Municipality: BOROUGH OF TINTON FALLS

<p>Would you classify your community's <u>legal and regulatory</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your community's overall <u>technical</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your community's overall <u>fiscal</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your community's overall <u>administrative</u> capability to implement hazard mitigation strategies as high, moderate, or low?</p>	<p>Would you classify your political leadership's willingness to enact policies and programs that reduce hazard vulnerabilities in your community as high, moderate, or low - even if met with opposition? (i.e., guiding development away from identified hazard areas)?</p>
<p><b>HIGH</b></p>	<p><b>MODERATE</b></p>	<p><b>LOW</b></p>	<p><b>HIGH</b></p>	<p><b>HIGH</b></p>
<p><b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b></p>				
<p>The Borough of Tinton Falls has sufficient professionals to provide the legal and regulatory capabilities, as well as strong overall administration personnel capable of implementing hazard mitigation strategies. The Borough's Mayor and Council Members are particularly accepting of hazard mitigation proposals. The gaps identified in the Borough's capabilities to achieve mitigation actions and goals include; overall technical capability and fiscal capability. Technical capability to implement strategy is predominately contingent on fiscal capabilities. Allocating finances to mitigation projects are challenging at the Municipal level. There is typically a significant cost associated with hazard mitigation projects. In addition to physical construction costs, many hazard mitigation projects are complex in nature and require extensive permits from NJDEP, USACE, SESC, etc or may require property and r.o.w acquisition all of which drive soft costs up. Even applications to obtain hazard mitigation grant funds is a costly endeavor. Ways of bridging gaps include seeking grant funding, shared service agreements with other municipalities, public-private partnerships, and technical assistance programs from other levels of government.</p>				

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

**First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)**

**A) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that all information previously provided is still current. (If checking box A, then please return only this cover page.)**

Currently, everything is the same however, the economic development plan, post disaster recovery plan, post disaster recovery ordinance and real estate disclosures might change in the future based upon the outcome of Sandy.

**B) I certify that I have reviewed my community's feedback from the 2009 Capability Assessment and that any information that has changed since that time is clearly shown on the attached markup. Any supporting comments I would like to note are indicated in the lines below. (If checking box B, then please return this completed cover page and any pages with markups.)**

**Then, review and answer the supplemental questions on Page 7. Check box C.**

**C) I have completed responses to the supplemental questions on Attachment Page 7.**

Completed questionnaires should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by April 29, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b>				
<p>The Borough of Union Beach has implemented several projects listed within the 2008 Monmouth County Multi-Jurisdiction Hazard Mitigation plan. However, the Borough has been limited in their ability to complete all projects due to funding. The Borough will continue to apply to FEMA and local programs to implement these initiatives while budget projects that the Borough can reasonably accomplish.</p>				

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update Capability Assessment Update

Performing a Capability Assessment is one step of a FEMA-approved hazard mitigation plan update. A mitigation planning Capability Assessment consists of taking an in-depth look at community mechanisms (such as plans, codes, ordinances, staffing, etc.) that can affect hazard mitigation activities. Performing the Capability Assessment helps communities identify the regulatory, administrative, technical, and fiscal capacities and capabilities of their jurisdiction and consider ways that these tools can be used to further hazard mitigation and disaster resiliency goals. Capability Assessments were undertaken by each participating jurisdiction as part of the development of the initial plan. Excerpts from the 2009 Plan's Capability Assessment section are included in the pages to follow, documenting your community's prior feedback.

First, review your community's feedback shown in the three tables on Attachment Pages 1 through 6, and identify any changes that have occurred since that time. Check box A or B. (Note: Municipalities whose rows are blank did not submit responses in 2009, and must do so now.)

Moderate	Moderate	Moderate	Moderate	Moderate
<b>Discuss ways of bridging identified gaps in your local capabilities to ensure that they are in-line with your mitigation actions and goals.</b>				
<b>Continue with Mitigation Planning process to include; program participation, progress monitoring and financial improvements.</b>				

**APPENDIX 1.7 – WORKSHEET 5: STATUS OF PAST PROJECTS**

Jurisdiction	Mitigation Action	Previous Priority	Hazard(s) Addressed	Responsible Party/Parties to Implement	Status - Check One			Status Details	Relevance - Check One		Relevance Details
					Completed	Initiated but Not Completed	Ongoing Type of Activity		Not Initiated	Still Relevant - Carry Forward to Updated Mitigation Strategy	
Monmouth County	Provide a General Overview of how Priorities Have Changed Since the Last Version of the Plan: After recent experiences with Hurricane Irene and Superstorm Sandy, Monmouth County priorities have, for the most part, not shifted. In general, 6 of the 7 previously identified mitigation actions will remain a priority. These include upgrade of critical county roads and bridges (infrastructure), the regional concept of stormwater management, upgrade of flood prone highway district garages and acquisitions will remain relevant mitigation strategies. Sheltering is still a priority and the County has initiated a plan to use county owned buildings to shelter it's residents. We are in the process of building a cache of supplies for the shelters, are planning to train county employees to assist in running the shelters, MOU's are in place with a food vendor and an EMS agency, reception centers and transportation plans are in place. Without the benefit of mitigation funding, the County has budgeted for, and made positive strides in most of these actions.										
Monmouth County	Project #1 - Storage of Critical Equipment (Retrofit existing facilities for storage of critical equipment presently housed at floodprone highway district garages - #1 in Belford and #8 in Hazlet)	H	Flooding, Storms, Nor'easter, Storm Surge, Hurricanes	Dept. of Public Works & Engineering & Building & Grounds				x	x		This action item for District #8 will remain a priority in the updated HMP and will now include permanent emergency generators at Highway Districts. During Sandy, a major problem was the lack of available fuel for first responder vehicles/equipment, as well as generators which were supporting county facilities and two county shelters. The County DPW&E submitted LOI's for HMGP 4086 funding to address these issues. At this time the LOI's are still in review.
Monmouth County	Project #2A - Regional Stormwater Management Hydrological and Drainage Studies	M	Flooding, Storm Surge	Municipal Government with Assistance from County departments through shared services	x					x	The County shared services agreement assists various communities, but the individual municipalities are the lead agency. This is a municipal mitigation project.
Monmouth County	Project #2B - Regional Stormwater Management Acquisition/Construction of Sediment Management Site	L	Flooding, Hurricanes, Nor'easters and Storm Surge	Various State, County & Municipal Agencies				x	x		This is not a mitigation strategy on its own, it is a component of overall projects.
Monmouth County	Project #3 - Utility Protection (Protective Measures for Utility Rights of Way)	M	Flooding, Hurricanes, Nor'easter, High Wind & Fire	County OEM, Utility Companies				x	x		This action has since been determined to be the direct responsibility of the various utility companies and is no longer considered to be a valid action for the County as the funding of more important mitigation efforts takes priority.
Monmouth County	Project #4 - Purchase Properties (Purchase of Flood Prone Properties)	M	Floods, nor'easter, hurricanes, storm surge, wave action	County Parks, other County agencies and Non profit conservation agencies, NJDEP (blue acres/green acres)				x	x		The Monmouth County Park System will continue to acquire properties within the project areas designated in the Monmouth County Open Space Plan (2008) to create a county-wide public open space system that will help meet park and recreation needs and conserve vital natural resources. The Park System will continue to work with the NJDEP Green Acres/Blue Acres Programs, municipalities and non-profits such as the Monmouth Conservation Foundation to meet the objectives and goals set in the Open Space Plan.

Jurisdiction	Mitigation Action	Previous Priority	Hazard(s) Addressed	Responsible Party/Parties to Implement	Status - Check One			Status Details	Relevance - Check One		Relevance Details
					Completed	Initiated but Not Completed	Ongoing Type of Activity		Still Relevant - Carry Forward to Updated Mitigation Strategy	No Longer Relevant - Omit from Updated Mitigation Strategy	
Monmouth County	Project # 5 – Roads and Bridges (Upgrade Critical County Roads and Bridges Impacted by Flooding)	M	Floods, Storm Surge, Dam Failure, Wind, Nor'easter & Hurricane	County Dept. of Public Works & Engineering, & Municipal agencies	x			The three construction projects (County Bridges HL-72, MN-10, & U-12) are substantially complete and are awaiting minor modifications for close out. One project, the replacement of Bridge MA-9, rehabilitation of Lake Lefferts Dam, drainage & roadway improvements to CR 6A (Ravine Drive) is in the design phase and the construction contract is anticipated to be awarded in 2015.	x		The specific bridges identified in this 2009 Mitigation Action Project were completed with Federal, State and County funds. The County will continue to identify other critical roads and bridges to be upgraded and therefore reduce flooding. The County DPW&E submitted one LOI under HMGP 4086 addressing 2 County bridges (H-5 & H-5A) associated with the elevation of Palmer Ave (Holmdel & Middletown). At this time the LOI's are still under review.
Monmouth County	Project #6 - Shelter Hardening (Special Needs Shelter Hardening)	H	Floods, wind, winter storms, tornado, nor'easter, hurricanes & excessive heat	County Health Department and County OEM	x			FY 2010 HMA grant application submitted, required revisions to BCA portion of the application were too extensive for county staff ability. In 2011, this office began working with a local engineering firm to provide the BCA for the regional shelter, but FEMA's safe room policy for HMA grants was too restrictive. BCA issues were not resolved for the FY 10 grant. HMA safe room policy issue was not resolved.	x		Due to FEMA's restrictive safe room policy, the County will omit this mitigation action from the updated mitigation strategy. The County is moving forward with a county wide plan for sheltering Monmouth County residents.

					Completed	Initiated but Not Completed	Ongoing Type of Activity	Not Initiated	Still Relevant - Carry Forward to Updated Mitigation Strategy	No Longer Relevant - Omit from Updated Mitigation Strategy	
Aberdeen, Township of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: Due to the impact of Hurricane Sandy the township is concerned with improving protection of low-lying areas of Cliffwood Beach with engineered dunes and the extension of the existing seawall. Residents have also expressed concern with possible elevation of their homes.										
Aberdeen, Township of	Create a mitigation outreach program that helps residents prepare for disasters	H	All	Office of Emergency Management	X				X		Project has not changed.
Aberdeen, Township of	Develop specific mitigation solutions for flood prone roadways, specifically State Highway 35 at Long Neck Creek, Lakeshore Drive and Greenwood Avenue, and Amboy Avenue, under the leadership of NIDOT. Develop a work plan for when sites will be surveyed and what role can the local government play in selection and implementation of mitigation activities (i.e., any monetary or contextual support through the local capital improvement plan).	M	Flooding caused by floods, hurricanes, and nor'easters	Township Engineer, NIDOT, Monmouth County Highway Department	X				X		Project has not changed.

					Completed	Initiated but Not Completed	Ongoing Type of Activity	Not Initiated		Still Relevant - Carry Forward to Updated Mitigation Strategy	No Longer Relevant - Omit from Updated Mitigation Strategy		
Allenhurst, Borough of	Created revised Storm Annex in Basic plan. Elevated municipal beach front buildings & infrastructure.												
Allenhurst, Borough of	Action 2B Mitigation Outreach	H	All	Deputy OEM		X		Posted mitigation outreach information in meeting room, PD and in Boro Hall. Updated governing body, Fire, Police & EMS.		x			Due to recent storm activity additional mitigation planning relating to the prevention of hurricane damage is being provided to residents and businesses. Not an organized program. These are issues discussed on a regular basis through municipal departments and the governing body.
Allenhurst, Borough of	Action 11A Purchase NOAA Weather Radios for critical facilities	H	All	Police	X						X		Reprogrammed EMS radios to carry NOAA in lieu of emergency radios.
Allenhurst, Borough of	Action 11B Educate residents about winter driving and winter hazards	M	Winter storm related hazards	Deputy OEM and Police		X					x		Not an organized activity. Outreach conducted regularly through all municipal departments.

					Completed	Initiated but Not Completed	Ongoing Type of Activity		Still Relevant - Carry Forward to Updated Mitigation Strategy	No Longer Relevant - Omit from Updated Mitigation Strategy	
Atlantic Highlands, Borough of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: The erosion and flooding to many parts of the Borough continues to be an issue of great concern. Since Superstorm Sandy (October 2012) the Borough has been dealing with flooding issues on the west side of town. It appears that the many Mind Creek floods residential areas more often than not in a rain storm. We continue to monitor the hillside for erosion and slump blocking										
Atlantic Highlands, Borough of	Project #1 - Hillside Road, Phase II	H (#1)	Landslides (steep slopes and slump blocks)	Mayor and Council	XX		Phase I of this project is complete. Phase II has rough estimates and drawing by engineer but there is no funding in place for Phase II	XX			Phase II continues to carry the stormwater from the end of Hillside Road, down to Bayside Drive via CMP. All CMP will be on Borough property or in easements with the neighbors. A scour pad at the bottom will dissipate the water. This work will elevate the pressure from stormwater along the hillside. The hillside has become progressively unstable and a huge amount of erosion has taken place since last update.
Atlantic Highlands, Borough of	Project #2 - Fireman's Field	M (#2)	Flooding	Mayor and Council, Atlantic Highlands Fire Department			Funding is a main reason for no action being taken although we did receive a "as built" map regarding the heights of the Many Mind Creek. Property line are a concern as well as the roadway bridge on West Highland Ave which appears to be undersized. This is a public / private project with the Borough of Atlantic Highlands, The County of Monmouth and the volunteer fire department have a stake in this.	XX			The change from previous is that the creek was dredged in this specific area and we continue to have flooding problems. The Fire Department owns the property so they must apply to DEP for CAFRA permit but they do not have the funds to do so. In addition, the bridge hasn't changed thus the continuance of problems.
Atlantic Highlands, Borough of	Project #3 - Bayside Drive Erosion Stabilization	M (#3)	Landslides (steep slopes and slump blocks)	Mayor and Council	XX		Funding is the main reason why this has not begun. Discussions have taken place and we have met with contractors regarding possible repairs. The cost is estimated to be in the \$2 to \$3 million range. The roadway is having difficulties with shifting.	XX			A lot more erosion has occurred and just recently, USGS has taken an interest and is doing an update to the Minyard report which was last updated in 1981. This project would bring better stability to the entire area as it sits on a slump block.

Jurisdiction	Mitigation Action	Previous Priority	Hazard(s) Addressed	Responsible Party/Parties to Implement	Status - Check One			Status Details	Relevance - Check One			Relevance Details
					Completed	Initiated but Not Completed	Ongoing Type of Activity		Still Relevant - Carry Forward to Updated Mitigation Strategy	No Longer Relevant - Omit from Updated Mitigation Strategy		
Avon-by-the-Sea, Borough of	Continue outreach efforts to residents and businesses through the quarterly Borough newsletter and Borough web site		Flooding, Wind, Winter Storms	OEM Coordinator	X		Outreach continues	H			Outreach will be expanded as risk has grown	
Avon-by-the-Sea, Borough of	Establish a resource library at the Borough Library to include printed materials as well as electronic data from the internet related to natural disasters	M	Flooding, Wind, Winter Storms	Librarian, OEM Coordinator	X		Renovations at Library stalled progress	M			Renewed effort now that library work is completed	
Avon-by-the-Sea, Borough of	Evaluate vulnerabilities of existing emergency facilities including the Municipal Building (PD and FD HQ), EMS HQ, and Water Treatment Plant. Develop action plan for deficiencies identified.	H	Flooding, Wind, Winter Storms	OEM Coordinator, Construction Department	XX		New flood exposures for DPW and other locations	H			Evaluate all locations based upon new exposures	
Avon-by-the-Sea, Borough of	Expand upon the lake management efforts for the Sylvan Lake to reduce damage from flooding. Include additional wall replacement and dredging activities to remove silt from streams feeding the lake.	L	Flooding	Sylvan Lake Commission (a joint agency of Avon By the Sea and Bradley Beach)	XX		Lack of funding and location for dredge spoils.	H			New funding sources identified and Federal support in place following Sandy	
<b>Avon-by-the-Sea, Borough of</b> <b>Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: Local Priorities have changed dramatically due to the effects of Hurricane Sandy. More attention has been focused on the priorities and residential awareness has been greatly increased.</b>												

Jurisdiction	Mitigation Action	Previous Priority	Hazard(s) Addressed	Responsible Party/Parties to Implement	Status - Check One				Status Details			Relevance - Check One		Relevance Details
					Completed	Initiated but Not Completed	Ongoing Type of Activity	Not Initiated	Still Relevant - Carry Forward to Updated Mitigation Strategy	No Longer Relevant - Omit from Updated Mitigation Strategy				
Belmar, Borough of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: Belmar experienced serious flooding from Sandy resulting from the storm surge and resultant flooding caused in large part due to the variants in elevations between much of the town and Ocean Avenue. The surge resulted in flooding both from the Ocean and from the Shark River with flood waters meeting at Main Street, extensive damage to the beachfront, marina and residential properties. Belmar is now dealing with serious issues from the 2 lakes in town Lake Como, and Silver Lake. We have also seen a serious impact to our underground infrastructure including the water distribution system and sewer collection systems.													
Belmar, Borough of	Continue to implement projects identified in the Capital Improvement Plan and seek grant funding when possible to offset project costs	M	All	Belmar DPW		X			Sufficient public support exist for the projects however funding remains our greatest need.		X			Boro capital priorities have changed with the impact of Sandy and the increasing need to manage the flooding exposures from Lake Como and Silver Lake. Boro is undergoing significant investment to its underground infrastructure in 2013. The mitigation strategy at Silver Lake has been adjusted to reflect lessons learned during Hurricane Sandy. Additional projects such as an elevated bulkhead at the Marina and the Ocean Front "Seawall" are new initiatives identified post-Sandy.
Belmar, Borough of	Stabilization of shoreline	M	Coastal erosion	Belmar DPW		X			Beach Replenishment will be coordinated with the Army Corps of Engineers and a seawall is proposed for the structures on the beachfront		X			Awaiting Army Corps Project.
Belmar, Borough of	Lake Como Flooding Mitigation Project	H	Flooding	Belmar DPW		X			Lake Como ad Silver Lake flooding are priorities which will also include changes to storm water runoff management going forward		X			Some aspects of the mitigation projects are presently underway, funding is required for remaining implementation.

					Completed	Initiated but Not Completed	Ongoing Type of Activity		Still Relevant - Carry Forward to Updated	No Longer Relevant - Omit from Updated	
<b>Bradley Beach, Borough of</b>											
<b>Due to Super Storm Sandy, our priorities are focused on the beach front, rebuilding our Dunes as well as re-pairing bulkhead breaches.</b>											
Bradley Beach, Borough of	Continue to implement measures to mitigate ocean and lake flooding due to hurricanes and large storms. This includes the new installation of outfall pipes and bulkheading around Fletcher Lake, bulkheading around Sylvan Lake and continued maintenance of the dunes which run along the entire beachfront.	M	Flooding due to hurricanes, coastal flooding and large storms	Mayor, Council, and Fletcher and Sylvan Lake Commission	Completed	Initiated but Not Completed	Not Initiated	<p>If not completed, identify barriers to implementation (i.e., lack of political support, funding, staff availability, etc.) or explain why the action is an ongoing one (i.e., acquisition of hazard prone land for open space can be completed for a given parcel or group of parcels, but there may be many more opportunities in the community and so the activity may be carried forward)</p>	Still Relevant - Carry Forward to Updated	No Longer Relevant - Omit from Updated	<p>If you checked the box that the project is being carried forward to the updated mitigation strategy, describe if and how it has changed from the 2009 Plan.</p> <p>If you checked the box that the project is being omitted from the updated mitigation strategy, provide a brief explanation.</p>
Bradley Beach, Borough of	Action 14A - Conduct evaluations of emergency facilities to determine the level of protection from flooding and wind damage	M	All	Mayor and Council, Office of Emergency Management	Completed	Initiated but Not Completed	Not Initiated	<p>Bulkheading of Sylvan and Fletcher Lakes is not completed due to financial inability. The Dunes were maintained adequately until Hurricane Sandy which eradicated them. The Borough is currently in the process of re-establishing the Dunes.</p> <p>The Borough Sewer Plant is identified as susceptible to storm flooding. Action is being taken at this time to Flood Proof the building and continue Dune Maintenance as well as elevate all utilities within the building and continue Dune Maintenance around the building. other critical facilities are not in the flood zone. The borough has considered wind effects at critical facilities but wind mitigation measures have not been deemed necessary at this time.</p>	Still Relevant - Carry Forward to Updated	No Longer Relevant - Omit from Updated	<p>The outfall pipe for Fletcher Lake along with the gates have been replaced and further bulkheading along Sylvan Lake has been added. Also Dunes along the entire length of the beachfront that are no longer there are in the process of being re-established.</p> <p>This project is being carried forward strictly regarding the sewer plant; other critical facilities are not in the flood zone. The borough has considered wind effects at critical facilities but wind mitigation measures have not been deemed necessary at this time.</p>
Bradley Beach, Borough of	Continue to support and fund the Borough's Community Emergency Response Team	M	All	Mayor, Emergency Management Coordinator	Completed	Initiated but Not Completed	Not Initiated	<p>The Borough continues to support and fund the Community Emergency Response Team.</p>	Still Relevant - Carry Forward to Updated	No Longer Relevant - Omit from Updated	<p>This is an ongoing activity however it has not changed from the 2009 plan.</p>
Bradley Beach, Borough of	Action 14D - Continue to implement the best management practices for floodplain areas	M	Flooding	Mayor, Council, Borough Administrator, Borough Engineer	Completed	Initiated but Not Completed	Not Initiated	<p>Lack of available grants and funding have hampered the Borough's ability to institute mitigation actions necessary to prevent flooding in certain identified areas.</p>	Still Relevant - Carry Forward to Updated	No Longer Relevant - Omit from Updated	<p>Due to the new advisory based flood elevation mapping and new areas that have been identified as prone to flooding since Super Storm Sandy new mitigation actions are in the process of being implemented.</p>

Jurisdiction	Mitigation Action	Previous Priority	Hazard(s) Addressed	Responsible Party/Parties to Implement	Status - Check One				Relevance - Check One			Relevance Details
					Completed	Initiated but Not Completed	Ongoing Type of Activity	Not Initiated	Still Relevant - Carry Forward to Updated Mitigation Strategy	No Longer Relevant - Omit from Updated Mitigation Strategy		
Brielle, Borough of	Reinforce the First Aid Building to be used as an emergency shelter. Retrofit and make improvements to a dedicated emergency shelter located out of flood-prone areas. The improvements would make the shelter resistant to loss of power during hurricanes, nor'easters, and other high wind storms. It would also harden the structure against utility outages due to extreme temperatures.		Hurricanes, loss of power, winter storms, nor'easters, heat wave, flooding, storm surge	Brielle OEM, Mayor and Council	<input checked="" type="checkbox"/>							
Brielle, Borough of	Multiple Bulkhead restoration projects throughout the Borough with priority being Ocean Avenue to prevent the end of the roadway from collapsing, which would undermine the adjacent properties and can cause flooding during a period of high tide. Any storm that creates a tidal surge would then pose a severe threat to the area and further undermine		Flooding, storm surge, hurricanes, nor'easters	Brielle OEM, Mayor and Council			<input checked="" type="checkbox"/>			<input checked="" type="checkbox"/>		The building now functions as a shelter and continues to be part of the emergency plan; however, the mitigation strategy is complete.  These projects would be a secondary priority post-Hurricane Sandy in favor of elevation of private homes. The design of the project would be revised based on the current ABFE, if funding is identified.
<b>Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: The Borough's mitigation emphasis will be to facilitate and support the elevation of private homes that have been identified as at-risk in the FEMA ABFEs released earlier in 2013. The Borough completed activities to create adequate storm shelter for residents since the last plan; thus, that item of the plan is no longer an applicable activity.</b>												

Jurisdiction	Mitigation Action	Previous Priority	Hazard(s) Addressed	Responsible Party/Parties to Implement	Status - Check One				Status Details		Relevance - Check One		Relevance Details
					Completed	Initiated but Not Completed	Ongoing Type of Activity	Not Initiated	Still Relevant - Carry Forward to Updated Mitigation Strategy	No Longer Relevant - Omit from Updated Mitigation Strategy			
<b>Colts Neck, Township of</b>	<b>Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan:</b> Since the last version of the plan was prepared, the Township has been impacted by two hurricanes. Each event has disrupted major portions of the town with power outages. Because Colts Neck is a well and septic community, no power means no water or sewer either. Therefore, the Township's focus has shifted away from outreach and more toward mitigation of tree related hazards that can impact power supply and transmission.												
Colts Neck, Township of	Action 2A - Expand and disseminate GIS and other hazard information on the internet	M	All	Township Administration		X			Continuing to evolve the connectivity between the Township and our residents. The County has GIS mapping available to internet users.		X	Established continuance of updated mapping. Change of Mitigation priority to keeping residential power through Utility pole replacement and tree trimming.	
Colts Neck, Township of	Action 2B - Create mitigation outreach program that helps residents and businesses prepare for disasters	M	All	Township Administration		X			Continuing to evolve the connectivity between the Township and our residents.		X	Established continuance of outreach. Change of Mitigation priority to keeping residential power through Utility pole replacement and tree trimming.	
Colts Neck, Township of	Action 11B - Educate residents about driving in winter storms and handling winter related health effects	M	Winter storms and nor'easters	Township Administration		X			Continuing to educate and promote through Website and reverse 911 messaging.		X	Established continuance of resident education. Change of Mitigation priority to keeping residential power through Utility pole replacement and tree trimming.	
Colts Neck, Township of	Action 11C - Promote ice and windstorm resistant trees and trimming to reduce tree related hazards	M	Winter storms and nor'easters	Township Administration		X			Continuing to educate and promote through Website and reverse 911 messaging.		X	Established continuance of resident education. Change of Mitigation priority to keeping residential power through Utility pole replacement and tree trimming.

