasquan Inlet in Monmouth County, continually experience serious beach erosion. In 1962, the Ash Wednesday Storm caused \$56 million in damages (1992 price level).

- ### Natural Hazards and Monmouth County - What is at stake?
- #### Wildfires
- According to New Jersey Forest Fire Service records, Monmouth County experienced 512 wildfire incidents that burned 353 acres between 1993 and 2003.
  - Average of 51 wildfire events per year
    - Average of about 0.7 acres each or 35 acres per year
- 

- ### Natural Hazards and Monmouth County - What is at stake?
- #### Notable Events
- Howell, 1977**

### 6.2.2 State Hazard Mitigation Goals and Objectives

The State embraces five goals and objectives and the Repetitive Loss strategy as stated below:

- To protect life through:**
  - Improve warning and emergency communications systems
  - Effectively address hazard mitigation issues, laws and regulations
  - Reduce the impacts of hazards on vulnerable populations
  - Strengthen State and local building code enforcement
- To protect property through:**
  - Protect critical State and non-State owned facilities and assets
  - Reduce repetitive losses on specifically vulnerable facilities
  - Implement hazard mitigation policies to protect the environment
- To increase public preparedness through:**
  - Improve public awareness of natural hazards and the risks they pose
  - Improve public information dissemination and improve and increase accessibility to those resources
  - Enhance community outreach and training emergency responders
- Develop and maintain an understanding of risks from natural hazards through:**
  - Review and incorporate hazard information developed at the local level into the Plan
  - Increase development of local mitigation planning
  - Incorporate new FEMA guidance, rules and regulations into the Plan
  - Update the Plan from lessons learned on the vulnerability
- Enhance capabilities to enable New Jersey to be vulnerable to hazards through:**
  - Mobilize the progress of on-going mitigation activities by state agencies
  - Provide technical information on resources for mitigation planning and acts
  - Encourage the formation of partnerships to leverage and share mitigation resources
  - Ensure continuity of critical operations of government and commerce

Adopted April 2011 and updated November 2011 Mitigation Strategy Section 5 Page 7 of 74  
Hazard mitigation is an important action to reduce or eliminate the long-term risk to life and property from hazards.

STATE OF NEW JERSEY HAZARD MITIGATION PLAN 2011

In addition to the stated mitigation goals and incorporated throughout the strategy to accomplish the State goals, New Jersey will take a three prong approach:

- Recognize flooding as the major disaster threat facing the state and seek acquisition between a voluntary seller and a public agency as the primary means to accomplish all of the goals and objectives with additional Repetitive Loss Strategy information below.
- Offer, as a secondary means of accomplishing the state goals, assistance in the elevation of homes when other acquisition is not an option.
- Work with both county and municipal governments that have an approved local mitigation plan and those which state are seeking completion to develop grants and technical projects to address the impacts of all natural disasters, not limited to flooding alone.

### HAZARD MITIGATION PLAN 2011

Figure 6.4.11 Sample New Jersey State Mitigation Project Priority Scale Table

General Application Information	POINTS	SCORE
Is this project geographically identified in the FEMA Hazard Plan?	10	
200 - Is this a planned type of project identified in the application plan?	20	
200 - Is the total size (FEMA grant approved) in the application for (RIFP)?	10	
Is the project in the identified vulnerable area by (RIFP)?	20	
Is the project in a FEMA community?	20	
Specific Application Information		
Is the project a mitigation measure that directly refers to overall plan for development and/or hazard mitigation in the disaster area, community or State?	20	
Is the measure that is not taken, will have a detrimental impact on the applicant, such as potential loss of life, loss of essential services, damage to critical facilities, or economic hardship in the community or State?	20	
Does the mitigation measure have the potential potential impact reducing further disaster losses?	20	
Has the mitigation measure been designed according to multiple objectives including damage reduction, environmental enhancement and economic recovery?	20	
Environmental		
Is the project eligible for a Competitive Response (CRP)?	1	
Is the project an All Hazards Alternative Response (AR) required?	1	
Is the project a FEMA/State/Local (FEMA/STL) required?	1	
Does a FEMA/STL study exist along a specific project line? These studies include:	1	
Does a FEMA/STL study exist for the project?	1	
Is a FEMA/STL study required for the project?	1	
Has an engineering study been provided, or will be a study of 1:20?	20	
State Strategy		
Is the structure in the Severe Repetitive Loss area?	10	
Is the structure on the Repetitive Loss list?	20	
Is the structure within a floodplain?	1	
Is the project on a floodplain?	10	
Is the project on a floodplain?	10	
Is the project on a floodplain?	1	
Is the project a FEMA/STL project?	1	
Is the project a FEMA/STL project?	1	
Is the project a FEMA/STL project?	1	
<b>Total Points Awarded</b>		

Final adopted in April 2011. This update to the 2007 Hazard Mitigation Plan Training Series, Strategy 17 of 17.

## Viable Projects for Your Municipality Based On Past Experiences

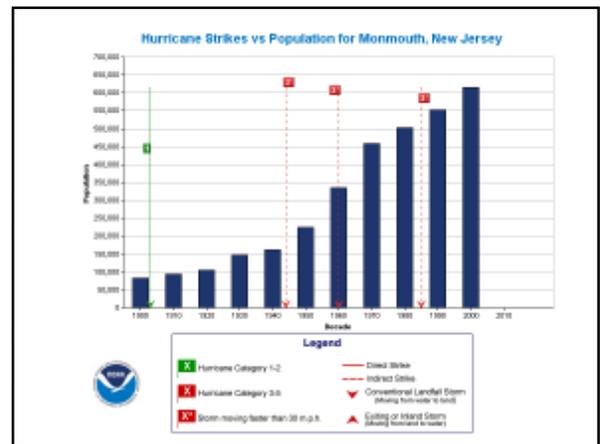

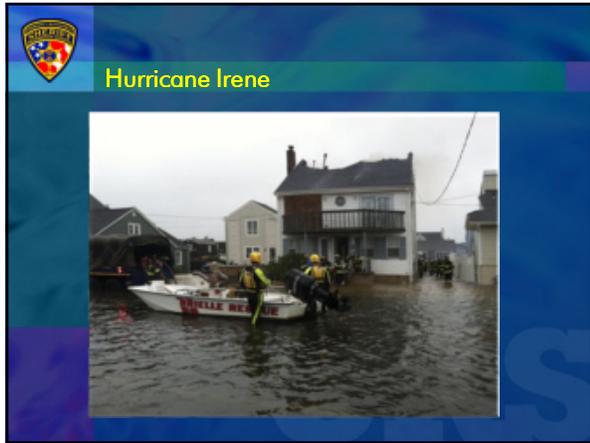

### What are the problems?

**Group discussion:**  
**What happened during Hurricane Irene? during other events?**

- What happened? Were these things expected? In expected locations? Were any impacts unanticipated, or with unanticipated consequences?
- Was the problem simply repaired to pre-disaster conditions, or was it mitigated?
- Did Irene highlight any areas in need of immediate attention (mitigation)?

## Hurricane Irene

**Viability Projects for Your Municipality Based On Past Experiences**  
*What are the problems?*

**Group discussion:**  
**What happened during Hurricane Irene? during other events?**

- What happened? Were these things expected? In expected locations? Were any impacts unanticipated, or with unanticipated consequences?
- Was the problem simply repaired to pre-disaster conditions, or was it mitigated?
- Did Irene highlight any areas in need of immediate attention (mitigation)?

**Viability Projects for Your Municipality Based On Past Experiences**  
*What are the solutions?*

**Group discussion:**  
**What are some possible solutions to the problems previously discussed?**

**Viability Projects for Your Municipality Based On Past Experiences**  
*What are the solutions?*

**General types of actions....**

- Dedication of currently undeveloped hazard area lands as open space
- Acquisition of hazardprone buildings
- Elevation of floodprone buildings
- Wet/dry floodproofing
- Land use controls
- Habitat restoration and enhancement (beaches, dunes, wetlands, streams, riparian buffers)
- Drainage system improvements
- Road raisings
- Erosion management (dune plantings, rip rap protection, bulkheading)
- Development restrictions for high hazard areas
- More rational development and redevelopment in the future
- More restrictive construction standards

**Viability Projects for Your Municipality Based On Past Experiences**  
*What are the solutions?*

**Keep in mind....**

- Hazards are not necessarily static
- Their boundaries are not guaranteed; their degree of severity can change over time (i.e., flooding – climate change, development pressures)

**Viability Projects for Your Municipality Based On Past Experiences**  
*What are the solutions?*

**Group discussion:**  
**What are some possible solutions to the problems previously discussed?**

**Food for Thought**  
*What are other communities doing? IN MONMOUTH COUNTY*

**Borough of Sea Bright: Ongoing Mitigation Efforts**

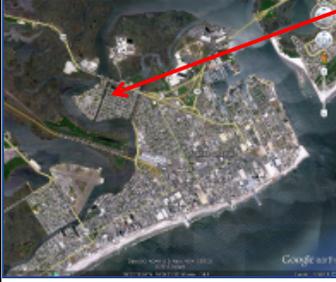

- Borough in NFIP since 1976
- 1,154 NFIP policies, \$15M losses
- 140 repetitive loss properties contributing \$9.5M in losses
- Sandy Hook – Barnegat Inlet BEC Project provides oceanfront protection
- Downtown area still at risk of flooding from Shrewsbury River

- US Army Corps of Engineers Project: plan formulation ongoing
- Structural solutions viable but not locally favored
- Focus on multiple structure retrofits
- Meanwhile: at least one residence has been the subject of a successful FEMA grant application for elevation since 2009

**Food for Thought**  
 What are other communities doing?  
**OTHER FEMA REGION 2 COASTAL AREAS**

**Atlantic City – Venice Park Bulkhead Project**

- City participating in NFIP since 1971
- 8,234 NFIP policies, \$16.4M losses<sup>1</sup>
- 272 repetitive loss properties contributing \$7.2M in losses<sup>1</sup>
- CRS Community (Class 9, 5% discount on flood insurance premiums)
- Venice Park – repetitive loss area
  - Island contains 1 school + 43 RLPs
  - Problems: erosion and tidal flooding
  - Bulkheads to protect clusters of properties with high average annual losses (143 protected)
  - CRDA funding

<sup>1</sup> year 2005

**Food for Thought**  
 What are other communities doing?  
**OTHER FEMA REGION 2 COASTAL AREAS**

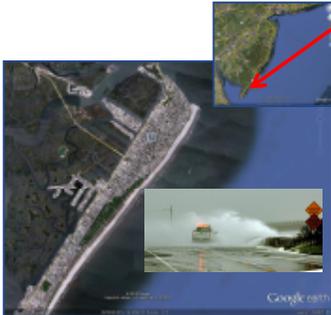

**Freeport, NY – Structure Elevations & Road Raisings**

- Long Island coastal back bay community
- 2,631 NFIP policies, \$10.1M losses<sup>1</sup>
- 285 repetitive loss properties contributing \$7.7M in losses<sup>1</sup>
- CRS Community (Class 8, 10% discount on flood insurance premiums)
- Various FEMA programs - Structure elevations and road raisings

<sup>1</sup> year 2005

**Food for Thought**  
 What are other communities doing?  
**OTHER FEMA REGION 2 COASTAL AREAS**

**Avalon, NJ – Backflow Valves, Pump Stations, Bulkhead Improvements**

- Barrier island community
- Resident population is about 2,000 but swells to around 40,000 in summer
- 4,845 NFIP policies, \$7.7M losses<sup>1</sup>
- 141 repetitive loss properties contributing \$5.4M in losses<sup>1</sup>
- CRS Community (Class 6, 20% discount on flood insurance premiums)
- Coastal and bay flooding
- Various FEMA programs and local funds for backflow valves, pump stations, and bulkhead improvements as well as an elevated dune system

<sup>1</sup> year 2006

**Closing Thoughts**

- Hazard mitigation is....a big commitment
  - people
  - time
  - money
- The benefits far outweigh the costs of inaction
- Will we mitigate everywhere in every municipality from every hazard?
  - No, not right away. Probably not ever. But **we are challenged to take the sometimes difficult steps that lead in the right direction.**

**Closing Thoughts**

“You can do anything if you work at it *a little at a time.*”

-Nicholas A. Curto, Sr.

Others in attendance:

Representative from ***Birdsall Services Group, John Miele***, who introduced himself as someone who provides municipal engineering services in south Jersey, but who is attending the workshop in place of Carolyn Weaver and Jim Criolo who work with Monmouth municipalities as far as municipal engineering, floodplain administration, and grants. Though ***he was not specific to which municipalities their firm was representing.***

## BAYSHORE REGION – 4/2/13

### Municipal Feedback

- **Sea Bright** is adopting V-zone + 2 feet of freeboard design standards.
- **Sea Bright** Zoning Officer is the Floodplain Administrator.
- **Sea Bright** has concerns about the new ABFEs. Murphy said the new maps show A zone coastal and V zone backbay; however, the buildings that were destroyed by waves are primarily coastal locations, not backbay.
- **Highlands** nodded regarding Carlisle question of whether the planned annual reviews had taken place during the plan maintenance phase. Lack of response from others seemed to imply that they hadn't.
- **Matawan** submitted two LOIs under Sandy: one for a roadway elevation, and another to install auxiliary power for their municipal complex.
- Several times over the course of the workshop municipalities expressed concerns related to Sandy recovery and rebuilding. **Sea Bright** and **Union Beach**, in particular, expressed concerns with regard to how to mapping trickles down to homeowners, and the schedule. Sounded like homeowners are financially tapped, and putting off rebuilding to the ABFEs until the Preliminaries are released in the hopes that the ABFEs were too aggressive and that the new maps will ultimately show lower elevations. This represents a cost savings to homeowners, but it also leaves them in limbo for several more months. This spurred a conversation on ICC monies, and possible HMGP monies, community block grants, Green Acres/Blue Acres - all of which are good but people don't know if they should take a chance and wait, or potentially dig an unnecessary financial hole in the name of starting now. Most in the room seemed to nod in agreements at statements from various companies (i.e., builders) that are issuing false information about FEMA grant and insurance programs, and also implying that homeowners can apply all on their own (as opposed to the municipality needing to be the applicant) and it's creating a lot of confusion. Also concerns about grandfathering, impacts on flood insurance rates, etc.
- **Union Beach's** concern regarding ACOE project. It has been unfunded for about 10 years. Initially, it was expected to cost about \$99 million; the locals could have absorbed the cost but it was unfunded in presidential budgets. Today, the cost would be about double that, a local share which the town can no longer afford. If the project had been funded and implemented pre-Sandy, he estimated that about 80% of the houses that were destroyed would still be standing today. The

town can't seem to get an answer as to whether this project may move forward again, or how the homeowners will be impacted (i.e., if the town tells everyone to build to ABFE plus a couple of feet of freeboard now, that costs people a lot of money that most don't have, and if in a couple of years the ACOE is going to come in and implement a project that makes all of that unnecessary, people's lives have really been upended for no reason. **Middletown** expressed similar concerns. Both made the case that it would be great if FEMA could step in and fund the Federal share for projects on the shelf like this one where there was a local match at one time.

- **Union Beach** was also concerned about how grant requirements to use prevailing wages really skyrockets project costs. He had one homeowner who funded an elevation on their own at a cost of \$47,000; whereas another nearly identical home that was FEMA-funded was raised identically by a contractor at a cost of \$247,000.
- **Union Beach** is not pursuing acquisitions. Recommending that people interested in selling work with a developer. They are a 1.8 square mile town, 1.7 square miles of which were inundated during Sandy. Acquisitions result in a loss of ratables. They are also dealing with issues regarding homes that have been destroyed where the owners only want to pay taxes now on the land. Loss of revenue. **Highlands** also feels similarly about acquisitions.
- **Union Beach** "Lots of carrots out there.".....**Middletown**: "Who do you believe? And what do you tell your people?"
- **Union Beach** and some others understand that the State will not fund 'checkerboard' type acquisitions; however, these are the only types in many cases that are suitable for the community. Particularly those municipalities that are small geographically.
- **Union Beach** prepared an acquisition application two years ago for 8 homes. The town covered the costs associated with project application development, BCAs, etc. Homeowners had the money to cover the match. But BCA was just under 1, ultimately. So FEMA did not fund. Due to Sandy, 4 of those 8 homes have been destroyed.
- **Highlands** said 7 projects post-Irene were denied due to State priorities for focusing Irene money in areas like Wayne. FEMA stressed that these 7 should be in their plan update.

## BAYSHORE REGION – 4/2/13

- **Union Beach** would like to relocate one of their firehouses, but at 1.8 square miles total, 98% developed, and 1.7 square miles flooded during Sandy, they don't have any place to relocate it to. What is the mitigation solution? (left open ended; some even talked about problems with elevating/flood proofing building when access roads are flooded).
- **Sea Bright** said that during Sandy they had 30' waves on top of storm surge; how did the ABFEs put the backbay areas into a V-zone and not the coastal areas? During Sandy, the firehouse was hit, as were roads to/from. Similar to Union Beach: what is the mitigation solution? Left as a rhetorical question.
- **Municipalities** – OEM coordinators have a lot of trouble getting anyone in other community departments involved; the 'black hole', even more so now post-Sandy. They don't have enough staff, the department budgets are low, many staff members are part time and filling multiple positions, they have a high turnover in positions (particularly leadership, i.e. mayors) – mitigation planning is falling on OEM coordinator shoulders despite best efforts to engage rest of the local government.
- **Sea Bright** Mayor intends to update the comprehensive plan to include a hazard mitigation element.
- **Sea Bright** mentioned that there is a report done recently by Stockton College which shows losses and amount of beach before/after Sandy.
- **Many communities** expressed concerns over the nature of the FEMA response where PA teams, in particular, are rotating. High staff turnover, and poor transfer of information.
- **Sea Bright** was not happy with Dewberry. The town had estimated substantial damage for about 50 buildings. Dewberry used a method which showed only 3 were substantially damaged. Birdsall representative and FEMA reminded attendees that only the local floodplain administrator is authorized to declare something substantially damaged, so that person can override consultant estimate. (If not a substantially damaged policyholder, then homeowner doesn't qualify for ICC monies).

### Key FEMA Points

- Stress on community ownership and local participation; local champion needed to take the actions forward through implementation and monitoring.

- The plan should be updated and modified constantly.
- Carlisle mentioned that FEMA Mitigation Assessment Teams are preparing reports and/or advisory sheets that may be useful for municipalities; contact FEMA for more information.
- Preliminary DFIRMs are expected approximately in September.
- Very important for the jurisdictional representatives to keep all their departments aware of the process, the plan, and the need for keeping it current.
- New Handbook is still forthcoming
- More developed actions should be in the update (if that's fewer, then fine; but they need to be moving away from broad brush statements and studies, and toward concrete actions to reduce risks).
- Activities that aren't true mitigation can go in, though they won't 'count' toward the mitigation action requirement, and must be labeled as preparedness, response, etc.
- In the new guidance, generators are fundable mitigation actions for critical facilities (some confusion though as to whether it is only as a component of a larger project to build a new critical facility, or if it also applies to discrete projects for auxiliary power for existing critical facilities).
- State will be given Rep Loss Data for Sandy from FEMA by the end of May.
- FEMA obligates HMGP monies to the State; the State is in charge of where that money is obligated and how project types or certain areas are prioritized.
- If damaged buildings are being sold to developers for the purpose of building bigger, better buildings – that's putting more at risk. How is that risk going to be mitigated?
- Public education is fine as an action item for the community's 'lesser hazards' (to meet the criteria of action items for each hazard)

9:00 am to 1:45 pm

### Municipal Feedback and Issues

- Half of the attendees were involved with the previous plan.
- Englishtown:** small municipality entirely surrounded by Manalapan, modest flooding risk, the only impact of Sandy was one tree down which affected power to two houses, although power to the whole town was affected by the disruption to the wider power system outside the Borough. Stream clearance was the only action they submitted in the original plan.
- Manalapan:** had one action in the initial plan which they have completed – dredging of Holiday Lake, which was locally funded but jointly managed with the Monmouth County Mosquito Commission.

- **Howell:** their actions in the initial plan included addressing repetitive flood properties, shelters and generators. Their representatives looked for confirmation that continual review and strengthening of existing ordinances counts as mitigation. FEMA concurred.
- **Marlboro:** their actions in the initial plan included four stream clearance (one of which is the subject of a post-Sandy LOI) plus outreach and warning systems.
- **Howell:** the repetitive flood properties action in the current plan refers to an area which floods frequently (including building inundations) but is not mapped as a flood hazard area on the FIRM. Property owners in this area apparently do not have flood insurance and were unaware that they were eligible for it despite not being in SFHA. Town should take steps to ensure that these property owners get NFIP coverage ASAP, especially since their premiums should be relatively low if they are not currently in the SFHA. The sooner these people have flood insurance the sooner the level of risk will become apparent as flood losses/NFIP claims are recorded, documented as Rep Loss, etc. Although the initial plan includes an action to address this issue, it should be much more specific (location/street names/number and type of structures), and it was recommended that they could consider actions in two phases:
  1. H&H study to establish the actual risk/frequency of flooding
  2. Acquisition program supported by outcome of study.
- **Manalapan:** representative wanted confirmation that detailed Rep Loss property information would be made available to individual municipalities, to assist in developing detailed actions (subject to the 1974 Privacy Act).
- **Marlboro:** getting permits is a major obstacle for stream clearance. The riverine flooding experienced in the town is virtually all nuisance flooding – mainly back yards, very little building or even road inundation.
- **Englishtown;** their only current action is listed as “routine stream maintenance, but for FEMA eligibility it should be presented as “stream/channel improvements” or similar, since they are not talking about an annual activity, more like something that has to be done once every 10 years or so. Since watercourses in Englishtown flow from/to Manalapan, there should be close cooperation/coordination (develop joint actions?) between the two municipalities.
- **Howell** representatives mentioned loss of power as major impact in many different storm events, and that municipalities do not have any authority over private utility companies with regard to mitigation actions. Anecdotal evidence

suggests that NJ power infrastructure is among the oldest in the nation. FEMA suggested that communities continue to document all power outage issues and make sure state authorities are aware of problems.

- **Monmouth County** has reached out to utility companies and will continue targeted outreach in this direction.
- **Howell:** representatives reported that overall they have had a negative experience of the mitigation process, since the likelihood of actually receiving any grant funding appears remote. It was expected that post-Sandy funding would be almost entirely directed to shore communities.
- **Manalapan:** property acquisition raises issue of what happens to existing mortgages on affected properties.
- **Howell:** Property acquisitions would likely be the responsibility of the Town Manager and could be completed in a year if all went well.
- **Marlboro:** lead agency for stream clearance/improvement would likely be Engineering with support from Public Works. Could be done under maintenance program and possibly utilize open space account.
- **Howell:** Representatives asked about criteria for ultimate grant award: For example, it was felt that Howell's project to acquire a dozen or so properties would be well down the pecking order for funding when compared to (say) the construction of a sea wall providing protection to several hundred properties, or the elevation/acquisition of a much larger number of properties in a different town. FEMA staff were able to provide a number of reasons that the Howell plan could still be prioritized for grant funding:
  1. The Howell plan features acquisition of a group of adjacent structures, which may provide better opportunity for open space preservation than a "checkerboard" pattern often arising from larger buyout programs.
  2. If Howell can get all the affected property owners on board quickly (apparently not an issue) the project may be regarded as more "shovel-ready", especially versus larger programs requiring buy-in from a greater number of owners.
  3. Projects such as sea walls and other large structures are unlikely to be funded by FEMA grant; more likely other Federal agency such as US Army Corps of Engineers and thus not in direct competition.

## WESTERN REGION – 4/3/13

4. Smaller project such as Howell's more likely to be completed in short time frame thus could be attractive to FEMA since they are keen to demonstrate mitigation success stories
5. The properties covered by the Howell project are all primary residences, which may not be the case with larger programs in shore communities.

### Key FEMA Points

- Cathleen Carlisle: the main point of the workshop is so that participants understand the key elements of the plan and how they fit together/flow from one to the other. She emphasized in particular that the link from risk assessment to actions should be clear.
- Cheryl Copeland recommended that municipalities should consult the plan "at least once a year".
- Mickey Stroup emphasized that each participating municipality should meet the requirements for approval on an individual basis: when she reviews a multi-jurisdictional plan she completes a separate crosswalk/plan review tool for each municipality. Each municipality should have a copy of the review tool to refer to.
- Generators are eligible for funding as mitigation options if they are for critical facilities, but municipal strategies must include other actions.
- Preparedness and response (e.g. emergency vehicles and warning systems) are not eligible for HMGP funds.
- Routine maintenance activities are also not considered mitigation projects.
- Cathleen described the Action Worksheet (distributed in blank form and as completed for three examples) as a way of including all key strategy elements (risk – action – evaluation – implementation – progress) on a single page. Would like to avoid forms with lots of check marks.
- Cathleen recognized that it is not easy to come up with meaningful actions for some hazards (eg severe storms, hail) and that increasing public awareness is the only realistic option for mitigation – as previously recommended in Region 2. Handout 15b provides an example of an action worksheet for public outreach for all natural hazards.

## WESTERN REGION – 4/3/13

- New DFIRMs for Monmouth County are not expected to include significant revisions for inland areas.
- Sara Margolis recommended that each community should analyze a separate range of actions.
- Selected actions should be consistent/aligned with individual community capabilities.
- Cathleen: capability assessments should be clear about people holding multiple posts – if one person holds two positions this should be made clear rather than implying that there are two different individuals (can give misleading impression of communities capabilities).
- FEMA encourage full participation of public utility companies in mitigation plans; they can be eligible for funding as a sub-grantee. Also applies to colleges, universities, and even school districts.
- Cathleen clarified that the State is responsible for prioritizing mitigation actions for funding, not FEMA. While post Irene the State made a policy decision to concentrate funds on acquisition of properties in northern NJ, post-Sandy priorities have not been decided.
- The mitigation plan can be used to support funding applications from sources other than HMGP.
- Important to specify planning mechanism in implementation strategy – easier to implement via existing programs.
- While section 9 of the plan lays out plan integration in general terms, the update should also relate details of what actually happened.
- Progress with mitigation actions is required for the update and is an opportunity to document obstacles to progress. Communities should remember that progress reports will be required for every project selected for inclusion in the plan.
- FEMA would prefer to see 2-3 high quality achievable projects in the plan for each community rather than 6-7 vaguely defined projects or those which have little chance of completion (due to incompatibility with local capabilities, for example).

## MID-MONMOUTH REGION – 4/4/13

### URS Scope of Work Mod1

#### Notetaking at FEMA-led Mitigation Strategy Workshops

- Bayshore Region – Tuesday, April 2, 2013
- Western Monmouth Region – Wednesday, April 3, 2013
- Mid Monmouth Region – Thursday, April 4, 2013
- South Monmouth Region – Friday, April 5, 2013

Scheduled for 9 am – 1:30 pm at MCOEM, 300 Halls Mill Road, Freehold

<b>OTHER REGIONS</b>		
LAKE COMO – Southern Monmouth Region	x	Louise Mekosh, Boro Clerk/Administrator

- Note: See attached sign in sheet for detailed contact information

Others in attendance:

Representative from **Birdsall Services Group, Chris Lettini**, who introduced himself as someone who provides municipal engineering services for Brick, Belmar, and Long Branch.

## MID-MONMOUTH REGION – 4/4/13

### Municipal Feedback

- **County Planning** discussed a recent restructuring of the Department, and indicated that there now is a much closer working relationship between Planning and OEM at the County level. He opened the door to participation in the plan update process, and to supporting municipalities with various technical assistance related to the plan update and beyond.
- **Red Bank** mentioned a sewer lift station that they have in a flood zone on the river, with a possible project being to raise the electrical components.
- **Birdsall** recommended that some of its municipalities could benefit from having underground utilities, and a possible action being to coordinate with County Planning and the utility companies.
- **Oceanport** mentioned that the Borough Hall needs to be relocated, but there is no place to move to.
- **Red Bank** has a school located in a swamp. They'd like to relocate, but there's no place to move it to. The land around the school is sinking. It sustained more than \$1 million on damages after Sandy when 6" of water was in the whole school. It's located at the end of River Street. Also mentioned that the Borough doesn't have the authority to tell the school district what to do. FEMA recommended partnering with Planning, and evaluating the Land Use Plan / Master Plan to see where it could go, or perhaps partnering with another municipality / joint district?
- **JCPL** issues came up a bit. Municipalities, hands tied. Company was referenced as having aging systems, not being proactive in terms of tree trimming programs, etc.

### Key FEMA Points

- Doug McDonald mentioned that after Sandy, he reached out to many municipalities in Monmouth County (via phone) to ask them about the Hazard Mitigation Plan. He found that many didn't know about the plan, what it was, where it was, or what the implications were of the adoption resolution.
- Emphasis that the plan is the plan of each municipality; that the municipalities are equal partners with the County.
- Stressed the importance of the process itself, and local participation in the process.

## MID-MONMOUTH REGION – 4/4/13

- Need for local ownership of the plan.
- Reminded attendees that the plan is a living document; it is to be maintained and updated regularly.
- Municipalities (and their respective departments, not just OEM) should know what it is, where it is, and how to make use of it.
- FEMA stressed that the worksheets being distributed today are intended to be useful, not mandatory.
- Attendees were reminded of the need to *be specific* in their identification of mitigation actions, and placed a great deal of emphasis on the importance of insuring that projects demonstrate the link between risks and actions.
- Cheryl and Mickey told the group that 25% local match for grants like HMGP could be in-kin. It was implied that the full 25% could be all in-kind, but that's not my understanding.

### Key NJOEM Points

- Shanita (Witt) stated that it was mandatory for school districts to participate in the process (just like a municipality) if they wanted to receive FEMA funding. Many questions were raised regarding whether or not this was the actual requirement. Considerable discussion followed, with many perspectives (from FEMA staff in attendance, as well as their contractor from Dewberry) on what the real FEMA requirements actually were. In the end, it appeared as if there was a general consensus with URS' understanding: that districts couldn't apply to FEMA directly if they didn't participate directly and adopt (like a municipality would) BUT that the municipality or the county in which they are located could sponsor, as long as the municipality/county successfully participated and adopted (in the same manner as a municipality would sponsor an individual homeowner, for example, and apply on their behalf).

9:00 am to 12:30 pm

## SOUTH REGION – 4/5/13

### URS Scope of Work Mod1

#### Notetaking at FEMA-led Mitigation Strategy Workshops

- Bayshore Region – Tuesday, April 2, 2013
- Western Monmouth Region – Wednesday, April 3, 2013
- Mid Monmouth Region – Thursday, April 4, 2013
- South Monmouth Region – Friday, April 5, 2013

Scheduled for 9 am – 1:30 pm at MCOEM, 300 Halls Mill Road, Freehold

**Municipal Feedback and Issues**

- Brielle:** One of the representatives was apparently not aware of the existing plan and its purpose.
- Bradley Beach/Avon-by-the-Sea:** key issue for them is Sylvan Lake which has serious drainage issues and affects several municipalities. Sylvan Lake was included in a project in the initial plan.

---

## SOUTH REGION – 4/5/13

- Some municipalities apparently not aware of Repetitive Loss Properties in their jurisdictions.
- **Belmar:** Lake Como has serious drainage problems (situation is very similar problem to Sylvan Lake ), and neighboring municipalities also affected (Borough of Lake Como in this case). 100 houses affected, if all were to be elevated the elevations would range from 4-6 feet. Belmar representative did not completely discount the nonstructural option, but believed that modifications to existing outfalls/drainage/pumping system would be easier and more locally acceptable. Was included in the initial plan.
- **Avon-by-the-Sea:** Seeking to restore/improve shorefront bulkheads and dunes (not in original plan). FEMA: Must demonstrate how such projects would reduce risk to specific assets and property. Avon representatives estimate that dune/bulkhead improvements would benefit the first two rows of shorefront properties (40-50 structures?).
- **Monmouth County:** Director of Planning raised the issue of dam failure, seen as a concern in several county locations, particularly the Manasquan Reservoir. Director mentioned possible mitigation measures for properties in potential downstream inundation zone such as acquisition and elevation, rezoning areas downstream of the dam, and also reducing impervious areas in watershed upstream of the dam.
- **NFIP Participation:** there appears to be some inconsistency in the current records. Freehold Borough and Shrewsbury Township do not appear on FEMA's list of non-participating communities, but they also do not appear on the Community Status list of current participating communities either.
- **Bradley Beach:** basic evaluation of a potential plan to dredge Sylvan Lake to increase capacity: No problems with technical feasibility, environmental benefits are anticipated in the form of improved water quality and habitat, socially and politically the project is very popular, and also there is a local champion.
- **Belmar:** evaluation of Lake Como project very similar to Sylvan Lake.
- **Neptune:** River bulkheads for flood protection – plug gaps and increase crest elevations. Flood damage risk reduced for ~200 properties. Technical feasibility not in doubt, minor adverse environmental impact but NJDEP permits are in place, project has local champion, also meets additional community objectives of

improving waterfront access and promoting recreation. Phase 1 included in original plan was funded and completed.

- **Bradley Beach:** Want to include backup power generators for Borough Hall alongside other mitigation actions in plan update. Currently eligible for HMGP funds.
- **Avon:** Looking to collaborate with Bradley Beach on Sylvan Lake project, potential sources of funding from NJDEP and NRCS as well as FEMA. There is also a Lake Commission which has no real authority but good example of a local champion. OEM would take the lead in administering the project.
- **Atlantic Highlands:** Original plan includes projects to mitigate flooding and erosion problems. Following this workshop the Borough will actively pursue property acquisitions (would like to amend existing LOI) which could be undertaken via the open space plan. For example, one affected property is adjacent to a walking trail and the acquired property could be added to the recreation land. Could pursue funding from Friends of the Navesink in addition to HMGP.
- **Brielle:** Would like to consider property elevations and would like more details regarding computation of substantial damage and funding to cover the 24% owners' share. Observation: elevations can be costly: two were done in Sea Bright (post-Irene) for about \$250,000 each.

### Key FEMA Points

- Mickey Stroup emphasized that the plan should be reviewed every year by all participating jurisdictions and the County.
- Shenetia Henderson clarified that FEMA expects a stronger and more detailed plan than the initial one, with more participation. Also that ultimate ownership of the plan rests with the participating jurisdictions, not FEMA, the State, or the consultant.
- “Concise is nice”
- New review tool replaces the previous crosswalk tool with the intent that the review tool judges the intent of the plan rather than just checking boxes.

- Attendees encouraged to check out new FEMA publication “Mitigation Ideas” <http://www.fema.gov/library/viewRecord.do?id=6938>
- Plan updates must demonstrate link between risk assessment and selected actions more clearly.
- The intent of the “Action Worksheet” is to reduce the size of the plan document by combining all key elements of each action (risk – action – implementation – progress) in one location.
- Where risks cross municipal boundaries (such as in the Sylvan Lake and Lake Como examples), projects undertaken jointly by teams of jurisdictions are very much encouraged and could lead to administrative cost savings and other efficiencies.
- Each participating jurisdiction must analyze a range of actions for their individual municipality.
- CRS participation is very much encouraged.
- Action evaluation – basic STAPLEE was used for the first plan but FEMA’s expectation for the update is that the evaluation goes deeper: In practice this means comments and explanations for each criteria rather than + or – as in previous forms.
- Municipal master plans and open space plans are good examples of existing planning mechanisms that can be used for mitigation.
- FEMA emphasized that mitigation actions can and should apply to future development as well as existing buildings.
- Capability assessment should be honest and distinguish between one person holding five positions and five different people holding those positions. Can give misleading picture of community capabilities.
- Reminder that school districts can act as fully participating jurisdictions in a multi-jurisdictional plan. The County should make all school districts aware of this opportunity.

FEMA Region 2

# Hazard Mitigation Planning

**A Workshop for Updating your Mitigation Strategy Monmouth County, NJ**  
April 2-5, 2013

H-List and H01

## WELCOME!

- **Workshop purpose:**
  - Jumpstart mitigation strategy update
- **Who's here?**
  - Planners, floodplain managers, public works, emergency managers, other?
- **Your role in planning process?**
- **Your workshop expectations?**

FEMA Region II 2 H02 RiskMAP

## WORKSHOP OUTLINE

- Hazard mitigation planning
- Mitigation strategy
  - Heart of the plan
  - Implementation focus
- What makes a good mitigation strategy?

FEMA Region II 3 RiskMAP

## Why Develop a Mitigation Plan?

Mitigation Planning Process assists with -

- **Public Support**
  - Involves stakeholders
  - Builds political commitment and partnerships
- **Risk Reduction**
  - Saves lives and reduces property damage
  - \$4 saved for every \$1 spent on mitigation
- **Project Implementation**
  - Provides a road map for implementing projects and actions
- **Grant Eligibility**
  - Hazard Mitigation Assistance (HMA) grant funding requires an approved plan

FEMA Region II 4 H03 RiskMAP

## Hazard Mitigation

**Approach**  
Mitigation as a way of doing business in the Community

**Goal**  
To reduce the risk to your community from natural hazards

FEMA Region II 5 RiskMAP

## Mitigation Planning Cycle

The cycle consists of four main stages: Establish a Planning Process, Assess Risks, Develop a Mitigation Strategy, and Implementing, Maintaining & Updating your Approved Plan. The cycle is continuous, with arrows indicating a clockwise flow between these stages.

FEMA Region II 6 RiskMAP

## Some Key Points

- *It's your plan.*
- *A consultant may support you, but your active participation is critical.*
- *The planning process is as important as the plan itself.*

## Updating your Plan?

"The Disaster Mitigation Plan?  
You just have to know where to look!"

## Writing the Plan

- **Goal:**
  - clear
  - useful
  - living document
- **Concise is nice**

## MITIGATION STRATEGY STEPS

- **Focus on mitigation**
- **Address risk findings**
- **Analyze a range of actions**
- **Assess community capabilities**
- **Evaluate identified actions**
- **Prepare implementation plan**

## MITIGATION STRATEGY STEP 1

- **Focus on mitigation**
  - Address risk findings
  - Analyze a range of actions
  - Assess community capabilities
  - Evaluate identified actions
  - Prepare implementation plan

## What is Mitigation?

Mitigation is any sustained action taken to reduce long-term risk to life and property from a hazard event

**Mitigation**  
elevated home by the river

**Mitigation**  
property acquisition

**Preparedness & Response**  
purchase of a police command vehicle

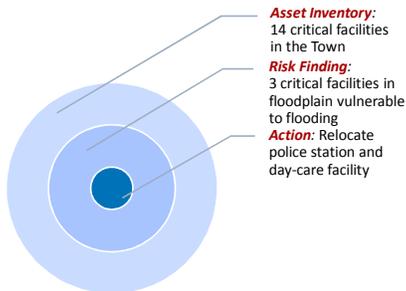

## DISCUSSION: Which Actions are Mitigation?

- Examine the actions in your latest plan
- Determine which actions are mitigation
  - Not preparedness or response
  - Not maintenance activities
  - Not stand-alone studies
  - Submitted plan should list mitigation actions together
- Q&A

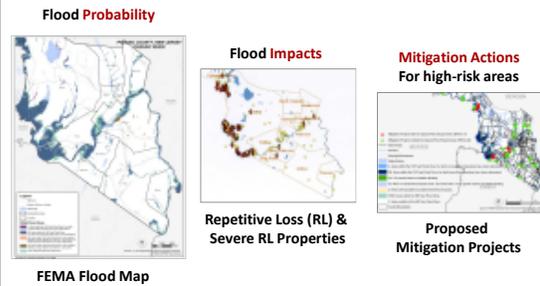

## MITIGATION STRATEGY STEP 2

- Focus on mitigation
- Address risk findings
- Analyze a range of actions
- Assess community capabilities
- Evaluate identified actions
- Prepare implementation plan

## Actions Should Address Risk Findings

## Using Flood Maps & Data to Link Risk and Actions

## Action Worksheet

- A worksheet for each action that brings together material all in one place
- Indicates connections between risk, action & implementation
- Provides an adaptable framework that allows input of meaningful text
- See *Action Worksheet example*

## Risk Findings: Summarize as Problem Statements

### Risk Findings

- 12 Repetitive Loss Properties located in one neighborhood with one of the highest combined claim amounts (\$4,300,000) over past 30 years.
- Emergency Operations Center experienced roof and window damage during Hurricane Irene
- Public understanding of mitigation, mitigation programs and their benefits is limited.

## Identify Actions that Address Risk

Risk Findings	Mitigation Actions
12 Repetitive Loss Properties located in neighborhood with one of the highest combined claim amounts (\$4,300,000) over past 30 years.	Acquire (or elevate) Repetitive Loss Properties
Emergency Operations Center experienced roof and window damage during Hurricane Irene	Retrofit EOC with storm shutters and wind-resistant roofing materials
Public understanding of mitigation, mitigation programs, and their benefits is limited	Develop a public outreach program

## BREAKOUT #1: Risk Findings and Mitigation Actions

- Identify
  - one key risk finding, and
  - a *new or ongoing* action that addresses this risk
- Complete the first 3 sections of an **Action Worksheet**
  - intro, assessing the risk and describing the action*
- Report-outs and discussion

## MITIGATION STRATEGY STEP 3

- Focus on mitigation
- Address risk findings
- Analyze a range of actions
- Assess community capabilities
- Evaluate identified actions
- Prepare implementation plan

## What constitutes Comprehensive Range of Actions?

### STRUCTURAL PROJECTS

Acquisition  
Elevation  
Retrofits  
Drainage

### PLANNING MECHANISMS

Zoning Codes  
Ordinances  
Open Space Plan  
NFIP

### EDUCATION & OUTREACH

Public Awareness  
Outreach  
Educational Programs

### NATURAL RESOURCE PROTECTION

Stream and Wetland Restoration  
Erosion Control

MITIGATION

IMAGINATION

## What Range of Actions might address this Wildfire Risk?

**Risk Findings**  
(Problem Statement)

Within wildland-urban interface areas:

- Two critical facilities
  - School & county maintenance shop
- \$500 million in property value at risk
- Increasing development pressure

### Analyzed Actions...

- Must be more than a generic list
- Must be unique to your community

Hurricane Clips

Elevated Home

FEMA Region II 25 RiskMAP

### For Multi-jurisdictional Plans

*Each jurisdiction must develop its own, unique actions, but some actions may be shared or similar across jurisdictions*

Participating Jurisdiction	Mitigation Action
County X	Public awareness video for local channel about "how to prepare for a high wind event"
Village Y and Town Z	Bank stabilization project along stream to remedy erosion that causes flooding in both towns
Village A	Adopt freeboard

FEMA Region II 26 RiskMAP

### MITIGATION STRATEGY STEP 4

- Focus on mitigation
- Address risk findings
- Analyze a range of actions
- **Assess community capabilities**
- Evaluate identified actions
- Prepare implementation plan

FEMA Region II 27 RiskMAP

### Assess Your Community Capabilities

- **Plans**
  - Master plan
  - Land use plan
- **Policies and Ordinances**
  - Building codes, zoning
- **Programs**
  - NFIP and CRS
- **Other Resources**
  - PNPs
  - Educational institutions

- **Studies and Reports**
  - Flood Insurance Studies, HAZUS
- **Staff and Departments**
  - Planner, engineer
  - Building code official
  - Public works official
  - Local floodplain administrator
  - GIS specialist
  - Public information official

FEMA Region II 28 H09 RiskMAP

### DISCUSSION: Align with Community Capabilities

- Review how community capabilities are addressed in your latest plan
- Identify how they have changed and how they can be improved
- See sample *Community Capabilities Worksheet*
- Discussion

FEMA Region II 29 H10/H11 RiskMAP

### Describe NFIP Participation

- Insurance summary
- Staff resources
- Regulation
  - Flood map status
- Compliance history
- Community Rating System (CRS)
- See NFIP Worksheet and example

FEMA Region II 30 H12/H13 RiskMAP

## Include NFIP Compliance Actions

- Not enough to just state “will maintain compliance with NFIP”
- Actions on **how the NFIP is administered**
  - e.g. Identify non-compliant structures
- Not all flood mitigation actions are NFIP compliance actions
  - e.g. structural projects
- Proactive, best practices
  - e.g. CRS activities

## MITIGATION STRATEGY STEP 5

- Focus on mitigation
- Address risk findings
- Analyze a range of actions
- Assess community capabilities
- Evaluate identified actions
- Prepare implementation plan

## Evaluation Process

- Approach
  - STAPLEE
  - Action Worksheet
- Must include a cost-benefit review

Potential Actions Identified

## Incorporating Benefit-Cost Review

### Is it cost effective?

- What are the losses avoided? i.e., what is the risk reduction?
  - Will it protect lives and prevent injuries?
  - Will it reduce damage to structures and infrastructure?
- What are the costs of the action?
- Will the losses avoided outweigh the action costs?

## Other Considerations

- Technical Feasibility
- Political Support
- Legal
- Environmental
- Social
- Administrative Capability
- Local Champion
- Other Community Objectives

## BREAKOUT #2: Evaluate Actions

- See **Evaluating the Action section** of Floodproof Worksheet
- Fill out this section of your Action Worksheet
- Report outs and discussion

## MITIGATION STRATEGY STEP 6

- Focus on mitigation
- Address risk findings
- Analyze a range of actions
- Assess community capabilities
- Evaluate identified actions
- Prepare implementation plan

## What goes into Your Implementation Plan?

- Describe the action (be specific)
- Prioritize the action
- Designate party responsible for implementation
- Identify costs and potential funding sources
- Estimate timeframe for completion
- Determine planning mechanisms

## Integrate Actions into Existing Planning Mechanisms

## Clearly Link Risk, Actions & Implementation

Risk Findings	Mitigation Actions	Implementation
12 Repetitive Loss Properties located in neighborhood with one of the highest combined claim amounts (\$4,300,000) over past 30 years.	Acquire Repetitive Loss Properties	- Apply for HMGP to acquire properties and use in-kind services and local open-space fund as 25% match. - Modify comprehensive plan and zoning to identify land as open space.
Emergency Operations Center experienced roof and window damage during Hurricane Irene	Retrofit EOC with storm shutters & roofing	- Apply for an HMGP grant for the retrofit or submit to Capital Improvement Plan budget. - Institute a policy for public/critical facilities to review/mitigate these buildings for wind damage.
Public understanding of mitigation and its benefits is limited.	Develop public outreach program	- County posts hazard mitigation information on website and municipalities provide link to it. - County and municipalities disseminate flyers to educate citizens about mitigation.

## BREAKOUT # 3: Plan for Implementing Actions

- See **Implementing the Action** section of Action Worksheet example
- Fill in this section on your Action Worksheet
- Report outs and discussion

## Examples: Progress in Mitigation Actions

Mitigation Actions	Implementation	Progress Update
Acquire Repetitive Loss Properties	- Apply to HMGP to acquire properties; use staff time and Town conservation funds as match.	- Completed partially - acquired 5 of 12 flood-prone properties, using HMGP.
Retrofit EOC with storm shutters & roofing	- Submit to Capital Improvement Plan budget. - Consider a policy requiring critical facilities to have higher level of wind protection.	- Retrofit added to Capital Improvement budget. - New policy under consideration.
Develop public outreach program	- Post hazard mitigation information on Town website. - Use social media to educate citizens about mitigation.	- Town website has separate webpage for mitigation and new Facebook mitigation page.

## DISCUSSION: Progress in Mitigation Efforts

- Review **Action Progress Report** → 
- See **progress section** of Action Worksheet example 
- Fill out this section on your Action sheet
- Report outs and discussion

FEMA Region II      43    H16/H17      RiskMAP

## AFTER SANDY, WHAT'S NEXT?

FEMA Region II      44      RiskMAP

## DISCUSSION: Increasing Disaster Resilience

- Irene, Lee and now Sandy...
- Sandy Recovery Resources 
- Climate change impacts in your community?
- Mitigation action ideas?

FEMA Region II      45      RiskMAP

## Safe Growth

- Identify Opportunities with the **Safe Growth Worksheet**
- Examples in your community? 

FEMA Region II      46    H18      RiskMAP

## WHAT MAKES A GOOD MITIGATION STRATEGY?

- Reflects your community's risk, capabilities and goals
- Benefits outweigh the costs
- Allows your community to seize post-disaster opportunities and implement projects
- Results in risk reduction and a more disaster-resilient community

FEMA Region II      47      RiskMAP

## Questions?

**Mitigation Planning Contacts**

New York State: Richard Lord (RLord@dhes.ny.gov)  
New Jersey: Robert Little (njmitigation@gw.njsp.org)  
FEMA Region II: Cathleen.Carlisle@fema.dhs.gov

**Thank You**

FEMA Region II      48    H19      RiskMAP

Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update  
*Core Planning Group Meeting #3 - Progress Meeting*  
April 15, 2013  
9:30 am and 7:00 pm  
Monmouth County Agriculture Building, 4000 Kozloski Road, Freehold, NJ

---

AGENDA

- **Welcome and Opening Remarks**..... *Michael Oppegaard and Margaret Murnane Brooks, MCOEM*
  
- **Looking Back - The CPG Meeting of September 2012**.....*Anna Foley and Richard Franks*
  - **Perspectives and perceptions six months ago**
    - Some key slides from the last meeting that best reflected perceptions at that time will be highlighted as a way of highlighting how Sandy has provided a new frame of reference.
    - CPG members will be expected to listen / ask questions.
  
- **Looking Forward - How Sandy Lessons Learned Are Shaping Local Mitigation Strategies**
  - **9:30 am Session: Guest Speaker – Buzz Baldanza, Oceanport**
  - **7:00 pm Session: Group Discussion**
    - Perspectives of how the disaster has changed the municipal perception of the severity of the problem, the need for mitigation, and what mitigation strategies to pursue
  - **Both Sessions: Brief overview of the April 2-5 workshops (URS/FEMA)** - the importance of developing a robust mitigation strategy.
  
- **Be a Force of Nature in Your Own Community**.....*Anna Foley and Richard Franks, URS*
  - URS will discuss:
    - **Knowing your community’s vulnerabilities and implementing hazard mitigation measures can reduce your risk and increase your community’s resiliency.**
      - Inform the public about the natural hazards in their locality;
      - Provide information that can be used to mitigate the impacts; and
      - Motivate individuals and communities to take actions that will prepare them for the next disaster and share their mitigation steps with others.
    - **Outreach to the public and other stakeholders during the plan update process is required for FEMA to approve the plan for your jurisdiction**
      - See Guidance Memo 1 for more information and tips; and
      - Use the Outreach Log to document your activities.
  - CPG members (County and municipal representatives) will be expected to participate in a group discussion and share some of their outreach activities to date with the other communities.

- **Hazard Rankings Versus Projects: The Good, The Bad and The Ugly ...***Anna Foley and Richard Franks, URS*
  - **The link between the risk assessment and mitigation strategies**
    - URS will present examples of good approaches to emulate when updating your mitigation strategies, and not-so-good approaches to try to avoid
    - CPG members will be expected to participate in group discussions that may arise.
  
- **SharePoint Site .....***Anna Foley and Richard Franks, URS*
  - <https://ieprojects.urscorp.com/clients/mcnj/SitePages/Home.aspx>
  - URS will navigate to the site (live) and provide an overview of structure and content.
  - CPG members will be expected to indicate whether they have been on the site yet, and any feedback they would like to share.
  
- **Facebook Page .....***Anna Foley and Richard Franks, URS*
  - URS will navigate to the Monmouth County Sheriff's Office Facebook Page
  - CPG members will be expected to indicate whether they have been on the site yet, and any feedback they would like to share.
  
- **Plan Update Worksheets - Capturing The Ebb and Flow of Information Between Communities and Plan Authors.....***Anna Foley and Richard Franks, URS*
  - **Recap of what was done for the 2009 Plan**
  - **Overview of what needs to be done for this Plan Update**
    - URS will discuss:
      - *Who should complete the worksheets*
      - *What will they encompass*
      - *When will they be distributed; when will they be due back*
      - *Where to get copies*
      - *How to submit responses*
      - *Why this is a necessary step of the process*
    - CPG members will be expected to listen / ask questions.
  
- **Questions and Answers.....***All*
  
- **Closing Remarks.....***Michael Oppegaard and Margaret Murnane Brooks, MCOEM*
  
- **Adjourn**

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**

**Core Planning Group Meeting #3**  
**April 15, 2013**  
**9:30 am / 7:00 pm**  
**Monmouth County Agriculture Building**

**Opening Remarks**

**Today's Agenda**

- Welcome and Opening Remarks
- Looking Back – The CPG Meeting of September 2012
- Looking Forward – How Sandy Lessons Learned Are Shaping Local Mitigation Strategies
- Be a Force of Nature in Your Own Community
- Hazard Rankings Versus Projects: The Good, The Bad, and The Ugly
- SharePoint Site
- Facebook Page
- Plan Update Worksheets – Capturing the Ebb and Flow of Information *Between Communities and Plan Authors*
- Questions and Answers
- Closing Remarks
- Adjourn

**Looking Back – The CPG Meeting of September 2012**

**NFIP Payouts - Then....**

- New Jersey (as of March 2011):
  - 5<sup>th</sup> in the country in terms of NFIP Payouts

LA:	\$16,041,923,827
TX:	\$5,475,442,711
FL:	\$3,602,905,854
MS:	\$2,867,988,741
<b>NJ:</b>	<b>\$970,512,663</b>

**Looking Back – The CPG Meeting of September 2012**

**NFIP Payouts - Now.....**

- New Jersey (as of February 2013):
  - Now, 3<sup>rd</sup> in the country in terms of NFIP Payouts, and **31.5% higher**

LA:	\$16,624,475,770
TX:	\$5,529,582,373
<b>NJ:</b>	<b>\$4,030,950,590</b>
NY:	\$3,806,399,120
FL:	\$3,699,451,971

**Looking Back – The CPG Meeting of September 2012**

**Value of Claims Paid, Monmouth County – Then ...**

- Since May 2008:
  - The total value of all claims paid county-wide increased by **42%** (\$76.8M in May 2008 to \$109.5M in May 2012)

**Looking Back – The CPG Meeting of September 2012**

Value of Claims Paid, Monmouth County – Now...

- Since May 2008:
  - The total value of all claims paid county-wide has increased by **646%** (\$76.8M in May 2008 to \$573.0M in February 2013)

**Looking Back – The CPG Meeting of September 2012**

“...each locality controls the character of its disasters...the decisions they make today will determine future losses.”

- Dennis Mileti, University of Colorado at Boulder, “Disasters by Design”

**Looking Forward - How Sandy Lessons Learned Are Shaping Local Mitigation Strategies**

- 9:30 am Session: Guest Speaker – Buzz Balanza, Borough of Oceanport
- 7:00 pm Session: Group Discussion
- Perspectives of how the disaster has changed the municipal perception of the severity of the problem, the need for mitigation, and what mitigation strategies to pursue.
- Both Sessions: Brief Overview of April 2-5 Workshops

**Looking Forward - How Sandy Lessons Learned Are Shaping Local Mitigation Strategies**

- **FEMA Workshops, April 2-5, Updating Your Mitigation Strategy**
  - Representatives from 23 municipalities and the County attended
  - Purpose: To jumpstart mitigation strategy update

**Looking Forward - How Sandy Lessons Learned Are Shaping Local Mitigation Strategies**

- **FEMA Workshops, April 2-5, Updating Your Mitigation Strategy**
  - Mitigation action: any sustained action taken to reduce long-term risk to life and property from a hazard event
  - Examples:
    - Elevating a home in the floodplain – yes
    - Acquiring at-risk building – yes
    - Purchase of police command vehicle - no

**Looking Forward - How Sandy Lessons Learned Are Shaping Local Mitigation Strategies**

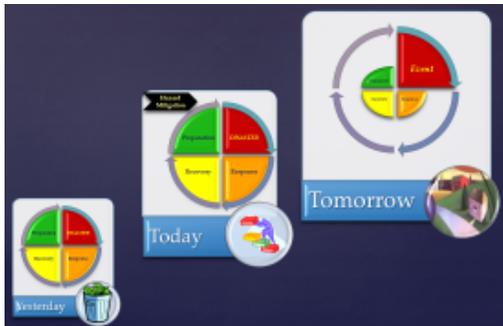

- **FEMA Workshops, April 2-5, Updating Your Mitigation Strategy**
  - Mitigation Strategy
    - Heart of the plan
    - Importance of developing a robust mitigation strategy
    - **Identify actions that address risk**
    - Describe the actions (*be specific*)

 **Be A Force Of Nature In Your Own Community**

- To reduce risk and increase community resiliency
  - Know your vulnerabilities
  - Implement hazard mitigation measures that address those vulnerabilities

 **Be A Force Of Nature In Your Own Community**

 **Be A Force Of Nature In Your Own Community**

- Inform the public and other stakeholders – hazards, risks
- Provide information they can use to mitigate impacts
- Motivate individuals and the community as a whole to take actions that will prepare them for the next disaster and share their mitigation steps with others

 **Be A Force Of Nature In Your Own Community**

- Outreach to the public and other stakeholders during the plan update process is required for FEMA to approve the plan for your jurisdiction
  - Tie into Sandy outreach activities*

 **Be A Force Of Nature In Your Own Community**

- Outreach
  - See **Guidance Memo 1** for more information and tips
  - Use **Outreach Log** to document activities
  - Take advantage of the project **Fact Sheet**

 **Be A Force Of Nature In Your Own Community**

- Outreach
  - All are posted on the SharePoint...
    - <https://ieprojects.urscorp.com/clients/mcnj/SitePages/Home.aspx>
  - ....and on the website....
    - <http://www.monmouthsheriff.org/Sections-read-144.html>

**Be A Force Of Nature In Your Own Community**

- Group Discussion – Types of Outreach Activities To Date

**Hazard Rankings Versus Projects: The Good, The Bad, and the Ugly**

- Goal:
  - Develop robust mitigation strategies
  - Address the greatest risks
  - Steps toward safer, more resilient communities
- Should be a direct link between
  - Risk assessment and mitigation actions
  - Capabilities and mitigation actions
- Strategies for mitigation (damage reduction)
  - Not 'maintenance'
  - Not 'preparedness'
  - Not 'response'

**Hazard Rankings Versus Projects: The Good, The Bad, and the Ugly**

**THE GOOD**  
Projects mitigate the highest ranked hazards

**THE BAD**  
Projects achieve minimal overall damage reduction

**AND THE UGLY**  
Projects don't mitigate much of anything

**Hazard Rankings Versus Projects: The Good, The Bad, and the Ugly**

- Examples – The Good**
  - Bayshore community, highest hazards: extreme wind, hurricane and tropical storm, nor'easter, winter storm, flooding, storm surge
  - Mitigation Actions:
    - Elevation of flood prone roadways
    - Relocation of fire company out of the floodplain
    - Outreach – flood warning signs in floodprone areas
    - Implementation of USACE shore protection and flood control project

**Hazard Rankings Versus Projects: The Good, The Bad, and the Ugly**

- Examples – The Good**
  - Bayshore community, highest hazards: extreme wind, hurricane and tropical storm, nor'easter, winter storm, flooding, storm surge
  - Other Actions
    - Maintain existing shore protection features, clean and maintain existing storm drains and inlets, clean and maintain receiving waterways and creeks, upgrade warning system, upgrade generator at police headquarters

**Hazard Rankings Versus Projects: The Good, The Bad, and the Ugly**

- Examples – The Bad**
  - Inland community, highest hazards: extreme wind, hurricane and tropical storms, nor'easters, winter storms, flooding, and wildfires
  - Actions:
    - Expand and disseminate GIS and other hazard information on the internet
    - Mitigation outreach program
    - Educate residents about driving in winter storms
    - Promote ice and windstorm resistant trees and trimming

### Plan Update Worksheets

*Why This Is A Necessary Step Of The Process*

- FEMA requirements are such that we must document...
  - an update of prior responses, to ensure that the plan still reports conditions that are current and relevant
  - how the plan addresses unique requirements for updates
  - how the plan addresses new standards (2008,2011)

### Plan Update Worksheets

*Why This Is A Necessary Step Of The Process*

- The plan needs to describe how each municipality has met each of the requirements.
- We need you to document these things, so we can write about them in the plan.
- If we don't have the information to be able to write about how your jurisdiction has met the requirements, FEMA can't read about it and, in turn, they will not approve the plan for your jurisdiction.