					Completed	Initiated but Not Completed	Ongoing Type of Activity	Not Initiated		Still Relevant - Carry Forward to Updated Mitigation Strategy	No Longer Relevant - Omit from Updated Mitigation Strategy	
Deal, Borough of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: Poplar Brook has always been our trouble spot for flooding over the years and was the top priority during the last version. With improvements that have been made both in Deal, and upstream in Ocean Township, we are now starting to focus on roadways with poor drainage. In addition, Hurricane Sandy has shifted most attention to rebuilding and reinforcing the beachfront areas that were so dramatically impacted.											
Deal, Borough of	Set up detention pond and berm system to prevent future flooding for Poplar Brook between Norwood Ave and Ocean Ave	H	Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami	Business Admin, DPW, OEM, Borough Engineer, Army Corps, State DEP	X				Some work has been done both in Deal and upstream in Ocean Township which has improved the situation. The berm system and retention pond has been determined by engineers to not be a benefit and has been abandoned.	XXXX		Relevant work has been completed, the rest abandoned.
Deal, Borough of	Widen culverts under roadways in three different streets for Poplar Brook (Norwood Ave, Almyr Ave, Ocean Ave)	H	Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami	Business Admin, DPW, OEM, Borough Engineer, Army Corps, State DEP, County Bridge Dept, State DOT	X				Ocean Avenue has been completed. The two remaining are owned by outside agencies and there has been no funding provided to complete projects to date.	XXXX		Project completed for Ocean Avenue. Almyr Avenue is owned by the County and no funding has yet been provided and no work done. Norwood Avenue is owned by the State and also no funding or work has been done. We will continue to keep the remaining two locations pending for possible future completion.

Highlands, Borough of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: Flooding has always been a concern in the Borough and remains a large concern today especially in the wake of the storm events we've experienced over the past several years. As such, the importance of providing mitigation measures and protection of the Borough's facilities and infrastructure is of the utmost importance. Equally important is to ensure that the privately owned structures are also following the Borough's Flood Damage Prevention Ordinance with regards to elevating and mitigating them as appropriate.										
Highlands, Borough of	Action 1E - Update Highlands Flood Mitigation Plan 1999. Use existing flood damage prevention ordinance 0-98-12. flood ID survey results, surface flooding drainage study, and repetitive loss survey results. Include damage surveys and repair cost estimates.	H	Flooding	Mayor and Council	X				X		The Flood Mitigation Ordinances will be revised to comply with future requirements set forth by FEMA and the NDEP.
Highlands, Borough of	Action 4E - Use flood ID survey results in Highlands Mitigation plan to mitigate damage and losses due to flooding. Specifically undersized drainage pipes, pumping station, and bulkheads. Stormwater runoff from hill sections, tidal conditions and coastal flooding create severe flooding conditions (pumps, storm drain replacement and repair)	H	Flooding due to stormwater runoff, tidal flooding, and coastal floods. Hurricanes and nor'easters	Mayor and Council		X		The Borough has identified and designed a storm system improvement project to reduce flooding in a portion of the downtown area. Lack of funding has prohibited the project from being implemented. There will be other phases of the project in the future as additional funding becomes available.	X		The Borough has identified and designed a storm system improvement project to reduce flooding in a portion of the downtown area. The project will be implemented as funding becomes available.
Highlands, Borough of	Action 7B - Reduce the possibility of damage and losses due to coastal erosion and wave action (bulkheads, repair wharves)	H	Flooding due to inland and coastal floods, hurricanes and nor'easters	Mayor and Council			X	The Borough visually evaluates the conditions of various bulkheads on a regular basis. Troubled areas are identified and addressed appropriately. The Army Corps of Engineers is also proposing a mitigation project along the waterfront.	X		The Army Corps of Engineers is currently advancing conceptual designs and alternatives for protection along the Borough's waterfront areas.
Highlands, Borough of	Action 9D - Reduce the possibility of damage and losses due to landslides. Highlands has specific areas identified (9A) prone to landslides. Damage as a result of a landslide currently has Bayside Drive closed.	H	Landslides due to steep slopes and slump blocks	Mayor and Council			X	The Borough has revised it's steep slope disturbance policies from a design waiver to a variance. This requirement puts any proposed project within a steep slope area under more scrutiny.	X		The steep slope areas are valid areas of concern and are consistently being monitored for potential revisions to the current Ordinance.
Highlands, Borough of	Action 2C - Planning for and funding improvements to telecommunication and electrical systems at critical facilities including facilities used for EOC and as local shelters.	M	All	Mayor and Council		X		Many of the Borough's telecommunications and electrical systems at critical facilities were adversely impacted due to Superstorm Sandy. Stand-by back up generation power, transfer switches, telecommunication equipment, dispatch DPW yard are currently uninhabitable due to damaged facilities with the exception of the firehouse and DPW yard are currently uninhabitable due to damaged facilities or possibly relocate to other areas within town.	X		Critical electrical and telecommunication infrastructure will have to be repaired and or replaced throughout the entire Borough due to Superstorm Sandy. These areas include the EOC, warning systems, dispatch center, designated shelters, pump stations, The Borough will either mitigate existing uninhabitable Borough facilities or possibly relocate to other areas within town.
Highlands, Borough of	Action 13E - Install hurricane clips and wind shutters on existing development particularly emergency facilities and shelters built before existing codes were adopted to offer some degree of protection	M	Wind events	Mayor and Council			X	Many of the Borough's facilities were adversely impacted due to Superstorm Sandy. Damage assessments have been completed and levels of protection have been identified. Recommendations are currently being developed.	X		The Borough is currently developing recommendations to mitigate flooding to it's facilities including damage from Superstorm Sandy.
Highlands, Borough of	Action 14A - Reduce the possibility of damage to emergency facilities by conducting an evaluation to determine existing level of protection, particularly to flooding and implementing recommendations.	M	All (particularly flooding)	Mayor and Council	X

Howell, Township of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: Acquired structures in flood prone area and demolish structures to reduce flood issues. Adopted a community wide hazard review program. After Irene and Hurricanes Sandy there are additional areas of the Township that required mitigation. There was a significant damage to structures and infrastructure. Further armoring of certain areas, being prepared for outages, and securing emergency generators was and is vital and needed to protect both private homes and public infrastructure. Acquisitions of certain properties have allowed the Township to reduce the impact of hurricanes. Securing emergency generators and power supplies will help minimize the impact in the future.										If you checked the box that the project is being carried forward to the updated mitigation strategy, describe if and how it has changed from the 2009 Plan. If you checked the box that the project is being omitted from the updated mitigation strategy, provide a brief explanation.

Lake Como, Borough of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: Action 1C. The Borough adopted the Advisory Base Flood Plan Elevation Ordinance in May 2013. The ordinance addresses the height of homes in flood areas and is enforced by the Building Department. Item 2: The Borough has worked with the Boroughs of Spring Lake and Belmar, and South Monmouth Regional Sewer Authority in mitigating the outfall pipe from Como Lake to the ocean and a new outfall pipe was installed in May 2013 and 4 pipes were installed to allow water to be pumped underground from the lake to the ocean. Spring Lake has applied for mitigation for the lake to install a new pipe and the Boroughs plan to continue working together to prevent flooding from the lake into the flood areas.											
Lake Como, Borough of	Action 1C - Enact hazard zoning/ordinances on height of homes in flood areas to place foundations above floodplain	H	Flooding	Mayor and Council	X			Completed by adoption of ordinance.				Completed.
Lake Como, Borough of	Develop mitigation action steps to reduce damage and losses due to flooding caused by inland and coastal floods (hurricanes and nor'easters), which impact Lake Como. This would be achieved by controlling the water flow by a more efficient drainage system into the ocean. Specifically by utilizing pumps at Lake Como to control floodwaters	H	Flooding, hurricanes, and nor'easters	Mayor and Council		X		Barrier: Funding. The boroughs of Lake Como, Spring Lake and Belmar in conjunction with South Monmouth Regional Sewerage Authority have completed mitigation of the outfall pipe to Pre-Sandy condition, and have installed 4 pipes under the outfall that allow the water to be pumped from the lake to the ocean. We will continue to work on mitigation to have a permanent solution of a larger outfall pipe, dredging and raising the level of the lakefront property.	X	N/A		No changes since 2009, however, Superstorm Sandy has proven that this is a necessary project.

Manasquan, Borough of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: In the wake of Hurricane Sandy, Manasquan has been actively identifying mitigation activities that will make our critical infrastructure, and emergency response systems more resilient to large-scale natural disasters. This includes providing back-up power systems, redundant communication and public warning systems, and providing fail-back emergency and governmental operations centers. Manasquan is also actively pursuing the elevation and floodproofing of residences and businesses in floodzones. Manasquan is also investigating projects that include elevating roadways and infrastructure in the flood-prone areas to make more resilient to coastal storms, and exploring property buyouts and open space preservation for severe repetitive loss areas. Manasquan has undertaken a wholesale review of our mitigation efforts and is committed to undertaking large-scale flood control projects, including watershed and flood studies and flood mitigation projects on all waterways that contribute to flooding within the municipality, all subject to available funding assistance.										If you checked the box that the project is being carried forward to the updated mitigation strategy, describe if and how it has changed from the 2009 Plan. If you checked the box that the project is being omitted from the updated mitigation strategy, provide a brief explanation.
Manasquan, Borough of	Increase Public Warning Capabilities: Upgrade existing AM Radio station, increase warning siren coverage, implement Reverse911 system, install electronic sign system	H	All	Office of Emergency Management with approval from governing body	X			Barriers include funding.	X		Please remove "Upgraded existing AM Radio station." Please change "install electronic sign system" to "upgrade electronic sign system coverage". Please add "improve use of web-based programs and social media" in this item.
Manasquan, Borough of	Develop Residential Mitigation Strategies: Develop specific hazard mitigation actions that home/business owners can undertake that will reduce property damage resulting from coastal storms	H	All	Office of Emergency Management with approval from governing body	X			Barriers include funding & staff availability		X	Please change "resulting from coastal storms" to "resulting from natural disasters". Please add "This includes specific hazard mitigation activities including elevating structures & property buyouts in repetitive loss areas."
Manasquan, Borough of	Develop Public Outreach Program: Implement a public outreach program that includes hazards identification, public warning systems and mitigation activities that home/business owners can undertake	H	All	Office of Emergency Management	X			Barriers include funding & staff availability	X		Please add "Develop a Program For Public information that will undertake a systematic approach towards hazard identification, mitigation, public safety and post-disaster recovery public information dissemination"
Manasquan, Borough of	Develop digital GIS flood inundation mapping: Develop inundation mapping based upon aerial topographic mapping and incorporating the latest SLOSH values from the US Army Corps	H	Hurricanes, Nor'easters, Flooding & Storm Surge	Office of Emergency Management with approval from governing body	X			Barriers include funding, technical capabilities, training & staff availability		X	GIS inundation mapping is already available from federal agencies for the regulatory floodplain as well as surge zones.

Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: The priorities have remained constant however we will be redefining our actions to include more specific projects as related to our stream cleaning program.												
Marlboro, Township of	Action 2D - Establish a stream cleaning program for Deep Run and its tributaries into Old Bridge Township to its deposit into the New Jersey American Water facility in Old Bridge Township	H	Flooding	Engineering		X			The stream cleaning program will be ongoing throughout the municipality. Priorities are established based on prevailing issues, available manpower and funding.	XX		The project will be redefined into more specific sections to allow for more thorough reporting.
Marlboro, Township of	Action 2D - Establish a stream cleaning program for the Yellow Brook and its tributaries up to Buck's Pond in Colts Neck Township	H	Flooding	Engineering		X			The stream cleaning program will be ongoing throughout the municipality. Priorities are established based on prevailing issues, available manpower and funding.	XX		The project will be redefined into more specific sections to allow for more thorough reporting.
Marlboro, Township of	Action 2D - Establish a stream cleaning program for the Barclay Brook and its tributaries through Old Bridge Township to its deposit in the Matchaponix Brook	H	Flooding	Engineering		X			The stream cleaning program will be ongoing throughout the municipality. Priorities are established based on prevailing issues, available manpower and funding.	XX		The project will be redefined into more specific sections to allow for more thorough reporting.
Marlboro, Township of	Action 2D - Establish a stream cleaning program for Melvins Brook and its tributaries through Manalapan Township to its deposit in McCallairds Brook	H	Flooding	Engineering		X			The stream cleaning program will be ongoing throughout the municipality. Priorities are established based on prevailing issues, available manpower and funding.	XX		The project will be redefined into more specific sections to allow for more thorough reporting.
Marlboro, Township of	Action 4A - Increase public awareness relating to the risks associated with severe weather events and the importance of personal preparedness	H	All	Administration			X		There has been staff discussion on the various means and methods to accomplish the action. Other issues have forced this to a lower priority however action will be initiated this year.	XX		The project will remain as it was originally posted.
Marlboro, Township of	Action 1D - Improve the Township's ability to alert and warn the public in the event of impending severe events	H	All	Office of Emergency Management			X		The Township has increased the use of Social Media as a way to inform the public during emergencies, including Facebook, Twitter and the Township website. Options for a local emergency radio system are being researched and hope to be acted upon within the next year.	XX		The project will remain as it was originally posted.

Millstone, Township of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: Millstone's priorities have not changed since the last version of the plan. The Township still operates on private wells and septic systems and is totally dependent on electric power for running water and other basic toileting and bathing needs. The Township continues to have a high degree of long duration outages, primarily from downed trees and flooding that results from storm activities. Additionally, as a result of power outages, communications to residents continue to be a major obstacle that we must contend with during most emergencies making responses and remediation that much more difficult. Finding workable solutions to these problems continue to be Millstone's biggest challenges.															
Millstone, Township of	Develop mitigation steps to reduce damage and losses due to flooding through control of stormwater runoff and more efficient drainage and discharge to five major streams	H	Severe thunderstorms, hurricanes, nor'easters, storm surge	Mayor and Township Committee and OEM Coordinator				X							This is an ongoing strategy for the Township as they work to improve and control stormwater runoff.	
Millstone, Township of	Develop mitigation steps to reduce significant damage from losses due to wildfires	H	Wildfires, thunderstorms, fallen electrical wires, plane crashes and motor vehicle accidents	Mayor and Township Committee and OEM Coordinator				X								This is an ongoing strategy for the Township as they work to improve and control wildfires.

Neptune City, Borough of	Our priorities have changed over the past three to four years due to the fact that power outages have been frequent during this time. Our priority has become more focussed on providing generators to public buildings to continue government operations and to provide shelter for our emergency personnel. We have also identified several areas which are prone to severe flooding. Since Hurricane Sandy the tides of the Shark River are exceptionally low and exceptionally high. During rain events, the drainage has been diminished.											
Neptune City, Borough of	Action 2C - Implement a public awareness campaign on the use of grounded electric outlets and surge protectors	H	Lightning strikes	Office of Emergency Management	x			Over the past few years, the focus of the Neptune City Office of Emergency Management has changed, and although this education movement is still a priority, other concerns have taken priority.	x			No longer a priority at this time.
Neptune City, Borough of	Action 11B - Implement a public awareness campaign on driving in winter storms and handling related health effects	H	Winter storms and nor'easters	Office of Emergency Management	x			Over the past few years, the focus of the Neptune City Office of Emergency Management has changed, and although this education movement is still a priority, other concerns have taken priority.		x		No longer a priority at this time.
Neptune City, Borough of	Action 2C - Develop a plan and seek funding for backup electric for shelters	M	All	Mayor and Council			x	The Borough is actively pursuing options to create comfort stations for the Public and facilities for First Responders and their families to stay during stand by time, and during emergencies. Generators have been purchased, locations have been chosen.			x	This project is ongoing and the Borough has applied for a HM grant to help fulfill this.

Sea Bright, Borough of	Develop a town wide strategy to aid both local, county, state and federal officials to provide the replacement of sand along the Atlantic Ocean Beach for protection of both the NJSH Route 36 corridor, local residences, businesses and bulkheads	H	Flood, wind, storm, surge, wave action, Hurricanes, Nor'easter	Mayor and Council				Completed		X	Borough does not have the equipment or funding to staff this program.
Sea Bright, Borough of	Develop a town wide strategy to aid both local, county, state and federal officials to provide the reconstruction of bulkheads along the Shrewsbury River for protection of both the NJSH Route 36 corridor, local residences, businesses and bulkheads	H	Flood, wind, storm, surge, wave action, Hurricanes, Nor'easter	Mayor and Council				Completed		X	Borough is currently creating emergency Berms to protect vulnerable areas. Beach Replenishment from Army Corps of Engineers has been completed.
Sea Bright, Borough of	Encourage citizens and businesses when rebuilding or modifying their buildings to provide underground utilities in order to promote utilities that are generally not prone to damage during high winds and flooding incidents	M	Flood, wind, storm, surge, wave action, Hurricanes, Nor'easter	Mayor and Council, Building Department				Completed		X	Anchorage bulkhead is completed. Facility at anchorage is in progress. FEMA projects are currently being reviewed for a scope change. In conversations with state and federal agencies for riverfront bulkheads.
Sea Bright, Borough of	Include in Sea Bright Day a public education and awareness component for hazard mitigation, citizen safety, include mitigation techniques highlighting our available resources	M	Flood, wind, storm, surge, wave action, Hurricanes, Nor'easter	Mayor and Council, Clerk				Completed		X	Residents have expressed interest in this through the Sea Bright 2020 process. There is a committee dedicated to researching this issue and discussions are ongoing with utility companies to see how to proceed with this.
Sea Bright, Borough of	Provide additional support and training for the Building Department on wind and flood resistant structures, including information on hurricane clips, wind shutters, beyond the minimum building code	M	Flood, wind, storm, surge, wave action, Hurricanes, Nor'easter	Building Department				Completed		X	The Mayor and Council hold public meetings three times a month and discuss this information with community members in a public forum. The Borough also updated the website with additional resources for residents. The Borough has also applied for reentry to the CIS.
Sea Bright, Borough of								Completed		X	In an effort to make the building process as easy as possible for residents and business owners, the Borough has hired additional staff and extended hours for professionals. Additionally, continuing education for the Floodplain manager and OEM Coordinator has been a priority, ensuring that our professionals are up to date on the current codes and standards.

Sea Girt, Borough of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: The borough of sea girt has identified four main areas of concern since our last plan - 1. stormwater management and the outflow of such through the outflow pipes - inadequate 2. public information - need for an AM radio station, public warning signage, alert warning sirens and PA for the town 3. protection and management of low lying areas and houses susceptible to flooding and damage from tidal water - increased dunes, dune height and enacting local zoning mitigation ordinances when necessary - this also includes raising of houses in low lying areas ; accurate flood mapping is an absolute necessity 4. increased protection and operations of our CIS and operational centers during storm period; back-up generators are necessary for this purpose. Infrastructure improvements, including hardening of protective measures in and around the Stockton Substation (JCP&L) are necessary as well.											
Sea Girt, Borough of	Enact hazard zoning/ordinances. Specifically allow variances to height of homes in flood areas to place foundations above floodplain	H	Flooding	Mayor and Council		x			houses in the low lying areas were subject to flooding, Houses in the susceptible area on the beachfront, would be candidates for raising but property owners have not shown interest.	x		Houses in flood zones need to be addressed with possible raising; also, restoration of the dune system in conjunction with the plan prepared by Dr. Stewart Farrell of Stockton College should help mitigate future damage.
Sea Girt, Borough of	Develop mitigation steps to reduce damage and losses due to flooding caused by inland and coastal floods, hurricanes and nor'easters at local ponds (Wreck Pond) through control of water flow and through more efficient drainage to ocean. Specifically, pumps at Wreck Pond to control floodwaters and use of weirs in strategic locations to control flow (all done in conjunction with Spring Lake).	H	Flooding due to inland and coastal floods, hurricanes and nor'easters	Mayor and Council		x		Wreck Pond outflow handled by spring lake and it is open for flood control, south end of town stormwater drains were replaced, to help drainage, outflow pipe at Baltimore Blvd. needs replacing	x			cut in dune and pumps installed by SPLK has helped this issue; lengthening of the outfall pipes at Baltimore and Trenton Blvds. should be included in future mitigation projects, especially with the renourishment of SG beaches expected to be completed by March 2014 to avoid any detrimental consequences.
Sea Girt, Borough of	Reduce the possibility of flooding at Wreck Pond by implementing stormwater retention projects identified by the Wreck Pond Regional Stormwater Management Committee in Subregion 12 watershed	H	Flooding due to inland and coastal floods, hurricanes, and nor'easters	Mayor and Council		x		handled by spring lake - pond is open for tidal flow now	x			see above; measures taken by Spring Lake must be reviewed and vetted for potential impact on the Sea Girt side of the pond.
Sea Girt, Borough of	Reduce the possibility of flood damage by conducting a Stream Maintenance Plan and cleaning out sediment at Wreck Pond and Black Creek - will need to work with Spring Lake, Spring Lake Heights, and Wall on this.	M	Inland and coastal flooding (has additional impact on health and beach environment)	State DEP, Mayor and Council		x		dredging in the works w DEP	x			pond needs to be dredged - was in works with DEP to complete
Sea Girt, Borough of	Planning for and funding improvements to communications and electrical systems at critical facilities including facilities used for EOC and as local shelters	H	All	Mayor and Council		x		needs new alert system, am station, generators needed, at cr	x			applied for HMGP funding for new alert system, public signage, am radio station and generator funding for CIS
Sea Girt, Borough of	Reduce the possibility of damage to emergency facilities by conducting an evaluation to determine existing level of protection, particularly to flooding, and implementing recommendations	M	All	Mayor and Council		x		The acquisition of generators for critical facilities is our goal; HMGP grants will be sought to offset some of the costs.			x	The Borough is still seeking funds to install generators at critical facilities, but upon review, the installation of a bulkhead at this location was found to be a less effective flood control measure than originally projected.