### Plan Update Worksheets

Worksheet	Original Plan	Plan Update
Hours Log Sheet	•	•
Hazard ID	•	No- see below <sup>1</sup>
Outreach Log	•	•
Land Uses & Development Trends	•	•
Capability Assessment	•	•
STAPLEE Worksheet <sup>2</sup>	•	•
Implementation Strategy Worksheet <sup>2</sup>	•	•
Risk Reduction Worksheet <sup>2</sup>		•
NFIP Worksheet		•
Plan Integration Worksheet		•
Status of Past Projects Worksheet		•
Participation at the Local Level		•

<sup>1</sup> verbal concurrence at Sept. 2012 meeting    <sup>2</sup> Subject to ongoing review/discussion with FEMA

### Upcoming Worksheets

*Who should complete them?*

Worksheet	Who Should Complete
Outreach Log	Jurisdictional Assessment Team
Land Uses & Development Trends	Planning Dept. / Planning Board Member
Capability Assessment	Jurisdictional Assessment Team
STAPLEE Worksheet	Jurisdictional Assessment Team
Implementation Strategy Worksheet	Jurisdictional Assessment Team
Risk Reduction Worksheet	Jurisdictional Assessment Team
NFIP Worksheet	Floodplain Administrator
Plan Integration Worksheet	Jurisdictional Assessment Team
Status of Past Projects Worksheet	Jurisdictional Assessment Team
Participation at the Local Level	Jurisdictional Assessment Team

### Upcoming Worksheets

What will they encompass?

Worksheet	Topic
Outreach Log	List of your outreach activities
Land Uses & Development Trends	Review your community's previous responses and note any changes
Capability Assessment	Review your community's previous responses and note any changes
STAPLEE Worksheet	Document the process your community used to assign a priority to each mitigation measure
Implementation Strategy Worksheet	Tell FEMA how your community plans to implement its mitigation measures

### Upcoming Worksheets

What will they encompass? ...continued...

Worksheet	Topic
Risk Reduction Worksheet	Tell FEMA the risk that each of your mitigation measures is addressing
NFIP Worksheet	Describe your community's floodplain management activities
Plan Integration Worksheet	Document past progress over last planning cycle, and describe targeted activities for the next planning cycle
Status of Past Projects Worksheet	Document the status of projects in your last plan
Participation at the Local Level	Document who was invited to be on your community's Jurisdictional Assessment Team, and whether or not they agreed to participate

### Upcoming Worksheets

When will they be distributed? and due back?

Worksheet	Targeted Distribution Date	Return Date
Outreach Log	July 2012	Oct. 21, 2013
1. Participation at the Local Level	Feb. 28, 2013	March 28, 2013
2. NFIP Worksheet	Feb. 28, 2013	March 28, 2013
3. Land Uses & Development Trends	March 28, 2013	April 29, 2013
4. Capability Assessment	March 28, 2013	April 29, 2013
5. Status of Past Projects Worksheet	April 29, 2013	May 29, 2013
6. Plan Integration Worksheet	April 29, 2013	May 29, 2013
7. STAPLEE Worksheet	May 29, 2013	Oct. 21, 2013
8. Implementation Strategy Worksheet	May 29, 2013	Oct. 21, 2013
9. Risk Reduction Worksheet	May 29, 2013	Oct. 21, 2013

10/21/13

#1

03/28/13

#2

03/28/13

## Upcoming Worksheets

### How To Submit Responses

- Please fill in all worksheets electronically
- Upload Responses to the SharePoint Site
  - <https://ieprojects.urscorp.com/clients/mcnj/SitePages/Home.aspx>
  - Navigate to:
    - Hazard Mitigation Plan → 2014 Plan Update → Plan Update Worksheets → Your Completed Versions
    - Drop into appropriate worksheet folder<sup>1</sup>

<sup>1</sup>File name must include worksheet name and the name of your jurisdiction. Only one submittal per jurisdiction.

Welcome and Opening Remarks

Plan Integration (Worksheet #6)

Status of Past Projects (Worksheet #5)

Common Issues with Incoming Worksheets To-Date

Reminder About Outreach

Questions and Answers

Closing Remarks

Adjourn

## Plan Update Worksheets

### *Why This Is A Necessary Step Of The Process*

FEMA requirements are such that we must document....

- an update of prior responses, to ensure that the plan still reports conditions that are current and relevant
- how the plan addresses unique requirements for updates
- how the plan addresses new standards (2008,2011)

## Plan Update Worksheets

### *Why This Is A Necessary Step Of The Process*

- The plan needs to describe how each municipality has met each of the requirements.
- We need you to document these things, so we can write about them in the plan.
- If we don't have the information to be able to write about how your jurisdiction has met the requirements, FEMA can't read about it and, in turn, they will not approve the plan for your jurisdiction.

## Plan Integration

### *What is it?*

#### Plan Integration:

44 CFR Part 201.6(c)(4)(ii)

The process by which local governments incorporate the requirements of the mitigation plan into other planning mechanisms such as comprehensive or capital improvement plans, when appropriate.

#### In other words:

How hazard mitigation will be tied into things like job descriptions, comprehensive or master plans, capital improvement plans, zoning and building codes, site reviews, permitting, etc. - ensure consistency in policy.

# Plan Integration Strategy – 2009 Plan

## What was it?

### Section 9, Pages 9-4 to 9-6 (see handout)

SECTION 9 - PLAN INTEGRATION	SECTION 9 - PLAN INTEGRATION	SECTION 9 - PLAN MAINTENANCE
<p><b>Plan Integration</b></p> <p>As per the 2009 Plan (2009 Plan), the plan shall include all projects for which the environmental impacts are significant or cumulative. The plan shall also include other planning activities that are significant or cumulative.</p> <p>To meet this requirement, the 2009 Plan Integration Plan should include the following:         <ul style="list-style-type: none"> <li>• A description of the projects that are significant or cumulative.</li> <li>• A description of the planning activities that are significant or cumulative.</li> <li>• A description of the cumulative impacts of the projects and planning activities.</li> <li>• A description of the cumulative impacts of the projects and planning activities.</li> </ul> </p>	<p><b>Plan Integration</b></p> <p>The 2009 Plan Integration Plan should include the following:         <ul style="list-style-type: none"> <li>• A description of the projects that are significant or cumulative.</li> <li>• A description of the planning activities that are significant or cumulative.</li> <li>• A description of the cumulative impacts of the projects and planning activities.</li> <li>• A description of the cumulative impacts of the projects and planning activities.</li> </ul> </p>	<p><b>Plan Maintenance</b></p> <p>The 2009 Plan Integration Plan should include the following:         <ul style="list-style-type: none"> <li>• A description of the projects that are significant or cumulative.</li> <li>• A description of the planning activities that are significant or cumulative.</li> <li>• A description of the cumulative impacts of the projects and planning activities.</li> <li>• A description of the cumulative impacts of the projects and planning activities.</li> </ul> </p>

# Plan Integration Strategy - 2009 Plan

## How was it developed?

- Guidance Memo #3, August 2007 – Presented the requirement, and proposed language for this plan subsection.
- Distributed to CPG, and posted on web site
- Comments were requested; none were received
- Proposed Plan Integration Strategy discussed at CPG Meeting of March 2008
- Coordination with MCOEM

## Plan Integration Requirement - Plan Updates

***“Integration of Hazard Mitigation:** The updated plan must explain **how the jurisdictions incorporated the previous mitigation plan, when appropriate, into other planning mechanisms** over the last five years as a demonstration of progress....[and]...must continue to describe how the current mitigation strategy...will be incorporated into other planning mechanisms over the next five years....”*

## Plan Integration Worksheet #6

**Purpose of the Plan Integration Worksheet:** (see handout)

To ensure that every participating jurisdiction provides a comprehensive **evaluation of their progress in working toward each element of the Plan Integration Strategy that was set out in the last version of the plan**, and that the quantity and quality of this feedback is consistent from one jurisdiction to the next and is thorough enough to fulfill the Plan Integration requirement.

## Plan Integration Worksheet #6

### First Part

### Demonstration of Integration Progress - Last Planning Cycle

In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.

## Plan Integration Worksheet #6

### First Part

(blue)

#### DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE

Please check all activities that your municipality has undertaken over the last five years.

1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?	
2. A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below.	
B. Check here if your municipality does not have a master, general, or comprehensive plan.	
C. Check here if your master, general or comprehensive was updated since 2008.	
D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below.	
E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.	
3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below.	
4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury).	
B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.	

# Plan Integration Worksheet #6

## First Part

(blue)

C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements. D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.	
E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).	
F. Check here if your community has joined the CRS since 2009.	
G. Check here if your community has dropped out of the CRS since 2009.	
5. A. Check here if your community has a local zoning ordinance. B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.	
6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities. B. If so, describe.	
7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation. B. If so, describe.	
8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding. B. Check here if capital or operating budgets already included this when the plan was first adopted.	
9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable). B. If so, describe.	
10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently). B. If so, describe.	
11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria. B. If so, describe.	
12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards. B. If so, describe.	

# Plan Integration Worksheet #6

## First Part

(blue)

13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe.	
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe.	
15. A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	

## Plan Integration Worksheet #6 Second Part

(yellow)

### Targeted Plan Integration Activities - Next Planning Cycle

Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle, and have asked each community to document to FEMA the manner in which they are committing to integrate the hazard mitigation plan into local government operations from this point forward.

## Plan Integration Worksheet #6 Second Part

(yellow)

### TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE

Please check all activities that your municipality is committing to undertake over the next five years.

1.	CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	
2.	A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan. B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	
3.	Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	
4.	A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	
5.	Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6.	Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	
7.	Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8.	Revise capital or operating budgets to include a line item for mitigation project funding.	
9.	Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	
10.	Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	
11.	Add hazard vulnerability to subdivision and site plan review criteria.	
12.	Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13.	Reach out to state agencies for assistance with natural hazard mitigation activities.	
14.	Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	
15.	Adopt (or continue to enforce) a local stormwater management plan/ordinance.	
16.	Protect life and property in high hazard areas by limiting densities of new development.	
17.	Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18.	Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	
19.	Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	
20.	Implement hazard mitigation activities through existing plans and policies.	
21.	Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	

## Mitigation Strategies

Hazard mitigation plans must include mitigation strategies:

- Specific actions that will be taken for natural hazard risk reduction
- Long-term blueprint for reducing the potential losses identified in the risk assessment
- Unique mitigation strategy for each community participating in the plan

## Mitigation Strategies

Mitigation strategies must include information regarding how each project will be implemented, including:

- By whom
- By when
- With what anticipated funding

## Mitigation Strategies – 2009 Plan

*Where were they in the document?*

In the 2009 Plan, jurisdiction-specific Mitigation Strategies were included in Appendix E.

## Mitigation Strategies – 2009 Plan

*Who developed the project lists?*

Your community did.

Action items included in the 2009 Plan were provided to URS by your Core Planning Group member (or their designee) at the time the plan was being developed.

## Status of Past Projects

### *What is required for the Plan Update?*

#### Plan updates must reflect progress in local mitigation efforts.

- Assess previous actions
- Evaluate progress in implementing each action
- Adjust actions to address current realities
- Describe any changes in local priorities

## Status of Past Projects (Worksheet #5)

#### Purpose of the Worksheet: (see handout)

To ensure that every participating jurisdiction provides a comprehensive **evaluation of their progress in implementing mitigation projects that were set out in the last version of the plan**, and that the quantity and quality of this feedback is consistent from one jurisdiction to the next and is thorough enough to fulfill the applicable requirements.

## Example: Aberdeen, 2009 Plan

IMPLEMENTATION STRATEGY								
(Name of Jurisdiction) <u>Aberdeen Township</u>								
Priority	Mitigation Action	What hazards does the action address?	What community assets will be impacted by the action? (Indicate: Existing, New, or Both)	Who is responsible for implementing the action? (List Title, Department, or Office – please do not use names)	Identify an existing local planning mechanism through which the action will be implemented.	What is the target date for completion?	How much is the action estimated to cost?	What funding source(s) will be used to fund the action?
High	Create a mitigation outreach program that helps residents prepare for disasters.	All	Both	Office of Emergency Management	Local Emergency Planning Committee	2009	Minimal cost. Use existing resources.	Municipal operating budget
Medium	Develop specific mitigation solutions for flood-prone roadways, specifically State Highway 35 at Long Neck Creek, Lakeshore Drive and Greenwood Ave., and Amboy Ave., under the leadership of NJDOT. Develop a work plan for when sites will be surveyed and what role the local government play in selection and implementation of mitigation activities (e.g. any monetary or contextual support through the local capital improvement plan).	Flooding caused by floods, hurricanes, and nor'easters.	Existing	Township Manager, Township Engineer, NJDOT, Monmouth County Highway Dept.	Coordination with municipal, county, and state agencies. Plans for improvements to Highway 35 have been in development for many years.	Unknown	Unknown, although probably significant capital costs.	Combination of local, state, and county capital improvement budgets, plus grants if available.

## Example: Aberdeen, Worksheet #5

Jurisdiction	Mitigation Action	Priority	Hazard(s) Addressed	Responsible Party/Party to Implement	Status	Item Details	Reference	Reference Details
					Check Date	Item Details	Check Date	Reference Details
Aberdeen, Township of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan							
Aberdeen, Township of	Create a mitigation outreach program that helps residents prepare for disasters.	H	All	Office of Emergency Management				
Aberdeen, Township of	Develop specific mitigation solutions for flood-prone roadways, specifically State Highway 35 at Long Neck Creek, Lakeshore Drive and Greenwood Avenue, and Amboy Avenue, under the leadership of NJDOT. Develop a work plan for when sites will be surveyed and what role the local government play in selection and implementation of mitigation activities (e.g. any monetary or contextual support through the local capital improvement plan).	M	Flooding	Township Manager, Township Engineer, NJDOT, Monmouth County Highway Department				

## Upcoming Worksheets

*When will they be distributed? and due back?*

Worksheet	Targeted Distribution Date	Return Date
Outreach Log	July 2012	Oct. 21, 2013
1. Participation at the Local Level	Feb. 28, 2013	March 28, 2013
2. NFIP Worksheet	Feb. 28, 2013	March 28, 2013
3. Land Uses & Development Trends	March 28, 2013	April 29, 2013
4. Capability Assessment	March 28, 2013	April 29, 2013
5. Status of Past Projects Worksheet	May 13, 2013	June 13, 2013
6. Plan Integration Worksheet	May 13, 2013	June 13, 2013
7. STAPLEE Worksheet*	June 13, 2013	Oct. 21, 2013
8. Implementation Strategy Worksheet*	June 13, 2013	Oct. 21, 2013
9. Risk Reduction Worksheet*	June 13, 2013	Oct. 21, 2013

\* May be combined through use of a new FEMA form

## Common Issues with Incoming Worksheets To-Date

- Please answer each question. If you provided a response with blanks, please expect us to reach out to you. If you don't reply, please expect that your contribution could be returned by FEMA during their review.
- Please answer the question that is asked.
- Please don't provide answers that could raise unnecessary red flags. Think before you submit. (things like conflicting feedback on the same form, for example)
- Please make sure your community name, at a minimum, is on the first page of each submittal.

## Common Issues with Incoming Worksheets To-Date

- Worksheet 5 – Status of Past Projects** Biggest issue on the few already submitted is cells being left blank, esp. the one regarding how priorities have changed (blue row)

Activity	Priority/Order	Responsible Party/Person	Status	Notes	Other Info	Timeline	Remarks
<p><b>Worksheet 5 – Status of Past Projects</b></p> <p>Worksheet 5 – Status of Past Projects</p> <p>Worksheet 5 – Status of Past Projects</p>							
Worksheet 5 – Status of Past Projects	Worksheet 5 – Status of Past Projects	Worksheet 5 – Status of Past Projects	Worksheet 5 – Status of Past Projects	Worksheet 5 – Status of Past Projects	Worksheet 5 – Status of Past Projects	Worksheet 5 – Status of Past Projects	Worksheet 5 – Status of Past Projects

## Common Issues with Incoming Worksheets To-Date

- Worksheet 6 – Plan Integration** The few that have already been submitted are generally looking good.

DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE	TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE
<p>Please check all activities that your municipality has undertaken over the last five years.</p> <p>1. ## Reminder: Continue Outreach to the Public and Other Stakeholders

- Discuss the plan update at regularly scheduled meetings of your local governing body
- Targeted outreach to key stakeholders in your community
- Put something on your community web site and/or Facebook page (etc. other social media)
- Publish in a local paper and/or newsletters
- Take advantage of distributing the Fact Sheet at local fairs/festivals this summer, and other regularly scheduled events where you may already have a booth (or similar).
- See Guidance Memo 1 for more info
- **Document your activities in the Outreach Log**

## AGENDA

Monmouth County Steering Committee

Mitigation Plan/Mitigation Grants

August 15, 2013 10:00 am

- 1) Introductions
- 2) NJSP OEM Mitigation/Mitigation Grants – Brad Waugh
  - a) HMGP - 4 sub programs
  - b) FMA/SRL/RFC
  - c) PDM
- 3) Overview of Mitigation plan update
  - a) CRS initiative - Joe Barris, MC Planning Bd.
  - b) County Mitigation Strategy
- 4) Questions/Comments/Discussion
- 5) Next meeting date
- 6) Adjourn

## 10 – CPG One-On-Ones

- Record of attendees

## CPG URS OneOnOnes 111413

On November 14, 2013 URS was available at MCOEM to meet one-on-one with any participating jurisdictions requesting assistance with providing feedback on the plan update worksheets. A total of four municipalities signed up, and attended morning time slots:

### SEA BRIGHT

Read Murphy, Emergency Manager  
Joseph Verruni, Manager/Administrator  
9am to 10am  
URS provided assistance with Worksheets 1 and 2

### MONMOUTH BEACH

Lori Thompson, T&M  
[name], T&M  
Susan Howard, Mayor  
10am to 11am  
URS Provided assistance with Worksheets 1, 2, 4, and 6

### INTERLAKEN

Lori Reibrich, Administrator  
11am to 12pm  
URS provided assistance with Worksheets 1, 2, 4, and 6

### COLTS NECK

Kevin Sauter, Emergency Manager  
12:30 to 1:00 pm  
URS provided assistance with Worksheets 1, 2, 4, 5, and 6  
*\* Note: Chief Sauter had a last minute conflict and attended by phone*

**11 – Steering Committee Meeting, 12/16/2013**

No sign-in sheet is available for this meeting.

## **12 – Joint CPG/Coordinators Meeting, February 18, 2014**

- Sign-in sheet, AM session
- Sign-in sheet, PM session
- PowerPoint presentation (used at both sessions)

**Coordinators Meeting  
February 18, 2014  
9:00**

**SIGN-IN**

## Monmouth County Hazard Mitigation Plan Update

Core Planning Group Members Session  
at the  
Emergency Management Coordinators Meeting  
February 18, 2014

### CPG Meeting in November

- Core Planning Group members met in November with the consultant, who provided one-on-one assistance with providing outstanding feedback regarding:
  - Jurisdictional Assessment Team membership
  - Land Uses and Development Trends Updates
  - Capabilities Updates
  - Continued Compliance with the NFIP
  - Status of Past Projects
  - Plan Integration Activities

### Ongoing CPG Activities

- Outreach
  - Ongoing outreach to the public and other stakeholders
  - Using Guidance Memo 1 as a guide
  - Documenting activities in the Outreach Log
- Brainstorming about mitigation projects

### Plan Revisions

- Consultant continues to make revisions to the plan, with an eye toward streamlining and moving as much backup-type content as possible to appendices, which will be reproduced on CD instead of in hard copy

### Plan Revisions

- FEMA's recent release of Preliminary Flood Maps – we are in the process of incorporating these into the risk assessment

### PRIs and Hazard Rankings

- Priority Risk Indices (PRIs) and Hazard Rankings from the last version of the plan have been reevaluated
  - *Why is this important?* Improved rankings for use in mitigation strategy development

## PRIs and Hazard Rankings

- Priority Risk Indices (PRIs) are an evaluation of each hazard's relative risk based on its probability, impact, spatial extent, warning time, and duration.
- PRI scores are used to generate Hazard Rankings
  - PRI 0-2.3 = Low
  - PRI 2.4-2.9 = Medium
  - PRI 3.0-4.0 = High

## Key Risk Findings

- Key Risk Findings have been captured from various sections of the report, streamlined, and presented with the PRI results and Hazard Rankings
- Hazard area extent, examples of past damages and trouble spots, along with how fast population is growing and what recent land uses and development trends have been like.

## Why is this important?

- Last version of the plan:
  - Disconnect between risks and actions
  - Solutions didn't align with the problems that were discussed throughout the plan text
- This version of the plan:
  - We will help you make the connection between the **Problems** (Key Risk Findings) and the **Solutions** (the projects that make up your Mitigation Strategies)

## Why is this important?

- The updated PRIs and Hazard Rankings are more reflective of real-life conditions in each community.
- When viewed in conjunction with Key Risk Findings, municipalities have plan highlights in one place when developing projects.
- **Your mitigation strategies are the meat of the plan!**

## Mitigation Strategies

- Mitigation Strategy: Actions and projects to reduce risk
  - Robust strategy
  - Unique for each community
  - Addresses highest hazards and key risks

## Mitigation Strategies

- Updated Mitigation Strategies will consist of:
  1. OLD Worksheet 5 projects that are carrying forward  
.....and.....
  2. NEW projects you have identified

## Closing thoughts...

- FEMA's RAI Worksheet (we'll call it Worksheet 6) will need to be filled out for EACH project in your strategy
- Do not work in a bubble at this juncture; work with your local team!
- Get public input, and input from stakeholders.

## Questions?

## **13 - CPG Meeting, February 27, 2014**

- Sign-in sheet, 2pm session
- Sign-in sheet, 7pm session
- Agenda
- PowerPoint presentation

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

**Core Planning Group Meeting #5**  
**February 27, 2014**  
**2:00 pm / 7:00 pm**  
**Monmouth County Communications Center, Neptune**

Multi-Jurisdictional Hazard Mitigation Plan Update  
 Monmouth County, New Jersey

URS  
 An Equal Opportunity/Affirmative Action Employer  
 Minorities and Women are Encouraged to Apply

## Today's Agenda

- \_\_\_\_\_ Welcome and Opening Remarks
- \_\_\_\_\_ Mitigation Strategy Overview and Goals for Today's Session
- \_\_\_\_\_ Mitigation Strategy: Linking Problems With Solutions
- \_\_\_\_\_ Priority Risk Indices, Hazard Rankings, and Key Risk Findings
- \_\_\_\_\_ Documenting Your Projects Using Worksheet #7
- \_\_\_\_\_ Reminder About Outreach
- \_\_\_\_\_ Questions and Closing Remarks
- \_\_\_\_\_ Adjourn

## Today's Mitigation Strategy Working Session

**We are here to:**

- Have interactive discussions
- Build on FEMA's Mitigation Strategy Workshop (April 2013)
- Help you
  - understand latest regulatory requirements
  - develop an updated mitigation strategy

## Today's Mitigation Strategy Working Session

**Goal:**

- For each community
- to develop a robust mitigation strategy
- that addresses its highest hazards and key risks
- Only then will we be able to achieve safer, more disaster-resistant and resilient communities

## What is a mitigation strategy?

**The mitigation strategy is:**

- Your community's hazard mitigation actions/projects
- The heart of the mitigation plan
- A roadmap for reducing the risk to your community from natural hazards

## Who prepares the mitigation strategy?

**Your mitigation strategy is developed by:**

- Your community's Jurisdictional Assessment Team
  - (the people you listed on Worksheet #1)
  - (many times: your LEPC members)
- With input from the public and key stakeholders

### Why update the mitigation strategy?

**Updates are done to:**

- Keep the plan current
  - Deleting completed projects
  - Adding new projects
  - Improving upon the overall approach to risk reduction
    - based on new information on potential risks
    - to bridge gaps in the prior approach

### ...Wait...we had gaps in the prior approach?

**Yes. Some of the solutions ultimately selected by many communities didn't align well with the problems that were discussed throughout the plan.**

- Coastal community subject to flooding, surge, high winds, erosion with actions focused on driving in winter weather conditions
- Communities with high wildfire risk and no corresponding actions

### Mitigation Strategy: Linking Problems With Solutions

Today's workshop is designed to help you make better connections between **Problems** (Key Risk Findings) and **Solutions** (the projects that make up your Mitigation Strategies).

*Keep In Mind: At the April 2013 Workshops, FEMA suggested focusing on fewer but better, more developed mitigation actions.*

### Mitigation Strategy: Linking Problems With Solutions

**Problems:**

- Highest Hazards
- Key Risk Findings

**Solutions:**

- Actions and projects that make up your Mitigation Strategy

### Mitigation Strategy: Linking Problems With Solutions

**Mitigation Strategy – Four Basic Steps**

1. Identify Highest Hazards
2. Understand Key Risks
3. Develop Projects to Solve the Problems \*
4. Complete One Worksheet #7 for Each Project
  - Assess the Risk
  - Describe the Action
  - Evaluate the Action (benefits, costs, etc.)
  - Implementation Information (priority, responsible party, etc.)
  - Reporting on Progress (if carryover from last version of the plan)

\* Developed by each JAT/LEPC, with input from the public and other stakeholders.

### Mitigation Strategy: Linking Problems With Solutions

**Step 1 – Problems – Identify Highest Hazards**

- County-wide, there are 16 hazards included in the plan
  - The subset of applicable hazards and the degree of risk posed by applicable hazards varies from one community to the next
- Therefore: we need a way to rank the hazards
- Hazard Rankings through Priority Risk Indices (PRIs)

### Mitigation Strategy: Linking Problems With Solutions

**Step 1 – Problems – Identify Highest Hazards**

- PRI = Sum of the weighted scores of five factors

$PRI = Probability(30\%) + Impact(30\%) + Extent(20\%) + WarningTime(10\%) + Duration(10\%)$

- Hazard Rankings based on PRI
  - PRI 0.0-2.3 = Low
  - PRI 2.4-2.9 = Medium
  - PRI 3.0-4.0 = High

### Mitigation Strategy: Linking Problems With Solutions

*\* Please refer to your handouts for your community's specific results*

### Mitigation Strategy: Linking Problems With Solutions

**Step 2 – Problems – Understand Key Risks**

*\* Please refer to your handouts for your community's specific results*

### Mitigation Strategy: Linking Problems With Solutions

**Step 3 – Solutions: Develop Projects to Solve the Problems**

- Updated Mitigation Strategies = Solutions to the Problems (actions and projects addressing the Highest Hazards and Key Risks)
  - OLD projects that are carrying forward (Worksheet 5) ...and...
  - NEW projects you have identified

### Mitigation Strategy: Linking Problems With Solutions

**Step 3 – Solutions: Develop Projects to Solve the Problems**

**What is Mitigation?**

Mitigation is any sustained action taken to reduce long-term risk to life and property from a hazard event.

- Mitigation: elevated house by the river
- Mitigation: property acquisition
- Preparedness & Response: purchase of a police command vehicle

*\* Slide from FEMA's April 2013 Workshop*

### Mitigation Strategy: Linking Problems With Solutions

**Step 3 – Solutions: Develop Projects to Solve the Problems**

**DISCUSSION: Which Actions are Mitigation?**

- Examine the actions in your latest plan
- Determine which actions are mitigation
  - Not preparedness or response
  - Not maintenance activities
  - Not stand-alone studies
  - Submitted plan should list mitigation actions together
- Q&A

*\* Slide from FEMA's April 2013 Workshop*

### Mitigation Strategy: Linking Problems With Solutions

**Step 3 – Solutions: Develop Projects to Solve the Problems**

- Excellent resource: FEMA's Mitigation Ideas

[www.fema.gov/media-library-data/20130726-1904-25045-2423/fema\\_mitigation\\_ideas\\_final\\_01252013.pdf](http://www.fema.gov/media-library-data/20130726-1904-25045-2423/fema_mitigation_ideas_final_01252013.pdf)

### Mitigation Strategy: Linking Problems With Solutions

**Step 3 – Solutions: Develop Projects to Solve the Problems**

- You must have a range of different categories of actions and projects to reduce the impacts of hazards in your community
  - Planning and Regulatory Solutions
  - Structure and Infrastructure Projects
  - Natural Systems Protection
  - Education and Awareness Programs
- Emphasis is required on new and existing buildings and infrastructure

### Mitigation Strategy: Linking Problems With Solutions

**Step 4 – Solutions: Document Your Projects on Worksheet #7**

- One Worksheet 7 for each project on your list

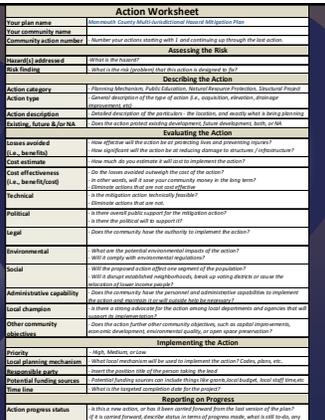

\* Handout from FEMA's April 2013 Workshop

### Mitigation Strategy: Linking Problems With Solutions

**\* EXCEL SUBMITTALS ONLY \***

# Monmouth County, NJ Coastal Hazard Analysis Resilience Meeting

March 13, 2014

**RiskMAP**  
Increasing Resilience Together

# Purpose of Resilience Meeting

**To continually build local capacity for  
implementing mitigation actions  
within Hudson County**

# Objectives of the Resilience Meeting

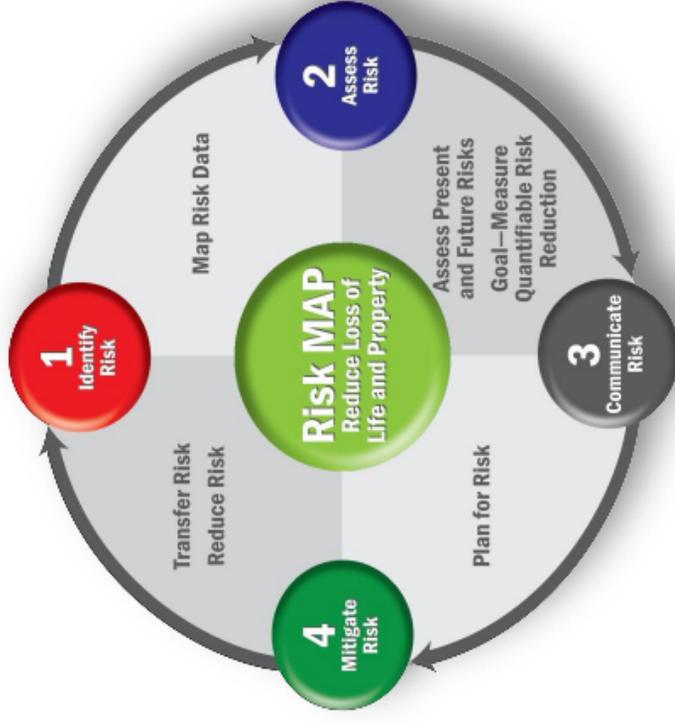

- Build more local capacity for implementing mitigation actions
- We are here to assist Monmouth County in:
  - Using flood map products to develop new strategies to reduce your risk
  - Understanding the resources available to help you implement those strategies
  - The importance of and opportunities for communicating flood risk to your constituents
- This will provide you the opportunity to more fully develop your mitigation actions for your Hazard Mitigation Plan.

# Agenda for today

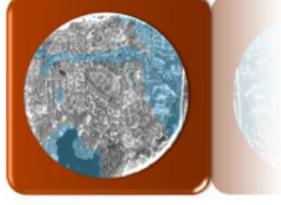

- Risk MAP Program/Overview of Risk Communication
- Hazard Mitigation Planning and Action
- Overview of Non-Regulatory Flood Risk Products and Datasets, and Example Actions
- Breakout Group Sessions
- Regroup: Discuss Feedback and Mitigation Actions

# FEMA's Risk MAP Program

- Risk Mapping, Assessment and Planning 2010 - 2014
- Builds on Map Mod digitized Flood Insurance Rate Map (FIRM) successes
- Will deliver quality data that **increase public awareness and lead to action that reduces risk to life and property**
- Regulatory Products: Flood Insurance Study (FIS) and FIRM (Coastal re-mapping)
- New Non-Regulatory Products and Datasets

**M**apping **A**ssessment **P**lanning

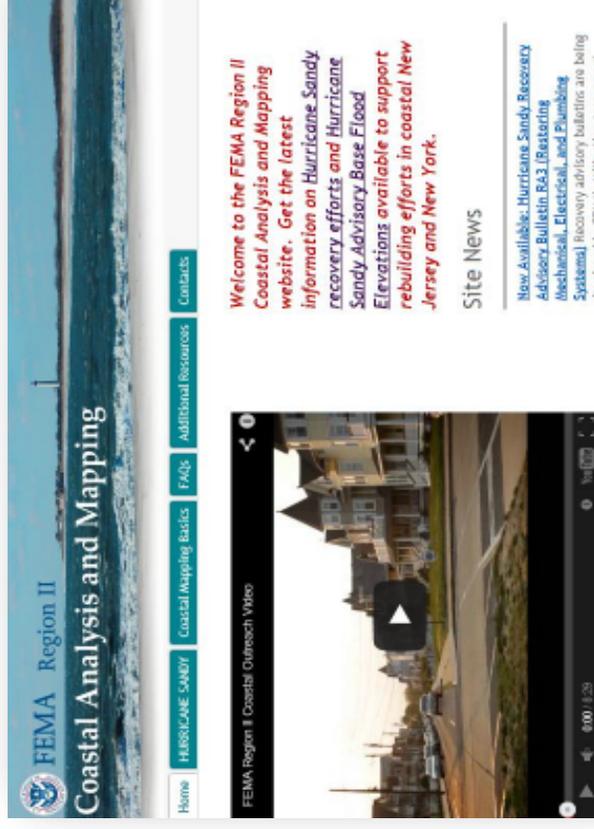

# Risk Communications

- **Federal/State/Local goals:**
  - Creating safer communities reducing risk to lives and property
  - Effectively communicate risk and increase public awareness, leading citizens to make informed decisions regarding risk
- **Key factors contributing to successful achievement of these goals are:**
  - Community engagement and exchange of flood risk information
  - Effective collaboration through partnerships
  - Strategic communications plan development

# Risk Communications - Resources

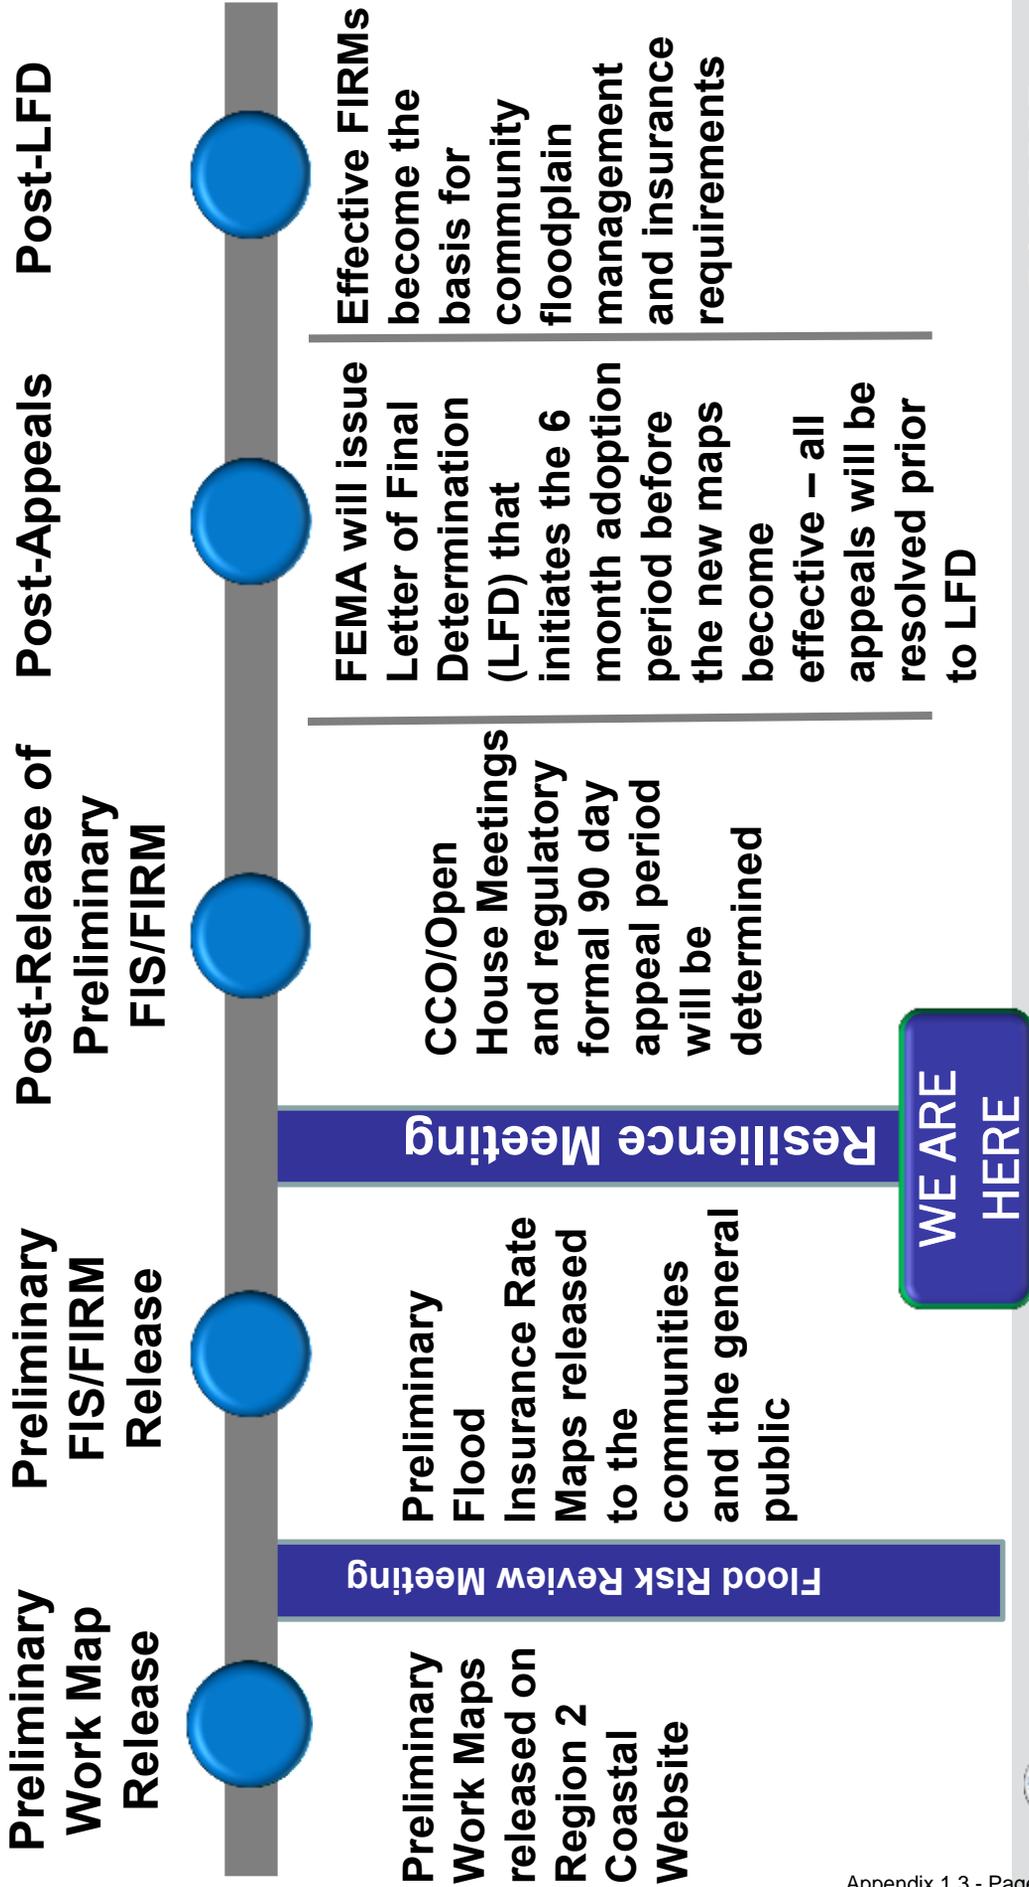

- Visit our Website: [www.region2coastal.com](http://www.region2coastal.com)
- Outreach factsheets
- Frequently Asked Questions
- Coastal Risk Educational Videos
- Most recent flood hazard information (Preliminary FIRMs)
- Non-Regulatory Products and Datasets

# Timeline for Monmouth County – Past

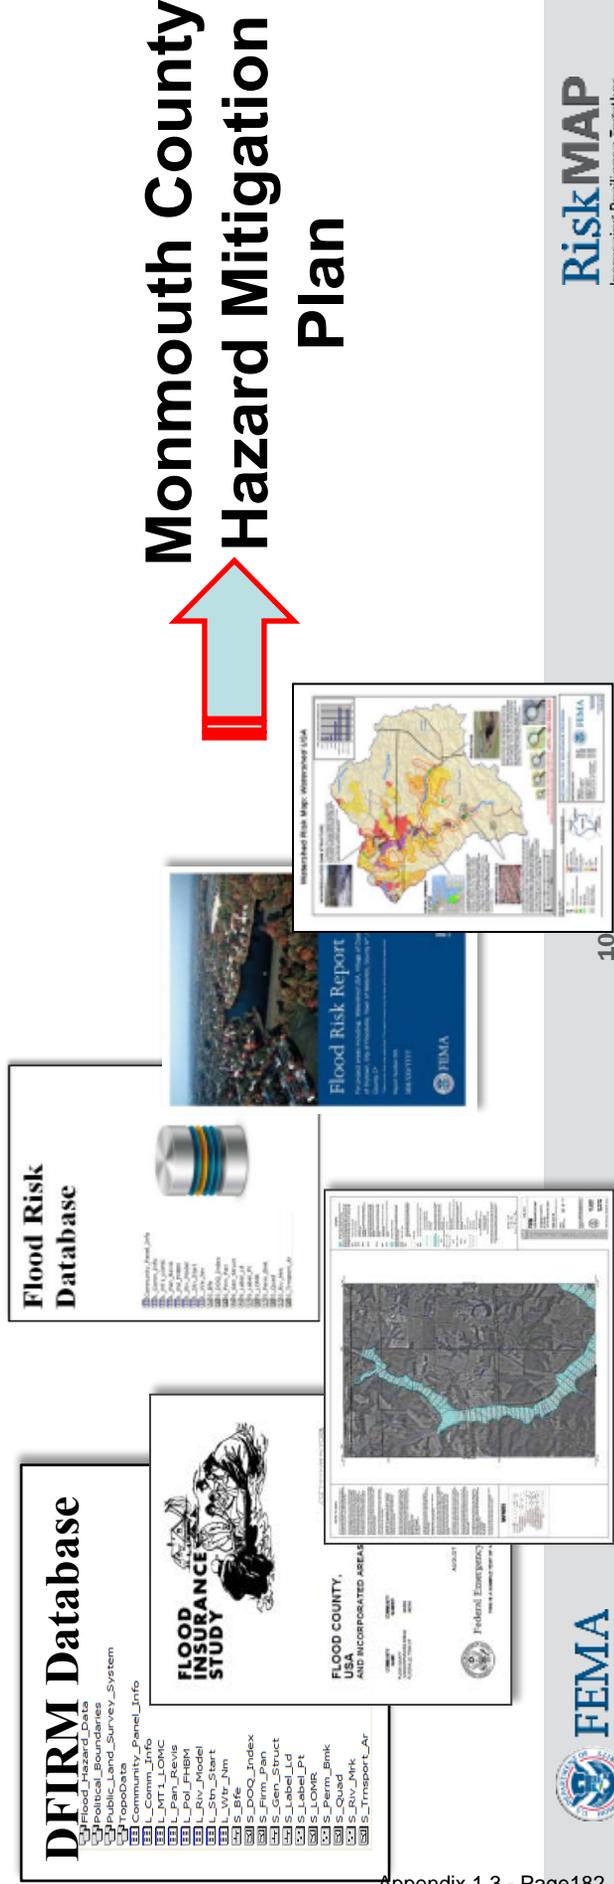

- **NJ/NYC Coastal Flood Risk Study – started in 2009**
- **Meetings with local officials:**
  - Coastal Study Update Webinar – August, 2010
  - Introduction to Risk MAP – July, 2011
  - Hazard Mitigation Planning – December, 2011
  - Risk Assessment – February, 2012
- **Post-Sandy:**
  - ABFEs – December, 2012
    - Multiple meetings with local officials and public
  - Preliminary Work Maps – June, 2013
    - Webinar with local officials

# Timeline for Middlesex County – Future

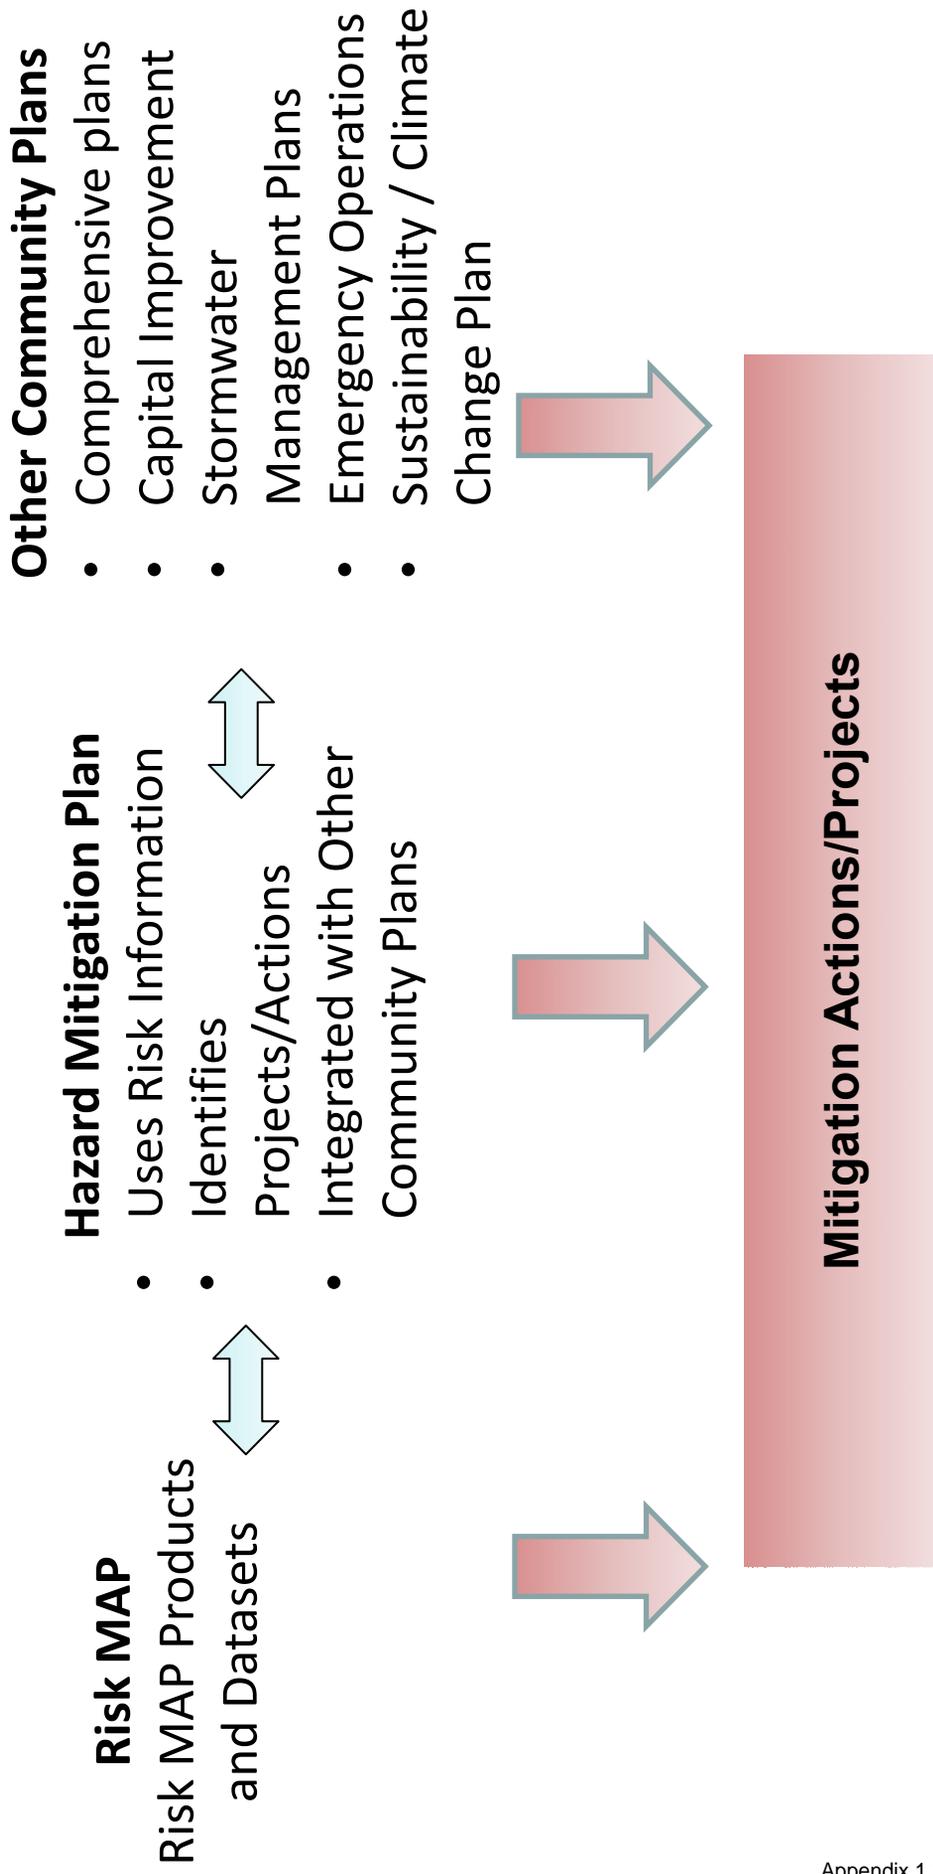

# Hazard Mitigation Planning

- Hazard Mitigation is defined as any sustained **action taken to reduce or eliminate long-term risk** to life and property from hazards
- Use new Risk MAP information to help with identifying mitigation actions when updating your Hazard Mitigation Plan

# Local Hazard Mitigation Plans (HMPs)

# Mitigation Actions – Types, Examples

## STRUCTURE AND INFRASTRUCTURE PROJECTS

- Acquisition
- Elevation
- Retrofits
- Drainage

## LOCAL PLAN AND REGULATIONS

- Zoning
- Building Codes
- Ordinances
- Open Space Plan

## COMMUNITY IDENTIFIED PROGRAMS

- Firewise
- StormReady
- NFIP
- CRS

## NATURAL SYSTEM PROTECTION

- Stream and wetland restoration
- Erosion control

# Mitigation Actions and HMA

- To be eligible for FEMA/State funding, mitigation actions must be in your Hazard Mitigation Plan
- There must be consistency between the projects identified in the Letters of Intent (LOIs) and planning documents
- Utilize non-regulatory flood risk tools to make informed decisions

# Mitigation Actions – Examples

## **Actions from 2009 plan (County actions):**

- Regional stormwater management – identify and prioritize critical stream segments and receiving water bodies most often flooded; develop and secure permits to clean, dredge, widen and otherwise improve water flow to reduce flooding impacts and flooded areas.
- Purchase of flood prone properties: Acquisition and deed restriction of properties Monmouth County and locally active conservation organizations have identified for preservation which are located in flood prone areas.
- Upgrade critical county roads and bridges impacted by flooding

# Mitigation Actions – Examples

## **Actions from 2009 HMP (municipal actions):**

- Avon by the Sea – Evaluate vulnerabilities of existing emergency facilities including the Municipal building (police and fire HQ), First Aid Building and water treatment plant.
- Borough of Deal – Set up detention pond and berm system to prevent future flooding for Popular Brook
- Borough of Keansburg – Enact hazard zoning ordinances
- Borough of Keyport – Raise Green Grove Avenue at Chingarora Creek culvert crossing to alleviate storm flooding
- Lake Como – Enact hazard zoning/ordinances on height of homes in flood areas to place foundations above flood plain

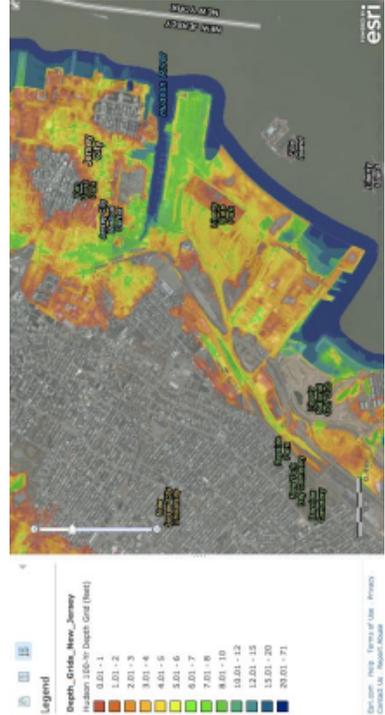

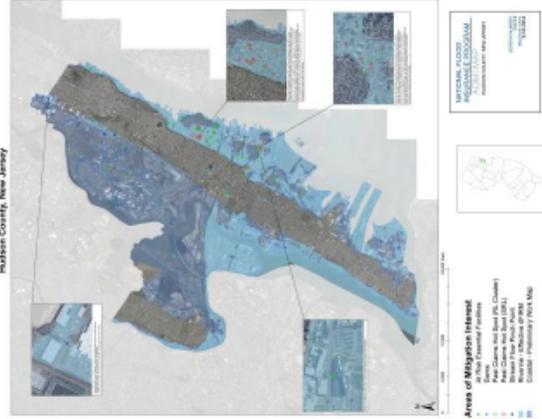

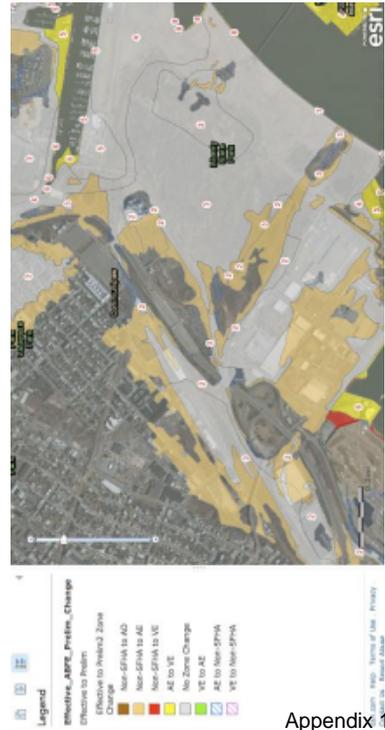

# Mitigation Actions – Examples

## Other Mitigation Ideas:

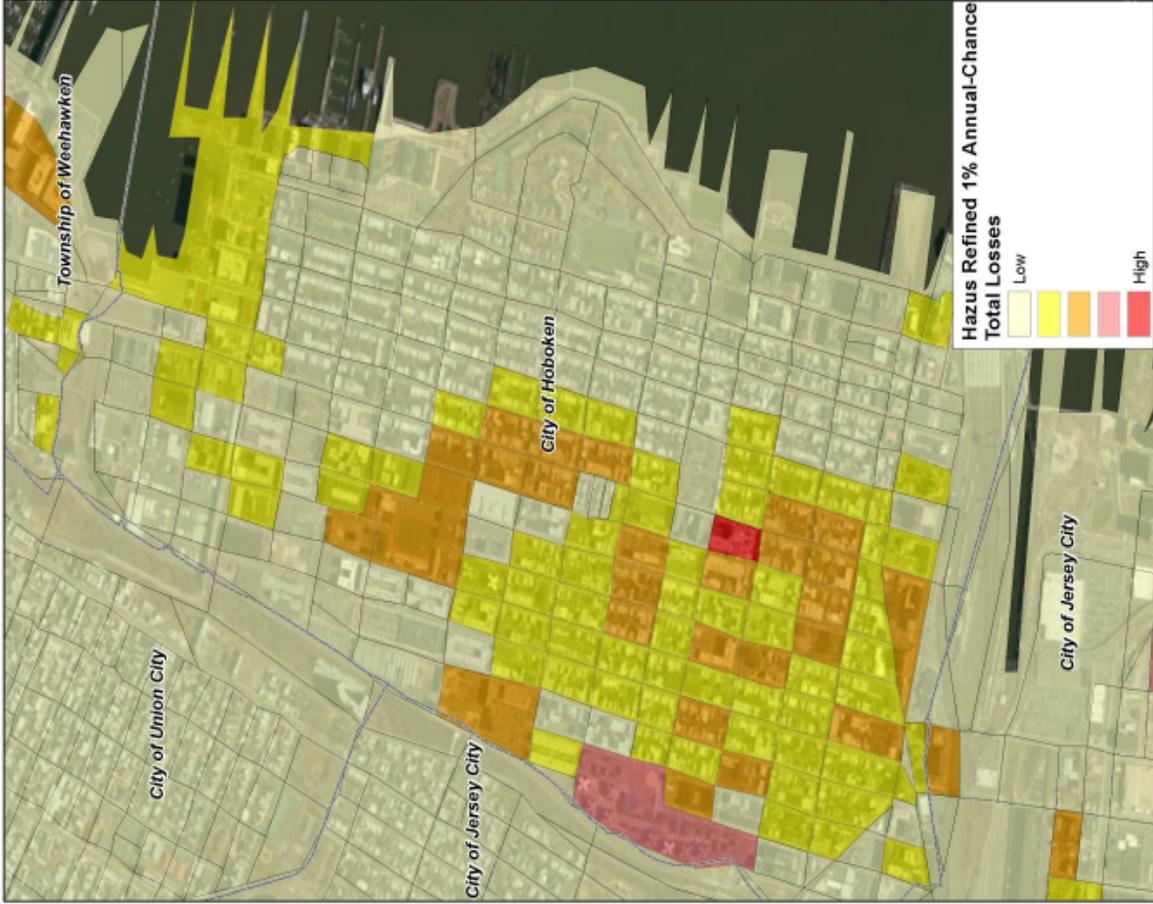

- Installing a storm drain backflow apparatus
- Training and/or coordination of technical skills and capabilities
  - E.g. Hazus or GIS capabilities
- Creative efforts to reduce local water volume putting less strain on storm sewer systems
  - Open space acquisitions
  - Conversion of brown space to open space
  - Retention measures (Green roofs, rain barrels, permeable pavement, etc)
- Evaluate considerations/options of how to provide access to elevated structures for elderly or disabled citizens
- Procuring parking locations or sites for citizen parking before a storm