<b>Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: Borough has taken additional steps to better maintain existing infrastructure that contributed to flooding in the past. Financing future projects is uncertain due to lack of capital funding.</b>												
Shrewsbury, Borough of	Upgrade stormwater infrastructure on Haddon Ave	H	Flooding	Borough Engineer	X			Funding limitations preclude replacement/upgrade of drainage infrastructure. NIDOT corrected downstream piping defect and improved situation.	X			Limited improvement due to NIDOT work. Awaiting capital funding.
Shrewsbury, Borough of	Upgrade stormwater infrastructure on Monroe Ave	H	Flooding	Borough Engineer, Monmouth County, NIDEP oversight		X		Funding limitations preclude replacement/upgrade of drainage infrastructure. Design progressed through preliminary stages to permitting point. Awaiting capital funding to complete.	X			Awaiting capital funding for the project. Low priority at this point.
Shrewsbury, Borough of	Upgrade stormwater infrastructure on Trafalgar Pl	H	Flooding	Borough Engineer		X		Routine cleaning and deslagging by DPW has been effective at controlling flooding. Awaiting funding for capital upgrade.		X		Tidal waters infiltrate the storm sewer system during storms but routine maintenance and cleaning lessens the impact. Low priority with capital funding at this time.
Shrewsbury, Borough of	Stream Management	H	Flooding	Borough Engineer/DPW, NIDEP permits required		X		Jurisdiction deferred to Monmouth County. Stream cleaning by Mosquito Commission on-going.	X			Recent storms have accelerated projects by Mosquito Commission. Awaiting County commitment.
Shrewsbury, Borough of	Upgrade stormwater infrastructure on Newman Springs Road	H	Flooding	County and Borough Engineer			X	No action by Monmouth County thus far. Borough lacks jurisdiction to initiate improvements.			X	Monmouth County has jurisdiction over this county road and infrastructure.
Shrewsbury, Borough of	CERT programs and public outreach, including potable water conservation and drought limitations	M	Various	OEM		X		Continuous effort.			X	Expanded CERT program with additional members and training. Identified private wells

<p><b>Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan:</b> Priorities have changes in that it is critical that a solution to controlling inflow and out flow of water into and out of Lake Como and werck pond is a necessity. Working on a multi-jurisdictional solution with surrounding towns to control run off. Looking to upgrade infrastructure to meet current codes and standards of outside agencies.</p>											
Spring Lake, Borough of	Action 1C - Enact hazard zoning/ordinances. Specifically allow variances on heights of homes in flood areas to place foundations above floodplain.	H	Flooding	Mayor and Council	x			enacted after hurricane Irene and amended after Sandy to be between 4 and 5 feet above previous base flood elevation	x		Ordinance is adopted.
Spring Lake, Borough of	Action 4E - Develop mitigation steps to reduce damage and losses due to flooding caused by inland and coastal floods, hurricanes and nor'easters at local ponds (Wreck Pond and Lake Como) through control of water flow and through more efficient drainage to ocean. Specifically, pumps at Wreck Pond and/or Lake Como to control floodwaters and sue of weirs in strategic locations to control flow.	H	Flooding due to inland and coastal floods, hurricanes, and nor'easters	Mayor and Council	x		Both Wreck pond and Lake Como are still in the permitting process.	x			No change from 2009 plan, more emphasis being place on this project. Spring lake Boro taking priority to control flooding in both bodies of water.
Spring Lake, Borough of	Action 4F - Reduce the possibility of flood damage by conducting a stream maintenance plan and cleaning out sediment at Wreck Pond and Black Creek	M	Inland and coastal flooding, (has additional impact on health and beach environment)	State DEP, Mayor and Council	x			Minor maintenance sediment removal has and continues to take place. Full sediment dredging will only be possible after the USACE study to be conducted at Wreck pond.	x		No change from 2009 plan.
Spring Lake, Borough of	Action 4H - Reduce the possibility of flooding and increase early warning of potential flood conditions at Wreck Pond by implementing stormwater retention projects identified by the Wreck Pond Brook Regional Stormwater Management Plan (RSWMP) committee in Subregion 12 watershed and by implementing sensor systems (preferably USGS) in the watershed	H (highest priority)	Flooding (due to inland and coastal floods, hurricanes, and nor'easters)	Mayor and Council	x			Use reverse 911 to notify residents of flooding at Wreck Pond. Decision on sensor waiting on USACE study and funding.	x		completed
Spring Lake, Borough of	Action 2C - Planning for funding and improvements to telecomm and electrical systems at critical facilities including EOC and local shelters	M	All	Mayor and Council	x			Improved telecommunications system in EOC. Emergency generators purchased for critical facilities and shelter.	x		completed
Spring Lake, Borough of	Action 14A - Reduce the possibility of damage to emergency facilities by conducting an evaluation to determine existing level of protection, particularly to flooding, and implementing recommendations	M	All	Mayor and Council	x			Implementing identified improvements	x		completed

Tinton Falls, Borough of	<b>Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan:</b> Local priorities remain essentially unchanged since the last version of the plan. However, personnel responsible for implementing portions of the plan have better understanding of their roles and responsibilities.										
Tinton Falls, Borough of	Action 1E - Develop a stormwater management plan that includes subdivision regulations to control runoff; both for flood reduction and to minimize saturated soils on steep slopes that can cause landslides. (Sycamore Avenue storm drainage, Water Street erosion (Pine Brook))	H	Flooding Landslides	Mayor and Council	X			Stormwater management ordinance is in place. Portion of Water Street streambank was restored after damages by hurricane Irene. Other sections of Water Street along Pine Brook continue to be monitored.	X		Stormwater management ordinance in place. Continued monitoring of development within Pine Brook watershed.
Tinton Falls, Borough of	Action 11C - Ice and windstorm resistant trees and landscaping practices to reduce related hazards (throughout municipality)	H	Winter storms	Mayor and Council	X			Tree maintenance program to address potentially hazardous trees and limbs. New shade tree installations take consideration to ice and windstorm hazards.	X		Tree maintenance program to address potentially hazardous trees and limbs. New shade tree installations take consideration to ice and windstorm hazards.
Tinton Falls, Borough of	Action 9B - Locally identify and map specific areas of potential slope failure and limit future development in these areas (Water Street into Pine Brook)	H	Landslides	Mayor and Council	X			Adoption of FEMA Flood Hazard Ordinance and updated FEMA DFIRM (and ABFE and Preliminary Work Maps as applicable)	X		Adoption of Preliminary Work Maps from FEMA as applicable.
Tinton Falls, Borough of	Action 4F - Conduct a routine maintenance program and seek financial assistance to clean out stream segments with heavy sediment deposits (Whale Pond Brook, Jumping Brook)	H	Flooding by hurricanes, severe storm, nor'easters	Mayor and Council	X			Coordinating efforts with Monmouth County Mosquito Commission and adjoining Municipalities	X		Coordinating efforts with Monmouth County Mosquito Commission and adjoining Municipalities
Tinton Falls, Borough of	Action 4G - Develop specific mitigation solutions for flood-prone roadways and intersections under the leadership of NUDOT. Develop a work plan for when sites will be surveyed and what role the Borough can play in selection and implementation of mitigation activities (County Highway 13A, County Highway 16, Hope Road)	H	Flooding by hurricanes, severe storm, nor'easters	Mayor and Council	X			Coordinating efforts with NJDOT and Monmouth County Engineering for various areas identified. More specifically at Sycamore Avenue and Homestead Parkway East; Sycamore Avenue and Old Farm Road; and Asbury Avenue at Pine St and Essex Road	X		Continue coordination with applicable agencies to advance programs.
Tinton Falls, Borough of	Action 4H - Implement identified stormwater recharge, rate or volume projects identified in Regional Stormwater Management Plans to decrease 'flash' in streams during/after storm events	H	Flooding by hurricanes, severe storm, nor'easters	Mayor and Council	X			Stormwater management ordinance is in place.	X		Stormwater management ordinance is in place.
Tinton Falls, Borough of	Action 9D - Consider adopting a steep slope ordinance, if one is not already in place, to regulate development on these higher risk areas (Water Street, Jumping Brook)	H	Landslides	Mayor and Council		X		Steep Slope ordinance is not yet in place, but the more critical stormwater management ordinance is in place and being enforced.	X		Mitigation strategy has not changed.
Tinton Falls, Borough of	Action 2B - Create a mitigation outreach program to prepare residents for disasters. Build and support local capacity to enable the public to prepare for, respond to, and recover from disasters.	M	All	Mayor and Council		X		Introduction of Code Red (reverse 911) to alert residents of impending hazards has been utilized during recent events. Code Red Week has increased enrollment significantly since inception.	X		Continue use of Code Red for emergency notifications.
Tinton Falls, Borough of	Action 2E - Support and fund Community Response Team (CERT) programs that also include a mitigation component. Build and support local capacity to enable the public to prepare for, respond to, and recover from disasters (note: borough has existing CERT program)	M	All	Mayor and Council		X		Significant investments made in CERT and OEM programs during current administration	X		Continue evaluation of CERT and OEM programs to build on current success.
Tinton Falls, Borough of	Action 10A - In consultation with NJFFS, local fire service, develop mapping of wildland/urban interface areas	M	Wildfires	Mayor and Council, NJFFS, local fire service		X		Work with fire service	X		Mitigation strategy has not changed.
Tinton Falls, Borough of	Action 10C - In consultation with NJFFS, local fire service, review local EOPs for possible wildfire components regarding fire rescue, alert warning, and communications	M	Wildfires	Mayor and Council, NJFFS, local fire service		X		Work with fire service and community outreach	X		Mitigation strategy has not changed.

<b>The Borough priorities have changed based upon some projects being completed. However, the highest priority is still the roadway elevation of Florence Avenue since this is a major access road for the Borough.</b>											
Union Beach, Borough of	Raise the roadway elevation of the floodprone section of Florence Avenue	1	Flooding	Borough Engineer			X	Lack of Funding Available.	X		The Borough has to main egress and ingress in the municipality. Both roadways flood and it is a priority of the Borough to elevate these Roadways.
Union Beach, Borough of	Raise the roadway elevation of the floodprone section of Jersey Avenue	2	Flooding	Borough Engineer	X					X	
Union Beach, Borough of	Raise the roadway elevation of the floodprone intersection of Spruce Street and Center Street	3	Flooding	Borough Engineer			X	Lack of Funding Available.	X		These two roadways are priorities for the Borough since they are located in a residential community and provide access to the park and residential structures. When these roadways flood homeowners cannot access their homes.
Union Beach, Borough of	Relocation of Harris Garden Fire Company Building to a site outside of the floodprone area	4	Flooding	Mayor and Borough Council, Office of Emergency Management, Fire Department			X	Lack of Funding Available.	X		This is priority for the Borough in order for them to continue to provide firefighting services during flooding events.
Union Beach, Borough of	Raise the elevation of the floodprone Scholer Park parking lot	5	Flooding	Borough Engineer	X					X	
Union Beach, Borough of	Maintenance of the existing shore protection features (bulkhead, beach area)	6	Coastal erosion and wave action	Borough Engineer, Public Works			X	The Borough continues to maintain these features through their existing capital budget and/or when need apply for funding through other grant programs.	X		This is the borough's first line of defense against wave actions and flooding during storm events.
Union Beach, Borough of	Cleaning and maintenance of the existing storm drains and inlets	7	Flooding	Public Works			X	The Borough continues to maintain these features through their existing capital budget	X		These are priority for the Borough in order to ensure property drainage of flood waters and to reduce flooding events in the Borough.
Union Beach, Borough of	Cleaning and maintenance of receiving waterways and creeks	8	Flooding	Public Works, County Mosquito Commission			X	The Borough continues to maintain these features through their existing capital budget	X		These are priority for the Borough in order to ensure property drainage of flood waters and to reduce flooding events in the Borough.
Union Beach, Borough of	Installation of flood warning signs in floodprone areas	9	Flooding	Office of Emergency Management				Lack of Funding Available.	X		Since many roads in the borough flood it is imperative for the borough to have proper signage in order to reduce risk and damage to personal property.
Union Beach, Borough of	Upgrade Borough's existing warning system	10	Flooding, coastal erosion, and wave action	Office of Emergency Management, Police Department			X	Lack of Funding Available.	X		Upgrading the existing system will keep the system capable with surrounding communities and the county.
Union Beach, Borough of	Upgrade emergency generator at police headquarters	11	Flooding, coastal erosion, and wave action	Office of Emergency Management, Police Department	X					X	
Union Beach, Borough of	Implementation of the Army Corps of Engineers Shore Protection and Flood Control Project	12	Flooding, coastal erosion, and wave action	Mayor and Borough Council, ACOE, NJDEP			X	Lack of Funding Available.	X		It has been stated by the ACOE that this project would protect the Borough against major flooding event.

Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: LOCAL PRIORITIES FOCUS ON REPETITIVE LOSS LOCATIONS, PROACTIVELY MITIGATING THE POTENTIAL FOR FLOOD OR TO REDUCE FLOODING AND TO MITIGATE WIND DAMAGE TO REDUCE PROPERTY DAMAGE, UTILITY LOSS AND/OR ROAD CLOSURE & DAMAGE.											
Upper Freehold, Township of	Action 4D - Ellisdale Road - Installation of sheet piling, increase culvert size, construct ditching and reconstruction of 700 LF of roadway at Bridge U-52	H (#1)	Flooding due to inland flooding, hurricanes and nor'easters	Township Committee	X			Project completed in 2011.		X	Project completed
Upper Freehold, Township of	Action 4F - Cleaning of sediment and debris and removal of fallen trees which block waterways. Examples are at Bridges U-15 Breza Road and U-52 Ellisdale Road	H (#2)	Flooding due to fallen trees caused by storm drainage	Township Committee		X		Project completed in 2011. Upper Freehold Township does not have jurisdiction over these County bridges. However, Upper Freehold Township will continue to advise County of known issues as appropriate.	X		Monmouth County maintains all bridges within the Township of Upper Freehold. UFT will conduct meetings to advise Monmouth County of known issues.
Upper Freehold, Township of	Action 4D - Roadway bank protection at Bridge U-34 Sharon Station Road; Bridge U-53 Provinceline Road; and Bridges U-47 & U-48 Wainsmill Road	H (#3)	Roadway erosion caused by flooding	Township Committee		X		Project completed in 2011. Upper Freehold Township does not have jurisdiction over these County bridges. However, Upper Freehold Township will continue to advise County of known issues as appropriate.	X		Monmouth County maintains all bridges within the Township of Upper Freehold. UFT will conduct meetings to advise Monmouth County of known issues.
Upper Freehold, Township of	Educate residents about what to do before, during and after a flood	1	Flooding	OEM and Deputy OEM			X	Staff availability has been the limiting factor. This initiative will be of an on-going nature once it has launched in order to continue to advise and educate the community on flood hazards and the resources available to manage flood crisis events.		X	Education program under development. Relevant content under development for Upper Freehold Township and UFT OEM websites. Awareness campaign under development to utilize EverBridge Community Awareness/Notification Systems as well as OEM Facebook and website announcements.
Upper Freehold, Township of	Develop an inventory of addresses that could be affected by a wildfire. Use inventory and develop a route alerting system.	2	Wildfires	OEM and Deputy OEM		X		Staff availability has been the limiting factor. This initiative will be of an on-going nature once it has launched in order to maintain an updated list of potential risks as well as contact information.		X	Inventory and contact information is currently being identified and compiled. Once complete, an awareness campaign and notification/alert test will be conducted using the EverBridge Community Notification System.

West Long Branch, Borough of	Provide a General Overview of How Local Priorities May Have Changed Since the Last Version of the Plan: No notable changes since last plan.												
West Long Branch, Borough of	Drainage remediation project servicing West Long Branch, Long Branch, Monmouth County property, and Monmouth University property	H (#1)	Hurricane, tropical storm, nor'easter, flood	Borough Engineer				x	Lack of funding. Large multi-jurisdictional project.	x			No change from 2009 plan.
West Long Branch, Borough of	Remediation of Turtle Mill Floodway - stream cleaning	M (#2)	Hurricane, tropical storm, nor'easter, flood	Borough Engineer				x	Lack of funding.	x			No change from 2009 plan.

**APPENDIX 1.8 – WORKSHEET 6: PLAN INTEGRATION**

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Plan Integration Worksheet

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community’s resilience to disasters. “Plan integration” can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction’s past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring too.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	
<p>A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below. The updated HMP will be referenced in the Monmouth County Comprehensive Master Plan (currently the Monmouth County Growth Management Guide) and will eventually be adopted as an element of the Comprehensive Master Plan upon completion in 2014.</p>	<p style="text-align: center;">x</p>
<p>2. B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	
<p>C. Check here if your master, general or comprehensive was updated since 2008. Various elements of the County's Master Plan (Growth Management Guide) have been updated since 2008 including the Farmland Plan, Coastal Monmouth Plan, Panhandle Plan, and the Monmouth County Road Plan.</p>	<p style="text-align: center;">x</p>
<p>D. If you checked box 2C, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below. Flooding and mitigation are referenced in the Coastal Monmouth Plan, but there is not a specific "mitigation" chapter or element of the plan.</p>	<p style="text-align: center;">x</p>
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below. Conversations within the plan include:</p> <ul style="list-style-type: none"> <li>• Strategic adjustment should be considered as an alternate approach, whereby development in hazard zones are acquired and removed as part of the Coastal Blue Acres Program</li> <li>• Bridges, culverts, and other restrictions along riparian corridors which are seriously undersized be replaced and enlarged or improved to restore riparian corridors and reduce flood hazards</li> <li>• riparian corridor protection</li> <li>• Coastal Routes Evacuation Plan and coordinated evacuation plans</li> </ul> <p>2e. (wording) Maps identify coastal floodplains as environmental features</p> <ul style="list-style-type: none"> <li>• Some conditions such as sedimentation, degraded water quality, and flooding may require a regional approach</li> <li>• Blue &amp; Grey infrastructure</li> </ul>	<p style="text-align: center;">x</p>

<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below.</p>	<p>NA</p>
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury)                  B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.                  Not under County jurisdiction</p>	<p>NA</p>
<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.                  D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.                  Not under County jurisdiction</p>	<p>na</p>
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS)                  F. Check here if your community has joined the CRS since 2009.                  G. Check here if your community has dropped out of the CRS since 2009.</p>	<p>na na na</p>
<p>5. A. Check here if your community has a local zoning ordinance.                  B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.                  Not under County jurisdiction</p>	<p>na na</p>
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.                  B. If so, describe.                  There is an overall higher awareness of the importance of Hazard Mitigation; more County Departments are involved with hazard mitigation planning and coordination efforts.</p>	<p>x</p>
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.                  B. If so, describe. Official civil service job descriptions cannot be modified, however, duties within the job description include planning related responsibilities. Monmouth County Planning Division is to assist all 51 NFIP municipalities in reaching a rating of at least a 9 As part of their 2013 Division Work Program, the Planning Division has identified assisting OEM with Hazard mitigation planning; Planning Board staff attended FEMA Hazard Mitigation workshops; Planning Board members were on the County Committee for HMGF 4086 LOI prioritization; also on the HMP Steering Committee</p>	<p>x</p>
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.                  B. Check here if capital or operating budgets already included this when the plan was first adopted.                  Budgets were not specifically revised to include a line item for mitigation however, mitigation funds are included w/in other line items</p>	<p>X</p>

<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).                  B. If so, describe. The County Board of Freeholders passed the resolutions in order for the County to apply for, and accept, PDM funding for the original HMP and the update. The Board did adopt the current plan and will adopt the update when completed.</p>	<p>x</p>
<p>10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).                  B. If so, describe. Through the County's shared services agreement, Monmouth County DPW&amp;E will assist any municipality requesting assistance. In addition, MCDPW&amp;E inspects and cleans streams for debris and siltation.</p>	<p>x</p>
<p>11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.                  B. If so, describe. The County Planning Board addresses hazards as part of their site plan/subdivision review process</p>	<p>x</p>
<p>12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.                  B. If so, describe. Historic structures on County property are maintained by the County Park System. Internal planning to protect these sites from natural hazards is ongoing within the MC Park System.</p>	<p>x</p>
<p>13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities.                  B. If so, describe. DEP for acquisitions and permitting; DOT with County DPW and Eng for infrastructure; and NJOEM for pre and post disaster mitigation grants;</p>	<p>x</p>
<p>14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities.                  B. If so, describe. Monmouth University, Urban Coast Institute (member of County Steering Committee) and Stevens Institute of Technology, Shrewsbury River Flood Warning System; Jacques Cousteau Reserve(Rutgers University) part of the County Mitigation Steering Committee.</p>	<p>x</p>
<p>15. A. Check here if your community has a stormwater management plan.                  County does have a NJPDES Stormwater Pollution Prevention Plan for County owned facilities/infrastructure</p>	<p>x</p>
<p>B. Check here if your community has a stormwater management ordinance.                  Not under County jurisdiction</p>	<p>na</p>

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	x
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	X
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	na
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	na
B. Enforce codes and standards beyond FEMA minimum requirements.	na
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
County Planning Board CRS initiative to assist all NFIP communities enter the program with at least a rating of 9	
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	na
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	x
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation. Official civil service job descriptions cannot be modified, however, duties within the job description include planning related responsibilities	x
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	na
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	na
11. Add hazard vulnerability to subdivision and site plan review criteria.	na
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	x
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	x
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	na
16. Protect life and property in high hazard areas by limiting densities of new development.	na
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	na
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	na
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	x
20. Implement hazard mitigation activities through existing plans and policies.	
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)FEMA Mitigation workshops offered to all municipalities in April 2013. CRS course hosted by the County in July 2013	x

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

11. Add hazard vulnerability to subdivision and site plan review criteria.	X

Community Name: Allenhurst

12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	X
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	X
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	<p>X</p>
<p>2. A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below.</p>	
<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	<p>X</p>
<p>C. Check here if your master, general or comprehensive was updated since 2008.</p>	<p>X</p>
<p>D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below.</p>	
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.</p>	
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below.</p>	
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury).</p>	<p>X</p>