# Coastal Flood Risk Datasets

- Flood Risk Datasets provided at the Flood Risk Review meeting:
  - Changes Since Last FIRM (CSLF)
  - Coastal 1% Depth Grid
  - Areas of Mitigation Interest (AOMI)

# Coastal Flood Risk Assessments – Hoboken Estimated Potential Losses

# Coastal Flood Risk Assessments – Hoboken Estimated Potential Losses

City of Hoboken - Estimated Potential Losses for Flood Event Scenarios (2010 AAL)												
	Total Inventory		10% (10-yr)		2% (50-yr)		Refined 1% (100-yr)		0.2% (500-yr)		Annualized (\$/yr)	
	Estimated Value	% of Total	Dollar Losses <sup>1</sup>	Loss Ratio <sup>2</sup>

Note: HAZUS analyses are based on using the latest risk factors applied to Census 2000 Housing Data

# Coastal Flood Risk Assessments – *Mitigation Actions*

- Helps local officials identify where risk reduction efforts may produce the highest return on investment
- Quantifies potential losses from floods on the built environment
- Shows details of potential flood losses of critical facilities
- Assists with the prioritization of mitigation areas, and could also be incorporated into a focused sustainability effort
- Providing potential flood event scenarios with dollar damages for properties makes the risk more tangible and helps address the concerns/criticisms expressed by local stakeholders

# Coastal Increased Inundation Areas Jersey City

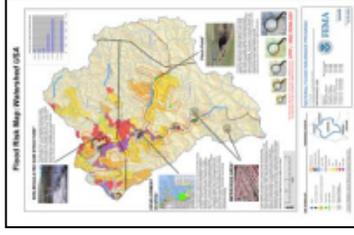

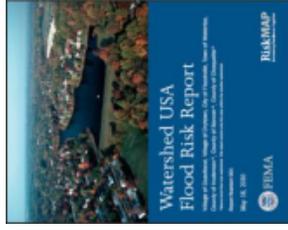

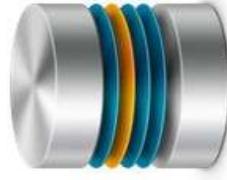

- If flood levels exceed the currently estimated 1-percent-annual-chance levels for City of Jersey City by as little as **1-2 feet**:
  - An additional **1.3 square miles** of residentially developed area would be at risk of flooding
  - An additional **809 structures** would also be at risk of flooding

# Coastal Increased Inundation Areas - *Mitigation Actions*

- **Contributes to a better understanding of current and possible future flood risk in your community**
- **Leads to more informed decisions to allow suitable and appropriate development in higher risk areas**
- **Let's you see the horizontal impacts of the hypothetical rises of the water surface**
- **Floodplain managers could use this data for advising the local elected officials to consider adopting more freeboard in the local floodplain ordinance**
- **Could be used to advise property owners that are within the increased inundation areas to consider purchasing a Preferred Risk Flood Insurance policy**

# Non-Regulatory Coastal Flood Risk Products and Datasets

- **Flood Risk Products**
  - Flood Risk Report, Map, and Database
- **Flood Risk Datasets**
  - Will be stored in the Flood Risk Database

# Breakout Groups

Group 1:

Group 2:

Group 3:

# Regroup

- Share feedback and mitigation actions
  - What did you learn during the breakout session?
  - What types of new mitigation actions did you identify? What existing resources can you utilize to implement these actions?
  - What are three actions you personally will take to encourage development or implementation of flood mitigation strategies?

# Conclusion: Community Resilience

***Together, we all can create stronger and safer communities***

### Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update - NFIP Worksheet

*Note: All communities participating in the National Flood Insurance Program (NFIP) provided FEMA with a floodplain management ordinance and a designated floodplain administrator as a prerequisite to enter the program. The Borough of Freehold and Township of Shrewsbury are the only Monmouth County communities that do not participate in the NFIP and, therefore, do not need to complete this worksheet.*

Adoption Date of your Current Floodplain Management Ordinance	Date of Entry into NFIP	Position or Title of Your Jurisdiction's Designated Floodplain Manager/Administrator (may also be called NFIP Coordinator)	Is this person is a Certified Floodplain Manager?	Is floodplain management an auxiliary function?	Does your community intend to continue to commit staff resources to improving local mapping and/or code administration?	Is your community in good standing with the NFIP?	
8/4/2009	8/21/1985	Construction Official	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Provide an explanation of NFIP administration services (i.e., permit review, GIS, education or outreach, inspections, engineering capability):							
The NFIP administration services provided are permit review, GIS, education, outreach, and inspections.							
Describe barriers to running an effective NFIP program in the community (if applicable):							
Residents who are not insured and unable to obtain financial aid to enable them to satisfy any flood hazard mitigation requirements.							
When was most recent FEMA Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?*	Is a CAV or CAC scheduled or needed?	Does the current floodplain management ordinance exceed FEMA or State minimum requirements? If so, describe how.	Is training of staff regarding NFIP issues planned?	Does your community intend to continue to enforce the floodplain management requirements including regulating new construction in Special Flood Hazard Areas (SFHAs)?	Does your community participate in the CRS? If so, state your Class.	Does your community intend to continue its participation in the CRS program?	If your community is not currently participating in the CRS program, are you intending to initiate the process during the next planning cycle?
January 2013	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes* <input type="checkbox"/> No * Class <u>9</u>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes <input type="checkbox"/> No
*Describe any outstanding compliance issues (i.e., current violations):							
None							
Provide an explanation of your local floodplain permitting process:							
The applicant provides all floodplain documentation for review before issuance of any development, zoning, or construction permits.							

Name: John Quinn Title: Floodplain Manager/Floodplain Administrator/NFIP Coordinator  
 Representing: Aberdeen Twp. Email and Phone: 732-583-4200 ext 121  
 john.quinn@aberdeennj.org

Does your community intend to continue floodplain identification and mapping services including any local requests for map updates? [X]   Yes     No	Does your community intend to initiate/continue the buyouts of repetitive loss properties?     Yes   [X]   No	Does your community intend to commit staff or resources to improve local mapping or code administration in the future? X   Yes     No	Does your community intend to provide local outreach to promote the sale of flood insurance? [X]   Yes     No	Does your community intend to participate in RiskMAP meetings and planning initiatives? [X]   Yes     No	Does your community intend to continue to implement structural improvements to mitigate against flooding - culverts, drainage basins, etc.? [X]   Yes     No	Does your community intend to continue to implement home improvement programs designed to minimize basement flooding? [X]   Yes     No	Does your community intend to continue to implement roadway improvements to reduce damage from future flooding events? [X]   Yes     No	Does your community intend to implement plans and programs in coordination with a local or regional drainage/sewer authority? [X]   Yes     No
Does your community intend to adopt the new FEMA Advisory Base Flood Elevations? [X]   Yes     No		As Floodplain Manager, did you (or your predecessor at the time) actively participate in the development of the initial Hazard Mitigation Plan? [X]   Yes     No		As Floodplain Manager, are you actively participating in the development of this Hazard Mitigation Plan Update? [X]   Yes     No		Have there been any changes to your community's local floodplain management program since the last version of the plan in 2009?     Yes *   [X]   No		
* If you answered "yes", that there have been changes to your local program since 2009, please describe:  N/A								
Provide a description of your community assistance and monitoring activities:  The Township operates an office of emergency management to coordinate and assist in any recovery efforts when necessary. We are also in the process of further developing the Township's hazard mitigation plan.								
NFIP participating communities are required to update/revise their floodplain management ordinance to ensure that it complies with the latest FEMA regulations. Will your community continue to commit to this program requirement?  [X]   Yes     No				NFIP participating communities are also required to update/revise their floodplain management ordinance to be consistent with the latest FIRMs. Will your community continue to commit to this program requirement?  [X]   Yes     No				
Note: NFIP policy statistics by community are maintained at: <a href="http://bsa.nfipstat.fema.gov/reports/1011.htm#NJ">http://bsa.nfipstat.fema.gov/reports/1011.htm#NJ</a> NFIP claims data by community is maintained at: <a href="http://bsa.nfipstat.fema.gov/reports/1040.htm#34">http://bsa.nfipstat.fema.gov/reports/1040.htm#34</a> Information about structures at risk of flooding can be found in Section 3 of the Hazard Mitigation Plan. All NFIP participating communities should encourage local residents to purchase and maintain flood insurance.

January 2010	9/16/81	Mayor Stuart A. Fierstein, OEM Coordinator	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Provide an explanation of NFIP administration services (i.e., permit review, GIS, education or outreach, inspections, engineering capability):						
Development permit applications are filed with the Municipal Planning and Zoning Board and reviewed in accordance with Borough code Chapter XXVII – Flood Damage Prevention. Outreach program includes creation of a Mailer to all residents and businesses describing actions underway and proposed Hazard Mitigation strategies. Hazard Mitigation brochures are provided at the Borough Municipal Building. Inspection activities include pre and post storm event inspections of critical infrastructure by Borough representatives including licensed water system and sanitary sewer system operators, Construction Code Official, Borough Public Works and Borough Engineer's Office. Borough Engineers office and Construction Code Officials are trained in construction practices related to buildings and infrastructure; and understand natural and/or human caused hazards. All development activities require compliance inspections by the Borough Engineer's Office and Construction Code Official. The Borough conducts Flood Damage Protection ordinance development and review.						
Describe barriers to running an effective NFIP program in the community (if applicable):						
There are no barriers identified at this time that would impact the implementation of NFIP program requirements.						
When was most recent FEMA Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?*	Is a CAV or CAC scheduled or needed?	Does the current floodplain management ordinance exceed FEMA or State minimum requirements? If so, describe how.	Is training of staff regarding NFIP issues planned? ### Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update - NFIP Worksheet

*Note: All communities participating in the National Flood Insurance Program (NFIP) provided FEMA with a floodplain management ordinance and a designated floodplain administrator as a prerequisite to enter the program. The Borough of Freehold and Township of Shrewsbury are the only Monmouth County communities that do not participate in the NFIP and, therefore, do not need to complete this worksheet.*

Adoption Date of your Current Floodplain Management Ordinance	Date of Entry into NFIP	Position or Title of Your Jurisdiction's Manager/Administrator (may also be called NFIP Coordinator)	Is this person is a Certified Floodplain Manager?	Is floodplain management an auxiliary function?	Does your community intend to continue to commit staff resources to improving local mapping and/or code administration?	Is your community in good standing with the NFIP?	
9/2/09	2/15/79	Joe Cunha, City Engineer / DPW Director	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Provide an explanation of NFIP administration services (i.e., permit review, GIS, education or outreach, inspections, engineering capability):							
Permit review includes impacts on construction due to Floodplain proximity, inspections include sensitivity to storm drain connections and conditions of known localized flooding.							
Describe barriers to running an effective NFIP program in the community (if applicable):							
Community participation is low due to minimal impacts from Sandy on residential neighborhoods. Informing the public adequately seems to pose a challenge.							
When was most recent FEMA Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?*	Is a CAV or scheduled CAC needed?	Does the current floodplain management ordinance exceed FEMA or State minimum requirements? If so, describe how.	Is training of staff regarding NFIP issues planned?	Does your community intend to continue to enforce the floodplain management requirements including regulating new construction in Special Flood Hazard Areas (SFHAs)?	Does your community participate in the CRS? If so, state your Class.	Does your community intend to continue its participation in the CRS program?	If your community is not currently participating in the CRS program, are you intending to initiate the process during the next planning cycle?
None Yet	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes* <input checked="" type="checkbox"/> No* * Class _____	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
*Describe any outstanding compliance issues (i.e., current violations):							
None to report at this time.							
Provide an explanation of your local floodplain permitting process:							
Floodplain process is as dictated in the City's local ordinance. When an applicant submits a permit request to the Construction Department, one of the checks is to determine if the property is within the floodplain. Based upon this determination, additional scrutiny may or may not be required with respect to elevations of proposed improvements.

### Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update - NFIP Worksheet

*Note: All communities participating in the National Flood Insurance Program (NFIP) provided FEMA with a floodplain management ordinance and a designated floodplain administrator as a prerequisite to enter the program. The Borough of Freehold and Township of Shrewsbury are the only Monmouth County communities that do not participate in the NFIP and, therefore, do not need to complete this worksheet.*

Adoption Date of your Current Floodplain Management Ordinance	Date of Entry into NFIP	Position or Title of Your Jurisdiction's Designated Floodplain Manager/Administrator (may also be called NFIP Coordinator)	Is this person is a Certified Floodplain Manager?	Is floodplain management an auxiliary function?	Does your community intend to continue to commit staff resources to improving local mapping and/or code administration?	Is your community in good standing with the NFIP?
2013	1998	Construction Official	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Provide an explanation of NFIP administration services (i.e., permit review, GIS, education or outreach, inspections, engineering capability):						
Permit reviews and inspection						
Describe barriers to running an effective NFIP program in the community (if applicable):						
Lack of staff and funding for staffing and staff training						
When was most recent FEMA Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?*	Is a CAV or scheduled or needed?	Does the current floodplain management ordinance exceed FEMA or State minimum requirements? If so, describe how.	Is training of staff regarding NFIP issues planned?	Does your community intend to continue to enforce the floodplain management requirements including regulating new construction in Special Flood Hazard Areas (SFHAs)?	Does your community participate in the CRS? If so, state your Class.	If your community is not currently participating in the CRS program, are you intending to initiate the process during the next planning cycle?
During Storm Sandy	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
*Describe any outstanding compliance issues (i.e., current violations):						
None at this time.						
Provide an explanation of your local floodplain permitting process:						
Development application filed with Construction Official (CO). Application to include location/dimensions/elevations (w/r/t MSL) for ex. And proposed structures, fill, storage and drainage facilities. Application reviewed by CO for ordinance conformance and other permits that may be required.

### Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update - NFIP Worksheet

*Note: All communities participating in the National Flood Insurance Program (NFIP) provided FEMA with a floodplain management ordinance and a designated floodplain administrator as a prerequisite to enter the program. The Borough of Freehold and Township of Shrewsbury are the only Monmouth County communities that do not participate in the NFIP and, therefore, do not need to complete this worksheet.*

Adoption Date of your Current Floodplain Management Ordinance	Date of Entry into NFIP	Position or Title of Your Jurisdiction's Designated Floodplain Manager/Administrator (may also be called NFIP Coordinator)	Is this person is a Certified Floodplain Manager?	Is floodplain management an auxiliary function?	Does your community intend to continue to commit staff resources to improving local mapping and/or code administration?	Is your community in good standing with the NFIP?
2009	1978	Engineer/Zoning Officer Gregory S. Blash, P.E.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Provide an explanation of NFIP administration services (i.e., permit review, GIS, education or outreach, inspections, engineering capability):						
The Borough's Engineering Department provides residents with information services to aid in flood plain elevation mapping. Likewise, the Borough provides website links to FEMA information and emergency email services.						
Describe barriers to running an effective NFIP program in the community (if applicable):						
N/A						
When was most recent FEMA Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?*	Is a CAV or CAC scheduled or needed?	Does the current floodplain management ordinance exceed FEMA or State minimum requirements? If so, describe how.	Is training of staff regarding NFIP issues planned?	Does your community intend to continue to enforce the floodplain management requirements including regulating new construction in Special Flood Hazard Areas (SFHAs)?	Does your community intend to continue its participation in the CRS program?	If your community is not currently participating in the CRS program, are you intending to initiate the process during the next planning cycle?
	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes* <input checked="" type="checkbox"/> No* * Class _____	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
*Describe any outstanding compliance issues (i.e., current violations):						
The Borough's Flood Damage Prevention Ordinance requires three (3) feet of freeboard for all new construction.						
Provide an explanation of your local floodplain permitting process:						
Applicant shall apply for development permit prior to construction in accordance with Ordinance Section 19 – Coastal Wetlands and Ordinance Section 22 – Flood Damage Prevention.

<b>*Describe any outstanding compliance issues (i.e., current violations):</b>							
Assorted pre and post firm non-compliant structures. We actively mitigate all possible structures in violation.							

Provide an explanation of your local floodplain permitting process:								
Flood prevention is a prior approval to all development and building permits. Projects are reviewed to the current flood prevention ordinance in accordance with state law and authorized or denied based upon the same. Enforcement and issuance of notice of violations are part of the daily inspection process of all UCC inspectors.								
Does your community intend to continue floodplain identification and mapping services including any local requests for map updates?	Does your community intend to initiate/continue the buyouts of repetitive loss properties?	Does your community intend to commit staff or resources to improve local mapping or code administration in the future?	Does your community intend to provide local outreach to promote the sale of flood insurance?	Does your community intend to participate in RiskMAP meetings and planning initiatives?	Does your community intend to continue to implement structural improvements to mitigate against flooding - culverts, drainage basins, etc.?	Does your community intend to continue to implement home improvement programs designed to minimize basement flooding?	Does your community intend to continue to implement roadway improvements to reduce damage from future flooding events?	Does your community intend to implement plans and programs in coordination with a local or regional drainage/sewer authority?
[X] Yes     No	Yes [X] No	[X] Yes     No	[X] Yes     No	[X] Yes     No	[X] Yes     No	[X] Yes     No	[X] Yes     No	
Does your community intend to adopt the new FEMA Advisory Base Flood Elevations?	As Floodplain Manager, did you (or your predecessor at the time) actively participate in the development of the initial Hazard Mitigation Plan?		As Floodplain Manager, are you actively participating in the development of this Hazard Mitigation Plan Update?	Have there been any changes to your community's local floodplain management program since the last version of the plan in 2009?				
[X] Yes     No	Yes [X] No		[X] Yes     No	[X] Yes *     No				
* If you answered "yes", that there have been changes to your local program since 2009, please describe:								
On 01/15/13 as a result of Hurricane Sandy, the Borough of Monmouth Beach adopted the advisory BFE'S plus 3'-0" of Freeboard with a Coastal A Zone requirement.								
Provide a description of your community assistance and monitoring activities:								
Regular public outreach is offered to the community with expert assistance from the FEMA Speakers Bureau, OEM, Building department, Zoning and Engineering. Dedicated email access is provided to submit questions and comments. Website access to assorted flood related information is also available through the Borough. Inspectors regularly monitor the community for compliance of permitted and non-permitted work.								
NFIP participating communities are required to update/revise their floodplain management ordinance to ensure that it complies with the latest FEMA regulations. Will your community continue to commit to this program requirement?				NFIP participating communities are also required to update/revise their floodplain management ordinance to be consistent with the latest FIRMs. Will your community continue to commit to this program requirement?				
[X] Yes     No				[X] Yes     No

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update - NFIP Worksheet**

Note: All communities participating in the National Flood Insurance Program (NFIP) provided FEMA with a floodplain management ordinance and a designated floodplain administrator as a prerequisite to enter the program. The Borough of Freehold and Township of Shrewsbury are the only Monmouth County communities that do not participate in the NFIP and, therefore, do not need to complete this worksheet.

Adoption Date of your Current Floodplain Management Ordinance	Position or Title of Your Jurisdiction's Designated Floodplain Manager/Administrator (may also be called NFIP Coordinator)	Is this person is a Certified Floodplain Manager?	Is floodplain management an auxiliary function?	Does your community intend to continue to commit staff resources to improving local mapping and/or code administration?	Is your community in good standing with the NFIP?
2009	Bill Doolittle * see below *	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Provide an explanation of NFIP administration services (i.e., permit review, GIS, education or outreach, inspections, engineering capability):					
See attached, We are currently not in the NFIP. Our Floodplain Manager is scheduled to take the Certification exam on October 17, 2013					
Describe barriers to running an effective NFIP program in the community (if applicable):					
n/a					
When was most recent FEMA Community Assistance Visit (CAV) or Community Contact (CAC)?	Does the current Floodplain Management Ordinance exceed FEMA or State minimum requirements? If so, describe how.	Is training of staff regarding NFIP issues planned?	Does your community intend to continue to enforce the floodplain management requirements including regulating new construction in Special Flood Hazard Areas (SFHAs)?	Does your community intend to participate in the CRS? If so, state your Class.	Does your community intend to continue its participation in the CRS program, are you intending to initiate the process during the next planning cycle?
Unknown	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Describe any outstanding compliance issues (i.e., current violations):					
We have not, to our knowledge had a Community Assistance Visit, so there are no outstanding violations.					
Provide an explanation of your local floodplain permitting process:					
Applicant shall apply for a development permit prior to construction or development shall begin within any area of special flood hazard area per ordinance section 66-12					

\*Bill Doolittle holds the concurrent positions of floodplain administrator, building official, zoning official, and construction official. NFIP-1

Will your community continue to commit to this program requirement? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No				NFIP participating communities are also required to update/revise their floodplain management ordinance to be consistent with the latest FIRM's. Will your community continue to commit to this program requirement? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No				

Note: NFIP policy statistics by community are maintained at: <http://bsa.nfipstat.fema.gov/reports/1011.htm#NJ>  
 NFIP claims data by community is maintained at: <http://bsa.nfipstat.fema.gov/reports/1040.htm#54>  
 Information about structures at risk of flooding can be found in Section 3 of the Hazard Mitigation Plan.  
 All NFIP participating communities should encourage local residents to purchase and maintain flood insurance.

**NFIP Worksheet No: 2**

***Provide an explanation of NFIP administration services (i.e., permit review, GIS, education or outreach, inspections, engineering capability):***

The Borough prior to the final resale of a home will perform a CCO to ensure compliance with Flood Plain regulations. Additionally, all new homes prior to final occupancy (CO) are inspected for build code and flood plain regulation. The Borough's Engineering Department provides residents with information services to aid in flood plain elevation and mapping. Likewise, the Borough provides website links to FEMA information and emergency email services.

<b>Provide an explanation of NFIP administration services (i.e., permit review, GIS, education or outreach, inspections, engineering capability):</b>						
<u>The NFIP administration services provided are permit review, GIS, education, outreach and inspections.</u>						
<b>Describe barriers to running an effective NFIP program in the community (if applicable):</b>						
<u>Residents who are not insured and are unable to obtain financial aid to enable them to satisfy any flood hazard mitigation requirements.</u>						

When was most recent FEMA Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?*	Is a CAV or CAC scheduled or needed?	Does the current floodplain management ordinance exceed FEMA or State minimum requirements? If so, describe how.	Is training of staff regarding NFIP issues planned?	Does your community intend to enforce the floodplain management requirements including regulating new construction in Special Flood Hazard Areas (SFHAs)?	Does your community participate in the CRS? If so, state your Class.	Does your community intend to continue its participation in the CRS program?	If your community is not currently participating in the CRS program, are you intending to initiate the process during the next planning cycle?	
1/21/2013	Yes   X   No	Yes   X   No	X   Yes     No	X   Yes     No	Yes*   X   No *Class	Yes     No	Yes   X   No	
*Describe any outstanding compliance issues (i.e., current violations):								
None.								
Provide an explanation of your local floodplain permitting process:								
The applicant provides all floodplain documentation for review before any issuance of any development, zoning or construction permits.								
Does your community intend to continue floodplain identification and mapping services including any local requests for map updates?	Does your community intend to initiate/continue the buyouts of repetitive loss properties?	Does your community intend to commit staff or resources to improve local mapping or code administration in the future?	Does your community intend to provide local outreach to promote the sale of flood insurance?	Does your community intend to participate in RiskMAP meetings and planning initiatives?	Does your community intend to continue to implement structural improvements against flooding - culverts, drainage basins, etc.?	Does your community intend to continue to implement home improvement programs designed to minimize basement flooding?	Does your community intend to continue to implement roadway improvements to reduce damage from future flooding events?	Does your community intend to implement plans and programs in coordination with a local or regional drainage/sewer authority?
X   Yes     No	Yes   X   No	X   Yes     No	X   Yes     No	X   Yes     No	X   Yes     No	X   Yes     No	X   Yes     No	X   Yes     No
Does your community intend to adopt the new FEMA Advisory Base Flood Elevations?	As Floodplain Manager, did you (or your predecessor at the time) actively participate in the development of the initial Hazard Mitigation Plan?							
X   Yes     No	Yes   X   No							
* If you answered "yes", that there have been changes to your local program since 2009, please describe:								
Have there been any changes to your community's local floodplain management program since the last version of the plan in 2009?								
Yes*   X   No								

In the process of changing Floodplain Manager to Municipal Engineer, Christine Ballard, and updating plan.

**Provide a description of your community assistance and monitoring activities:**

The Borough operates an Office of Emergency Management to coordinate and assist in any recovery efforts when necessary. In the process of further developing the Borough's Hazard Mitigation Plan.

<p><b>NFIP participating communities are required to update/revise their floodplain management ordinance to ensure that it complies with the latest FEMA regulations. Will your community continue to commit to this program requirement?</b></p>	<p><b>NFIP participating communities are also required to update/revise their floodplain management ordinance to be consistent with the latest FIRMs. Will your community continue to commit to this program requirement?</b></p>
<p><input checked="" type="checkbox"/>   Yes     No</p>	<p><input checked="" type="checkbox"/>   Yes     No</p>

Note: NFIP policy statistics by community are maintained at: <http://bsa.nfipstat.fema.gov/reports/1011.htm#NJT>  
 NFIP claims data by community is maintained at: <http://bsa.nfipstat.fema.gov/reports/1040.htm#34>  
 Information about structures at risk of flooding can be found in Section 3 of the Hazard Mitigation Plan.

All NFIP participating communities should encourage local residents to purchase and maintain flood insurance.

Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update - *NFIP Worksheet*

*Note: All communities participating in the National Flood Insurance Program (NFIP) provided FEMA with a floodplain management ordinance and a designated floodplain administrator as a prerequisite to enter the program. The Borough of Freehold and Township of Shrewsbury are the only Monmouth County communities that do not participate in the NFIP and, therefore, do not need to complete this worksheet.*

Adoption Date of your Current Floodplain Management Ordinance	Date of Entry into NFIP	Position or Title of Your Jurisdiction's Designated Floodplain Manager/Administrator (may also be called NFIP Coordinator)	Is this person is a Certified Floodplain Manager?	Is floodplain management an auxiliary function?
2013	1972	OEM Coordinator	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Provide an explanation of NFIP <b>administration</b> services (i.e., <b>permit review</b> , GIS, education or outreach, <b>inspections</b> , <b>engineering</b> capability):	During the permitting process, community meetings are held and the building department distributes information to local residents and businesses. Code enforcement continually reinforces the NFIP through inspection. At the completion of a project an elevation certificate is required to certify compliance. There has been a significant increase in promotion of the NFIP since Superstorm Sandy occurred.			
Describe barriers to running an effective NFIP program in the community (if applicable):	Residents lack knowledge of programs. Currently working on creating and implementing NFIP education program for community.			
When was most recent FEMA Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?*	Is a CAV or CAC scheduled or needed?	Does the current floodplain management ordinance exceed FEMA or State minimum requirements? If so, describe how.	Is training of staff regarding NFIP issues planned?	Does your community intend to continue to enforce the floodplain management requirements including regulating new construction in Special Flood Hazard Areas (SFHAs)?
unknown	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
*Describe any outstanding compliance issues (i.e., current violations):	It is needed. We are working to be in compliance with the CRS. We failed to stay current on the CRS rules and regulations. We attempted to reenter the CRS program in 2007; however, we were unsuccessful.	BFE + 2

Describe barriers to running an effective NFIP program in the community (if applicable):							
There are none.							
When was most recent FEMA Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?*	Is a CAV or CAC scheduled or needed?	Does the current floodplain management ordinance exceed FEMA or State minimum requirements? If so, describe how.	Is training of staff regarding NFIP issues planned?	Does your community intend to continue to enforce the floodplain management requirements including regulating new construction in Special Flood Hazard Areas (SFHAs)?	Does your community participate in the CRS? If so, state your Class.	Does your community intend to continue its participation in the CRS program?	If your community is not currently participating in the CRS program, are you intending to initiate the process during the next planning cycle?
44/2042 after Hurricane	<input type="checkbox"/> Yes   <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes     No Ordinance requires two feet of freeboard as opposed to one.	<input type="checkbox"/> Yes   <input checked="" type="checkbox"/> No	<input checked="" type="checkbox"/> Yes*     No * Class 8	<input checked="" type="checkbox"/> Yes     No	<input type="checkbox"/> Yes     No	<input type="checkbox"/> Yes     No
*Describe any outstanding compliance issues (i.e., current violations):							
The Borough of Union Beach was delayed in holding their required floodplain public hearing due to the Hurricane Sandy.							