<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.</p>	
<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p>	
<p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.</p>	
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p>	
<p>F. Check here if your community has joined the CRS since 2009.</p>	
<p>G. Check here if your community has dropped out of the CRS since 2009.</p>	
<p>5. A. Check here if your community has a local zoning ordinance.          B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.</p>	X
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.          B. If so, describe.</p>	
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.          B. If so, describe.</p>	
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.          B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	
<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).          B. If so, describe.</p>	
<p>10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning.</p>	x

debris from streams and ditches (i.e., more frequently). xB. If so, describe. Before storms our DPW always inspects the dams for debris to avert possible flooding.	X
11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria. B. If so, describe.	
12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards. B. If so, describe.	
13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe.	
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe.	
15. A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	X

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	x
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	x
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	X
B. Enforce codes and standards beyond FEMA minimum requirements.	
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	x
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	x
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	x
11. Add hazard vulnerability to subdivision and site plan review criteria.	
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	x
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	x
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X

- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan. B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	X
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	X
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	X
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	X
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

# Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

## Plan Integration Worksheet

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring too.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	<p>X</p>
<p>2. A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below. <b>Borough Engineer, Grant Consultant; and OEM Coordinator continue to meet to review hazard mitigation plan and activities.</b></p>	<p></p>
<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	<p></p>
<p>C. Check here if your master, general or comprehensive was updated since 2008.</p>	<p></p>
<p>D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below.</p>	<p></p>
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.</p>	<p></p>
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. <b>Building Official has also contributed to the plan updates.</b></p>	<p>X</p>
<p>A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury).</p>	<p>X</p>

<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below. <b>Brielle adopted the FEMA ABFE maps plus 1 foot for all construction.</b></p> <p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p> <p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.</p> <p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p> <p>F. Check here if your community has joined the CRS since 2009.</p> <p>G. Check here if your community has dropped out of the CRS since 2009.</p>	<p>X</p>
<p>4. A. Check here if your community has a local zoning ordinance.</p> <p>B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below. <b>The Engineer meets regularly with the zoning official to discuss zoning requirements; however, the Borough is 99% developed.</b></p>	<p>X</p>
<p>5. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.</p> <p>B. If so, describe.</p>	
<p>6. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.</p> <p>B. If so, describe.</p>	
<p>7. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.</p> <p>B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	
<p>8. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).</p> <p>B. If so, describe.</p>	

<p>9. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).                  B. If so, describe.</p>	
<p>10. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.                  B. If so, describe.</p>	
<p>11. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.                  B. If so, describe.</p>	
<p>12. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities.                  B. If so, describe. <b>Brielle has applied to participate in FEMA HMGP through the NJ Office of Emergency Management.</b></p>	<p>X</p>
<p>13. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities.                  B. If so, describe.</p>	
<p>14. A. Check here if your community has a stormwater management plan.                  B. Check here if your community has a stormwater management ordinance.</p>	<p>X X</p>

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

*Please check all activities that your municipality is committing to undertake over the next five years.*

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	X
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	X
B. Enforce codes and standards beyond FEMA minimum requirements.	
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Plan Integration Worksheet*

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring too.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	
<p>2. A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below.</p>	
<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	√
<p>C. Check here if your master, general or comprehensive was updated since 2008.</p>	
<p>D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below.</p>	
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.</p>	
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below.</p>	
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury)</p>	√
<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.</p>	

Community Name: Township of Freehold

<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p>	
<p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.</p>	
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p>	
<p>F. Check here if your community has joined the CRS since 2009.</p>	
<p>G. Check here if your community has dropped out of the CRS since 2009.</p>	
<p>5. A. Check here if your community has a local zoning ordinance.</p>	√
<p>B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.</p>	
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.</p>	
<p>B. If so, describe.</p>	
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.</p>	
<p>B. If so, describe.</p>	
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.</p>	
<p>B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	
<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).</p>	
<p>B. If so, describe.</p>	
<p>10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).</p>	√
<p>B. If so, describe.</p>	
<p>The Township of Freehold has been more active in clearing jams near culverts and roads in the wake of recent storms.</p>	
<p>11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.</p>	
<p>B. If so, describe.</p>	
<p>12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.</p>	
<p>B. If so, describe.</p>	

Community Name: Township of Freehold

13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe.	
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe.	
15. A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	✓ ✓

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	✓
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	✓
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	✓
B. Enforce codes and standards beyond FEMA minimum requirements.	✓
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	✓
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	
11. Add hazard vulnerability to subdivision and site plan review criteria.	
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	✓
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	✓
16. Protect life and property in high hazard areas by limiting densities of new development.	✓
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	✓
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	✓
20. Implement hazard mitigation activities through existing plans and policies.	✓
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update  
Plan Integration Worksheet**

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring too.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@uis.com](mailto:anna.foley@uis.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.</p>	
<p>B. If so, describe.</p>	
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.</p>	<p>x</p>
<p>B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	
<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).</p>	<p>NA</p>
<p>B. If so, describe.</p>	
<p>10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).</p>	<p>X</p>

B. If so, describe. The borough has contracted a company to maintain storm sewers in the entire town	
11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.	x
B. If so, describe. All building permits are reviewed	x
12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.	
B. If so, describe.	
13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities.	
B. If so, describe.	
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities.	
B. If so, describe.	
15. A. Check here if your community has a stormwater management plan.	X
B. Check here if your community has a stormwater management ordinance.	X

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan. B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X x x
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	X
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	X
8. Revise capital or operating budgets to include a line item for mitigation project funding.	X
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	X
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	X
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	X
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	X
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	X
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	X
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	X
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	X
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	
<p>2. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below. The master plan and amendments continue to refer to the Borough's Floodplain Management Regulations. I have had numerous discussions with the Borough Planner and Planning Board regarding the Hazard Mitigation Plan and the importance of same.</p>	X
<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	
<p>C. Check here if your master, general or comprehensive was updated since 2008. Re-examined in 2009</p>	X
<p>D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below. The Borough's Floodplain Management Regulations remained in the updated document and included any updates to the regulations since the last Master Plan was adopted. The regulations are included in the Land Use Plan section of the Master Plan.</p>	X
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.</p>	
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. I stay in close communication with the Construction Official. He does not issue permits unless I approve an application under floodplain review first – if the application requires floodplain review.</p>	X
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury)</p>	X

<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below. The Borough enforces minimum FEMA/NJDEP requirements, whichever are more stringent. We allow applicants to mitigate beyond the minimum requirements if they choose to.</p>	X
<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p>	X
<p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements. NJDEP requirements require one foot of freeboard where FEMA may not. As such the Borough is requiring the additional one foot of freeboard to the finished floor throughout the floodplain. In the V Zone it may be higher depending on the substructure beneath the floor in a particular residence.</p>	
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p>	
<p>F. Check here if your community has joined the CRS since 2009. The Borough is currently in the process and is under consideration.</p>	X
<p>G. Check here if your community has dropped out of the CRS since 2009.</p>	
<p>5. A. Check here if your community has a local zoning ordinance.</p>	X
<p>B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.</p>	
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.</p>	
<p>B. If so, describe.</p>	
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.</p>	
<p>B. If so, describe.</p>	
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.</p>	
<p>B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	
<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).</p>	

Community Name\_\_Borough of Highlands\_\_\_\_\_

B. If so, describe.	
10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently). B. If so, describe. More frequent checks are being performed and cleaning as appropriate.	X
11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria. B. If so, describe. Applications must be reviewed and approved by the Floodplain Administrator where appropriate.	X
12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards. N/A B. If so, describe.	
13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe. Funding assistance from the NJDEP has been requested for mitigation projects.	X
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe.	
15. A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	X X

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	X
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	X
B. Enforce codes and standards beyond FEMA minimum requirements.	X
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	X
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	X
8. Revise capital or operating budgets to include a line item for mitigation project funding.	X
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	X
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	X
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards. N/A	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	X

In all areas of special flood hazards the following standards are required:</p> <p>a. <i>Anchoring.</i></p> <ol style="list-style-type: none"> <li>1. All new construction and substantial improvements shall be anchored to prevent flotation, collapse, or lateral movement of the structure.</li> <li>2. All manufactured homes shall be anchored to resist flotation, collapse or lateral movement. Methods of anchoring may include, but are not to be limited to, use of over-the-top or frame ties to ground anchors. This requirement is in addition to applicable State and local anchoring requirements for resisting wind forces.</li> </ol> <p>b. <i>Construction Materials and Methods.</i></p> <ol style="list-style-type: none"> <li>1. All new construction and substantial improvements shall be constructed with materials and utility equipment resistant to flood damage.</li> <li>2. All new construction and substantial improvements shall be constructed using methods and practices that minimize flood damage.</li> </ol> <p>c. <i>Utilities.</i></p> <ol style="list-style-type: none"> <li>1. All new and replacement water supply systems shall be designed to minimize or eliminate infiltration of floodwaters into the system;</li> <li>2. New and replacement sanitary sewage systems shall be designed to minimize or eliminate infiltration of floodwaters into the systems and discharge from the systems into flood waters;</li> <li>3. <b>On-site</b> waste disposal systems shall be located to avoid impairment to them or contamination from them during flooding; and</li> <li>4. Electrical, heating, ventilation, plumbing and air-conditioning equipment and other service facilities shall be designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding.</li> </ol> <p>d. <i>Subdivision Proposals.</i></p> <ol style="list-style-type: none"> <li>1. All subdivision proposals shall be consistent with the need to minimize flood damage;</li> <li>2. All subdivision proposals shall have public utilities and facilities such as sewer, gas, electrical, and water systems located and constructed to minimize flood damage;</li> <li>3. All subdivision proposals shall have adequate drainage provided to reduce exposure to flood damage; and,</li> <li>4. Base flood elevation data shall be provided for subdivision proposals and other proposed development which contain at least fifty (50) lots or five (5) acres (whichever is less).</li> </ol> <p>e. <i>Enclosure Openings.</i> All new construction and substantial improvements having fully enclosed areas below the lowest floor that are usable solely for parking of vehicles, building access or storage in an area other than a basement and which are subject to flooding shall be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must either be certified by a registered professional engineer or architect or must meet or exceed the following minimum criteria: A minimum of two (2) openings having a total net area of not less than one (1) square inch for every square foot of enclosed area subject to flooding shall be provided. The bottom of all openings shall be no higher than one (1) foot above grade. Openings may be equipped with screens, louvers, or other covering or devices provided that they permit the automatic entry and exit of floodwaters.</p> <p>(Ord. No. 2009-14 § 1)</p>
	X

**24-5.2 Specific Standards.**

In all areas of special flood hazards where base flood elevation data have been provided as set forth in subsection 24-3.2, Basis for Establishing the Areas of Special Flood Hazard or in subsection 24-4.3b, Use of Other Base Flood Data, the following standards are required:

a. *Residential Construction.*

1. New construction and substantial improvement of any residential structure shall have the lowest floor, including basement together with the attendant utilities and sanitary facilities, elevated to or above base flood elevation;
2. Within any AO zone on the municipality's FIRM that all new construction and substantial improvement of any residential structure shall have the lowest floor, including basement, elevated above the highest adjacent grade at least as high as the depth number specified in feet (at least two (2) feet if no depth number is specified). And, require adequate drainage paths around structures on slopes to guide floodwaters around and away from proposed structures.

b. *Nonresidential Construction.*

1. New construction and substantial improvement of any commercial, industrial or other nonresidential structure shall either have the lowest floor, including basement, elevated to the level of the base flood elevation; and
  2. Within any AO zone on the municipality's DFIRM that all new construction and substantial improvement of any commercial, industrial or other nonresidential structure shall have the lowest floor, including basement, elevated above the highest adjacent grade at least as high as the depth number specified in feet (at least two (2) feet if no depth number is specified). And, require adequate drainage paths around structures on slopes to guide floodwaters around and away from proposed structures;
  3. Be floodproofed so that below the base flood level the structure is watertight with walls substantially impermeable to the passage of water;
  4. Have structural components capable of resisting hydrostatic and hydrodynamic loads and effects of buoyancy; and,
  5. Be certified by a registered professional engineer or architect that the design and methods of construction are in accordance with accepted standards of practice for meeting the applicable provisions of this subsection. Such certification shall be provided to the official as set forth in subsection 24-4.3c,2(b).
- c. *Manufactured Homes.*
1. Manufactured homes shall be anchored in accordance with subsection 24-5.1a,2.
  2. All manufactured homes to be placed or substantially improved within an area of special flood hazard shall be elevated on a permanent foundation such that the top of the lowest floor is at or above the base flood elevation.

(Ord. No. 2009-14 § 1)

**24-5.3 Floodways.**

Located within areas of special flood hazard established in subsection 24-3.2 are areas designated as floodways. Since the floodway is an extremely hazardous area due to the velocity of floodwaters, which carry debris, potential projectiles, and erosion potential, the following provisions apply:

- a. Prohibit encroachments, including fill, new construction, substantial improvements, and other development unless a technical evaluation demonstrates that encroachment shall not result in any increase in flood levels during the occurrence of the base flood discharge.
- b. If subsection 24-5.3a. is satisfied, all new construction and substantial improvements must comply with Section 24-5, Provisions for Flood Hazard Reduction.
- c. In all areas of special flood hazard in which base flood elevation data has been provided and no floodway has been designated, the cumulative effect of any proposed development, when combined with all other existing and anticipated development, shall not increase the water surface elevation of the base flood more than two-tenths (0.2) of a foot at any point. (Ord. No. 2009-14 § 1)

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

<p>14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities.                  B. If so, describe.</p>	
<p>15. A. Check here if your community has a stormwater management plan.                  B. Check here if your community has a stormwater management ordinance.</p>	X X

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	X
B. Enforce codes and standards beyond FEMA minimum requirements.	
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	X
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	X
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	X
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	X
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	X
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	X
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	X
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	X
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

### Plan Integration Worksheet

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- **Demonstration of Progress over the Last Planning Cycle** – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.

- **Targeted Plan Integration Activities for the Next Planning Cycle** – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring too. Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

Name: Peter R. Avakian

Title: Floodplain Administrator

Email and Phone: Ph. 732-922-9229 Isavakian@aol.com

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

**Please check all activities that your municipality has undertaken over the last five years.**

1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?

√ 2.

A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below.

***The Borough does not have a Planning Department. Our master plan updates are led by the Engineer and Floodplain Administrator with support from the Planning Board and Council. Our CPG member has no other entity to directly coordinate with because he also fills those roles of Floodplain Administrator and Borough Engineer. However, he did share information about the mitigation plan with the planning board, council and clerk.***

B. Check here if your municipality does not have a master, general, or comprehensive plan.

C. Check here if your master, general or comprehensive was updated since 2008.

D. If you checked box 2C, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below.

***The Borough has adopted a Flood Damage Prevention Ordinance addressing residential and non-residential construction in accordance with the model State Ordinance.***

E. If you checked box 2C, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.

***Flood Damage Prevention Ordinance***

√ 3.

3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below.

***Building inspectors enforce current minimum standards and are current with all hazard mitigation standards.***

√ 4.

A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury)

B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.

C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.

D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.

E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).

F. Check here if your community has joined the CRS since 2009.

G. Check here if your community has dropped out of the CRS since 2009.

√ 5.

A. Check here if your community has a local zoning ordinance.

B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.

**N/A – fully built-out.**

√ 6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.

B. If so, describe.

**In 2009 The Borough adopted a Flood Damage Prevention Ordinance addressing residential and non-residential construction in accordance with the State Model Ordinance.**

√ 7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.

B. If so, describe.

**The Borough Engineer is appointed as the Floodplain Administrator.**

8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.

B. Check here if capital or operating budgets already included this when the plan was first adopted.

9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).

B. If so, describe.

√ 10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).

B. If so, describe.

**The borough has adopted a Municipal Stormwater Management Plan that ensures regular maintenance of storm facilities and outfall piping.**

√ 11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.

B. If so, describe.

**All development reviews submitted to the Borough must comply with NJDEP Flood Hazard Regulations, NJDP BMP standards, and the Flood Damage Prevention Ordinance.**

12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.

B. If so, describe.

√ 13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities.

B. If so, describe.

**The Borough of Interlaken has applied for grant money under the Hazard Mitigation Grant Program for damage occurred under Super Storm Sandy.**

14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities.

B. If so, describe.

√ 15. A. Check here if your community has a stormwater management plan.

√ B. Check here if your community has a stormwater management ordinance.

## TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.

2.

- ✓ A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.
- B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.

✓ 3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).

4.

- ✓ A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).
- B. Enforce codes and standards beyond FEMA minimum requirements.
- C. Join (or continue to maintain participation in) the NFIP's Community Rating System.

✓ 5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.

✓ 6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.

✓ 7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.

✓ 8. Revise capital or operating budgets to include a line item for mitigation project funding.

✓ 9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.

✓ 10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.

✓ 11. Add hazard vulnerability to subdivision and site plan review criteria.

12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.

✓ 13. Reach out to state agencies for assistance with natural hazard mitigation activities.

✓ 14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.

✓ 15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.

✓ 16. Protect life and property in high hazard areas by limiting densities of new development.

- ✓ 17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.
- ✓ 18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.
- ✓ 19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.
- ✓ 20. Implement hazard mitigation activities through existing plans and policies.
- ✓ 21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	X
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	X
B. Enforce codes and standards beyond FEMA minimum requirements.	X
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	X
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	

2013

Community Name Keyport Borough

12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	X
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update  
Plan Integration Worksheet**

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan Integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an Intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring too.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

Please check all activities that your municipality has undertaken over the last five years.

1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities? A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below. <i>The master plan addresses flooding flood areas and development in flood areas.</i>	✓
B. Check here if your municipality does not have a master, general, or comprehensive plan. C. Check here if your master, general or comprehensive was updated since 2008. ( <i>2009</i> ) D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below. <i>The mitigation plan will be incorporated in the next master plan update, only flooding (which is part of our plan) is addressed in master plan.</i>	✓
E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below. <i>NO, will be included in next master plan update.</i>	✓
3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. <i>Construction official is the Floodplain Administrator and enforces the local flood plain administration ordinance.</i>	✓
4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury). B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below. <i>Yes, the borough adopted the ABFE ordinance.</i>	✓

Community Name Lake Como Borough

- C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.
- D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements. DHA  
The Borough adopted the ABFE ordinance and enforced the guidelines of the ABFE ordinance.
- E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).
- F. Check here if your community has joined the CRS since 2009.
- G. Check here if your community has dropped out of the CRS since 2009.
- 5. A. Check here if your community has a local zoning ordinance.   
B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below. Zoning officer coordinates with Construction official and permits in the flood areas.
- 6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.   
B. If so, describe.
- 7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.   
B. If so, describe.
- 8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.   
B. Check here if capital or operating budgets already included this when the plan was first adopted.
- 9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).   
B. If so, describe. The borough council has always maintained an understanding of the importance of hazard mitigation by having Administrator and Engineer.
- 10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).   
B. If so, describe. DPW maintains stream behind homes on some line.
- 11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.   
B. If so, describe. Construction official reviews to determine if site plan is within flood area.
- 12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.   
B. If so, describe.

### TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	X
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	X
B. Enforce codes and standards beyond FEMA minimum requirements.	
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	X
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	X
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	X
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	X
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	X
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	<p>X</p>

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	<p>X</p>
<p>2. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below. The Hazard Mitigation Plan Update was discussed at various planning board meetings and recommendation made to include Hazard Mitigation Planning within the next update or re-examination of the Manalapan Township Master Plan.</p>	<p>X</p>
<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	<p>X</p>
<p>C. Check here if your master, general or comprehensive was updated since 2008.</p>	<p>X</p>
<p>D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below.</p>	<p>-</p>
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.</p>	<p>-</p>
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. Routine discussions are held between the Zoning Office, Construction Dept. and Township Engineer's office that review the township flood hazard protection ordinances, locations of Flood Hazard Areas and certifications/documentation to be submitted prior to issuance of a building permit for a structure within a Flood Hazard Area.</p>	<p>X</p>
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury).</p>	<p>X</p>

<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.                  The flood prevention ordinance was reviewed by the construction official, township engineer and flood plain administrator. It was determined that enforcement beyond FEMA requirements was not required. The development of new residential or commercial structures within a Flood Hazard Area is not permitted in the Township of Manalapan.</p>	<p><b>X</b></p>
<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p>	<p>n/a</p>
<p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.</p>	
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p>	<p>No</p>
<p>F. Check here if your community has joined the CRS since 2009.</p>	<p>No</p>
<p>G. Check here if your community has dropped out of the CRS since 2009.</p>	<p>No</p>
<p>5. A. Check here if your community has a local zoning ordinance.</p>	<p><b>X</b></p>
<p>B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.</p>	<p><b>X</b></p>
<p>The Zoning Board has been advised of the flood protection ordinance of the Township which prevents the development of structures with Flood Hazard Areas. Each site plan and subdivision application appearing before the Zoning Board is checked for compliance to the Flood Control Ordinance.</p>	
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.</p>	<p><b>X</b></p>
<p>B. If so, describe.</p>	
<p>Structures are now investigated for Substantial Damage Determination after flood events</p>	
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.</p>	<p>No</p>
<p>B. If so, describe</p>	
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.</p>	<p>No</p>
<p>B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	<p>No</p>
<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).</p>	<p><b>X</b></p>
<p>B. If so, describe.</p>	
<p>The Township Engineer was authorized to proceed with execution of a HMGP application for the acquisition of 100 Wilson Ave in order to remove</p>	

<p>the structure from a flood hazard area and convert the property to open space. The project was awarded funding and the State is in the process of closing on the property; demolition is expected in the next 3-4 months.</p>	
<p>10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).                  B. If so, describe.                  The DPW more frequently inspects streams and waterways, where feasible, and removes built up sediment, felled trees and limbs and other debris where permitted.</p>	<p>X</p>
<p>11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.                  B. If so, describe.                  Each subdivision and site plan submitted is reviewed for conformance to the Flood Control Ordinance and Flood Hazard Overlay Zone District, if applicable.</p>	<p>X</p>
<p>12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.                  B. If so, describe.</p>	<p>No</p>
<p>13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities.                  B. If so, describe.                  The township has solicited for funding grants and services from FEMA, the NJDEP and the County for flood mitigation projects such as property acquisition and flood prevention.</p>	<p>X</p>
<p>14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities.                  B. If so, describe.</p>	<p>No</p>
<p>15. A. Check here if your community has a stormwater management plan.                  B. Check here if your community has a stormwater management ordinance.</p>	<p>X X</p>

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan. B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	X

<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.  <b>Manasquan adopted a new Flood Damage Prevention ordinance on 09/14/2009 adopting revised Flood Insurance Study, new Flood Insurance Rate Maps and DFIRM Panels. Furthermore, Manasquan revised its Floodplain Ordinance on 10/07/2013 to include definitions for "Cumulative Substantial Improvement" revising definition for "Substantial Damage" and "Substantial Improvement" and removing the definition of sand dune.</b></p>	
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. <b>VERIFIED THAT BUILDINGS DEPT ENFORCES IBC</b></p>	<p>X</p>
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury).</p>	<p>X</p>

<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.</p>	
<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p>	X
<p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements. Requiring structures to be constructed 1' above FEMA Base Flood Elevations</p>	
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p>	X
<p>F. Check here if your community has joined the CRS since 2009.</p>	
<p>G. Check here if your community has dropped out of the CRS since 2009.</p>	
<p>5. A. Check here if your community has a local zoning ordinance. B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below. Advised and solicited input from planning board, however Manasquan is "built-out" and as such already has low density zoning in hazard areas.</p>	X X
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities. B. If so, describe. Office of Emergency Management has taken lead in ensuring an effective hazard mitigation strategy</p>	X
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation. B. If so, describe. Position of Hazard Mitigation Specialist is being created and is expected to be complete by 11/01/13</p>	X
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding. B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	X
<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable). B. If so, describe. Manasquan is in the process of formally adopting a Hazard Mitigation Advisory Committee that will memorialize the membership &amp; responsibilities of the current Jurisdictional Assessment Team (11/01/13)</p>	X

Community Name MANASQUAN BOROUGH

10.	A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently). B. If so, describe.	
11.	A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria. B. If so, describe.	
12.	Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards. B. If so, describe.	
13.	Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe. Working with state floodplain management office for technical assistance with floodplain mitigation. Met with NJDEP Office of Dam Safety & Flood Control	X
14.	Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe. Working with Stevens Institute Davidson Laboratory on Flood Warning and surge modeling.	X
15.	A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	X X

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

*Please check all activities that your municipality is committing to undertake over the next five years.*

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan. B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	X
8. Revise capital or operating budgets to include a line item for mitigation project funding.	X
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	X
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	X
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	X
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	X
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

*Please check all activities that your municipality is committing to undertake over the next five years.*

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	X
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	X
B. Enforce codes and standards beyond FEMA minimum requirements.	
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).	
B. If so, describe.	
10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).	
B. If so, describe. <u>We have adopted Stormwater Management Ordinances. The Public Works cleans storm drains weekly, before any weather event and all ditches 2x a year.</u>	
11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.	
B. If so, describe.	
12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.	
B. If so, describe.	

Community Name Borough of Neptune City

13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe. <u>We have applied for funding with FEMA for grants,</u>	<input checked="" type="checkbox"/>
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe.	<input type="checkbox"/>
15. A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	<input checked="" type="checkbox"/>

**Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring too.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?	
2. A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below. This Department sits on the MasterPlan Subcommittee. We have incorporated language in the Master Plan and subsequent documents regarding limited development in flood prone areas. All planning members have copies of Master Plan and any updates B. Check here if your municipality does not have a master, general, or comprehensive plan. C. Check here if your master, general or comprehensive was updated since 2008. D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below. The Conservation element was updated to incorporate the FEMA grants and funding The Utility section was updated to reflect the new Stormwater Ordinance that was amended 2009.	
E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.	
3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. Verbally talk to and work with building department regarding the current code updates adopted by ordinance through the clerk's office. Work with building department on structures in flood areas and that elevations are at or above flood.	
4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury) <b>Yes</b> B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your	
<b>The Township is requiring new finished floor elevations at a height greater than the 1% flood elevation. The township of Neptune requires the new finished floor elevations to be at or above the .02% flood elevation</b>	

Community Name \_\_\_\_\_

C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.
D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.
E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).
F. Check here if your community has joined the CRS since 2009.
G. Check here if your community has dropped out of the CRS since 2009.
5. A. Check here if your community has a local zoning ordinance.
B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.
6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.
B. If so, describe. Zoning relief for height in flood zone areas, measuring from BFE as adopted not existing grade. Also adopted .02% BFE of 12 instead of the 1% 100 year storm.
7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.
B. If so, describe.
8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.
B. Check here if capital or operating budgets already included this when the plan was first adopted.
9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).
B. If so, describe.
10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).
B. If so, describe. More frequent cleaning of storm drains in Flood Hazard Areas
11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.
B. If so, describe. Updated all checklists to add special flood area zones to all applications and mapping
12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.
B. If so, describe.

Community Name \_\_\_\_\_

13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe. We have applied to NRCS and received monies; we have previously applied to FEMA and received funding in prior rounds and have applied again for additional funding.	
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe.	
15. A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	

Community Name \_\_\_\_\_

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

*Please check all activities that your municipality is committing to undertake over the next five years.*

1.	CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.
2.	A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan. B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.
3.	Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).
4.	A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.
5.	Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.
6.	Modify work plans, policies or procedures to include hazard mitigation concepts/activities.
7.	Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.
8.	Revise capital or operating budgets to include a line item for mitigation project funding.
9.	Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.
10.	Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.
11.	Add hazard vulnerability to subdivision and site plan review criteria.
12.	Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.
13.	Reach out to state agencies for assistance with natural hazard mitigation activities.
14.	Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.
15.	Adopt (or continue to enforce) a local stormwater management plan/ordinance.
16.	Protect life and property in high hazard areas by limiting densities of new development.
17.	Increase resilience by limiting the extension of public infrastructure in high hazard areas.
18.	Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.
19.	Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.
20.	Implement hazard mitigation activities through existing plans and policies.
21.	Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update Plan Integration Worksheet

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. **Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update**  
*Plan Integration Worksheet*

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring too.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

Please check all activities that your municipality has undertaken over the last five years.

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	<p><input checked="" type="checkbox"/></p>
<p>2. A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below.</p>	<p><input type="checkbox"/></p>
<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	<p><input type="checkbox"/></p>
<p>C. Check here if your master, general or comprehensive was updated since 2008.</p>	<p><input checked="" type="checkbox"/></p>
<p>D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below.</p>	<p><input type="checkbox"/></p>
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below.</p>	<p><input type="checkbox"/></p>
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below.</p>	<p><input type="checkbox"/></p>
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury)</p>	<p><input checked="" type="checkbox"/></p>
<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.</p>	<p><input type="checkbox"/></p>

*I was not a participant of the CPG at the time of the previous Plan, I do not believe my predecessor did so.*

Community Name Red Bank Borough

C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.	
D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.	
E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).	
F. Check here if your community has joined the CRS since 2009.	
G. Check here if your community has dropped out of the CRS since 2009.	
5. A. Check here if your community has a local zoning ordinance.	
B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.	
6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.	X
B. If so, describe.	<u>Flood Ordinance has been changed to include ABFE.</u>
7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.	
B. If so, describe.	
8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.	X
B. Check here if capital or operating budgets already included this when the plan was first adopted.	
9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).	
B. If so, describe.	<u>The Borough has line item in budget to maintain storm drains/cleanlots</u>
10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).	X
B. If so, describe.	<u>More frequent inspections + cleaning of storm drains</u>
11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.	
B. If so, describe.	
12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.	X
B. If so, describe.	<u>Borough has NO historical properties in Flood zone,</u>

Community Name Red Bank Borough

13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe. <u>Borough was applied for funding from NFDGP Shoreland protection for Bulkhead reconstruction.</u>	<input checked="" type="checkbox"/>
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe.	<input type="checkbox"/>
15. A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	<input checked="" type="checkbox"/> <input checked="" type="checkbox"/>

Community Name \_\_\_\_\_

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

*Please check all activities that your municipality is committing to undertake over the next five years.*

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	X
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	X
B. Enforce codes and standards beyond FEMA minimum requirements.	X
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	X
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	X
8. Revise capital or operating budgets to include a line item for mitigation project funding.	X
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	X
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	X
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	X
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	X
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	X
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	X
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	
<p>C. Check here if your master, general or comprehensive was updated since 2008.</p>	<p>x</p>
<p>D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below. We Added a flood plain ordinance that was past by council.</p>	
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below. We amended the document to include required elevations to be 2 foot above BFE for building.</p>	
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. Have had several talks with construction officials to inform them on what is going on.</p>	<p>x</p>
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury)</p>	<p>x</p>
<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption; check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below. Passed an ordinance to be 2 foot about BFE and had meetings with construction officials.</p>	<p>x</p>

<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p>	
<p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements. At this time we have only past our ordinance on raising two foot higher than BFE</p>	
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p>	
<p>F. Check here if your community has joined the CRS since 2009.</p>	
<p>G. Check here if your community has dropped out of the CRS since 2009.</p>	
<p>5. A. Check here if your community has a local zoning ordinance.                  B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.</p>	<p style="text-align: right;">x</p>
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.                  B. If so, describe. Again just raising 2 foot above BFE</p>	<p style="text-align: right;">x</p>
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.                  B. If so, describe. Our Zoning officer was appointed flood plain manger .</p>	<p style="text-align: right;">x</p>
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.                  B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	
<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).                  B. If so, describe.</p>	
<p>10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).                  B. If so, describe.                  We have no ditches or streams in the borough but we are cleaning storm drains more often.</p>	
<p>11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.                  B. If so, describe.</p>	
<p>12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.</p>	

Community Name Sea Bright

B. If so, describe. N/A	
13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe. Yes, DCA, DEP and DOT Fema has put a team in place at the borough for Sandy related issues and we are learning from this group.	x
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe. The Bloustein School at Rutgers has assisted with potential planning and design, the Kennedy School at Harvard did a gap analysis and NJIT did a studio class about potential design with technology.	x
15. A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	x

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

*Please check all activities that your municipality is committing to undertake over the next five years.*

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	X
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan.	X
B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating).	X
B. Enforce codes and standards beyond FEMA minimum requirements	X
C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	X
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	X
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	
11. Add hazard vulnerability to subdivision and site plan review criteria.	
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	<p>X</p>
<p>2. A. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below.</p>	
<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	
<p>C. Check here if your master, general or comprehensive was updated since 2008.</p>	<p>X</p>
<p>D. If you checked box 2C, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below. Stormwater management plan element was added to the Master Plan, and does address flood mitigation efforts in the Borough.</p>	
<p>E. If you checked box 2C, please check here if a specific hazard mitigation element was added to the document, and describe in the space below. See above</p>	
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. <i>The Borough of Sea Girt is in weekly contact with the Borough's Construction Official (who oversees the issuance of construction permits), and confirm with him and his staff that all current minimum standards are being met.</i></p>	<p>X</p>
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury).</p>	<p>X</p>

<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.</p> <p>The administrator was in constant contact with the Borough engineer and planning board and local construction officials for enforcement of FEMA min requirements and seeing what can be added to that to ensure safety of the Borough. The Borough has a limited number of repetitively damaged properties</p>	<p>x</p>
<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p> <p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.</p>	
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p> <p>F. Check here if your community has joined the CRS since 2009.</p> <p>G. Check here if your community has dropped out of the CRS since 2009.</p>	
<p>5. A. Check here if your community has a local zoning ordinance.</p> <p>B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.</p> <p>The Borough Administrator handled all correspondence with the local zoning board since 2008. The town does not undergo much new building and we have no open space. Zoning dealt with modifications or rebuilds to existing properties.</p>	<p>X</p> <p>X</p>
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.</p> <p>B. If so, describe. Stormwater management rules have been adopted and incorporated into plan review process.</p>	<p>x</p>
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.</p> <p>B. If so, describe. – current OEM and local engineer as well as the Borough Administrator have reviewed job descriptions and incorporated mitigation-related duties that will be completed during regularly scheduled tasks.</p>	<p>x</p>
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.</p> <p>Not yet but working on it due to mitigation grants applied for and planning for future mitigation efforts</p> <p>B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	<p>TBD</p>

Community Name Sea Girt Borough

<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).          B. If so, describe. – dune management to mitigate flooding in the borough and outflow pipe management</p>	<p>x</p>
<p>10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).          B. If so, describe.          Sewer cleaning schedule increased; identified crews to remove debris from storm drains. Wreck Pond has been opened up by Spring Lake providing for outflow of water during periods of heavy rain that mitigates potential flooding from the Pond.</p>	<p>x</p>
<p>11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.          B. If so, describe.          Site plans must comply with stormwater management rules.</p>	<p>x</p>
<p>12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.          B. If so, describe.          Sea Girt Lighthouse is in the beachfront area – mitigation grants to prevent flooding from east will cover this</p>	<p>x</p>
<p>13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities.          B. If so, describe.          HMGP grants applied for as well as CAFRA and FEMA advisors for building and maintaining dunes</p>	<p>x</p>
<p>14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities.          B. If so, describe. Administrator in constant contact with advisors from Stevens Institute of technology and with Dr. Stewart Farrell of the Coastal Institute at Stockton College.</p>	<p>x</p>
<p>15. A. Check here if your community has a stormwater management plan.</p>	<p>X</p>

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

*Please check all activities that your municipality is committing to undertake over the next five years.*

1.	CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.
2.	A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan. B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.
3.	Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).
4.	A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.
5.	Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.
6.	Modify work plans, policies or procedures to include hazard mitigation concepts/activities.
7.	Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.
8.	Revise capital or operating budgets to include a line item for mitigation project funding.
9.	Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.
10.	Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.
11.	Add hazard vulnerability to subdivision and site plan review criteria.
12.	Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.
13.	Reach out to state agencies for assistance with natural hazard mitigation activities.
14.	Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.
15.	Adopt (or continue to enforce) a local stormwater management plan/ordinance.
16.	Protect life and property in high hazard areas by limiting densities of new development.
17.	Increase resilience by limiting the extension of public infrastructure in high hazard areas.
18.	Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.
19.	Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.
20.	Implement hazard mitigation activities through existing plans and policies.
21.	Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update

### Plan Integration Worksheet

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

Name: Ed Broberg

Title: Borough Engineer

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	<p>Y</p>
<p>2. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below. <b>The Borough works with its engineers to ensure the planning documents for the Borough will include all related hazardous mitigation initiatives in the Borough.</b></p>	<p>Y</p>
<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	<p>Y</p>
<p>C. Check here if your master, general or comprehensive was updated since 2008.</p>	<p>Y</p>
<p>D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below. <b>Adopted new ABFEs and updated Ordinances.</b></p>	<p>Y</p>
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below. <b>Adopted new ABFEs and updated Ordinances.</b></p>	<p>Y</p>
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. <b>The Borough Engineer provide copies of the new ABFEs mapping to the building department and a draft ordinance that modified the minimum elevation required for substantially damaged properties and new constructions. The Borough adopted the new ABFEs heights and updated their Ordinances to reflect these new building requirements.</b></p>	<p>Y</p>
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury)</p>	<p>Y</p>

<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.</p>	
<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p>	<p>Y</p>
<p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements. The Borough has been enforcing new construction and reconstruction standards including elevation standards. The Borough requires homeowner to elevate their home to the ABFEs which are advisory flooding maps and are stricter. In addition, the Borough requires two feet of free board where FEMA only requires one in AE zones.</p>	
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p>	<p>Y</p>
<p>F. Check here if your community has joined the CRS since 2009.</p>	
<p>G. Check here if your community has dropped out of the CRS since 2009.</p>	
<p>5. A. Check here if your community has a local zoning ordinance.          B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.</p> <p>The Borough of Union Beach is currently in the process of preparing a Strategic Recovery Planning Report. This report will evaluate all available planning documents in (i.e. master plans, zoning ordinances, hazard mitigation plan) for consistency regarding community resiliency. During this process, representatives from the engineer's office, the zoning office, planning board, and administrative offices and DPW staff will assist with us taking all documents for community resiliency and hazardous mitigation.</p>	<p>Y Y</p>
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.          B. If so, describe. The Borough Engineer provide copies of the new ABFEs mapping to the building department and a draft ordinance that modified the minimum elevation required for substantially damaged properties and new constructions. The Borough adopted the new ABFEs heights and updated their Ordinances to reflect these new building requirements.</p>	<p>Y</p>
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.</p>	

B. If so, describe.		
8.	A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding. B. Check here if capital or operating budgets already included this when the plan was first adopted.	
9.	A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable). B. If so, describe.	N/A
10.	A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently). B. If so, describe. They are inspected and cleaned every year.	Y
11.	A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria. B. If so, describe.	
12.	Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards. B. If so, describe.	
13.	Check here if your community has reached out to state agencies for assistance with natural hazard mitigation activities. B. If so, describe. <b>The Borough applied for funding for elevation of homes and road elevations.</b>	Y
14.	Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities. B. If so, describe.	
15.	A. Check here if your community has a stormwater management plan. B. Check here if your community has a stormwater management ordinance.	Y Y

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

*Please check all activities that your municipality is committing to undertake over the next five years.*

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan. B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	Y Y Y
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	Y
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	
11. Add hazard vulnerability to subdivision and site plan review criteria.	Y
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	Y
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	
16. Protect life and property in high hazard areas by limiting densities of new development.	
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	Y
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	
20. Implement hazard mitigation activities through existing plans and policies.	Y
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	Y

## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. ## Monmouth County Multi-Jurisdictional Hazard Mitigation Plan Update *Plan Integration Worksheet*

---

For a community to succeed in reducing risk in the long term, the information and recommendations of the hazard mitigation plan must be integrated into day-to-day local government operations. Throughout the planning process, partnerships are formed between departments and agencies, and sustained actions between these partners will increase the community's resilience to disasters. "Plan integration" can be thought of as the process whereby each local government will incorporate the mitigation plan findings and projects into other planning mechanisms (governance structures that are used to manage local land use development and community decision making).

For this Plan Update, FEMA requires:

- a summary of each jurisdiction's past progress in plan integration over the last planning cycle; and
- a description of plan integration activities that each jurisdiction expects to undertake over the course of the next planning cycle.

This worksheet has been set up, therefore, into two components with each portion focusing on one of the bullets above.

- Demonstration of Progress over the Last Planning Cycle – In the first component of this worksheet, we have reiterated the targeted plan integration activities that were included in the last version of the plan (Section 9, beginning on Page 9-4) in a tabular form, and are asking each community to describe their respective accomplishments since the plan was adopted five years ago.
- Targeted Plan Integration Activities for the Next Planning Cycle – Similarly, in the second component of this worksheet, we have outlined a series of plan integration activities for the next five-year planning cycle. Please document to FEMA the manner in which your community will commit to integrate the hazard mitigation plan into your local government operations from this point forward.

Where integration activities are carried out by another jurisdiction through an intergovernmental agreement or by another layer of government (such as the county), please include a note on the bottom of this form and reference the section number on this form that the note is referring to.

Feedback should be returned to URS Project Manager Anna Foley at [anna.foley@urs.com](mailto:anna.foley@urs.com) by June 13, 2013. If you have questions or need help, please email Anna or give her a call at 973-883-8562.

**DEMONSTRATION OF PAST PROGRESS OVER THE LAST PLANNING CYCLE**

*Please check all activities that your municipality has undertaken over the last five years.*

<p>1. Check here if you (or your predecessor on the CPG) issued a letter to each of your community's department heads to solicit their support and explore opportunities for integrating hazard mitigation planning objectives into their daily activities?</p>	
<p>2. Check here if you (or your predecessor on the CPG) worked with your planning department to educate them on the Hazard Mitigation Plan and encourage that on the next update of your master plan, general or comprehensive plan, hazard mitigation for natural hazards is addressed. Please describe your coordination efforts in the space below.</p>	
<p>B. Check here if your municipality does not have a master, general, or comprehensive plan.</p>	
<p>C. Check here if your master, general or comprehensive was updated since 2008.</p>	<p>X</p>
<p>D. If you checked box 2D, please check here if natural hazard risk/mitigation was incorporated into the updated document, and describe how in the space below.</p>	
<p>E. If you checked box 2D, please check here if a specific hazard mitigation element was added to the document, and describe in the space below. The local planning board to review and approve all zoning and land usage.</p>	
<p>3. Check here if you (or your predecessor on the CPG) coordinated with your building department to ensure that they have adopted and are enforcing the minimum standards established in the current State-adopted IBC (NJ edition). Please describe your coordination efforts in the space below. Predecessor coordinated with local building dept. and planning board to ensure compliance with State Uniform Construction Codes.</p>	<p>X</p>
<p>4. A. Check here if your community participates in FEMA's National Flood Insurance Program (this is true for all except the Borough of Freehold and Township of Shrewsbury).</p>	
<p>B. If your community participates in the NFIP and was only enforcing minimum requirements at the time of the first plan's adoption, check here if you (or your predecessor on the CPG) coordinated with your Floodplain Administrator to determine if enforcement beyond FEMA minimum requirements would be prudent for your community. Please describe your coordination efforts in the space below.</p>	
<p>C. Check here if your community was already enforcing regulations beyond FEMA minimum requirements.</p>	
<p>D. Briefly explain here what is currently being enforced beyond FEMA minimum requirements.</p>	
<p>Enforcement is based on code regulations.</p>	
<p>E. Check here if your community has maintained its participation in the NFIP's Community Rating System (CRS).</p>	
<p>F. Check here if your community has joined the CRS since 2009.</p>	
<p>G. Check here if your community has dropped out of the CRS since 2009.</p>	

<p>5. A. Check here if your community has a local zoning ordinance.                  B. Check here if you (or your predecessor on the CPG) worked with your local zoning board to educate them on the Hazard Mitigation Plan and encourage consideration of low occupancy, low-density zoning in hazard areas, when practicable. Please describe your coordination efforts in the space below.</p>	<p>X</p>
<p>6. A. Check here if any work plans, policies or procedures were changed to include hazard mitigation concepts/activities.                  B. If so, describe The Borough contracts with an engineering firm to review building and site plan designs during the review process to ensure proper compliance with uniform construction codes and adequate drainage specifications.</p>	<p>X</p>
<p>7. A. Check here if any job descriptions were revised to include mitigation-related duties to further institutionalize mitigation.                  B. If so, describe.</p>	
<p>8. A. Check here if capital or operating budgets were revised to include a line item for mitigation project funding.                  B. Check here if capital or operating budgets already included this when the plan was first adopted.</p>	
<p>9. A. Check here if your governing body or local executive issued any directives to require departments/agencies to carry out certain hazard mitigation activities (if your jurisdiction does not have this authority, say 'NA' for Not Applicable).                  B. If so, describe. Storm water management plan</p>	<p>X</p>
<p>10. A. Check here if your Department of Public Works has adopted more rigorous procedures for inspecting and cleaning debris from streams and ditches (i.e., more frequently).                  B. If so, describe. As a matter of daily routine practices, DPW workers visually inspect drainage points. The results are reported back to the Superintendent of DPW, who then initiates the appropriate response for proper cleaning and or repairs.</p>	<p>X</p>
<p>11. A. Check here if your Planning Department has added hazard vulnerability to subdivision and site plan review criteria.                  B. If so, describe. The Borough's engineering firm works with the planning board to complete a comprehensive review of all site plans, ensuring compliance with state uniform construction codes.</p>	<p>X</p>
<p>12. Check here if inventories of historic sites in hazard areas in your community have been performed to identify where special treatment may be needed to protect them from specific natural hazards.                  B. If so, describe. N/A</p>	
<p>13. Check here if your community has reached out to state agencies for assistance with natural hazard mitigation</p>	<p>X</p>

Community Name \_\_\_\_\_ West Long Branch

activities.	
B. If so, describe. N.J.D.O.T. – To clear storm drains on Hwy 36, west of Hwy 71.	
14. Check here if your community has reached out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
B. If so, describe. “Urban Coast Institute” at Monmouth University.	
15. A. Check here if your community has a stormwater management plan.	X
B. Check here if your community has a stormwater management ordinance.	X

**TARGETED PLAN INTEGRATION ACTIVITIES FOR THE NEXT PLANNING CYCLE**

Please check all activities that your municipality is committing to undertake over the next five years.