Name: **Bob Burlew** Title: Floodplain Manager/Floodplain Administrator/NFIP Coordinator

Representing: Borough of Union Beach Email and Phone: ubconstruction@optonline.net (732) 739-1503

**Provide an explanation of your local floodplain permitting process:**

Homeowners are required to submit an elevation certificate with their construction permit for new construction and/or reconstruction. The Construction Official (Bob Burlew) will review project for substantially damaged, if applicable, and issue letters if necessary. In addition, the Bob Burlew will review all new construction and/or reconstruction permits for compliance with the ABFE or the BFE.

Does your community intend to continue floodplain identification and mapping services including any local requests for map updates?	Does your community intend to initiate/continue the buyouts of repetitive loss properties?	Does your community intend to commit staff or resources to improve local mapping or code administration in the future?	Does your community intend to provide local outreach to promote the sale of flood insurance?	Does your community intend to participate in RiskMAP meetings and planning initiatives?	Does your community intend to continue to implement structural improvements to mitigate against flooding - culverts, drainage basins, etc.?	Does your community intend to continue to implement home improvement programs designed to minimize basement flooding?	Does your community intend to continue to implement roadway improvements to reduce damage from future flooding events?	Does your community intend to implement plans and programs in coordination with a local or regional drainage/sewer authority?
<input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No	<input type="checkbox"/> Yes   <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No
<p>Does your community intend to adopt the new FEMA Advisory Base Flood Elevations?</p> <p><input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No</p>								
<p>* If you answered "yes", that there have been changes to your local program since 2009, please describe:</p>								
<p>Borough updated the new ABFEs on February 24, 2043.</p>								
<p>Provide a description of your community assistance and monitoring activities:</p>								
<p>The Borough notifies residents by mail, newsletters and updates information on their website about funding programs and changes in regulations and/or advisory information about flooding and reducing flood insurance costs.</p>								
<p>NFIP participating communities are required to update/revise their floodplain management ordinance to ensure that it complies with the latest FEMA regulations. Will your community continue to commit to this program requirement?</p> <p><input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No</p>				<p>NFIP participating communities are also required to update/revise their floodplain management ordinance to be consistent with the latest FIRMs. Will your community continue to commit to this program requirement?</p> <p><input checked="" type="checkbox"/> Yes   <input type="checkbox"/> No</p>

**APPENDIX 1.5 – WORKSHEET 3: LAND USES AND DEVELOPMENT TRENDS**

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Land Uses and Development Trends Update*

---

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**Please check box A or B below.**

- A) I certify that I have reviewed my community's feedback from the 2009 Land Uses and Development Trends assessment and that all information previously provided is still current.** *(If checking box A, then please return only this cover page.)*
  
- B) I certify that I have reviewed my community's feedback from the 2009 Land Uses and Development Trends assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below.** *(If checking box B, then please return this completed cover page and any pages with markups.)*

**Email and Phone:** TGillen@CMEUSA1.com

Table 3d.6

Summary of Responses

Land Uses and Development Trends Questionnaire

(Source: Core Planning Group Members)

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
<p>Aberdeen, Township of</p> <p>The Township has very little remaining vacant land available and suitable for development. Therefore, the predominant development occurring in the Township in the recent years is on single, small lots with in-fill development or the redevelopment of existing sites, both for residential and non-residential uses.</p> <p>The Township has identified a number of larger areas for redevelopment, some of which have been designated as Redevelopment Areas under the Local Redevelopment And Housing Law. The areas either identified or designated are as follows:</p> <ul style="list-style-type: none"> <li>• A "Commerce &amp; Transportation Center" Redevelopment Area has been designated on lands in the vicinity of the Aberdeen/Matawan Train Station. <del>The subject land area is coupled with land area in Matawan Borough. At this time, the formulation of the Redevelopment Plan and the appointment of a redeveloper are still under discussion. The Redeveloper has been designated and the Redevelopment Plan proposes two - phased construction of a total of 8000sf retail, 6050sf resident amenity center and 232 residential units of which 23 are affordable.</del></li> <li>• A "Planned Adult Community Redevelopment Area" as a Redevelopment Area has been designated on lands (approx. 183 acres) in the Freneau portion of the Township where public sewer and water service are proposed to be extended to serve both the existing and proposed developments. Development approvals under the enabling ordinances have been granted for the redevelopment of this area for 521 age-restricted dwelling units plus 68 non-age restricted affordable housing units; however, the developments have yet to be built. <u>Subsequently, 22 acres have been acquired for Open Space, 20 additional acres are under negotiation for acquisition, and the remaining area is being considered for limitation of development to 240 residential units on 40 acres +/- with the remainder of the lands as conservation easement.</u></li> <li>• A designated "Age-Restricted Affordable Housing" zoning district was created for a 13.8 acre brownfield site formerly owned by the South River Metal Products Company which permits the municipally sponsored development of up to 154 age-restricted apartments; and</li> <li>• A Redevelopment Area has been designated on the Anchor Glass Manufacturing Facility of 50.55 acres for a Planned Unit Development with up to approximately 8290,000 square feet of retail/office space, <u>50750 dwelling units (of which 110 are affordable) a theater and a hotel - no specific provisions or plans have been developed at this time. Plans are being submitted to the Planning Board for the June 2013 meeting.</u></li> </ul>	<p>The Land Development Ordinance (LDO) of the Township of Aberdeen contains specific provisions to protect environmentally critical areas from the negative effects of development, as follows:</p> <ol style="list-style-type: none"> <li>1. A "Conservation/Recreation" zoning district (Section 408) has been established in the Township for most of the marshland and wetlands of the Raritan Bay and associated stream corridors of Whale, Long Neck and Matawan creeks. This zoning district limits the types of permitted development to farms, boat yards and other similar marina uses, restaurants, and conservation areas, public parks and other similar public purpose uses. All permitted land uses must have a "definite relationship to the estuarial zone" and be approved by NJDEP, where required.</li> <li>2. All residential development is required to be located a minimum of 100 feet from any existing or proposed detention or retention basin, pond, lake or other water body or course, as measured from the highest topographic grade of said water body or course (Section 401 G.).</li> <li>3. Section 514 of the LDO regulates retaining walls, embankment slopes and bulkheads. Slope returns for embankments are limited to a 3 to 1 slope. Bulkheads or other appropriate permanent bank stabilization acceptable to the Board are required for all development on or along waterways, and the design must be approved by the Township Engineer.</li> <li>4. Section 523 of the LDO regulates Surface Water Management and Section 524 regulates Stormwater Management consistent with the new NJDEP regulations.</li> <li>5. Section 608 of the LDO regulates and protects "Critical Areas" which are defined by ordinance as 100-year flood plains, freshwater wetlands, wetlands transition areas or steep slopes 15% or greater. Stream corridors with buffer strips of 100 feet in width from the top of the channel banks or the flood plain area, if larger, also are regulated and protected from most types of development. All development in the Township is subject to the provisions of this section of the LDO. Design or performance standards are included within the regulations for those developments that are permitted when variances or waivers are granted.</li> <li>6. In addition to the specific LDO regulations, the Township of Aberdeen has adopted Master Plan documents which recommend the protection of environmentally sensitive areas and the provision for open spaces and recreation areas. When variances from the LDO are sought, an applicant must show that there is no substantial detriment to the intent and purpose (negative criteria) of these Master Plan documents.</li> </ol>

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

## **Borough of Atlantic Highlands**

### Land Uses and Development Trends in Hazard Areas

For the most part, Atlantic Highlands is a "Built-Out" community. The Borough has 2 waterfront properties still undeveloped although they are currently used for commercial purposes.

1) McConnell Property - Former site a fuel farm. 2 huge Esso tanks were on property and dismantled in 1986. Property was recently remediated. The property is zoned for 19 single family homes. The Borough wants to purchase the property but it's big dollars – 6 million plus. Borough would want to preserve for open space - extension of current beach area.

2) Guiliani property - former home of a contracting company. Now a boat storage facility although the property was recently purchased by SeaStreak LLC, the local fast ferry company that transports people to New York City and back daily. Property is possibly contaminated from 1920's Coal Manufacturing plant that is owned by NJ Natural Gas Co. Borough wanted to buy this piece of property to extend the Borough owned Municipal Harbor. The Borough had restraints against the purchase from COAH.

Other areas along the waterfront are not buildable. Some buyers are taking down smaller homes and building larger homes on the property. Biggest issue for the Borough is water runoff/erosion. New or old - this is the real challenge. Borough has 7 condo/high density apartment complexes. Anything built in the hills must meet steep slope ordinance requirements. One former restaurant parcel, 3 acres, has since been replaced with 2 new homes.

### Regulations / Codes / Ordinances to Protect New Development from Natural Disasters

As provided in the first request:

- 1) Steep slope ordinance which has been upheld by Supreme Court in 3 challenges.
- 2) Land use regulations.
- 3) Stormwater Management Ordinance
- 4) Flood Plain / ABFE & Ordinance

**Table 3d.6**  
**Summary of Responses**  
**Land Uses and Development Trends Questionnaire**  
*(Source: Core Planning Group Members)*

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
Belmar, Borough of	We are a one sq. mile municipal located on the east coast of central New Jersey. The community consists mostly of single family homes. We are currently updating our Business Zone by re-building and redesigning a 6 block area. We are a summer resort with a year round population of about 6,000.	Belmar participates in the NFIP and enforced codes and ordinances regarding same.  <u>Belmar has adopted the ABFE maps (2013) and has adopted modifications to our residential home height ordinance to encourage home elevations.</u>  <u>All building regulations pertaining to wind, flood and hurricane are enforced by the building department.</u>
Bradley Beach, Borough of	Bradley Beach is primarily a residential community with mixed use retail / residential and office / residential along the Main Street Corridor at the west edge of the Borough. The majority of the Borough is zoned single family residential except for the aforementioned mixed use zone and townhouse and apartment used permitted along the beachfront block. The Borough is fully developed with no vacant property available for development. Development is limited to demolition and construction of wither single family homes throughout the Borough or small condominium projects or larger lots in the beachfront area.	The Borough of Bradley Beach enforces floodplain management regulations and all FEMA regulations regarding natural hazards. There are no steep slopes or potential earthquake or landslide areas in the Borough. Building regulations related to high winds and hurricanes design standards are enforced by the Borough's Building Department.
Brielle, Borough of	Brielle is 1.3 square miles and there is little room for development. The trend is toward minor subdivisions, in particular in the area east of Union Land, between Old Bridge Road and Green Avenue, where the required frontage is 75 feet and the trend is for the division of 100 foot lots into 50 foot lots. The trend is distressing, but hard to stop. The few remaining commercial areas, i.e. marinas, are in danger of going condominium. While the increase in density is manageable; it cannot but help to adversely impact the overall quality of life.	The Borough has enacted a Flood Plain Management Ordinance and has supplemented it with a Stormwater Management Ordinance and Soil Removal.
Brookdale Community College	Brookdale Community College operates academic, administrative and support facilities in excess of 1 million square feet on 200 acres of land in the Lincroft section of Middletown Township. The College also operates individual facilities in Hazlet, Wall, Long Branch and Freehold. The College leases space in Neptune and on Sandy Hook. Expansion of the Lincroft Campus is expected to include the renovation of the Collins Arena and development of a 32,000 sq. ft multi-purpose activity center as well as a 9,600 sq. ft. expansion of the Auto Technology center. Future plans include expansion of the College facilities in Freehold and in Wall.	Not Applicable – The College complies with all relevant Federal, state and county land use regulations. The College does not have the statutory authority to adopt regulations of development. The College does not have the statutory authority to enforce development regulations.
Colts Neck, Township of	Historically development in the Township of Colts Neck consists of agriculture and detached single family dwellings. The A-1 Agriculture/ Residential Zone is a two acre zone with a density of 0.1 dwellings per acre. Over the past five years the Township has issued 110 certificates of occupancy and 37 demolition permits for a net gain of 73 dwellings. This averages 15 dwellings per year. This trend is anticipated to decline in the near future, due to a lack of vacant land and current market conditions. The only multifamily development plan is The Manor Homes at Colt Neck. A 48 unit inclusionary development proposed in Route 537. Commercial development is limited to the Route 34 corridor between Artisan Place and Route 18. Due to a reliance of on-site well and septic systems, the density of the commercial	The Township Code Enforcement Officer enforces the Township's local ordinances published in Chapter 102 - Development Regulations of the Township of Colts Neck. The Construction Official enforces building code through compliance with the Universal Construction Code (UCC). The State of New Jersey oversees State regulations including the Freshwater Wetlands, Stream Encroachment, Highway Access, Stormwater Management, Residential Site Improvement Standards and other State permits. While Federal regulations such as FEMA and Soil Erosion and Sediment Control Plans are administered by Federal Agencies. Compliance with these outside agencies requirements are addressed as part of the planning process within each individual Planning Board

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Land Uses and Development Trends Update*

---

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

*(Source: Core Planning Group Members)*

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
Eatontown, Borough of	<p>1) Multi-family Townhouse developments – upward of 300 units with 1,000 new residents</p> <p>2) Expansion of regional shopping mall 50,000 square ft. Type 1 construction. Population will vary on times of years.</p> <p>3) New business in Industrial Park Area - 2 business complexes Type 1 100,000+ sq ft.</p> <p>1 medical office/Operating Room 25,000 sq ft Type 1</p> <p>4) approval on new Rt 35 - Rt 36 Construction to soon facilitate movement of traffic.</p> <p>Englishtown is a half-square mile community that is for the most part completely built out except for two land tracks. One has plans for four to six single family homes and the other track is going to be 8 apartment buildings with a total of 134 apartments.</p> <p>At this time the only land available is lots that 1 or 2 houses can be built on. No major building is expected.</p>	DEP Standards, NJ Building Code, NEPA Standards, OSHA, Boro of Eatontown Codes, Stormwater Management of NJ DEP, Electrical codes, State DOT.
Englishtown, Borough of	Farmingdale is a very small (1.5 sq. mile) Borough with limited development. Spot lot residential and limited commercial construction takes place sporadically.	N/A
Fair Haven, Borough of	The Borough of Freehold is approximately 95% built out. At the present time there are two residential developments proposed both are located on Orchard Street in the southeast area of the municipality. One development has already been approved and is in the process of being built - Liberty Crossing 1 consists of 12 two story single family homes to be built on the west side of Orchard Street. At the time the last plan was prepared, Liberty Crossing 2 was before the Borough of Freehold Planning Board, consisting of a four story age restricted condominiums. Level 1 was to be used as a parking garage and levels 2, 3 & 4 as 30 condominiums. This project was approved by the Board, but has since been terminated. Presently, Orchard Place at Freehold is before the Planning Board for this site. It consists of seven, 2-family homes and one 1-family home. In terms of commercial development since the last plan was prepared, the three story office building at 83 South Street has been completed. Another three story office building has been completed at 42 East Main Street. Previous plans for a two story commercial building (first floor retail, second floor office) at 63 East Main Street (corner of Spring Street) were approved at the time the initial plans were prepared, but the project has since been terminated.	Yes, if the building were to affect an area.
Farmingdale, Borough of	The Borough of Freehold does not appear on any FEMA Flood Maps due to the fact that it is located 178 feet above sea level and there are no streams, rivers or lakes in the Borough. The only flooding problems are localized during times of extremely heavy rainfall because of an antiquated storm drainage system in some areas. The Borough of Freehold enforces the State Uniform Construction Code which adopts the 2009 <del>2446</del> International Building Code and has provisions for earthquake resistant design criteria and high wind design criteria. There are no wildfire hazard areas located in the Borough of Freehold. In September of 2009 the Borough of Freehold adopted a Flood Damage Prevention Ordinance, and has recently sent in its application for participation in FEMA's National Flood Insurance Program.	Within our limited development, yes.
Freehold, Borough of	Although the Township has experienced significant growth over the last three	The Land Use Ordinance discourages development in critical Areas: 100 Year

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
<p>Hazlet, Township of</p>	<p>Many various projects approved or pending and under construction currently; Details provided by Sharon A. Keegan, Zoning Official.</p>	<p>The Township utilizes a Development Review Ordinance that regulates all property within its boundaries. The intent of the ordinances is to guide the appropriate use of development of all lands in a manner that promotes the public health, safety, morals and general welfare. To secure safety from fire, panic and other natural or manmade disasters. The following ordinances are some of the ways the township regulates new development from the effects of a natural hazard.</p> <ol style="list-style-type: none"> <li>1. Section 412 - Flood Hazard Regulations-designed to regulate development of lands within the defined flood hazard areas.</li> <li>2. Section 500 - Performance \$ Design Standards - designed to promote the creation of functional and attractive development that shall promote to the health, safety, general welfare, morals, efficiency, economy, maintenance of property values and the character of the Township. To minimize adverse impacts of flooding, drainage, erosion vehicular traffic, pedestrian movement, parking, vibration, lighting and glare, noise, odor, solid waste disposal and litter.</li> <li>3. Section 508 Land Use Restrictions and Easements, such as drainage easements, sight triangle easements and utility easements.</li> <li>4. Section 525 Storm Water Management Control.</li> <li>5. Section 526 Stream Setback, No activity shall be permitted within 100 feet of the top of the bank of a stream or other body of water. No building shall be constructed within the 100 year flood plain.</li> </ol>
<p>Highlands, Borough</p>	<p>Near the waterfront: Single family residential units are being renovated, older single and multi family housing units are being demolished and replaced with single and multi family housing units. Some pre-existing high density areas have been rezoned into "MXD" areas and are currently awaiting redevelopment. Pre-existing open areas are being developed and are becoming, single and multi-family housing units. Much of the waterfront business area zones has already been developed with restaurants or marinas. Older restaurants are being renovated and re-opened as restaurants as business thru-out the town continues to increase.</p> <p>The analysis concluded that the 2003 population of the Township was approximately 17,487 and that with current zoning the population at total build-out would be about 19,608. Most of the undeveloped properties are in residential zones with the largest properties zoned for single-family homes in clustered developments with a maximum density of 0.2 units per acre. Some of the undeveloped properties have received development approvals from the Planning Board. Given the state of the real estate market the actual development of these properties is at present proceeding very slowly. There are two clusters of undeveloped properties along Route 35. Each of these has about 25 acres and they are currently zoned for commercial/retail use. There are no currently known development plans for either of these properties.</p>	<p>The borough has developed, adopted and enforces: Flood plain ordinances, Steep slope ordinances, storm water management plans. Additionally the borough follows the FEMA NFIP program and has adopted the current edition of the International Code Council (ICC) construction codes and the current edition of the New Jersey Residential Construction Code.</p>
<p>Holmdel, Township of</p>	<p>(continued on the following page...)</p>	<p>Holmdel Township includes in its Development Regulations Section 30-116, Resource Management Regulations. These regulations limit development within stream corridors including floodplains, on steep slopes, and around water bodies and limit tree and woodland removal on properties proposed for development. The regulations require that buffers be placed in conservation easements.</p>

**Table 3d.6**  
**Summary of Responses**  
**Land Uses and Development Trends Questionnaire**  
*(Source: Core Planning Group Members)*

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
Howell, Township of	<p><i>(Holmdel, continued...)</i></p> <p>The largest development uncertainty in the Township is the potential redevelopment of the 472-acre property owned by Alcatel-Lucent that formerly housed research and development facilities of Bell Laboratories. On this property is an approximately 2,000,000 sq. ft building that was designed by Aero Saarinen for Bell Laboratories and is now vacant. Six to eight years ago there were 6-7,000 employees working in the building. A redevelopment company has a contract to purchase the property. However, the sale has not closed. Some of the possibilities for the redevelopment include the partial or complete demolition of the existing building, the re-use of a portion of the building, the construction of new buildings for professional and office use, the construction of a 350,000 sq. ft. data center, the construction of age-restricted residences, some municipal facilities, and some combination of all of these and other possibilities. The Township Committee has appointed an Advisory Committee to advise it on the options. Because of the poor state of the commercial real estate market in Monmouth County and New Jersey, the lack of population and employment growth in New Jersey, and the lack of identified or contracted tenants, the ultimate plan for the development of this property is unknown at this time. <u>In May, 2012, Holmdel Township approved the Alcatel-Lucent Redevelopment Plan. In March, 2013, Somerset Development won initial approval to proceed with their plans but although under contract to purchase the site have not yet closed on the purchase.</u></p> <p>Large McMansion development exists within areas of previously farmed land. A large area of the Township maintains a rural character. Most of the Township's development is scattered throughout rural locations and located at previously farmed areas and wetland areas.</p> <p>Agricultural Rural Estate zone districts are present within the Township and prevent the impacts of development in areas located outside of centers that are identified in the Township's Master Plan. Agricultural uses and low density development are encouraged within the ARE zone districts. High density residential development within the Township are located within the residential zone districts and located in the vicinity of well traveled roadways. Commercial development within the Township can be found along the Rt. 9 and Rt. 35 corridors.</p>	<p>Yes, the Township has a 300 foot Riparian Buffer Ordinance (188-34). A 300 foot buffer is required adjacent to all streams, lakes, ponds within the Township. The buffer is measured as a line extending perpendicularly from the 100-year flood plan delineation. If there is no 100 year flood line delineated, the distance shall be measured outward from the top of the bank. This ordinance protects communities from potential flood hazard occurrences.</p>
Interlaken, Borough of	<p>The Borough of Interlaken is unique in that the municipality is completely single-family residential. The only non-residential land use is borough-owned property such as Borough Hall, a park and an arboretum. The Borough's goal is to retain the current character of the community and this is reinforced in its Master Plan and Zoning Ordinance. The Borough is concerned about preserving its Deal Lake frontage as well as environmental stabilization of the Deal Lake itself.</p>	<p>The Borough of Interlaken does enforce a Flood Hazard Prevention Ordinance and a full circuit of Storm water management ordinances. The Borough of Interlaken also has an arboretum along Deal Lake and has steep slope easement and conservation easement in place to preserve stream corridors.</p>
Keansburg, Borough of	<p>Town House/ Condo Development and retail development near our waterfront areas; feasibility study being conducted for a marina.</p>	<p>Floodplain management ordinances for new construction in floodplain zones.</p>
Keyport, Borough of	<p>Residential development 50 yards from waterfront; 10 new homes within last 5 years; Future Project: Multi Condo project along a creek bed.</p>	<p>The jurisdiction enforces or regulates development for floodplain along Raritan Bay and along our two creeks. Also for added / new or development along the</p>

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Land Uses and Development Trends Update*

---

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**Please check box A or B below.**

**A) I certify that I have reviewed my community's feedback from the 2009 Land Uses and Development Trends assessment and that all information previously provided is still current.** *(If checking box A, then please return only this cover page.)*

**Table 3d.6**  
**Summary of Responses**  
**Land Uses and Development Trends Questionnaire**  
*(Source: Core Planning Group Members)*

Community	1. Land Uses and Development Trends in Hazard Areas <i>(Holmdel, continued...)</i>	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
Howell, Township of	<p>The largest development uncertainty in the Township is the potential redevelopment of the 472-acre property owned by Alcatel-Lucent that formerly housed research and development facilities of Bell Laboratories. On this property is an approximately 2,000,000 sq. ft. building that was designed by Aero Saarinen for Bell Laboratories and is now vacant. Six to eight years ago there were 6-7,000 employees working in the building. A redevelopment company has a contract to purchase the property. However, the sale has not closed. Some of the possibilities for the redevelopment include the partial or complete demolition of the existing building, the re-use of a portion of the building, the construction of new buildings for professional and office use, the construction of a 350,000 sq. ft. data center, the construction of age-restricted residences, some municipal facilities, and some combination of all of these and other possibilities. The Township Committee has appointed an Advisory Committee to advise it on the options. Because of the poor state of the commercial real estate market in Monmouth County and New Jersey, the lack of population and employment growth in New Jersey, and the lack of identified or contracted tenants, the ultimate plan for the development of this property is unknown at this time.</p> <p>Large McMansion development exists within areas of previously farmed land. A large area of the Township maintains a rural character. Most of the Township's development is scattered throughout rural locations and located at previously farmed areas and wetland areas.</p> <p>Agricultural Rural Estate zone districts are present within the Township and prevent the impacts of development in areas located outside of centers that are identified in the Township's Master Plan. Agricultural uses and low density development are encouraged within the ARE zone districts. High density residential development within the Township are located within the residential zone districts and located in the vicinity of well traveled roadways. Commercial development within the Township can be found along the Rt. 9 and Rt. 35 corridors.</p>	<p>Yes, the Township has a 300 foot Riparian Buffer Ordinance (1885-34). A 300 foot buffer is required adjacent to all streams, lakes, ponds within the Township. The buffer is measured as a line extending perpendicularly from the 100-year flood plan delineation. If there is no 100 year flood line delineated, the distance shall be measured outward from the top of the bank. This ordinance protects communities from potential flood hazard occurrences.</p>
Interlaken, Borough of	<p>The Borough of Interlaken is unique in that the municipality is completely single-family residential. The only non-residential land use is borough-owned property such as Borough Hall, a park and an arboretum. The Borough's goal is to retain the current character of the community and this is reinforced in its Master Plan and Zoning Ordinance. The Borough is concerned about preserving its Deal Lake frontage as well as environmental stabilization of the Deal Lake itself.</p>	<p>The Borough of Interlaken does enforce a Flood Hazard Prevention Ordinance and a full circuit of Storm water management ordinances. The Borough of Interlaken also has an arboretum along Deal Lake and has steep slope easement and conservation easement in place to preserve stream corridors.</p>
Keansburg, Borough of	<p>Town House/ Condo Development and retail development near our waterfront areas; feasibility study being conducted for a marina.</p>	<p>Floodplain management ordinances for new construction in floodplain zones.</p>
Keyport, Borough of	<p>Residential development 50 yards from waterfront; 10 new homes within last 5 years; Future Project: Multi Condo project along a creek bed. Recent additional approvals include 20 condo units along creek bed. Inquiry by developers continue, requesting approvals for waterfront multi-family units.</p>	<p>The jurisdiction enforces or regulates development by enforcement of CAFRA Regulations and Floodplain Management Best Practices along Karitan Bay and along our two creeks. ¶                  ¶ added / new or development along the Bay has high wind Criteria.</p>

Table 3d.6

Summary of Responses  
Land Uses and Development Trends Questionnaire  
(Source: Core Planning Group Members)

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
Lake Como, Borough of	<p>There is a number of recently approved and soon-to-be proposed "high-density residential over commercial" projects on Main Street. The projects range from 4 to 25 residential units each and there is a maximum potential for about 8 to 10 such projects to ultimately be built pending on further economic growth. The remainder of the town is completely developed with most work being confined to additions and alterations and or replacement of existing single-family residences (usually small bungalows being replaced with new larger homes).</p> <p>Little Silver is largely residential, developing slowly in accordance with its current zoning. Development is mostly renovation of existing homes except for one age restricting housing development recently approved by the Planning Board.</p>	<p>Yes, State and Federal flood plan, wind design and general building code requirements are enforced.</p>
Little Silver, Borough of	<p>Little Silver is largely residential, developing slowly in accordance with its current zoning. Development is mostly renovation of existing homes except for one age restricting housing development recently approved by the Planning Board.</p>	<p>Yes, the Borough has an Ordinance restricting all development below the six foot contour (along stream corridors) and has recently adopted ordinances prohibiting the use of steep slopes and environmentally sensitive areas for lit area calculations.</p>
Loch Arbour, Village of	<p>Village of Loch Arbour is fully developed, primarily single family residential development is usually in the form of knock-downs and rebuilds.</p>	<p>Yes, floodplain management, high wind design criteria apply in the Village. No other criteria are necessary.</p>
Long Branch, City of	<p>Over the last ten years the City of Long Branch has been developing and implementing an extremely progressive redevelopment program. The Oceanfront development has already begun with Beachfront North – a high-density residential development and Pier Village – a high-density residential/commercial mix. In the near future the city will begin the next four phases of their development plan, which includes Broadway Corridor, Broadway Gateway, Hotel Campus and Beachfront South. Broadway Corridor is a high-density residential/retail mix with an emphasis on the arts. Broadway Gateway is a mix of commercial and big box retail. Hotel Campus is another beachfront project, which includes a large expansion of an existing hotel and added high-density residential/dormitories. The final project is Beachfront South, which is expected to also include high density residential with improvements to the public boardwalk.</p>	<p>The City of Long Branch follows FEMA's National Flood Insurance Program, the State of New Jersey Uniform Construction Code, the State of New Jersey Municipal Land Use Laws and Monmouth County Freehold Soil Conservation.</p> <p>The City has also adopted several ordinances on a local level to help protect new development and give local officials guidance. These ordinances include Land Use Procedures, Environmental Commission, Urban Enterprise Zone, Property Maintenance, Flood Damage Prevention, Public Property, Redevelopment, Soil Removal and Zoning.</p> <p>Although each of the above listed ordinances may not individually affect each project the combination of several will benefit a large majority of our development.</p>
Manalapan, Township of	<p>The township continues to grow and develop both residential and non-residential uses. The Town completed a Vacant Land Analysis and Employment and Population Projections report as part of the Master Plan Housing Element, which was adopted in 2005. The Town projects that its population will grow from 33,423 in 2000 to 40,923 in 2025. At that point, the Town expects that it will be at its residential buildout based on the current zone plan. Future residential development that has been approved for construction includes single family detached housing, attached housing, affordable housing, and age-restricted housing. Nonresidential growth and development would increase employment within the Town from 8,145 in 2000 to 13,430 in 2025.</p> <p>Development pressures within the Township have generally corresponded to economic cycles. Over the last decade, the Township has experienced a strong demand for residential development and increasing land values. The Township has also experienced a demand for non-residential development for retail office, and office-warehouse uses.</p>	<p>All development and building within the Township is regulated pursuant to the development regulations of the Township of Manalapan, the State Residential Site Improvement Standards, the State Uniform Construction Code, and any other applicable State or County regulations. Township development regulations are enforced through the Township development review and approval process and by the Township agencies and officials responsible for the administration of the regulations and the issuance of development permits</p> <p>Township development regulations include a Flood Hazard Area Overlay zone which prohibits most types of development in the 100-year floodplain, irrespective of the underlying zone district. The objective is to conserve the natural floodplain. The regulations also include building setback requirements from the floodplain. Any permitted development in the floodplain must comply with the Flood Damage Prevention Regulations of the Township Code which incorporates FEMA standards.</p> <p>(continued on next page...)</p>