1. CPG member will issue a letter to each department head to solicit their support and explore opportunities for further integration of hazard mitigation into the daily activities of the community as a whole.	
2. A. Incorporate hazard mitigation for natural hazards in the next update of your master, general or comprehensive plan. B. Add a specific hazard mitigation element to the next update of your master, general or comprehensive plan.	X
3. Adopt and enforce the minimum building standards established in the current State-adopted IBC (NJ edition).	X
4. A. Maintain community participation in FEMA's National Flood Insurance Program (or join the NFIP, if you are not currently participating). B. Enforce codes and standards beyond FEMA minimum requirements. C. Join (or continue to maintain participation in) the NFIP's Community Rating System.	X
5. Steer growth and development away from high risk locations by using the risk assessment from the hazard mitigation plan as a tool to monitor future updates of community land use plans, zoning and subdivision codes and the development review process.	
6. Modify work plans, policies or procedures to include hazard mitigation concepts/activities.	X
7. Revise job descriptions to include mitigation-related duties to further institutionalize mitigation.	
8. Revise capital or operating budgets to include a line item for mitigation project funding.	
9. Issue directives to require departments/agencies in the community to carry out certain hazard mitigation activities.	X
10. Require the Department of Public Works to inspect and clean debris from streams and ditches more frequently.	X
11. Add hazard vulnerability to subdivision and site plan review criteria.	
12. Perform inventories of historic sites in hazard areas in your community to identify where special treatment may be needed to protect them from specific natural hazards.	
13. Reach out to state agencies for assistance with natural hazard mitigation activities.	X
14. Reach out to colleges and universities for technical assistance with natural hazard mitigation activities.	X
15. Adopt (or continue to enforce) a local stormwater management plan/ordinance.	X
16. Protect life and property in high hazard areas by limiting densities of new development.	
17. Increase resilience by limiting the extension of public infrastructure in high hazard areas.	
18. Reduce the vulnerability of future development in high hazard areas by reviewing development regulations, and modifying where needed.	X
19. Use the risk assessment to inform future updates of the community emergency operations plan, evacuation plan, and/or post disaster recovery plan.	X
20. Implement hazard mitigation activities through existing plans and policies.	
21. Sponsor training on best practices for hazard mitigation for local government staff. (Note: this may be accomplished with other local governments.)	X

## APPENDIX 1.9 – WORKSHEET 7: ACTION WORKSHEETS

**Note:**

Several jurisdictional action items identified in this appendix list “severe storms” as a hazard addressed; however, that doesn’t correspond to one of the hazards profiled in Section 3A. Please note that severe storms, by definition, are a broad category event-type covering a range of atmospheric hazards identified in this plan (specifically: extreme temperatures, extreme wind, hailstorm, hurricane and tropical storm, lightning, nor’easter, tornado, and winter storm).

**Monmouth County  
Community Rating System Program**

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane &amp; Tropical Storms, Nor'easter, Coastal Erosion, Flood, Storm Surge, Wave Action</i>
<b>Risk finding</b>	<i>The CRS ranking program, which is run by FEMA through the National Flood Insurance Program (NFIP), scores communities on their effectiveness in dealing with flood plain management and development. Towns that take action steps to increase their resiliency to future storm events can help residents and businesses increase their eligibility for policy holder discounts. The program differentiates amongst ten classes. Communities enter at Class 10, and then as additional activities undertaken, they accumulate points toward moving up into the next higher class and achieving an associated decrease in insurance premiums for policyholders in their jurisdiction. Currently there are only eight Monmouth County towns that are part of the CRS program. Many communities in Monmouth County lack the resources to undertake the more technical aspects of the program in-house. In turn, many communities have either not accessed the program at all, or have entered at only the lowest levels. Many homeowners and businesses in Monmouth County may see an increase in their flood insurance premiums as the new FEMA Flood Maps are adopted.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Local planning and regulations</i>
<b>Action type</b>	<i>CRS- NFIP Community Rating System (CRS) Community Engagement and Participation</i>
<b>Action description</b>	<i>County to provide technical and professional assistance to local municipalities for their engagement and advancement in the National Flood Insurance Program's (NFIP) Community Rating System (CRS). Hazard mitigation planning, community outreach, public information, flood protection information, mapping and regulations</i>
<b>Existing, future &amp;/or NA</b>	<i>Future and existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Improve municipal mitigation activities that result in an increase the number of communities in Monmouth County that participate in the CRS program; Increase the CRS rankings of those communities that already participate in the CRS program; improve public awareness and knowledge of flood prevention and mitigation activities. NFIP participating municipalities are eligible for CRS assistance through Monmouth County. Policy holders (residential and business) in CRS communities benefit from better resiliency and lower insurance premiums; towns also benefit from reduced premiums on their flood prone assets. As more and more people in the County become aware of the program and undertake smaller scale mitigation activities, losses will be avoided during large and small events alike. While the dollar losses avoided are unquantifiable, losses avoided are estimated to be well in excess of project costs.</i>
<b>Cost estimate</b>	<i>\$50,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>NFIP participating municipalities are eligible for CRS assistance through Monmouth County. Policy holders (residential and business) in CRS communities benefit from better resiliency and lower insurance premiums; towns also benefit from reduced premiums on their flood prone assets. This action is likely to be cost effective, with unquantifiable benefits estimated to be well in excess of project costs.</i>
<b>Technical</b>	<i>This program is technically feasible including the production of public information material for distribution, outreach meetings, website and document maintenance; ordinance and master plan preparation assistance; GIS mapping and land use analysis;</i>
<b>Political</b>	<i>The CRS program has been formalized by the Monmouth County Board of Chosen Freeholders; 15 local municipalities are either current participants in CRS or have taken actions to implement CRS. Included in the County CEDS and upcoming Master Plan</i>
<b>Legal</b>	<i>No known legal impediments</i>
<b>Environmental</b>	<i>No known negative environmental impacts</i>
<b>Social</b>	<i>Anyone living in or conducting business in a flood prone area of a CRS community may benefit directly from this type of assistance; those outside flood prone areas in a town benefit from overall improved community resiliency, minimized storm impacts, lower cleanup/repair/replacement costs over time.</i>
<b>Administrative capability</b>	<i>Monmouth County has the staff to assist but requires additional training and expertise on some CRS and floodplain subject matters</i>
<b>Local champion</b>	<i>Monmouth County Division of Planning and Office of Emergency Management</i>
<b>Other community objectives</b>	<i>Integrate mitigation activities and practices into county and local master plans, improve public awareness and involvement in mitigation activities and flood preparedness</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Participation in the NFIP Community Rating System (CRS)</i>
<b>Responsible party</b>	<i>Joe Barris, PP, AICP and Margaret Murnane Brooks</i>
<b>Potential funding sources</b>	<i>Dedicated staff time, state and federal resiliency grants</i>
<b>Time line</b>	<i>Five year-long term effort</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is a new action since the last HMP. The county began developing a CRS user program in late 2013 and is looking to expand assistance to our municipal partners. Progress is ongoing.</i>

**Monmouth County  
Floodplain Management Capacity and Certification**

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County</i>
<b>Community action number</b>	<i>2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane &amp; Tropical Storms, Nor'easter, Coastal Erosion, Flood, Storm Surge, Wave Action</i>
<b>Risk finding</b>	<i>All communities in Monmouth County participate in FEMA's National Flood Insurance Program. Many communities and residents suffer from flooding events on a regular basis, and incur significant damages and costs associated with preparation, response, and recovery from these events. There also tends to be a disconnect between local master plans and floodplain management issues.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Local planning and regulations</i>
<b>Action type</b>	<i>Support local floodplain management planning</i>
<b>Action description</b>	<i>Assist municipalities in identifying and executing floodplain management activities that improve flood hazard mitigation, community resiliency and recovery from storm events. Expand understanding, capacity, and expertise in Floodplain Management. Training and certification - Monmouth County staff members would welcome more advanced training and certifications in areas such as floodplain management strategies and land use development in the SFHA that would be necessary to provide resource support to reduce these costs and bridge the planning gap. This action benefits multiple municipal jurisdictions in Monmouth County by providing certified staff to assist with local floodplain management strategies including ordinance preparation master plans, and outreach.</i>
<b>Existing, future &amp;/or NA</b>	<i>Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided by a project of this nature are unquantifiable, but are generally considered to be well in excess of project costs.</i>
<b>Cost estimate</b>	<i>\$25,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is estimated to be cost effective, with unquantifiable losses avoided considered to be well in excess of project costs.</i>
<b>Technical</b>	<i>This program is technically feasible as there are numerous staff members with educational backgrounds that support this type of activity including degrees in planning, environmental science, environmental policy, engineering.</i>
<b>Political</b>	<i>This activity supports advancement of the County's CRS program which has received support from County officials.</i>
<b>Legal</b>	<i>No known legal impediments</i>
<b>Environmental</b>	<i>No known negative environmental impacts</i>
<b>Social</b>	<i>Communities benefit from having certified experts to call upon at the regional level to assist in floodplain management and reducing flood risk.</i>
<b>Administrative capability</b>	<i>Monmouth County has the staff to assist but requires additional training and expertise on some CRS and floodplain subject matters</i>
<b>Local champion</b>	<i>Monmouth County Division of Planning and Office of Emergency Management</i>
<b>Other community objectives</b>	<i>Better integration of floodplain management issues and recommendations into county and local master plans as well as local ordinances. This effort improves County effectiveness to support efforts in the CRS program.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Master Plan and ordinances</i>
<b>Responsible party</b>	<i>Joe Barris, PP, AICP and Margaret Murnane Brooks</i>
<b>Potential funding sources</b>	<i>Dedicated staff time, state and federal grants</i>
<b>Time line</b>	<i>Five year-long term effort</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is a new recommended action since the last HMP.</i>

**Monmouth County**  
**GIS Enhancements for Mitigation and Risk Assessment**

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County</i>
<b>Community action number</b>	<i>3</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane &amp; Tropical Storms, Nor'easter, Coastal Erosion, Flood, Storm Surge, Wave Action</i>
<b>Risk finding</b>	<i>Many local officials in Monmouth County lack direct access to mapping services (i.e., GIS). This creates a gap in their full understanding of natural hazards in their communities, significant costs are incurred each year for hazard response, recovery, and damage repair. Lack of access to mapping services such as GIS creates a situation in some communities where mitigation project development is sometimes hindered, and public education/warning programs are not as efficient/targeted as they could be.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Education and awareness programs</i>
<b>Action type</b>	<i>Increase awareness of flood risk</i>
<b>Action description</b>	<i>Many municipalities rely on GIS assistance from Monmouth County. This system can be improved to provide municipal access with online services. This requires new software and/or software licenses, hardware and equipment, data updates and upgrades as well as investments in our existing technology infrastructure. This system would also allow the public to access GIS information and customize maps showing risk to their property and community and ties back to CRS mapping requirements as well as information used in the development of local master plans.Planning, hazard response, community outreach, public information, flood information, mapping, municipal training, CRS Support. Support development of interactive, online mapping services for public use, provide municipalities with technical assistance and training, improve in-house GIS system network, provide mapping and analysis services to CRS engaged communities, enhance information assimilation and distribution.</i>
<b>Existing, future &amp;/or NA</b>	<i>Future and existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The County, 53 municipalities, and the public would benefit from having easy access to customized online mapping to help evaluate and understand community risk. Having more direct access to mapping services tools could facilitate local communities to guide development away from hazard areas, improve public education/warning for their residents in hazard areas, and enhance their mitigation project development. Improve county and local government capacity in the identification and analysis of flood risk. Provide an improved user interface for officials and the public to review and analyze risk in their community. Mapping and analysis can be used in the development of community master plans without requiring extensive GIS knowledge or technology for end users. Losses avoided are unquantifiable for a project of this nature; however, they are generally expected to be well in excess of the \$100k project costs.</i>
<b>Cost estimate</b>	<i>\$100,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is expected to be cost effective, with benefits expected to be well in excess of the \$100,000 project costs.</i>
<b>Technical</b>	<i>This program is technically feasible including the development of online mapping services, providing technical outreach assistance, and map assistance with CRS program requirements.</i>
<b>Political</b>	<i>A GIS program and CRS program including is available to municipalities through the County. This would enhance existing capabilities.</i>
<b>Legal</b>	<i>No known legal impediments</i>
<b>Environmental</b>	<i>No known negative environmental impacts</i>
<b>Social</b>	<i>Communities and the public would benefit from risk awareness and analysis. Communities could include mapping and modeling their community master plans, land use studies, environmental resources inventories, etc.</i>
<b>Administrative capability</b>	<i>Monmouth County has the staff to assist but requires additional training and GIS capabilities.</i>
<b>Local champion</b>	<i>Monmouth County Division of Planning</i>
<b>Other community objectives</b>	<i>Risk identification and analysis, community planning, public information and awareness, remote access to information, asset inventory, impact modeling</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Monmouth County GIS Program</i>
<b>Responsible party</b>	<i>Monmouth County GIS Supervisor</i>
<b>Potential funding sources</b>	<i>Dedicated staff time, state and federal grants</i>
<b>Time line</b>	<i>Five year-long term effort</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is a new action since the last HMP. The county constantly improves upon its GIS capabilities and information delivery.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>County of Monmouth</i>
<b>Community action number</b>	4
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Severe Storm, Storm Surge, Coastal Erosion, Wave Action, Landslides, Hurricanes and Tropical Storms, Nor'easters</i>
<b>Risk finding</b>	<i>Within Hartshorne Woods Park (Middletown) there are two unique sites; Claypit Creek and Portland Place. The sites are protected by coastal river-edge bluffs which were severely eroded during the Superstorm Sandy event. Both sites offer passive recreation activities for County residents and have a south-eastern orientation steep bluff, which received the most direct exposure of winds, flooding and wave action from the storm.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Protect critical facilities, Protect and restore natural buffers, Stabilize erosion hazard area.</i>
<b>Action type</b>	<i>Slope stabilization, Living shoreline restoration.</i>
<b>Action description</b>	<i>This proposal will serve to reestablish, restore and stabilize the eroded bluff and establish a living shoreline at the river edge to further provide protection of the slope to future storm events as well as provide and enhance habitat for fish and wildlife.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing &amp; Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Proposed slope restoration will protect a nearby historic structure that is listed on the National Historic Register at one site and at the other upland recreational facilities will be protected, and will enhance wildlife and fish habitats. Losses avoided by implementing this action are estimated to be approximately \$10 million.</i>
<b>Cost estimate</b>	<i>\$700,000 design, permit fees and implementation</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits on the order of \$10 million and costs of only \$700k.</i>
<b>Technical</b>	<i>Technically feasible by proven methods of river coastal restoration and case studies.</i>
<b>Political</b>	<i>No political opposition is known. Previous support by other conservation organizations was obtained.</i>
<b>Legal</b>	<i>No legal obstacles</i>
<b>Environmental</b>	<i>Must conform to NJDEP and US Army Corps of Engineers permitting issues.</i>
<b>Social</b>	<i>Recreational facilities provide benefits for a wide age and ability cross section of the public. Natural resources are protected for the public good.</i>
<b>Administrative capability</b>	<i>The County of Monmouth has the personnel and administrative capabilities to begin planning and permitting for such a project. Additional specialty consultants will be hired on an as needed basis.</i>
<b>Local champion</b>	<i>County of Monmouth, NJDEP</i>
<b>Other community objectives</b>	<i>Protects existing recreational features or public natural areas adjacent to project sites.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>NJ Municipal Land Use Law, NJDEP Permitting</i>
<b>Responsible party</b>	<i>Monmouth County Park System</i>
<b>Potential funding sources</b>	<i>FEMA, Capital Sources, NJDEP Green Acres/Blue Acres, NOAA, non-profits land conservation organizations.</i>
<b>Time line</b>	<i>1 year design/permitting, 1 year construction.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action proposed in 2014</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>County of Monmouth</i>
<b>Community action number</b>	5
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Floods, Severe Storm, Storm Surge, Hurricanes and Tropical Storms, Nor'easters, Wave Action</i>
<b>Risk finding</b>	<i>The County Park System acquires land for open space preservation, public park &amp; recreation purposes and natural resources conservation. Some of the properties that are identified for acquisition are ones that are subject to flooding, winter storms or associated storm surges. These properties may be located in coastal zones or located along stream and river corridors throughout the county. When many properties along a watercourse are acquired, they form a protected greenway along the stream or river. By purchasing these properties, any buildings located in the flood zone are removed and the land is restored to a natural condition. Protected lands adjacent to coastal zones and river courses helps to reduce regional flooding by not increasing impervious cover and also allows natural systems of forests and marshes to mitigate some of the effects of flooding.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Removal of Structures in Flood Hazard Area, Natural Resource Protection</i>
<b>Action type</b>	<i>Acquisition of flood prone properties and coastal properties subject to winter storms and storm surge.</i>
<b>Action description</b>	<i>The Monmouth County Park System will continue to acquire properties within the project areas designated in the Monmouth County Open Space Plan (2008) to create a county-wide public open space system that will help meet park and recreation needs and conserve vital natural resources. Properties subject to flooding, severe winter weather and associated storm surges are considered for purchase to meet the goals of the Monmouth County Open Space Plan. By purchasing these properties, any buildings located in the flood zone are removed and the land is restored to a natural condition.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Removes or reduces structures subject to flooding. This is an ongoing program; no particular properties are identified at this time. However, the sites that would be good candidates for this program would be highly floodprone and would be purchased where their historic flood losses have been significant enough to justify the cost of the property.</i>
<b>Cost estimate</b>	<i>Ongoing purchase program that is subject to real estate market conditions.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Cost effective as the program eliminates flood prone structures while preserving natural resources and providing recreational opportunities for the public.</i>
<b>Technical</b>	<i>Proven technique to reduce flooding and the elimination of flood prone structures.</i>
<b>Political</b>	<i>This is a continuing program that has always had favorable support since its inception.</i>
<b>Legal</b>	<i>No legal obstacles</i>
<b>Environmental</b>	<i>Program provides for the protection of natural resources from development.</i>
<b>Social</b>	<i>Recreational facilities provide benefits for a wide age and ability cross section of the public. Natural resources are protected for the public good.</i>
<b>Administrative capability</b>	<i>The County of Monmouth has the personnel and administrative capabilities to continue in the purchasing properties for Open Space Conservation and Recreational needs.</i>
<b>Local champion</b>	<i>County of Monmouth</i>
<b>Other community objectives</b>	<i>Provides additional recreational opportunities and land conservation. Open space preservation. (all in addition to flood mitigation and natural resources protection)</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Monmouth County Open Space Plan (2008)</i>
<b>Responsible party</b>	<i>Monmouth County Park System</i>
<b>Potential funding sources</b>	<i>FEMA, Capital Sources, NJDEP Green Acres/Blue Acres, non-profits land conservation organizations.</i>
<b>Time line</b>	<i>ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Amended action from previous Worksheet 5</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>County of Monmouth</i>
Community action number	6
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Coastal Erosion, Storm Surge, Wave Action, Landslide, Hurricanes and Tropical Storms, Nor'easters, Flooding</i>
Risk finding	<i>Fisherman's Cove Conservation Area, Seven Presidents Oceanfront Park, Henry Hudson Trail - Popamora Point, Bayshore Waterfront Park have all experience some coastal dunes loss, erosion of coastal zone open space real estate, sedimentation of adjacent channels, loss of protective features for adjacent private properties.</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project, Natural Resource Protection</i>
Action type	<i>Stabilize slopes, establish dunes, plant native coastal vegetation.</i>
Action description	<i>Regrading and/or sand fencing to establish dune topography. Vegetation management to establish native coastal vegetation adapted to coastal hazard and slopes.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Loss of natural systems, dunes &amp; coastal zone real estate. Losses avoided are estimated to be roughly \$15 million. (Fisherman's Cove, \$3 million; Seven Presidents Oceanfront Park, \$6 million; Henry Hudson Trail - Popamora Point, \$2 million; Bayshore Waterfront Park \$4 million)</i>
Cost estimate	<i>Fisherman's Cove \$500,000, Seven Presidents \$100,000, Popamora Point \$150,000, Bayshore Waterfront Park \$650,000 <b>TOTAL \$1.4 Million</b></i>
Cost effectiveness (i.e., benefit/cost)	<i>Cost effective as benefits are projected to be in excess of project costs. The program enhances protective features for adjacent private properties under storm conditions while preserving natural resources and providing recreational opportunities for the public.</i>
Technical	<i>Technically feasible, Seven Presidents Oceanfront Park and Bayshore Waterfront Park have constructed dune systems.</i>
Political	<i>Political and popular support.</i>
Legal	<i>County owned property, permitable actions.</i>
Environmental	<i>No impacts, compliant with Land-Use regulations. Carry permits already in some cases.</i>
Social	<i>No specific populations affected. No permanent disruptions to communities.</i>
Administrative capability	<i>The County of Monmouth has the personnel and administrative capabilities to plan and coordinate implementation for such a project.</i>
Local champion	<i>County of Monmouth, Borough of Atlantic Highlands, Manasquan Borough, Borough of Long Branch and Middletown Township .</i>
Other community objectives	<i>Provides quality open space and access to waterfront.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Structural Project, Natural Resource Protection</i>
Responsible party	<i>Monmouth County Park System</i>
Potential funding sources	<i>US Fish &amp; Wildlife Foundation, NOAA, FEMA, HRERP</i>
Time line	<i>1 year Planning, Permitting, Bid Contract 2 year implementation</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action proposed in 2014</i>

## Action Worksheet

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>County of Monmouth</i>
Community action number	7

### Assessing the Risk

Hazard(s) addressed	<i>Flooding, Hurricanes and Tropical Storms, Nor'easters</i>
Risk finding	<i>Pine Brook (Pine Brook Golf Course, Manalapan) and Ramanessin Brook (Holmdel Park, Holmdel) stream bank stabilization, Manasquan River (Turkey Swamp Park, Freehold) floodplain restoration. The Manasquan River has been increasingly more flood prone and suffers potable water quality issues related to increased watershed development and past stream channel straightening impacts.</i>

### Describing the Action

Action category	<i>Construct Flood Control Measures, Restore Natural Flood Mitigation Features</i>
Action type	<i>Bank stabilization, Floodplain restoration.</i>
Action description	<i>Installation of stream bank stabilization techniques throughout the streams in Ramanessin Brook and Pine Brook. Manasquan River floodplain study and restoration. A proposal has been in the planning phase for many years to re-introduce stream form and function in the upper reaches of the watershed where extensive straightening occurred in the past. This will result in more stream stability and improved water quality with improve stream function.</i>
Existing, future &/or NA	<i>Existing &amp; Future</i>