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Land Uses and Development Trends Update

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**Please check box A or B below.**

(Source: Core Planning Group Members)

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
Lake Como, Borough of	There is a number of recently approved and soon-to-be proposed "high-density residential over commercial" projects on Main Street. The projects range from 4 to 25 residential units each and there is a maximum potential for about 8 to 10 such projects to ultimately be built pending on further economic growth. The remainder of the town is completely developed with most work being confined to additions and alterations and or replacement of existing single-family residences (usually small bungalows being replaced with new larger homes).	Yes, State and Federal flood plan, wind design and general building code requirements are enforced.
Little Silver, Borough of	Little Silver is largely residential, developing slowly in accordance with its current zoning. Development is mostly renovation of existing homes except for one age restricting housing development recently approved by the Planning Board.	Yes, the Borough has an Ordinance restricting all development below the six foot contour (along stream corridors) and has recently adopted ordinances prohibiting the use of steep slopes and environmentally sensitive areas for lit area calculations.
Loch Arbour, Village of	Village of Loch Arbour is fully developed, primarily single family residential development is usually in the form of knock-downs and rebuilds.	Yes, floodplain management, high wind design criteria apply in the Village. No other criteria are necessary.
Long Branch, City of	Over the last ten years the City of Long Branch has been developing and implementing an extremely progressive redevelopment program. The Oceanfront development has already begun with Beachfront North – a high-density residential development and Pier Village – a high-density residential/commercial mix. In the near future the city will begin the next four phases of their development plan, which includes Broadway Corridor, Broadway Gateway, Hotel Campus and Beachfront South. Broadway Corridor is a high-density residential/retail mix with an emphasis on the arts. Broadway Gateway is a mix of commercial and big box retail. Hotel Campus is another beachfront project, which includes a large expansion of an existing hotel and added high-density residential/dormitories. The final project is Beachfront South, which is expected to also include high density residential with improvements to the public boardwalk.	The City of Long Branch follows FEMA's National Flood Insurance Program, the State of New Jersey Uniform Construction Code, the State of New Jersey Municipal Land Use Laws and Monmouth County Freehold Soil Conservation.  The City has also adopted several ordinances on a local level to help protect new development and give local officials guidance. These ordinances include Land Use Procedures, Environmental Commission, Urban Enterprise Zone, Property Maintenance, Flood Damage Prevention, Public Property, Redevelopment, Soil Removal and Zoning.  Although each of the above listed ordinances may not individually affect each project the combination of several will benefit a large majority of our development.
Manalapan, Township of	The township continues to grow and develop both residential and non-residential uses. <del>The Town completed a Vacant Land Analysis and Employment and Population Projections report as part of the Master Plan Housing Element/Master Plan Rezoning, which was adopted in 2005. The Town projects that its population will grow from 33,423 in 2000 to 40,923 in 2025. At that point, the Town expects that it will be at its residential buildout based on the current zone plan. Future residential development that has been approved for construction includes single family detached housing, attached housing, affordable housing, and age restricted housing. Nonresidential growth and development would increase employment within the Town from 8,145 in 2000 to 13,430 in 2025.</del>  Development pressures within the Township have generally corresponded to economic cycles. Over the last decade, the Township has experienced a strong demand for residential development and increasing land values. The Township has also experienced a demand for non-residential development for retail office, and office-warehouse uses. <del>Since the recession of 2008, development has slowed significantly and land values stabilized but a substantial amount of developable lands still exist in the Township.</del>	All development and building within the Township is regulated pursuant to the development regulations of the Township of Manalapan, the State Residential Site Improvement Standards, the State Uniform Construction Code, and any other applicable State or County regulations. Township development regulations are enforced through the Township development review and approval process and by the Township agencies, including the <u>Planning Board and Board of Adjustment</u> , and officials responsible for the administration of the regulations and the issuance of development permits  Township development regulations include a Flood Hazard Area Overlay zone which prohibits most types of development in the 100-year floodplain, <del>irrespective</del> of the underlying zone district. The objective is to conserve the natural floodplain. The regulations also include building setback requirements from the floodplain. Any permitted development in the floodplain must comply with the Flood Damage Prevention Regulations of the Township Code which incorporates FEMA standards.  <i>(continued on next page...)</i>

Summary of Responses

Land Uses and Development Trends Questionnaire  
(Source: Core Planning Group Members)

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
	<p>The development trends in Manalapan typical include the construction of large lot (4 acre) residential subdivisions. These typically occur in the southern half of Manalapan, where historically farmed lands are being developed. The northern half of Manalapan is generally built out. Commercial development typically consists of new retail or office/warehouse construction along the Route 33 corridor. Route 9 is another commercial corridor within the Township, however, same is mostly built out.</p>	<p>(Manalapan, continued ...)</p> <p>Township development regulations include provisions to regulate development activities along streams and within stream corridors. The regulation is also applicable to any pond, lake, or perennial or intermittent waterway as shown by USGS maps, the Monmouth County Soils Survey, or the Natural Resource Inventory for Manalapan Township.</p> <p>Township development regulations include standards for the development on steep slopes. The standards restrict development on slopes of 10% or greater. Disturbance of slopes 20% or greater is only permitted if the disturbance is essential to the reasonable use of the property.</p> <p>The Township has an active open space and farmland preservation program to retain significant areas of the Township in farm and open space use.</p>
Manasquan, Borough of	<p>Manasquan is a built-out year-round shore community consisting of approximately 6,400 residents. Most development consists of razing older, smaller homes and replacement with larger, 2 to 3 story homes, especially along the oceanfront.</p>	<p>The Borough of Manasquan enforced the following: Wind Design Criteria: Uniform Construction Code (UCC); Flood Plain Ordinance NJSA 58:16A.57 (required by the State); Borough Ordinance Chapter # 29 (Flood Prevention &amp; Construction Design)</p>
Marlboro, Township of	<p>The Township is seeing a combination of high-density high-occupancy residential, commercial and low-density residential on lots of 1 acre or larger. Ten commercial properties include a big-box retail store, 2 banks, 2 office buildings, 2 combination office buildings/warehouses, one house of worship, a drive-thru pharmacy and an indoor tennis &amp; training facility. Six pending residential developments include one with a combination of single family homes and 2 Multi-family dwellings, one multi-unit single family attached dwelling, and 4 single family dwelling Developments with lot sizes ranging from ¼ acre to 2+ acres.</p>	<p>The Zoning and/or Engineering Departments enforce the following sections of the Township Code:</p> <ol style="list-style-type: none"> <li>1. General Provisions 84-30D(1)(a); "No structure shall be built within 100' of top-of-bank of a Stream or other body of water or within any drainage or conservation easement...No building shall be constructed within the 100 year flood plain of any stream or watercourse..."</li> <li>2. Flood Damage Prevention 84-37 and NJSA 40:48-1 et seq.</li> <li>3. Storm Water Management 84-104</li> <li>4. Floodplain Regulations 84-1095. SoilRemoval84-1346. Grading &amp; Clearing 84-30 D (24), 84-83 F</li> </ol>
Matawan, Borough of	<p>The Borough of Matawan is a 2.26 square mile community which has mostly been developed to capacity. Currently, there is one residential development in the initial stages of construction. The development (The Preserve at Matawan) encompasses an approximate sixteen acre tract of land formally used as both a residence and retail business. This tract of land included a warehouse type building and a residential home with the undeveloped acres remaining wooded and wetland areas. This development is located between State Highway #79 and Mill Rd. and borders Matawan's Gravelly Brook and Gravelly Brook Park. The Preserve at Matawan will encompass one hundred twenty-six luxury condominiums. The condominiums will be offered in one, two or three bedroom models. The development will be restricted to active adults 55 years old and older and reportedly will include a low-income component. A portion of the site will remain un-developed due to wetland restrictions.</p>	<p>With the exception of prohibitions for developing on or near preserved wetland areas, I am not aware of any such regulations/ordinances or codes currently in place to protect new development from the effects of natural hazards.</p>

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Land Uses and Development Trends Update*

---

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**Summary of Responses**  
**Land Uses and Development Trends Questionnaire**  
*(Source: Core Planning Group Members)*

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
	<p><i>(Matawan, continued...)</i></p> <p><del>In addition to this development the</del> The Borough of Matawan is in the initial stages of a large scale re-development for the entire area of the Matawan-Aberdeen Train Station. The original plans called for a combination of retail, commercial and residential development in this area. The area has been approved as a Transit Village by New Jersey Transit. The entire re-development process was a joint venture with neighboring Aberdeen Twp--<del>but has</del> <b>was</b> stalled due to on-going litigation <b>but is once again, an active project. The Borough is currently in the process of developing a new plan and selecting a development partner.</b></p> <p><b>Broad Street Plaza, a proposed project to be built adjacent to the Matawan Municipal Community Center at the intersection of Broad Street and State Highway 34 has been presented to the Planning Board for review. The project proposes the construction of 130 apartments, 26,900 square foot of retail space and a 1,600 square foot fitness center.</b></p>	
Middleton, Township of	<p>Development trends in recent years have essentially been a continuation of the trends and patterns of the past. New development consists largely of single family homes and subdivisions. Typical subdivision applications currently range in size from 2-12 lots, whereas in years past they tended to be much larger, with 30 - 50 lot developments being common. [More multi-family developments, both rental and for sale, have been occurring in the past 10 years and will likely continue. This is primarily due to the Township's efforts in complying with State mandated affordable housing obligations. More than 1,100 new units have been approved and/or built in the past decade and another 200 - 300 hundred are likely in the next 10 years. Densities typically range from 3 - 10 units per acre, with project sizes ranging from 12 units to 150 units. Some multi-family developments has occurred near the waterfront. There is also an area of 10 -15 acres near the waterfront that is adjacent to the commercial fishing cooperative that is slated for redevelopment in the next few years. Other than that the Bayshore area is mostly built out, with some infill development possibilities. Newly enacted State regulations (11/5/07), applicable to floodplains, will have a significant impact on the magnitude of new development in those areas. Commercial development continues steadily, although the scale of commercial projects is somewhat smaller. Nearly all of our major shopping centers have been fully rehabilitated within the past 10-15 years. Scattered smaller commercial and retail developments (5,000 - 10,000 square feet) continue to take place. The only major land uses not occurring much are large office developments and industrial development.</p> <p>Millstone Township is considered a Low Density rural residential. Development is permitted along stream corridors and limited areas of commercial development.</p>	<p>The Township participates extensively in the FEMA National Flood Insurance Rate Map Program. Properties are regularly reviewed to determine if they are located in flood hazard areas. If they are, special design and development standards are imposed and a Floodplain Encroachment Permit process is implemented, via Township Ordinance. As indicated in #1 new State regulations applicable in flood hazard areas will severely limit new development and filling in Floodplains.</p> <p>Design and development standards relative to earthquakes and high winds are implemented via state regulated uniform construction standards. Landslide hazards and wildfire hazards are typically not applicable here. The Township does have steep slope conditions that limit and in some cases even prohibit developments that disturb sloped areas.</p>
Millstone, Township of	<p>Millstone Township strictly enforces various township ordinances that protect new development from various natural hazards. We have in place Steep slopes,</p>	

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Land Uses and Development Trends Update

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Summary of Responses  
Land Uses and Development Trends Questionnaire  
(Source: Core Planning Group Members)

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
Middleton, Township of	<p>(Matawan, continued...)</p> <p>In addition to this development the Borough of Matawan is in the initial stages of a large scale re-development for the entire area of the Matawan-Aberdeen Train Station. The original plans called for a combination of retail, commercial and residential development in this area. The area has been approved as a Transit Village by New Jersey Transit. The entire re-development process was a joint venture with neighboring Aberdeen Twp. but has stalled due to on-going litigation.</p> <p>Development trends in recent years have essentially been a continuation of the trends and patterns of the past. New development consists largely of single family homes and <del>in</del> subdivisions and multifamily site plans. Typical subdivision applications currently range in size from <del>2-12.5-25</del> lots, <del>whereas in years past they tended to be much larger, with 30-50 lot developments being common</del> though there have been larger developments approved recently. <del>More</del> multi-family developments, both rental and for sale, have been occurring in the past 10 years and will likely continue. This is primarily due to the Township's efforts in complying with State mandated affordable housing obligations. More than 1,100 new units have been approved and/or built in the past decade and another <del>200-500 - 300-750</del> hundred are likely in the next 10 years. Densities typically range from 3 - 10 units per acre for single family developments, with project sizes ranging from 12 units to 150 units. Multifamily tends to have higher densities at 8-12 units per acre, sometimes higher. Some multi-family developments has occurred near the waterfront. There is also an area of 10 -15 acres near the waterfront that is adjacent to the commercial fishing cooperative that is slated for redevelopment in the next few years. Other than that the Bayshore area is mostly built out, with some infill development possibilities. <del>Newly enacted State regulations (11/5/07), applicable to floodplains, will have a significant impact on the magnitude of new development in these areas.</del> Commercial development continues steadily, although the scale of commercial projects is somewhat smaller. Nearly all of our major shopping centers have been fully rehabilitated within the past 10-15 years. Scattered smaller commercial and retail developments (5,000 - 10,000 square feet) continue to take place. The only major land uses not occurring much are large office developments and industrial development.</p>	<p>The Township participates extensively in the FEMA National Flood Insurance Rate Map Program. Properties are regularly reviewed to determine if they are located in flood hazard areas. If they are, special design and development standards are imposed and a Floodplain Encroachment Permit process is implemented, via Township Ordinance. <del>As indicated in #1 new State regulations applicable to flood hazard areas will severely limit new development and filling in floodplains.</del></p> <p>Design and development standards relative to earthquakes and high winds are implemented via state regulated uniform construction standards. Landslide hazards and wildfire hazards are typically not applicable here. The Township does have steep slope <del>conditions</del> regulations that limit and in some cases even prohibit developments that disturb sloped areas.</p>
Millstone, Township of	<p>Millstone Township is considered a Low Density rural residential. Development is permitted along stream corridors and limited areas of commercial development.</p>	<p>Millstone Township strictly enforces various township ordinances that protect new development from various natural hazards. We have in place Steep slopes, soil contamination, flood plain, conservation Easement and Storm water management ordinances.</p>
Monmouth Beach, Borough of	<p>Redevelopment of existing property to meet newer codes. US Coast Guard Life Saving Station reconstructed into Monmouth Beach Cultural Center. Flood Plain Management enacted.</p>	<p>Monmouth Beach complies with stormwater management rules; Drainage and road improvements for active flooding; Land disturbance ordinance enacted to prevent flooding encroachment; Seawall reconstruction to prevent encroaching ocean tides.</p>
Neptune City, Borough of	<p>Neptune City is 99% developed with majority of that as single family homes. It has some apartment complexes and commercial areas. There is a process of a possible 16 acres of redevelopment of high density housing.</p>	<p>At this time we do not. All new development is by the regular building codes.</p>

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Land Uses and Development Trends Update*

---

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**Please check box A or B below.**

**Summary of Responses**  
**Land Uses and Development Trends Questionnaire**  
*(Source: Core Planning Group Members)*

Community	I. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
<p><i>(Matawan, continued...)</i></p> <p>Middleton, Township of</p>	<p>In addition to this development the Borough of Matawan is in the initial stages of a large scale re-development for the entire area of the Matawan-Aberdeen Train Station. The original plans called for a combination of retail, commercial and residential development in this area. The area has been approved as a Transit Village by New Jersey Transit. The entire re-development process was a joint venture with neighboring Aberdeen Twp. but has stalled due to on-going litigation.</p> <p>Development trends in recent years have essentially been a continuation of the trends and patterns of the past. New development consists largely of single family homes and subdivisions. Typical subdivision applications currently range in size from 2-12 lots, whereas in years past they tended to be much larger, with 30 - 50 lot developments being common. More multi-family developments, both rental and for sale, have been occurring in the past 10 years and will likely continue. This is primarily due to the Township's efforts in complying with State mandated affordable housing obligations. More than 1,100 new units have been approved and/or built in the past decade and another 200 - 300 hundred are likely in the next 10 years. Densities typically range from 3 - 10 units per acre, with project sizes ranging from 12 units to 150 units. Some multi-family developments has occurred near the waterfront. There is also an area of 10 - 15 acres near the waterfront that is adjacent to the commercial fishing cooperative that is slated for redevelopment in the next few years. Other than that the Bayshore area is mostly built out, with some infill development possibilities. Newly enacted State regulations (11/5/07), applicable to those areas. Commercial development continues steadily, although the scale of commercial projects is somewhat smaller. Nearly all of our major shopping centers have been fully rehabilitated within the past 10-15 years. Scattered smaller commercial and retail developments (5,000 - 10,000 square feet) continue to take place. The only major land uses not occurring much are large office developments and industrial development.</p>	<p>The Township participates extensively in the FEMA National Flood Insurance Rate Map Program. Properties are regularly reviewed to determine if they are located in flood hazard areas. If they are, special design and development standards are imposed and a Floodplain Encroachment Permit process is implemented, via Township Ordinance. As indicated in #1 new State regulations applicable in flood hazard areas will severely limit new development and filling in Floodplains.</p> <p>Design and development standards relative to earthquakes and high winds are implemented via state regulated uniform construction standards. Landslide hazards and wildfire hazards are typically not applicable here. The Township does have steep slope conditions that limit and in some cases even prohibit developments that disturb sloped areas.</p>
Millstone, Township of	<p>Millstone Township is considered a Low Density rural residential. Development is permitted along stream corridors and limited areas of commercial development.</p>	<p>Millstone Township strictly enforces various township ordinances that protect new development from various natural hazards. We have in place Steep slopes, soil contamination, flood plain, conservation Easement and Storm water management ordinances.</p>
Monmouth Beach, Borough of	<p>Redevelopment of existing property to meet newer codes. US Coast Guard Life Saving Station reconstructed into Monmouth Beach Cultural Center. Flood Plain Management enacted.</p>	<p>Monmouth Beach complies with stormwater management rules; Drainage and road improvements for active flooding; Land disturbance ordinance enacted to prevent flooding encroachment; Seawall reconstruction to prevent encroaching ocean tides.</p>
Neptune City, Borough of	<p>Neptune City is 90% developed with majority of that as single family homes. It has some apartment complexes and commercial areas. There is a process of a possible 16 acres of redevelopment of high density housing. There is a five acre redevelopment area of which two acres just received approval for the construction of 36 townhomes. The Borough has two State Highways and is located near the hospital, so there is</p>	<p>At this time we do not. All new development is by the regular building code. Uniform Construction Code. The Borough has a Stormwater Management Ordinance and Land Use Board provisions if applicable.</p>

**Summary of Responses  
Land Uses and Development Trends Questionnaire  
(Source: Core Planning Group Members)**

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
Neptune, Township of	<p>construction of many office buildings.</p> <p>Development trends vary depending on the area of Neptune Township. Below is a listing based on location within the Township:</p> <p>Western Neptune: Medical office - 15,000 sf to 30,000 sf. Big Box Retail, including pad sites for restaurants, banks, pharmacies, and other retail, Major Subdivisions - not exceeding 20 lots.</p> <p>Eastern Neptune - In-fill residential, smaller lots. West Lake Ave. redevelopment area - dense mixed use including residential retail and office Former Ridge Ave. School Site redevelopment area - dense residential including single-family townhouses, and apartments.</p> <p>Other Areas: In-fill residential mainly including 2-lot minor subdivisions. Large expansion of regional hospital.</p> <p>Potential Redevelopment Areas: Transit Village - dense mixed use near railroad station. Shark River Waterfront- moderate dense residential with a portion of retail and hotel. Existing highway corridors - possible in-fill and new development.</p> <p>There is substantial redevelopment of commercial space along State Highway 35.</p> <p>Residential Development is basically of 2 kinds:</p> <p>1- Infill - Undeveloped parcels in the middle of an otherwise developed neighborhood. Usually large new homes on small lots.</p> <p>2-Age Restricted Adult Communities - Continuing construction on two large projects, while a third was recently completed.</p> <p>Currently a 44 home development is under construction off Port-au-Peck Ave between Oceanport Ave and East Main St. This is an over 50 complex and there is a retention pond on site. The next major development will be a commercial complex across from the above development, with rental units on the second level. Still awaiting a developer to take Project over. A 12 lot sub-division, on single family homes is planned off Port-au-Peck Ave between Branchport Ave and Myrtle Ave. There are concerns of storm water management for this site. A four unit townhouse complex is slated for Main St and Oceanport Ave. This borders water front area. 6 affordable housing units are being considered for Main St, with a water front border, but over 125 feet set back. A 36 unit three story condo on East Main St, which borders water front. An possibly a 6 story, 60 unit complex on water front property along the Shrewsbury River of Morris Place and River St. A major concern is Fort Monmouth will be closing and over 400 acres of property will become part of the Boro. Several redevelopment designs are presently being examined. Residential, commercial and recreational sites being looked at. Unable to give you an actual count of what each would be.</p>	<p>All buildings are designed for 120 mph winds due to the proximity to the Atlantic Ocean and potential hurricanes. Other building requirements include flood vents and hurricane clips. These are ICC codes that are enforced by the Township's building department.</p> <p>The local zoning ordinance has a section for steep slopes. Although Neptune Township is a coastal community, there are sections of town with steep slopes. The ordinance requires individuals proposing excavation and construction in areas greater than 25% slope to obtain variances, which require review by the planning or zoning board and board engineer.</p> <p>The Township doesn't have a flood plain ordinance and relies on FEMA, Special Flood Hazard Areas.</p>
Ocean, Township of		<p>We use the FEMA maps and also have a generally more restrictive local flood plain study. Any construction in a flood hazard area requires a variance from the Zoning Board of Adjustment. Variances are only granted after review by the Board Engineer. All applicable flood construction standards must be maintained.</p>
Oceanport, Borough of		<p>Yes, Floodplain. A 9 foot elevation or better. All new development and over 50% improvement based on the assessed value will require an elevation of 11.5 feet.</p>

**Local Land Uses and Development Trends - 2009 Plan**

For the initial Plan, Core Planning Group members were asked to provide responses to a Land Uses and Development Trends Questionnaire for the individual jurisdictions. This brief questionnaire consisted of the following two questions:

1. Please describe development trends occurring within your jurisdiction, such as the predominant types of development occurring, location, expected intensity, and pace by land use. While details are preferred, it is ok if your feedback is qualitative and quite general, such as “*high-occupancy, high-density residential development is occurring near the waterfront*”.
2. Does your jurisdiction enforce regulations/ordinances/codes to protect new development from the effects of natural hazards? (Some examples might be floodplain management ordinances enforcing FEMA’s NFIP for new development or substantial improvements in the floodplain; steep slope ordinances for community’s which may have landslide hazards; earthquake resistant design criteria and/or high wind design criteria; or buffer zones in wildfire hazard areas.) If so, please describe.

Responses to these two questions, as submitted by each jurisdiction, are presented in the following table.

Table 3d.6

**Under construction:**

Major commercial development with rental units above on East Main St.

Formatted: Font: Bold, Underline

**No action:**

12 Lots sub-division off Port-au-Peck Ave is on hold; asbestos was found on the property.  
36 unit, 3 story condo- still no action  
6 affordable housing units off Main St.

Formatted: Font: Bold, Underline

**Defeated:**

6 story high rise off Morris Place and River St.

Formatted: Font: Bold, Underline

**Pending:**

Fort Monmouth- consisting of about 419 acres, almost 25% more in area to town.  
Education-Medical campus mixed-income housing  
McAfee Center & Squier Hall reuse green industry technology cluster  
Historic housing reuse  
Oceanport municipal center marina, retail, mixed-income housing

Formatted: Font: Bold, Underline

**Elevations:**

200 homes have indicated the need to elevate

Formatted: Font: Bold, Underline

**Regulations:**

BFE plus 2 feet. All new development and over 50% improvement is required

<p align="center"><b>Table 3d.6</b>  <b>Summary of Responses</b>  <b>Land Uses and Development Trends Questionnaire</b>  <i>(Source: Core Planning Group Members)</i></p>		
<b>Community</b>	<b>I. Land Uses and Development Trends in Hazard Areas</b>	<b>2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards</b>
Neptunes, Township of	<p>Development trends vary depending on the area of Neptune Township. Below is a listing based on location within the Township:</p> <p>Western Neptune: Medical office - 15,000 sf to 30,000 sf. Big Box Retail, including pad sites for restaurants, banks, pharmacies, and other retail, Major Subdivisions - not exceeding 20 lots.</p> <p>Eastern Neptune - In-fill residential, smaller lots. West Lake Ave. redevelopment area - dense mixed use including residential retail and office Former Ridge Ave. School Site redevelopment area - dense residential including single-family townhouses, and apartments.</p> <p>Other Areas: In-fill residential mainly including 2-lot minor subdivisions. Large expansion of regional hospital.</p> <p>Potential Redevelopment Areas: Transit Village - dense mixed use near railroad station. Shark River Waterfront- moderate dense residential with a portion of retail and hotel. Existing highway corridors - possible in-fill and new development.</p> <p>There is substantial redevelopment of commercial space along State Highway 35:</p> <p>1- Infill - Undeveloped parcels in the middle of an otherwise developed neighborhood. Usually large new homes on small lots.</p> <p>2-Age Restricted Adult Communities - Continuing construction on two large projects, while a third was recently completed.</p> <p>Currently a 44 home development is under construction off Port-au-Peck Ave between Oceanport Ave and East Main St. This is an over 50 complex and there is a retention pond on site. The next major development will be a commercial complex across from the above development, with rental units on the second level. Still awaiting a developer to take Project over A 12 lot sub-division, on single family homes is planned off Port-au-Peck Ave between Branchport Ave and Myrtle Ave.</p> <p>There are concerns of storm water management for this site. A four unit townhouse complex is slated for Main St and Oceanport Ave. This borders water front area. 6 affordable housing units are being considered for Main St. with a water front border, but over 125 feet set back. A 36 unit three story condo on East Main St. which borders water front. An possibly a 6 story, 60 unit complex on water front property along the Shrewsbury River of Morris Place and River St. A major concern is Fort Monmouth will be closing and over 400 acres of property will become part of the Boro. Several redevelopment designs are presently being examined. Residential, commercial and recreational sites being looked at. Unable to give you an actual count of what each would be.</p>	<p>All buildings are designed for 120 mph winds due to the proximity to the Atlantic Ocean and potential hurricanes. Other building requirements include flood vents and hurricane clips. These are ICC codes that are enforced by the Township's building department.</p> <p>The local zoning ordinance has a section for steep slopes. Although Neptune Township is a coastal community, there are sections of town with steep slopes. The ordinance requires individuals proposing excavation and construction in areas greater than 25% slope to obtain variances, which require review by the planning or zoning board and board engineer.</p> <p>The Township doesn't have a flood plain ordinance and relies on FEMA, Special Flood Hazard Areas.</p>
Ocean, Township of	<p>We use the FEMA maps and also have a generally more restrictive local flood plain study. Any construction in a flood hazard area requires a variance from the Zoning Board of Adjustment. Variances are only granted after review by the Board Engineer. All applicable flood construction standards must be maintained.</p>	<p>Yes, Floodplain. A 9 foot elevation or better. All new development and over 50% improvement based on the assessed value will require an elevation of 11.5 feet.</p>
Oceanport, Borough of	<p>Currently a 44 home development is under construction off Port-au-Peck Ave between Oceanport Ave and East Main St. This is an over 50 complex and there is a retention pond on site. The next major development will be a commercial complex across from the above development, with rental units on the second level. # Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Land Uses and Development Trends Update

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

Please check box A or B below.

- A) I certify that I have reviewed my community's feedback from the 2009 Land Uses and Development Trends assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)
- B) I certify that I have reviewed my community's feedback from the 2009 Land Uses and Development Trends assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)

Although there are several on going projects concerning Residential + Commercial, there has been only 1 Developed area from what used to be vacant, LI Zone. 36 unit AFFordable housing.