### Evaluating the Action

Losses avoided (i.e., benefits)	<i>Potable water quality degradation. Infrastructure (bridges, roadways, real estate) damages from flood event. Stream downcutting reduced, recreational use preserved. Not only does the proposed restoration serve to stabilize the immediate area of a current recreational facility or protected natural area, it also helps to lessen flooding and improve water quality for the watershed downstream from proposed sites. Flood losses avoided by the project are estimated to be on the order of \$30 million, plus additional unquantifiable benefits associated with water quality and recreation.</i>
Cost estimate	<i>\$2.3 million design and implementation</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of \$30 million and costs on the order of \$2.3 million.</i>
Technical	<i>Technically feasible by proven methods of stream and river restoration case studies.</i>
Political	<i>No political opposition is known. Previous support by other conservation organizations was obtained.</i>
Legal	<i>Proposal utilizes existing public property under the stewardship of the County.</i>
Environmental	<i>No impacts. With proper review and design is permissible.</i>
Social	<i>No specific populations affected. No permanent disruptions to communities.</i>
Administrative capability	<i>The County of Monmouth has the personnel and administrative capabilities to begin planning and studies for such a project and to determine or identify additional partnerships and funding needs. Additional specialty consultants will be hired on an as needed basis.</i>
Local champion	<i>County of Monmouth</i>
Other community objectives	<i>Protects existing recreational features or public natural areas adjacent to project sites.</i>

### Implementing the Action

Priority	<i>High</i>
Local planning mechanism	<i>NJDEP permitting</i>
Responsible party	<i>Monmouth County Park System</i>
Potential funding sources	<i>FEMA, Capital Bond</i>
Time line	<i>1 year design/permitting, 1 year construction and ongoing for future additional restorations.</i>

### Reporting on Progress

Action progress status	<i>New Action proposed in 2014</i>
------------------------	------------------------------------

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>County of Monmouth</i>
Community action number	<i>8</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Wildfire</i>
Risk finding	<i>Certain wild-lands and urban interface areas pose a risk to losses by fire. Fisherman's Cove Conservation Area (Manasquan Boro), Turkey Swamp Park (Freehold Township) and Bayshore Waterfront Park (Middletown Township) are all park areas that have been subject to wildfires which have potential to destroy adjacent residential properties as well as park building infrastructure.</i>
<b>Describing the Action</b>	
Action category	<i>Urban Fire Reduction</i>
Action type	<i>Fire hazard reduction</i>
Action description	<i>Prescribed burn, mechanical thinning at: Fisherman's Cove Conservation Area (Manasquan Boro), Turkey Swamp Park (Freehold Township) and Bayshore Waterfront Park (Middletown Township)</i>
Existing, future &/or NA	<i>Existing, Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Losses avoided are estimated to be well above \$25 million, considering both residential property and park building infrastructure.</i>
Cost estimate	<i>Turkey Swamp \$15,000, Bayshore \$20,000, Fisherman's Cove \$10,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The cost of this ongoing project is highly cost effective when compared to the cost of replacing even one structure as well as providing public safety. Losses avoided are estimated to be \$25 million as compared to costs of only \$45,000.</i>
Technical	<i>Technically feasible.</i>
Political	<i>Public support moderate, local authorities high support.</i>
Legal	<i>Proposal utilizes existing public property under the stewardship of the County.</i>
Environmental	<i>No impacts. With proper review and design is permissible.</i>
Social	<i>No specific populations affected. No permanent disruptions to communities.</i>
Administrative capability	<i>The County of Monmouth has the personnel and administrative capabilities to implement the Community Wildfire Protection Plans prepared for Turkey Swamp Park (2011) and Bayshore Waterfront Park (2010). Fisherman's Cove Conservation Area still needs to be developed.</i>
Local champion	<i>County of Monmouth, NJ Forest Fire Service, Freehold Township., Manasquan Boro &amp; Middletown Township.</i>
Other community objectives	<i>Augments local fire marshal community protection efforts.</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>Community Wildfire Prevention Plan</i>
Responsible party	<i>Monmouth County Park System</i>
Potential funding sources	<i>Community Wildfire Prevention Plan, FEMA</i>
Time line	<i>1 year contract and implementation, then recurring four year cycle</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action proposed in 2014</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>County of Monmouth</i>
<b>Community action number</b>	9
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Coastal Erosion, Storm Surge, Wave Action, Severe Storm, Landslide</i>
<b>Risk finding</b>	<i>A section of the Henry Hudson Trail located in Atlantic Highlands along Sandy Hook Bay was destroyed by Superstorm Sandy. The adjacent coastal bluff experienced erosion at the base of slope from wave action and storm surge. Above the trail, located on the bluff, there are numerous high value residences that have taken advantage of the unique location. The bluff is subject to slump block failure usually associated with a rain event and disruption of the slope.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects, Natural Resource Protection</i>
<b>Action type</b>	<i>Shoreline and slope stabilization</i>
<b>Action description</b>	<i>A mile segment of the coastal trail will be the target area of this project. Various living shoreline techniques and wave attenuation structures will be investigated to find the "best fit" approach that will be permissible, economic and supported by adjacent residents. Additional work of stabilization of the slope will also be investigated that will replant or restore the slope for adjacent public owned properties.</i>
<b>Existing, future &amp;/or NA</b>	<i>Addresses the protection of existing structures</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>It is anticipated that proposed shoreline stabilization will add a significant level of stabilization and protection of the adjacent coastal bluff. Eventual work will protect a public recreational facility as well as residential homes located on the bluffs with the associated public infrastructure of roadways, utilities and additional open space. Losses avoided by implementing the project are estimated to be in the neighborhood of roughly \$100 million.</i>
<b>Cost estimate</b>	<i>Phase 1 - Estimated \$150,000 for planning and feasibility phase Phase 2 - Project (slope stabilization; shoreline stabilization) - Estimated to be in the range of \$5 million to \$20 million.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is considered likely to be cost effective, with benefits on the order of \$100 million and costs on the order of \$20 million .</i>
<b>Technical</b>	<i>Technically feasible as other similar structures, and improvements have been installed in other coastal locations</i>
<b>Political</b>	<i>Public support for the repair and protection of the trail has been great since the damage from Superstorm Sandy. Additional support has been noted from the local town Environmental Commission.</i>
<b>Legal</b>	<i>Joint project with Borough of Atlantic Highlands and the State of New Jersey as proposed project will be located on lands owned by same.</i>
<b>Environmental</b>	<i>Must conform to NJDEP and US Army Corps of Engineers permitting issues</i>
<b>Social</b>	<i>Recreational facilities such as this trail, provide benefits for a wide age and ability cross section of the public. No displacement of adjacent residents is required.</i>
<b>Administrative capability</b>	<i>The County of Monmouth has the personnel and administrative capabilities to begin initial planning and studies for such a project and to determine or identify additional partnerships and permitting needs. Additional specialty consultants will be hired on an as needed basis.</i>

<b>Local champion</b>	<i>County of Monmouth, Borough of Atlantic Highlands, local residents, State of NJ</i>
<b>Other community objectives</b>	<i>May provide additional recreational opportunities for the public along shoreline.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>NJ Municipal Land Use Law, NJDEP Permitting</i>
<b>Responsible party</b>	<i>Monmouth County Park System</i>
<b>Potential funding sources</b>	<i>FEMA, Capital Sources</i>
<b>Time line</b>	<i>2 years for initial study and feasibility analysis, followed by implementation.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action proposed in 2014</i>

Monmouth County  
Coastal Evacuation Routes Improvements

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County</i>
<b>Community action number</b>	<i>10</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane, Tropical Storms, Nor'easter, Coastal Erosion, Flood, Storm Surge, Wave Action</i>
<b>Risk finding</b>	<i>Monmouth County has an active history of hurricanes and tropical storms. Implementation of evacuation orders related to an impending hurricane would have a significant impact on travel patterns and operating conditions on the area's transportation system. For example, prevailing directional patterns would be altered substantially as westbound and coastal residents and visitors traveling away from the coast to higher ground would heavily utilize northbound travel lanes. Congestion levels at locations that already have constrained service rate issues, such as merge junctions, ramps, and signalized major intersections would be exacerbated. The timing of an evacuation order would have a significant effect on traffic flows, the shorter the timeframe, the more intense delays and queing potential. Operational, physical and long term improvements (either by route or by type) would greatly enhance to capacity of these evacuation routes during an evacuation order.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and infrastructure projects</i>
<b>Action type</b>	<i>Protect critical infrastructure</i>
<b>Action description</b>	<i>Physical (signage, striping, conversion of traffic signals to LED) Operational (identifying severe inundation zones as priority areas, preparation to place 1st responders at key intersections and choke points and coordination of highway advisory radio) and Long Term (widening and elevating of roads and bridges) improvements to County evacuation routes as documented in the 2009 Monmouth County Coastal Evacuation Routes Improvement Study. This study provided a transportation system condition and assessment of 12 Portal Evacuation Routes within the County. Some targeted improvements based on the recommendations would likely result in substantial benefits on roadway capacity, balancing travel demand and safety along the overall length of each portal route</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The State's Highway system runs through Monmouth County as well as two County Roads have been incorporated into the NJ State Emergency Evacuation Route System. The addition of new portal candidates to the State's system will generate multiple benefits including improved area coverage, increased capacity to serve an intense evacuation demand, and an expanded number of diversion possibilities to circumvent congestion and blockages. This action will improve evacuation time during a significant storm event allowing residents and tourists to get out of harms way thus reducing loss of life. Life safety. Dollar losses avoided for projects of this nature are generally unquantifiable.</i>
<b>Cost estimate</b>	<i>A variety of discrete projects/improvements outlined in the study with costs ranging from a low of approximately \$500 to a high of roughly \$20,000,000.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The projects are expected to be cost effective because their costs are expected to be less than the value of the estimated number of lives that could be lost under existing conditions.</i>

Monmouth County  
Coastal Evacuation Routes Improvements

<b>Technical</b>	<i>Technically feasible, study completed, recommendations documented.</i>
<b>Political</b>	<i>Positive public support and political will to support this action.</i>
<b>Legal</b>	<i>No known legal impediments.</i>
<b>Environmental</b>	<i>No negative environmental impacts.</i>
<b>Social</b>	<i>Residents would benefit from safer evacuation routes not affected by natural hazards.</i>
<b>Administrative capability</b>	<i>Monmouth County has the capability to oversee this action.</i>
<b>Local champion</b>	<i>Monmouth County Planning, DPW&amp;E, Highway, OEM and DOT. Municipal Governments.</i>
<b>Other community objectives</b>	<i>Overall effort to protect residents and visitors from the hazards of coastal flooding by evaluating how the current evacuation route system can be improved to help move people away from flood zones.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>2009 Monmouth County Coastal Evacuations Routes Improvement Study</i>
<b>Responsible party</b>	<i>Monmouth County Engineering and Monmouth County Planning</i>
<b>Potential funding sources</b>	<i>County Operating and Capital Budgets, State and Federal Grants, State Staff</i>
<b>Time line</b>	<i>Near term and intermediate operational improvements and long range physical solutions.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is a new action for the updated HMP.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County Department of Public Works &amp; Engineering</i>
<b>Community action number</b>	11
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Natural or human-made hazards.</i>
<b>Risk finding</b>	<i>Lack of fuel supply in a key location of Monmouth County, which is detrimental to operational and emergency services provided during a time of disaster or crisis.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure/Infrastructure</i>
<b>Action type</b>	<i>Design and construct an above ground fuel dispensing facility at Monmouth County Highway District #6 yard.</i>
<b>Action description</b>	<i>Monmouth County has strategically located highway district yards throughout the County, which have provided fuel to not only County &amp; Municipal fleets, but, during disaster events, to the National Guard, Federal Emergency Management, and Local Police, Fire, Ambulatory and Rescue vehicles. The construction of a fueling station at Highway District #6 in the Borough of Eatontown, would provide fuel in a central and critical area of Monmouth County. In order to mitigate (i.e. lessen the damage/cost) the results of a flooding event it is necessary to have a source of available fuel for vehicles</i>
<b>Existing, future &amp;/or NA</b>	<i>This project would allow emergency and service vehicles a quick response time to protect and serve human life and existing development.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The construction of this fueling station would ensure a fleet with little or no limitations on its ability to respond and react during the most vulnerable times for the region. A readily available source of emergency fuel is essential to ensure swift and reliable emergency response capabilities. Timing is crucial in the deployment of emergency responders and security officials. The detrimental impacts on the community because of inadequate fuel supply for emergency vehicles are extended response times, potentially resulting in increased damage to private and public property and risk human life.</i>
<b>Cost estimate</b>	<i>\$500,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The risk to human life and potential for increased damages to private and public property resulting from inadequate fuel supply for emergency vehicles are generally unquantifiable, but will certainly be well in excess of the project cost.</i>
<b>Technical</b>	<i>Technical feasibility would be vetted out during design.</i>
<b>Political</b>	<i>There are no anticipated political implications.</i>
<b>Legal</b>	<i>There are no anticipated legal implications.</i>
<b>Environmental</b>	<i>Construction would be in accordance with all related laws and authorities and would be in compliance with any of the permitting issued by the appropriate regulatory agencies.</i>
<b>Social</b>	<i>The benefits of adding this fuel facility will include, but not be limited to, direct fuel access for emergency vehicles during disaster events, significantly improved emergency response time, and overall enhanced effectiveness of the County's ability to respond to the community's needs both during critical events and continuing through recovery efforts.</i>
<b>Administrative capability</b>	<i>Staff of Monmouth County Division of Public Works &amp; Engineering would oversee and coordinate the activities of the various consulting firms hired to perform the required work.</i>
<b>Local champion</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Other community objectives</b>	<i>N/A</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>N/A</i>
<b>Responsible party</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Potential funding sources</b>	<i>HMGP, PDM, and a County match, whether it be financial or in-kind in-house labor or both.</i>
<b>Time line</b>	<i>2 years - Monmouth County submitted a LOI to the Hazard Mitigation Grant Program in 2013.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action proposed for inclusion in the 2014 Hazard Mitigation Plan Update.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County Department of Public Works &amp; Engineering</i>
<b>Community action number</b>	<i>12</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Natural or human-made hazards.</i>
<b>Risk finding</b>	<i>Telecommunication and electrical systems at key Monmouth County Operational Buildings are negatively impacted during periods of power failure (interruption or loss of electrical service caused by disruption of power transmission caused by accident, sabotage, natural hazards, or equipment failure).</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure / Infrastructure Project</i>
<b>Action type</b>	<i>Protection of critical facilities.</i>
<b>Action description</b>	<i>The installation of permanent emergency generators at critical County Highway District facilities and the County Complex, which houses the administration buildings of the Department of Public Works, as well as the Divisions of Bridge, Highway, and Traffic Safety, to ensure the continuity of services during a disaster or crisis.</i>
<b>Existing, future &amp;/or NA</b>	<i>The Highway Districts and Divisions of Bridge, Highway, and Traffic Safety maintain and repair approximately 1,000 miles of County roadway and nearly 1,000 bridges and culverts, as well as the associated traffic signals and signs. Many roads and bridges are also considered critical infrastructure, particularly those providing ingress and egress for evacuees and those allowing emergency vehicles access to those in need. These roads are located in areas vulnerable to storm surge and inundation.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The detriments of these Districts &amp; Divisions being inoperable are extensive. They provide for event preparation/storm readiness (i.e. monitoring weather, delivering &amp; installing flood control devices &amp; sandbags, portable generators at critical intersections for traffic safety, etc.), assistance during the event (i.e. removal of fallen trees &amp; debris from critical evacuation routes, supply &amp; deliver concrete barriers to critical areas), and recovery post event (i.e. restore County infrastructure to safe and operating conditions). The benefits of this project for the County will be to ensure that each Highway District, the Public Works Administration, and the Divisions of Bridge, Highway &amp; Traffic have the electrical power necessary in advance of, during, and after any major disaster or hazard so that each strategically located facility can serve as the regional deployment center for the manpower, material, and equipment needed to maintain or repair County and/or municipal roads, bridges &amp; infrastructure for use by emergency vehicles (fire, first aid, and police) or evacuation routes for the general public.</i>
<b>Cost estimate</b>	<i>\$2,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The benefit of maintaining power during emergencies is easily understood, but generally unquantifiable; however, the benefit will far exceed the project cost of \$2,000,000.</i>
<b>Technical</b>	<i>The installation of emergency generators is technically feasible.</i>
<b>Political</b>	<i>There are no anticipated political implications.</i>
<b>Legal</b>	<i>There are no anticipated legal implications.</i>
<b>Environmental</b>	<i>There are no anticipated negative environmental implications.</i>
<b>Social</b>	<i>The social benefit would be both tangible (i.e. the real effects of a coordinated effort during a disaster resulting in power outages) as well as intangible (i.e. the security of the public in knowing the government offices responsible for their health and well-being are operational and emergency services are being provided).</i>
<b>Administrative capability</b>	<i>Staff of Monmouth County Division of Engineering &amp; Traffic Safety would oversee and coordinate the activities of the various consulting firms hired to perform the required work to install the generators or to provide any maintenance to the equipment needed following installation.</i>
<b>Local champion</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Other community objectives</b>	<i>N/A</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Responsible party</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Potential funding sources</b>	<i>HMGP, PDM, and a County match, whether it be financial or in-kind in-house labor or both.</i>
<b>Time line</b>	<i>As soon as funding becomes available. Monmouth County submitted a LOI to the Hazard Mitigation Grant Program in 2013.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action proposed for inclusion in the 2014 Hazard Mitigation Plan Update.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County Department of Public Works &amp; Engineering</i>
<b>Community action number</b>	<i>13</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Hurricane, Tropical Storm, Nor'easter &amp; Dam Failure</i>
<b>Risk finding</b>	<i>Dam overtopping and downstream flooding. Address the capacity and integrity of NJDEP defined Class 1 dams (those structures which, should they fail, would likely cause loss of life) and Class 2 dams (those structures which, should they fail, would likely cause substantial downstream property damage but are not considered to be a threat to life) as well as the associated bridge and roadways.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure /Infrastructure projects</i>
<b>Action type</b>	<i>Dam Rehabilitation, Bridge Replacement, Roadway &amp; Drainage improvements</i>
<b>Action description</b>	<i>Rehabilitate and upgrade dams to meet current NJDEP Bureau of Dam Safety Standards for spillway, embankment, low level outlet structure &amp; downstream channel improvements. Replace the adjoining County-owned bridge &amp; raise the roadway profile to address the safety issue associated with a potential dam failure or improve passage during flood events. Project locations include, but are not limited to, the following: 1) Lake Lefferts Dam, County Bridge MA-9, Ravine Dr. (CR 6A), Matawan; 2) Matawan Lake Dam, County Bridge MA-13, Main St. (CR 516), Matawan; 3) Perrineville Dam, County Bridge MS-48, Perrineville Rd. (CR 1), Millstone; 4) Shadow Lake Dam, County Bridges MT-30 &amp; MT-45, Hubbard Ave. (CR 12), Middletown; 5) Indian Dam, County Bridge U-18, Church St. (CR 526), Allentown; and 6) Hurley Pond Dam, County Bridge W-18, Allenwood Rd., Wall.</i>
<b>Existing, future &amp;/or NA</b>	<i>The action would protect existing County infrastructure (i.e. bridges and roads) and surrounding property and life.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>By NJDEP Dam Safety Standards, high hazard potential dams are "those dams, the failure of which may cause the probable loss of life or extensive property damage." Specifically for the County, the benefits of these projects would be significant financially over the long-term, as there would be less road flooding, therefore, less damage to the structures (i.e. reduced repair and maintenance costs). Reduced roadway flooding would also provide for safer passage for the traveling public. Repairing damage to the bridge and roadway following an overtopping event is very costly. Upgrading dams to increase storage and spillway capacity would reduce the amount of overtopping events, therefore, decrease the frequency of the need for the County to close the roadway during flooding events and the subsequent emergency repairs.</i>
<b>Cost estimate</b>	<i>Engineering estimates would vary and are project specific.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Cost effectiveness would vary and would be project specific, but is generally thought to be significant given the number of people and value of property and infrastructure in the potential inundation areas.</i>
<b>Technical</b>	<i>Technical feasibility will be addressed during the design phase.</i>