Table 3d.6

Summary of Responses  
Land Uses and Development Trends Questionnaire  
(Source: Core Planning Group Members)

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
Red Bank, Borough of	Five major projects under construction, including mixed-use structures, the largest of which includes more than 83,000 sf office space and a three-story parking garage. 10 significant projects approved for construction, several more pending board approval. (Full details were provided by the Planning and Zoning Dept.)	The planning and zoning process enforces stormwater regulations in accordance with the Borough Stormwater Ordinance. Where appropriate, we require applicants for development apply to the appropriate State agencies to gain approval for applicable floodplain requirements, CAFRA and waterfront development permits, including coastal bluff. Applicants are required, as a condition of Borough approvals, to obtain all required NIDEP permits. Refer to the building department for earthquake resistant design criteria and other building issues.
Roosevelt, Borough of	Due to the historical restrictions and open space preservation efforts, very little development is going on in Roosevelt at this time. The last large-scale residential development that was proposed was vehemently opposed and eventually turned down. The last spurt of residential development happened in the 1970s, with a house being built every few years since then. We have a very small industrial zone, which has little to no development happening or planned, as well as a very small commercial zone which also has little to no development happening or planned.	We have no such regulations at this time.
Rumson, Borough of	The Borough of Rumson is basically fully developed. New households (approximately four per year) are the result of the demolition of an existing house and the building of two homes to replace the former residence. The two new homes that are built are generally larger than the original home. Many smaller ranch homes are being demolished and replaced with larger, two-story homes.	The Borough of Rumson follows State conservation guidelines and codes for all new houses built in the Borough. The Borough of Rumson follows all FEMA guidelines for construction and development in flood areas. In addition, our construction official and zoning officers utilize our Borough Engineer for compliance testing for all applications submitted to the Borough.
Sea Bright, Borough of	Sea Bright is near fully developed. Any development proposed is typically rehabilitation or small scale redevelopment site. Downtown redevelopment is occurring on a small scale as well with some new businesses moving in and older, small bungalows being demolished, rebuilt, or raised out of flood zone. Waterfront development is minimal and regulated by CAFRA.	We have a flood damage prevention Ordinance as well as a new Stormwater Management Ordinance. We also have a Beach Preservation Ordinance and an established Coastal Protection Zone, running along the beachfront.
Sea Girt, Borough of	Sea Girt is a predominately a fully built up community. There is no or virtually no, open land for building. Residents that have double lots often break them up into two lots and sell them off. The impact of this type building is negligible on our infrastructure as well as our school system. Many homes being built in this manner, or new homes in general, belong to summer residents or part time residents in that make Sea Girt their home part of the year. The summer season, say from mid-April to mid-October is when the community is at its peak with residents and visitors. The town is almost 1.1 square miles.	All homes built within the mile zone of the ocean are required to either have hurricane proof glass or regular windows with plywood storm panels for each individual window. Residents in the zero one hundred block are recommended to install hurricane shutters on their east facing windows and are also advised to utilize high wind building design. Recently The Borough rebuilt the Lifeguard Headquarters and Beachfront pavilion and during the process which I was intimately involved in – for example – the Borough took the lead in using some of the above mentioned items for storm and natural hazard protection both at the recommendation of the Borough Engineer and the residents.
Shrewsbury, Borough of	Development patterns in the Borough have trended towards infill development as well as commercial re-development. A recent vacant land development analysis undertaken by the Borough revealed that there are no vacant parcels that are suited for development. The majority of future land development applications are expected to be largely made up of re-development initiatives of commercial properties along Broad Street (Hwy 35) and secondary arterials which are situated in commercial zones. It is also expected that mixed use residential & commercial development shall occur in non-residential zones as part of the Borough's Fair-Share Affordable Housing Plan to create real opportunities for affordable housing in the Borough.	The Borough of Shrewsbury has enacted certain ordinances to protect against hazards due to natural disasters, including the following: §122 Flood Hazard Areas §94-5.13 Preservation of Natural Features §94-8.39 Stormwater Control.

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Land Uses and Development Trends Update*

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
<p>Shrewsbury, Township of</p> <p>Spring Lake, Borough of</p>	<p>Shrewsbury Township does not have growth capacity to develop any of our land. To put simply, we do not have any room to grow as a community.</p> <p>Spring Lake Borough land area is approximately 1.3 sq miles, with the Atlantic on the East and bordered by the communities of Lake Como, Spring Lake Heights and Sea Girt and Wall. It is a fully developed community with mature settlement patterns and little vacant land (identified by the state as part of the Metropolitan Planning Area). Spring Lake developed a 1974 Zoning and Land Use Plan in 1974 when it developed its current Master Plan. That Plan has been reviewed periodically. In 2007 the Borough is conducting a "Comprehensive Master Plan Update". This Master Plan Update will be consistent with the Monmouth County Growth Management Guide/Coastal Monmouth Plan (1995). The Borough has undergone a transformation from a resort community to a more year round bedroom community. Most construction today involves either renovation of older homes or the tear down of older homes and construction of new, significantly larger homes on existing lots. The Borough currently owns 119.45 acres of open space and 80.89 acres of land available to the public for active or passive recreational use. This land percentage compares favorably with National Recreation and Park Association standards. The Master Plan Update objectives for Land Use focus on maintaining the quality of residential neighborhoods, encouraging the development of the business district and maintaining the traditional elements of neighborhoods such as sidewalks, alleys, front porches, public spaces, green spaces and street trees.</p>	<p>We do not see these types of codes essential to our emergency management growth and development plan.</p> <p>The town does not have specific regulations or ordinances specific for the protection of new development from the effects of natural hazards. However the Borough has taken the steps to develop a Stormwater Management Plan; the Borough is a member of a County managed watershed working group for Wreck Pond that addresses a multitude of issues related to the watershed and water management. The Borough is considering steps to mitigate the risk of damage from floods in flood prone areas by allowing variances in zoning for persons desiring to elevate homes. It is also reviewing maximum lot coverage and maximum impervious coverage with consideration to storm runoff and management. The Borough will include a Land Use Element in the 2007 Master Plan Update.</p>
<p>Spring Lake Heights, Borough of</p>	<p>The Borough of Spring Lake Heights enforces Zoning Ordinance Section 22-513 Flood Plain Regulations which restricts development in the flood plain. The Borough of Spring Lakes enforces Zoning Ordinance Section 22-513.2 Elevations which restricts development below the 100 year flood hazard elevation. The Borough of Spring Lake Heights currently enforces all applicable codes and regulations for building construction required by the State of New Jersey, namely the Uniform Construction Code which regulated high wind design criteria.</p>	<p>The Borough of Spring Lake Heights is essentially built out. There is approximately 5% or less of vacant/undeveloped land available in the Borough. The majority of development is residential in nature and occurs as part of home additions and renovations. Records indicate the Borough of Spring Lake Heights has not issued a multi-family building permit from 2000 to 2006. The Borough issued a total of 23 single-family building permits in 2006 of which the majority were home additions and improvements. There were a total number of 133 single-family residential building permits issued in the Borough of Spring Lake Heights from 2000 thru 2006.</p>
<p>Tinton Falls, Borough of</p>	<p>Residential: Recent residential development trends in Tinton Falls have been in line with existing zoning, and include several approved higher density developments with an affordable housing component (i.e., Rose Glen @ Tinton Falls, Meadowbrook II, and Heather Glenn @ Tinton Falls (Former CECOM Site)). These developments will result in well over 600 new residential units. Greenbriar Falls, a new active adult community currently in its final stage of construction, will contain 168 residential units. In addition, many of the larger residential developments in the Borough, such as Fox Chase, The Pines, and Seabrook, have reached their full built-out potential. There is also a steady flow of smaller subdivisions that have been approved under the Borough's zoning standards.</p> <p align="right"><i>(continued on next page...)</i></p>	<p>The Borough currently takes several different approaches to protect new development from natural hazards in its Land Development Ordinance. One approach is to exclude critical areas from building areas, yard and buffer requirements. The Borough has also adopted FEMA Flood Hazard Prevention Ordinance to regulate areas within Special Flood Hazard areas. All approvals are subject to NJDEP permits as applicable.</p>

**Table 3d.6**  
**Summary of Responses**  
**Land Uses and Development Trends Questionnaire**  
**(Source: Core Planning Group Members)**

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
	<p><i>(Tinton Falls, continued...)</i></p> <p>Non-Residential: By far the largest non-residential development planned in Tinton Falls is the redevelopment of Fort Monmouth. Currently CommVault is under construction on 55 acres and will consist of three phases of high-tech research and development offices. The initial phase will be 250,000 square feet with an ultimate build-out of nearly 700,000 square feet. Additional parcels within Fort Monmouth will be redeveloped in accordance with the FMERA Plan. The only other sizable non-residential construction recently completed is the 100-acre solar farm along Shafto Road. This development offset the development of 300+ single family homes and now generates an equivalent amount of solar energy.</p> <p>There are a number of other smaller-scale non-residential developments that have recently been approved, including a day care facility in the existing Tinton Falls Centre. A number of construction projects have recently been completed including a Wawa convenience store with fuel, Johnstone HVAC Supply, and Sonic Restaurant. In general, there is a steady stream of smaller-scale non-residential development (e.g. office, warehousing) being approved in Tinton Falls, particularly within the MFG and IOP zones along Shafto Road.</p>	
Union Beach, Borough of	<p>The Borough of Union Beach is a predominantly developed suburban community with single-family housing located on lots ranging from 2,000 square feet to 75,620 square feet. The Borough is nearly fully developed with very little land that is not impacted by environmental constraints available for development. Most of the development in the Borough is redevelopment, rehabilitation of older housing or infill development in established neighborhoods with the exception of a portion of the shorefront area. The area along the shorefront north of Brook Avenue extending west to the intersection of Front Street and Union Avenue. This area has been re-zoned as the townhouse district with townhouses as a principal permitted use having a density not to exceed ten units per acre (medium-density residential).</p>	<p>The Borough Council adopted a Floodplain Mitigation Plan on July 18, 2003 as part of the National Flood Insurance Community Rating Program. In addition, the Borough's Floodplain Management Ordinance requires all new development to conform to the Regulations of State and Federal Flood Insurance Program.</p>
Upper Freehold, Township of	<p>Upper Freehold Township's number one goal is preserving farmland and open space and we currently have in excess of 7,000 acres in the farmland preservation program. The type of residential development that we do have is generally subdivisions of 49 lots and under. They occur in all areas of the township with several of them located near neighboring Allentown Borough. Approximately 13 developments have been approved in the last 3-4 years resulting in approximately 475 single-family homes, when built out has been completed which may take many, many years. (Several of these sub-divisions only have preliminary approval; therefore, no building has begun.). We also have a small amount of commercial development within the Township such as small plazas with allowable retail uses (i.e. hair salons, convenience stores, doctor/professional offices, nursery schools, etc.)</p>	<p>Upper Freehold Township has adopted and enforces the following:</p> <ul style="list-style-type: none"> <li>35-604 Flood plain areas (Flood Plain Management)</li> <li>35-502 Storm Water Management</li> <li>15% Steep Slope</li> <li>2006 International Residential and Commercial Code</li> <li>100 mph wind load</li> <li>20 lb. live/10 lb dead snow land</li> </ul>
Wall, Township of	<p>Single Family development has slowed currently. Renovations and single family tear downs and rebuilds have moderately increased. Commercial development is steady, particularly along the Route 34 corridors. There are currently two higher density</p>	<p>Building design criteria follows current regulations with regards to earthquake and high wind design criteria. All development is reviewed with respect to impacts of floodplains through the township's Floodplain Management Ordinance.</p>

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Land Uses and Development Trends Update*

---

Performing an assessment of Land Uses and Development Trends is one step of a FEMA-approved hazard mitigation plan update. This look into the future is important because development in hazard areas could put more assets at risk and, in turn, could work to increase potential disaster-related damages at a time when the mitigation plan's purpose is to reduce the potential for damages emanating from natural disasters. Land uses and development trends are based on the construction of new buildings, demolition of old buildings, or the planning, zoning or subdivision of new areas for development. A stagnant or decreasing population alone is not reason for stating that no development has occurred unless backed up by a lack of development.

An evaluation of land uses and development trends was undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Land Uses and Development Trends section are included in the pages to follow, documenting your community's prior feedback. Please review your community's feedback shown in the table on the pages to follow, and identify any changes that have occurred since that time. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**Summary of Responses**  
**Land Uses and Development Trends Questionnaire**  
*(Source: Core Planning Group Members)*

Community	1. Land Uses and Development Trends in Hazard Areas	2. Regulations/Codes/Ordinances To Protect New Development From Natural Hazards
	<p><i>(Tinton Falls, continued...)</i></p> <p>Non-Residential: By far the largest non-residential development planned in Tinton Falls is the Jersey Shore Premium Outlets (Chelsea Outlets), which will contain approximately 450,000 square feet of retail space. Infrastructure construction has already begun on the outlets, which will be located just off the Garden State Parkway at Exit 100 along Essex Road and Route 66. There are a number of other smaller-scale non-residential developments that have been approved, including a Wawa convenience store and gas station. The Tinton Falls Towne Centre, which will contain approximately 24,000 square feet of retail space, has recently been completed. In general, there is a steady stream of smaller-scale non-residential development (e.g. office, warehousing) being approved in Tinton Falls, particularly within the MFG and IOP zones.</p>	
Union Beach, Borough of	<p>Prior to Sandy, the Borough of Union Beach is a predominantly developed suburban community with single-family housing located on lots ranging from 2,000 square feet to 75,620 square feet. The Borough is nearly fully developed with very little land that is not impacted by environmental constraints available for development. Most of the development in the Borough is redevelopment, rehabilitation of older housing or infill development in established neighborhoods with the exception of a portion of the shorefront area. The area along the shorefront north of Brook Avenue extending west to the intersection of Front Street and Union Avenue. This area has been re-zoned as the townhouse district with townhouses as a principal permitted use having a density not to exceed ten units per acre (medium-density residential). After Sandy, the Borough has several areas in the Borough that will need to be reconstructed with residential housing and their waterfront will need to be reconstructed.</p>	<p>The Borough Council adopted a Floodplain Mitigation Plan on July 18, 2003 as part of the National Flood Insurance Community Rating Program. In addition, the Borough's Floodplain Management Ordinance requires all new development to conform to the Regulations of State and Federal Flood Insurance Program. The Borough adopted the FEMA ABFE and modified their ordinances including the height ordinance to accommodate these new ABFE.</p>
Upper Freehold, Township of	<p>Upper Freehold Township's number one goal is preserving farmland and open space and we currently have in excess of 7,000 acres in the farmland preservation program. The type of residential development that we do have is generally subdivisions of 49 lots and under. They occur in all areas of the township with several of them located near neighboring Allentown Borough. Approximately 13 developments have been approved in the last 3-4 years resulting in approximately 475 single-family homes, when built out has been completed which may take many, many years. (Several of these sub-divisions only have preliminary approval; therefore, no building has begun.). We also have a small amount of commercial development within the Township such as small plazas with allowable retail uses (i.e. hair salons, convenience stores, doctor/professional offices, nursery schools, etc.)</p>	<p>Upper Freehold Township has adopted and enforces the following:</p> <ul style="list-style-type: none"> <li>35-604 Flood plain areas (Flood Plain Management)</li> <li>35-502 Storm Water Management</li> <li>15% Steep Slope</li> <li>2006 International Residential and Commercial Code</li> <li>100 mph wind load</li> <li>20 lb. live/10 lb dead snow land</li> </ul>
Wall, Township of	<p>Single Family development has slowed currently. Renovations and single family tear downs and rebuilds have moderately increased. Commercial development is steady, particularly along the Route 34 corridors. There are currently two higher density residential projects under construction. There are no new high density residential developments being considered. There are no major waterfront developments.</p>	<p>Building design criteria follows current regulations with regards to earthquake and high wind design criteria. All development is reviewed with respect to impacts of floodplains through the township's floodplain Management Ordinance. Natural features such as steep slopes, wetlands etc., are preserved per state and local regulations Ordinances.</p>
West Long Branch, Borough of	<p>Development in West Long Branch is minimal as the municipality is somewhat developed to the maximum. There are some minor sub-divisions planned for the last</p>	<p>Our Zoning and Planning Boards enforce the Land Use Code and Monitor any specific hazards. There are no obvious potentials such as landslides or wildfires.</p>

**APPENDIX 1.6 – WORKSHEET 4: CAPABILITY ASSESSMENTS**

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
**Capability Assessment Update**

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

**A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**

**B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update  
Capability Assessment Update**

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)

Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.				

Hurricane Sandy pointed out that our "on beach" structures were vulnerable. They were elevated and were made portable. A large front end loader was bought to remove these large structures. As the town is 17 feet above sea level and the homes were very sound we found no problems in building requirements. As for gaps, there really weren't any major deficiencies and we found that the Borough was up to the task. As mentioned in another document we did create a specific storm annex in our OEM basic plan.

**Our community has an active and experienced group of political leaders. They delegate much of their technical work to outside agencies both public and private. When a problem is revealed it's correctly aggressively.**

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<b>Would you classify your community's <u>legal and regulatory</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your community's overall <u>technical</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your community's overall <u>fiscal</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your community's overall <u>administrative</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your political leadership's willingness to enact policies and programs that reduce hazard vulnerabilities in your community as high, moderate, or low - even if met with opposition? (i.e., guiding development away from identified hazard areas)?</b>
High	High	Low	High	Moderate
<b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b>				
<p>The City will be conducting an election of its governing members for the next four years on May 14, 2013. All five members of the City Council will be elected on said date. Noted above is the current political leadership's willingness to enact policies and programs that reduce hazard vulnerabilities in our community. This is subject to change drastically.</p> <p>Unfortunately due to severe annual budget constraints and receipt of Transitional Aid from the State of New Jersey, we are severely limited in our overall fiscal capability to implement hazard mitigation strategies.</p>				

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. <b>Would you classify your community's <u>legal and regulatory</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your community's overall <u>technical</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your community's overall <u>fiscal</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your community's overall <u>administrative</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your political leadership's willingness to enact policies and programs that reduce hazard vulnerabilities in your community as high, moderate, or low - even if met with opposition? (i.e., guiding development away from identified hazard areas)?</b>
High	High	High	High	High
<b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b>				
<p>The Borough of Belmar continues to pursue grant funding at the State and Federal level to implement hazard mitigation projects. Our ongoing partnerships with FEMA, Army Corps of Engineers, NJDEP, NJDOT and Monmouth County are vital to obtaining the resources needed to implement our mitigation projects.</p>				

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
**Capability Assessment Update**

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

---

---

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<p><b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b></p>				
<p><b>Maximize familiarity and awareness of mitigation grant programs and other mitigation initiatives.</b></p> <p><b>Develop synergies of funding source to maximize the breadth and extent of mitigation projects and programs.</b></p> <p><b>Look to form regional or sub-regional partnerships to maximize the effectiveness</b></p> <p><b>Of partners expertise to the benefit of individual municipalities.</b></p>				

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

**A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**

**B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

---

---

**Then, review and answer the supplemental questions on Page 7. Check box C.**

**C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Capability Assessment Update*

---

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

Municipality: BOROUGH OF FAIR HAVEN

<p>Would you classify your community's <u>legal and regulatory</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your community's overall <u>technical</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your community's overall <u>fiscal</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your community's overall <u>administrative</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your political leadership's willingness to enact policies and programs that reduce hazard vulnerabilities in your community as high, moderate, or low - even if met with opposition? (i.e., guiding development away from identified hazard areas)?</p>
<p>MODERATE</p>	<p>LOW</p>	<p>MODERATE</p>	<p>MODERATE</p>	<p>HIGH</p>
<p>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</p>				
<p>POLITICAL LEADERSHIP WOULD BE WILLING, BUT WOULD NEED TRAINING TO BETTER IDENTIFY THESE AREAS. MORE TRAINING IS NEEDED FOR OFFICIALS TO UNDERSTAND THE RISKS.</p>				

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

---

---

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

Moderate	Moderate	Moderate	Low	High

**Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.**

**More Funding and Efforts should be made to increase clarification and responsibility with overlapping jurisdictions. As an example, flooding may occur in a municipal right-of-way or residence or business upstream from a blocked stream, culvert or storm sewer whose ownership responsibility is not clear**

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

Municipality : Freehold Borough

<p>Would you classify your community's <u>legal and regulatory</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your community's overall <u>technical</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your community's overall <u>fiscal</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your community's overall <u>administrative</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your political leadership's willingness to enact policies and programs that reduce hazard vulnerabilities in your community as high, moderate, or low - even if met with opposition? (i.e., guiding development away from identified hazard areas)?</p>
Moderate	High	Moderate	High	High
<p>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</p>				
<p><b>Jurisdictional Legal and Regulatory Compliance</b> -The Borough of Freehold will investigate the development and instituting of a Growth Management Ordinance, Post Disaster Recovery Ordinance and an Economic Development Plan.</p> <p><b>Jurisdictional Fiscal Capabilities</b> - The Borough of Freehold is 98% developed but will investigate the possibility of developing procedures for Impact Fees For Homeowners or Developers for New Developments/Homes. The Borough will investigate and identify hazard prone areas and if it is possible withhold any future spending in these areas.</p>				

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

\_\_\_The Township of Freehold has identified Timothy P. White as the flood plain manager\_\_\_\_\_

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

---

---

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<p><b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b></p> <p><b>Updating any relative ordinances and applying for any and all grant funds available.</b></p> <p><b>Identified gaps are lack of funding and sufficient staff. Ways of bridging gaps include seeking grant funding, shared service agreements with other municipalities, public-private partnerships, and technical assistance programs from other levels of government.</b></p>				

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Capability Assessment Update*

---

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

---

---

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

Moderate	Moderate	Moderate	Low	High
<p><b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b></p>				
<p>The Borough consists of under 400 properties and is fully built out. The Borough's only source of funding is currently through tax ratables. The Borough will continue to seek grant funding to supplement a limited local budget in order to implement its hazard mitigation projects. While the political leadership itself has a high willingness and desire to mitigate, the ultimate dedication of limited funds tends to be toward projects with the highest level of public support, so bridging this gap would be bridged by incorporating hazard mitigation into discussions at regular council meetings.</p> <p>There are only 6 full time employees in the entire Borough; bridging identified Administrative gaps involves heavy reliance on use of shared services with Deal and Allenhurst. Shared service agreements along with partnerships with regional and private firms increases our ability to meet the technical demands while keeping costs low.</p>				

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. <b>Would you classify your community's <u>legal and regulatory</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your community's overall <u>technical</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your community's overall <u>fiscal</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your community's overall <u>administrative</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b>	<b>Would you classify your political leadership's willingness to enact policies and programs that reduce hazard vulnerabilities in your community as high, moderate, or low - even if met with opposition? (i.e., guiding development away from identified hazard areas)?</b>
High	High	Moderate	High	High

**Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.**

The Borough of Lake Como's biggest gap would be in the fiscal capability of implementing the hazard mitigation strategies. The Borough has partnered with the Boroughs of Spring Lake and Belmar and the South Monmouth Regional Sewerage Authority to apply for funding for flood mitigation measures at Como Lake. The mitigation involves replacing the current outfall pipe, installation of pipes to install permanent pumps that would lower the lake level during times of storms. In addition, we have all met and agreed to split the costs for the percentage that the towns have to match to any grants approved for projects in the flood zones.

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Capability Assessment Update*

---

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

---

---

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<p><b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b></p>				
<p>In review of the capability assessment, the Borough has classified all community responses as high. The Borough has activity pursue mitigation activities and has completed Action 4E (Outfall and drainage improvements at Howard's Beach) as outlined within the Borough's mitigation action section of the 2009 County Mitigation Plan. The Borough is committed to protecting its residents and shoreline from future storm events. To help protect future residents, the Borough in 2013 has adopted the revised State Model Flood Damage Prevention Ordinance adopting the Advisory Base Flood Elevation with the recommend 3 feet of freeboard for all new construction. To help eliminate possible storm surge damage along the shoreline, the Borough is actively working with the State to clean up debris within streams left by Super Storm Sandy. This activity is in-line with mitigation action goal 4F, as outlined within the Borough's mitigation action section of the 2009 County Mitigation Plan.</p>

<p><b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b></p>				
<p>Manalapan Township intends on bridging the gaps in our local capabilities by conducting a comprehensive educational program between all the departments involved with pre- and post- disaster mitigation to ensure the goals and objectives of the hazard mitigation plan are known to all parties. This will include establishing leadership roles and liasons who can coordinate between the different departments to ensure task activities are not duplicated nor missed.</p>				

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

<p><b>Manasquan has the regulatory capability and has well-trained staff that possess both a working and technical knowledge of flood hazards. However, Manasquan lacks the necessary technical infrastructure &amp; training (ie: GIS/HAZUS), minimal fiscal funds, especially in light of lost tax/ratable income in the wake of Hurricane Sandy, and lacks administrative capability (staff) to implement the hazard mitigation plan to its fullest.</b></p> <p><b>Manasquan will a pursue grants that can assist with mitigation activities including technical infrastructure and technical assistance &amp; training. Manasquan will work with Monmouth County GIS to possibly incorporate Manasquan's requirements into the County GIS system. Manasquan is in the process of appointing a part-time Hazard Mitigation Coordinator position to provide the necessary administrative capabilities required.</b></p>				

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
**Capability Assessment Update**

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

**Marlboro Township has assumed control of the Marlboro Township Municipal Utilities Authority, giving the Township control of water fees for approximately 60% of the Township.**

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at anna.foley@urs.com by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<p><b>To increase the Borough of Matawan's regulatory capabilities to ensure that they are in line with our mitigation actions and goals, the Borough may need to review the current municipal ordinances and determine what, if any, changes should be made.</b></p> <p><b>To increase the Borough's technical capabilities to implement hazard mitigation strategies, the Borough may need to review their current staffing and determine if more full-time dedicated personnel would benefit such an implementation.</b></p> <p><b>To increase the Borough's fiscal capabilities, the Borough may need to dedicate an individual or individuals solely to the grant writing process. Being a small, mostly residential community with a high tax rate, Matawan does not have the ratables as many larger towns.</b></p>				

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Capability Assessment Update*

---

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

**Note: Table 4-1. The township does not have a Real Estate Disclosure Ordinance. However, there is state law under which the municipality is covered**

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

Municipality \_\_\_\_\_

<p><b>Would you classify your community's <u>legal and regulatory</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b></p>	<p><b>Would you classify your community's overall <u>technical</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b></p>	<p><b>Would you classify your community's overall <u>fiscal</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b></p>	<p><b>Would you classify your community's overall <u>administrative</u> capability to implement hazard mitigation strategies as high, moderate, or low?</b></p>	<p><b>Would you classify your political leadership's willingness to enact policies and programs that reduce hazard vulnerabilities in your community as high, moderate, or low - even if met with opposition? (i.e., guiding development away from identified hazard areas)?</b></p>
<p>High</p>	<p>High</p>	<p>Moderate</p>	<p>High</p>	<p>High</p>
<p><b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b></p>				
<p>Identified gaps are lack of funding and sufficient staff. Ways of bridging gaps include seeking grant funding, shared service agreements with other municipalities, public-private partnerships, and technical assistance programs from other levels of government.</p>				

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

---

---

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<p><b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b></p>				
<p><b>Gaps in local capabilities can be bridged to ensure that they are in-line with mitigation actions and goals by engaging municipal officials in the mitigation planning process. Funding of the mitigation plan should be reviewed on a regular basis to ensure budgeted line items are sufficient to accomplish actions and goals set forth in the plan. Communication among all officials, departments, boards and commissions identified as members of the core planning group in the mitigation plan are also vital to ensuring mitigation actions and goals are in-line with local capabilities.</b></p>

Municipality Neptune City

Would you classify your community's <u>legal and regulatory</u> capability to implement hazard mitigation strategies as high, moderate, or low?	Would you classify your community's <u>overall technical</u> capability to implement hazard mitigation strategies as high, moderate, or low?	Would you classify your community's <u>overall fiscal</u> capability to implement hazard mitigation strategies as high, moderate, or low?	Would you classify your community's <u>overall administrative</u> capability to implement hazard mitigation strategies as high, moderate, or low?	Would you classify your political leadership's willingness to enact policies and programs that reduce hazard vulnerabilities in your community as high, moderate, or low - even if met with opposition? (i.e., guiding development away from identified hazard areas)?
moderate	high	moderate	high	high
Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.				
<p>The City Council could enact an ordinance for Post-disaster Recovery + establish a post-disaster recovery plan in conjunction with the ordinance. We could also establish an Economic Development plan. To help us with our fiscal capability, we need to pursue more grants and also possibly look into Bonds.</p>				

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Capability Assessment Update*

---

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

---

---

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.**

**In order to bridge the gaps in certain categories above, the Township of Neptune committee would have to review the Hazard Mitigation Plan and those yet unfunded initiatives. Additional grant monies would need to be applied for or capitol monies set aside to meet some of the implementation goals of the Township.**

**With respect to policies and programs to reduce hazards vulnerabilities in the community the Township is working toward minimizing the gap by moving forward with a new classification in the CRS Program. This will result in more review and permitting of and regulated activities in the special Flood Hazard Area.**

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)

---

---

Then, review and answer the supplemental questions on Page 7. Check box C.

- C) I have completed responses to the supplemental questions on Attachment Page 7.

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<p>Grants and other funding would help the Borough of Rumson bridge gaps in Mitigation actions.</p>				

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Capability Assessment Update*

---

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- X B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

**We have established new building codes that require all building to be a minimum of two feet above the BFE as well as adjusting height to compensate for the elevation of existing structures.**

**We are also working on providing more information on items missing from items not checked off.**

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- X C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<p>After this storm – the Borough of Sea Girt, because of its mitigation plan implementation to date, fared better than most neighboring communities. We have identified 7 areas of concern for which we submitted grant applications to ensure better protection and increased mitigation of problems identified during this past storm. Funding these programs is an issue for which Sea Girt has committed its own resources and actively seeks a partnership via federal and State grant applications. We have identified weak areas within the Borough and are working to educate the public as well as present the Borough's case for improving infrastructure for these at-risk residents.</p>				

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. *(If checking box A, then please return only this cover page.)*
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. *(If checking box B, then please return this completed cover page and any pages with markups.)*

<p>The Borough has retained an engineer as a zoning officer/floodplain manager with education and expertise to assess the community's vulnerability to hazards.</p>				

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

- A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**
- B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

---

---

**Then, review and answer the supplemental questions on Page 7. Check box C.**

- C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.