<b>Political</b>	<i>Monmouth County does not own the primary dam structure however is identified as a co-owner of various dams with respective municipalities. Appropriate agreements will be executed prior to design &amp; rehabilitation of each dam.</i>
<b>Legal</b>	<i>Jurisdictional issues would be identified and addressed and the appropriate agreements executed prior to project commencement.</i>
<b>Environmental</b>	<i>Construction would be in accordance with all related laws and authorities and would be in compliance with any of the permitting issued by the appropriate regulatory agencies. The results of the project would ultimately benefit the environment, as less roadway debris would be washed into the surrounding surface waters.</i>
<b>Social</b>	<i>These projects would provide for safe passage to all members of the public who utilize these roadways, as well as maintain the recreational value derived from the water impounded to create the associated lakes (i.e. fishing, canoeing and other active and passive recreation).</i>
<b>Administrative capability</b>	<i>Staff of Monmouth County Public Works &amp; Engineering would oversee and coordinate the activities of the various consulting firms hired to perform the required work or work in coordination with the consultants hired by the local municipality.</i>
<b>Local champion</b>	<i>Monmouth County Department of Public Works &amp; Engineering, with the cooperation of and/or agreement with the local municipalities.</i>
<b>Other community objectives</b>	<i>N/A</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>N/A</i>
<b>Responsible party</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Potential funding sources</b>	<i>County Bond Ordinance in partnership with municipal funding</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Action proposed in the previous 2009 Hazard Mitigation Plan.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Community action number</b>	14
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Natural or human-made hazards.</i>
<b>Risk finding</b>	<i>Telecommunication and electrical systems at key Monmouth County Administration Buildings are negatively impacted during periods of power failure (interruption or loss of electrical service caused by disruption of power transmission caused by accident, sabotage, natural hazards, or equipment failure).</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure / Infrastructure Project</i>
<b>Action type</b>	<i>Protection of critical facilities.</i>
<b>Action description</b>	<i>Installation of permanent emergency generators at Monmouth County Hall of Records (Freehold Borough) and Human Services Building (Freehold Township). These generators will be designed to handle all potential electrical loads at these buildings thereby ensuring uninterrupted continuity of County government and response to the emergency at hand.</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects the County as a whole, as (1) the Hall of Records house the offices of the County Freeholders and Administration, as well as other essential offices, which establish priorities for response and recovery during a disaster or crisis from a centralized operational location; and (2) the Human Resources Building houses the staff that provides services and programs to address the needs of our most vulnerable citizens and those who may be struggling with an unexpected event and need assistance.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The benefits to the community are immeasurable as uninterrupted electrical power is needed to maintain operation and management of critical services that are coordinated by the County Board of Chosen Freeholders and Administrator, as well as other essential personnel, from a centralized location. It will also ensure the continued operation of the many services the Human Services Department provides to the community. Without the generators, the County would experience losses because of a reduced ability to provide effective executive oversight and direction during times of disaster, as well as the interruption of critical services needed at precisely a time of emergency or disaster. Relocation of these critical County operations to facilities with emergency generators, if available, would be a large undertaking and delay response.</i>
<b>Cost estimate</b>	<i>\$1,110,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The benefit of maintaining power during emergencies is easily understood, but generally unquantifiable; however, the benefit will far exceed the project cost of \$1,100,000.</i>
<b>Technical</b>	<i>The installation of emergency generators is technically feasible.</i>
<b>Political</b>	<i>There are no anticipated political implications.</i>
<b>Legal</b>	<i>There are no anticipated legal implications.</i>
<b>Environmental</b>	<i>There are no anticipated negative environmental implications.</i>
<b>Social</b>	<i>The social benefit would be both tangible (i.e. the real effects of a coordinated effort during a disaster resulting in power outages) as well as intangible (i.e. the security of the public in knowing the government offices responsible for their health and well-being are operational and emergency services are being provided).</i>
<b>Administrative capability</b>	<i>Staff of Monmouth County Public Works &amp; Engineering would oversee and coordinate the activities of the various consulting firms hired to perform the required work to install the generators or to provide any maintenance to the equipment needed following installation.</i>
<b>Local champion</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Other community objectives</b>	<i>N/A</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Responsible party</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Potential funding sources</b>	<i>HMGP, PDM, and a County match, whether it be financial or in-kind in-house labor or both.</i>
<b>Time line</b>	<i>As soon as funding becomes available. Monmouth County submitted a LOI to the Hazard Mitigation Grant Program in 2013.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action proposed for inclusion in the 2014 Hazard Mitigation Plan Update.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Community action number</b>	15
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Hurricane &amp; Tropical Storm, Nor'easter</i>
<b>Risk finding</b>	<i>Road flooding results in damage to infrastructure, reduced safe passage, and isolation of neighborhoods by flood waters.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure / Infrastructure Project</i>
<b>Action type</b>	<i>Bridge replacement, roadway elevation and drainage improvements.</i>
<b>Action description</b>	<i>Projects may include the replacement of a County bridge or culvert and/or elevating the approach roadway above the flood elevation or to accommodate the new bridge structure. Project locations include, but are not limited to, the following: * County Bridge H-5 &amp; H-5A, Palmer Ave (CR 7), Holmdel &amp; Middletown; * County Bridge MA-11, Aberdeen Road, Matawan; * County Bridges ML-17, ML-18, &amp; ML-19, Station Rd., Marlboro; * County Bridge R-5, Florence Ave (CR 39), Union Beach; * Union Ave (CR 39), Union Beach</i>
<b>Existing, future &amp;/or NA</b>	<i>The action would protect existing County infrastructure (i.e. bridges and roads) and surrounding property and life.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Flooding submerges the roadway in water, which results in damage to the roadway and bridge and creates scour and embankment erosion. This increases the maintenance of these structures, causing financial strain to provide staff, materials, and equipment. Reduced roadway flooding would provide for safer passage for the traveling public. Flooded roads can result in isolated populations, creating difficulty for emergency vehicles to reach vulnerable residents and property during times of distress.</i>
<b>Cost estimate</b>	<i>Engineering estimates would vary and are project specific.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The benefits of bridge reconstruction and roadway elevation would be financially significant over the long-term, as there will be less road flooding, therefore, less damage to the bridge (i.e. reduced repair and maintenance costs). Furthermore, the flooded roadway creates a traffic safety issue or the road is closed completely, resulting in the need to detour traffic to other roadways, adding to County and Municipal labor costs. Additionally, there is an adverse economic effect on local businesses that are inaccessible. For these reasons, while benefits and costs would vary and be project specific, these projects are anticipated to be cost effective given the frequency of flooding at the identified locations.</i>
<b>Technical</b>	<i>Technical feasibility will be addressed during the design phase.</i>
<b>Political</b>	<i>There are no known political implications, at this time. All work would be in agreement with the local municipalities.</i>
<b>Legal</b>	<i>Following design, jurisdictional issues would be identified and addressed and the appropriate agreements and right-of-entries would be acquired.</i>
<b>Environmental</b>	<i>Construction would be in accordance with all related laws and authorities and would be in compliance with any of the permitting issued by the appropriate regulatory agencies. The result of the projects would ultimately benefit the environment, as less roadway chemicals and debris would wash into the surface waters.</i>
<b>Social</b>	<i>These projects would provide for safe passage to all members of the public who utilize these roadways.</i>
<b>Administrative capability</b>	<i>Staff of Monmouth County Public Works &amp; Engineering would oversee and coordinate the activities of the various consulting firms hired to perform the required work.</i>
<b>Local champion</b>	<i>Monmouth County Public Works &amp; Engineering and local municipalities.</i>
<b>Other community objectives</b>	N/A
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	N/A
<b>Responsible party</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Potential funding sources</b>	<i>County Bond Ordinance, Transportation Funding</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Action proposed in the previous 2009 Hazard Mitigation Plan.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County Department of Public Works &amp; Engineering</i>
<b>Community action number</b>	<i>16</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Hurricane &amp; Tropical Storm, Nor'easter, Extreme Wind</i>
<b>Risk finding</b>	<i>Storm events and subsequent flooding wash substantial amounts of debris and sedimentation in creeks and waterways, compounding the effects of natural siltation and build up of debris and fallen trees, which obstruct the natural flow of some surface waters, resulting in increased inland and coastal flooding.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure / Infrastructure Project</i>
<b>Action type</b>	<i>Ensuring the unobstructed flow of streams, creeks, and rivers through and immediately adjacent to infrastructure owned and/or maintained by Monmouth County.</i>
<b>Action description</b>	<i>Hard armoring of creek and river banks and shorelines is not always possible or desirable. In most areas of the County, the only way to mitigate (i.e. lessen the effect of) the results of flooding is to anticipate for, maintain, and provide efforts to recover from after an extreme event. Thus, it is essential to inspect and maintain the structural integrity of County infrastructure and to perform activities to remove debris and sediment that may negatively effect the flow of surface water in and around this infrastructure; prestorm, during the storm event, and clean-up afterwards. This includes activities such as removing debris from support bracing underneath low-lying bridges and culverts, clearing sediment build-up, or repairing embankment erosion on riverbanks near County infrastructure. Also, repairing and cleaning stormwater drains and other drainage systems.</i>
<b>Existing, future &amp;/or NA</b>	<i>The action protects existing County infrastructure (i.e. roads, bridges, and culverts) and surrounding property and life.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Flooding has the potential to negatively impact County infrastructure (i.e. roads, bridges, and culverts). For example, when culverts become inadequate to carry the flow of surface water due to clogging from excess storm debris and sediment, the streams back up, flood and overtop roads with water, creating driving hazards and undermine approach roadways.</i>
<b>Cost estimate</b>	<i>Varies with the intensity and location of the storm event.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is anticipated to be cost effective, with benefits in excess of project costs. Improvements to infrastructure will decrease the frequency of the need for the County to close the roadway during flooding events and the subsequent emergency repairs. There will also be potential for reduced damages to property and hazards to life that is created by flooding. Results from compromised infrastructure could result in isolated population, disruption to transportation, structural and property damage, debris distribution and other environmental impacts.</i>
<b>Technical</b>	<i>These activities are economically defensible and technically sound.</i>
<b>Political</b>	<i>There are no anticipated political implications. Coordination with the municipalities would be arranged prior to activities, if necessary.</i>
<b>Legal</b>	<i>Work is typically performed in the County Right-of-Way.</i>
<b>Environmental</b>	<i>There are no anticipated environmental detriments. Activities to reduce or address surface water flow blockages enhance the environment, as surface waters that flood adjacent lands (including residential, commercial and agricultural areas) decrease water quality through increased turbidity and non-point source pollution.</i>
<b>Social</b>	<i>This project would provide for safe passage to all members of the public who utilize this roadway and protect surrounding property owners.</i>
<b>Administrative capability</b>	<i>Work is routinely performed with staff and equipment from the Monmouth County Department of Public Works &amp; Engineering.</i>
<b>Local champion</b>	<i>Monmouth County Department of Public Works &amp; Engineering and local municipalities.</i>
<b>Other community objectives</b>	<i>N/A</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>N/A</i>
<b>Responsible party</b>	<i>Monmouth County Department of Public Works &amp; Engineering and local municipalities.</i>
<b>Potential funding sources</b>	<i>NRCS EWP Grant, match from County in-house labor and/or Capital and/or Operating Budget.</i>
<b>Time line</b>	<i>Annual and on-going.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action proposed for inclusion in 2014 Hazard Mitigation Plan Update. Received an EWP Grant from NRCS in 2013.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Community action number</b>	<i>17</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane, Tropical Storm, Nor'easter, Wave Action, Storm Surge &amp; Erosion</i>
<b>Risk finding</b>	<i>Structural integrity of bridges that are exposed to wave, tidal, and storm surges. These bridges may carry coastal evacuation routes and any damage to the bridge may impair safe passage, ultimately jeopardizing human life. Bridges include, but are not limited to, W-43 (Avon-by-the-Sea &amp; Belmar), S-31 (Middletown &amp; Rumson), S-32 (Rumson &amp; Sea Bright), and W-9 (Brielle &amp; Manasquan).</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure / Infrastructure Project</i>
<b>Action type</b>	<i>Protect critical infrastructure.</i>
<b>Action description</b>	<i>Scour/embankment protection and repairs. Due to the location of coastal bridges, the substructure is highly susceptible to scour and the effects of waves, tides, and storm surges. Installing hard-armoring (ie. rip rap, jetty stone, and/or steel sheeting) would mitigate this coastal erosion that jeopardizes County bridges and the roads they carry. One such bridge is Monmouth County Bridge W-43 over the Shark River in the boroughs of Avon-by-the-Sea and Belmar. Bridge W-43 carries Ocean Ave. (CR 18). Other potential bridges include, but are not limited to, S-31 (Middletown &amp; Rumson), S-32 (Rumson &amp; Sea Bright), and W-9 (Brielle &amp; Manasquan).</i>
<b>Existing, future &amp;/or NA</b>	<i>The action would protect existing County infrastructure (i.e. bridges and roads) and surrounding property and life.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The benefits of hard-armoring would reduce the repairs needed at the bridge and would allow for an open road and unimpeded travel. Hard-armoring would be beneficial in the long-term as it would reduce the need for emergency repairs, help to prevent against undermining of abutments and wash-out of roadway fill.</i>
<b>Cost estimate</b>	<i>Engineering estimates would vary and are project specific.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Cost effectiveness would vary and would be project specific; however losses avoided are estimated to generally be well in excess of site specific costs.</i>
<b>Technical</b>	<i>Technical feasibility will be addressed during the design phase.</i>
<b>Political</b>	<i>There are no known political implications, at this time. All work would be in agreement with the local municipalities.</i>
<b>Legal</b>	<i>Following design, jurisdictional issues would be identified and addressed and the appropriate agreements and right-of-entries would be aquired, if needed.</i>
<b>Environmental</b>	<i>Construction would be in accordance with all related laws and authorities and would be in compliance with any of the permitting issued by the appropriate regulatory agencies. The results of the project would ultimately benefit the environment, as less roadway debris and fill would be washed into the surrounding surface waters.</i>
<b>Social</b>	<i>This project would provide for safe passage to all members of the public who utilize this roadway.</i>
<b>Administrative capability</b>	<i>Staff of Monmouth County Public Works &amp; Engineering would oversee and coordinate the activities of the various consulting firms hired to perform the required work.</i>
<b>Local champion</b>	<i>Monmouth County Department of Public Works &amp; Engineering, with the cooperation of and/or agreement with the local municipalities.</i>
<b>Other community objectives</b>	<i>These coastal bridge are highly trafficked during the summer months by vehicles, bicycles, and pedestrians alike and experience increased use due to seasonal tourism. These bridges also span navigable waterways that accommodate boat traffic. The foot of these bridges may also serve as a place for fishermen, sunbathers, and those enjoying other beach activities.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>N/A</i>
<b>Responsible party</b>	<i>Monmouth County Department of Public Works &amp; Engineering</i>
<b>Potential funding sources</b>	<i>Capital Bond Ordinance, Transportation Funding</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Action proposed in the previous 2009 Hazard Mitigation Plan.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County Department of Public Works &amp; Engineering</i>
<b>Community action number</b>	<i>18</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Hurricane &amp; Tropical Storm, Nor'easter</i>
<b>Risk finding</b>	<i>Highway District #8's office building and garage, in the Township of Hazlet, are prone to flooding. The critical equipment stored in these buildings may be compromised by floodwater, therefore could be detrimental to operational and emergency services provided during a time of disaster or crisis.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency Response.</i>
<b>Action type</b>	<i>Protection of critical facilities.</i>
<b>Action description</b>	<i>Monmouth County has strategically located highway district yards throughout the County. The office building and garage at Highway District #8, in the Township of Hazlet, is prone to flooding. This project is for the design and reconstruction of the building and garage at a higher elevation to ensure the continuity of services during a disaster or crisis.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing facilities.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The detriments of Highway District #8 being inoperable are extensive. They provide for event preparation/storm readiness (i.e. delivering &amp; installing flood control devices &amp; sandbags), assistance during the event (i.e. removal of fallen trees &amp; debris from critical evacuation routes, supply &amp; deliver concrete barriers to critical areas), and recovery post event (i.e. restore County infrastructure to safe and operating conditions). The benefits of ensuring that this Highway District has the electrical power necessary in advance of, during, and after any major disaster or hazard is that so this strategically located facility can serve as the regional deployment center for the manpower, material, and equipment needed to maintain or repair County and/or municipal roads, bridges &amp; infrastructure for use by emergency vehicles (fire, first aid, and police) or evacuation routes for the general public.</i>
<b>Cost estimate</b>	<i>\$600,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be well in excess of project costs.</i>
<b>Technical</b>	<i>Technical feasibility would be vetted out during design.</i>
<b>Political</b>	<i>There are no anticipated political implications.</i>
<b>Legal</b>	<i>There are no anticipated legal implications.</i>
<b>Environmental</b>	<i>Construction would be in accordance with all related laws and authorities and would be in compliance with any of the permitting issued by the appropriate regulatory agencies.</i>
<b>Social</b>	<i>The social benefit would be both tangible (i.e. the real effects of a coordinated effort during a disaster) as well as intangible (i.e. the security of the public in knowing that government facilities are operational and emergency services are being provided).</i>
<b>Administrative capability</b>	<i>Staff of Monmouth County Division of Public Works &amp; Engineering would oversee and coordinate the activities of the various consulting firms hired to perform the required work.</i>
<b>Local champion</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Other community objectives</b>	<i>N/A</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>N/A</i>
<b>Responsible party</b>	<i>Monmouth County Public Works &amp; Engineering</i>
<b>Potential funding sources</b>	<i>HMGP, PDM, and a County match, whether it be financial or in-kind in-house labor or both.</i>
<b>Time line</b>	<i>As soon as funding becomes available.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Action proposed in the previous 2009 Hazard Mitigation Plan.</i>

<b>Other community objectives</b>	<i>Preparedness and public education for high risk individuals.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High Priority</i>
<b>Local planning mechanism</b>	<i>The local planning mechanism is the Superstorm Sandy After Action Report and County Emergency Operations Plan</i>
<b>Responsible party</b>	<i>County Emergency Management Coordinator</i>
<b>Potential funding sources</b>	<i>Homeland grants, preparedness grants, PDM grants, budget and private funding sources</i>
<b>Time line</b>	<i>Continuous</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is a new action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>County of Monmouth</i>
<b>Community action number</b>	<i>19</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All Hazards</i>
<b>Risk finding</b>	<i>The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level of disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities (including, but not limited to, projects such as flood vents, residential floodproofing, and elevation of utilities).</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Education and awareness programs</i>
<b>Action type</b>	<i>Multi-hazard education and risk awareness</i>
<b>Action description</b>	<i>The delivering of preparedness education and community outreach on programs geared towards preparedness and small scale mitigation efforts. This action will be the delivering of preparedness education in the form of mitigation seminars discussing mitigation options, ie. flood vents, wet and dry floodproofing, elevation of utilities etc. The action will involve community focus meetings targeting the most at risk communities and working through each area of the County.</i>
<b>Existing, future &amp;/or NA</b>	<i>The action covers both current and future issues and risks.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action will be very effective in eliminating or reducing the potential loss of life that could evolve as a result of any All Hazard event. The information provided is directly related to the cause of protecting individuals from harm. While this program is not directly related to infrastructure or structures the education provided will assist the at risk population in preparing their homes and businesses for potential impacts, thus providing an inherent benefit. Losses avoided are generally deemed to be unquantifiable for projects of this nature, however, benefits are expected to be in excess of costs.</i>
<b>Cost estimate</b>	<i>The program is estimated to have the following costs: Program deliver/manager \$45,000.00 per year for 3 years at a total of cost of \$135,000.00. The program requires advertising and course materials at a cost of \$5,000.00 per year for 3 years for a total of \$15,000.00. The program provides a family disaster kit to each participant. the current program provides 600 kits each quarter for a total of 7,200 kits over a 3 year period totaling \$432,000.00 and a grand total for the action of \$582,000.00.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The costs of this action is minimal to that of what could happen if no action is taken. Any injury or even worse a loss of a life will outweigh the costs of this program/action and the project overall is expected to be cost effective.</i>
<b>Technical</b>	<i>Yes it is technically feasible</i>
<b>Political</b>	<i>Yes the program is already being conducted and has had enormous support from every aspect including that of political leaders.</i>
<b>Legal</b>	<i>Yes this is an outreach community education program with no legal issues</i>
<b>Environmental</b>	<i>No negative environmental impacts from this action</i>
<b>Social</b>	<i>This action supports all population segments, but is focused on the elderly and or at risk population. This program will actually bring neighborhoods closer together.</i>
<b>Administrative capability</b>	<i>The county has committed personnel to this program, however if this were to be implemented on this scale, outside assistance would be needed.</i>
<b>Local champion</b>	<i>The County Freeholders and numerous County departments have bought into the concept and are currently supporting its action.</i>
<b>Other community objectives</b>	<i>Preparedness and public education for high risk individuals.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High Priority</i>
<b>Local planning mechanism</b>	<i>The local planning mechanism is the Superstorm Sandy After Action Report and County Emergency Operations Plan</i>
<b>Responsible party</b>	<i>County Emergency Management Coordinator</i>
<b>Potential funding sources</b>	<i>Homeland grants, preparedness grants, PDM grants, budget and private funding sources</i>
<b>Time line</b>	<i>Continuous</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is a new action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Monmouth County</i>
<b>Community action number</b>	<i>20</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Extreme wind, hurricanes and tropical storms, nor'easters</i>
<b>Risk finding</b>	<i>Monmouth County has established a large County evacuation center at Brookdale Community College. The building, although structurally sound, does have some exterior windows and doors that could become compromised during a wind generating event.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Retrofit Critical Facilities</i>
<b>Action description</b>	<i>Shelter hardening for wind damage. The project will provide building retrofits with hurricane proof glass and storm shutters for the exterior windows and any applicable doors.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action will provide for a more resilient community evacuation shelter from all hazard events. The losses avoided would be damage to the building windows and glass doors from high winds and wind-blown debris impacts. It would also prevent secondary damages to the interior of the structure due to water intrusion during a storm after windows/doors are compromised. This action could also potentially avoid injury or loss of life to an evacuee within the shelter from blowing glass. These types of benefits are difficult to quantify. As a rough order of magnitude, avoided structural damages alone could be on the order of \$1,000,000 (assuming that 60% of windows and glass doors would need to be replaced, repair costs would be 50 windows at \$2,500 each and #25 doors at \$5,000 each, plus \$250,000 in labor; and perhaps \$250,000 secondary interior damages after the building envelope is compromised). Actual benefits would be even higher, because this would not include the humanitarian benefits of avoided injury and loss of life.</i>
<b>Cost estimate</b>	<i>\$250,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The cost effectiveness of this proposed project is multifaceted in that the action protects the building from potential damage and insurance claims as well as it provides a fortified resilient location for residents to take shelter during a storm event. This project is expected to be cost effective, with benefits estimated to be in excess of \$2,000,000 (not including potential loss of life) as compared to costs of only \$250,000</i>
<b>Technical</b>	<i>Through careful planning using a qualified architect to design the project, this project is technically feasible.</i>
<b>Political</b>	<i>There are no anticipated negative political issues with this action. In fact, it is anticipated that this action would draw strong political support.</i>
<b>Legal</b>	<i>No legal challenges are anticipated. The building that is the focus of this project is at the County College, which is under the auspices of the County Board of Freeholders.</i>
<b>Environmental</b>	<i>There are no environmental impacts with this project.</i>
<b>Social</b>	<i>This project provides benefit to all segments of the counties population and causes no segregation of any particular voting district, neighborhood, religious or ethnic group.</i>
<b>Administrative capability</b>	<i>Since the building is under County control, this project is administratively feasible.</i>
<b>Local champion</b>	<i>Municipalities in the County support the OEM's desire to establish county-wide regional shelters.</i>
<b>Other community</b>	<i>This action does not provide benefit to any other community objectives.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning</b>	<i>Local and state building codes will be followed when implementing this project.</i>
<b>Responsible party</b>	<i>Monmouth County OEM Director</i>
<b>Potential funding sources</b>	<i>Grants: Due to current budget constraints, this project can only be completed if grant funds are obtained.</i>
<b>Time line</b>	<i>If funded 1 year.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Aberdeen Township</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All</i>
Risk finding	<i>.The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities. Aberdeen has a fairly steady flow of infill development and redevelopment and its population is increasing, so promoting disaster resistant development will be key to achieving sustainability.</i>
<b>Describing the Action</b>	
Action category	<i>Education and Awareness Programs</i>
Action type	<i>Public Outreach</i>
Action description	<i>Create a mitigation outreach program that helps residents prepare for and mitigate disasters. Increase awareness of natural hazard risks and safety. Educate the public about hazard mitigation techniques and promote disaster-resistant development.</i>
Existing, future &/or NA	<i>N/A</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Protection of public health and safety through public outreach that encourages advanced disaster preparation for households and businesses. This action is intended to increase the public's awareness of the hazards to which they are susceptible, and how they can best prepare for and potentially mitigate their impacts. This will result in a reduction in the number of emergency calls during storm events, and protect public health and safety. Unable to quantify losses avoided, as are reoccurring on an annual basis; however losses are estimated at \$50,000 per year and are likely to be more than the cost estimate below.</i>
Cost estimate	<i>Minimal (approximately \$25,000 initially with an approximate recurring annual cost of \$2,500 for the outreach program).</i>
Cost effectiveness (i.e., benefit/cost)	<i>Potential losses include loss of lives and compromise of public health and safety. The benefits of this action far outweigh the costs, with benefits estimated to be on the order of \$50,000 and costs of only around \$25,000.</i>
Technical	<i>Yes</i>
Political	<i>Yes. Supported by municipal council.</i>
Legal	<i>Yes. Supported by municipal council.</i>
Environmental	<i>N/A</i>
Social	<i>The proposal will provide outreach to the entire population.</i>
Administrative capability	<i>Yes</i>
Local champion	<i>Yes - Administration and Office of Emergency Management</i>
Other community objectives	<i>Increase Public Awareness and overall resiliency to emergency situations</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Public Outreach</i>
Responsible party	<i>John Powers, OEM Officer</i>
Potential funding sources	<i>Local Budget and Staff Time</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>- Carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Aberdeen Township</i>
Community action number	2
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding caused by hurricanes/storms/nor'easters</i>
Risk finding	<i>Several roadways in the Township are flood prone. This includes but is not limited to: State Highway 35 at Long Neck Creek; Lakeshore Drive at Greenwood Avenue; and Amboy Avenue.</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>drainage improvement/elevation</i>
Action description	<i>Develop specific mitigation solutions for flood-prone roadways, specifically State Highway 35 at Long Neck Creek, under leadership of NJDOT; Lakeshore Drive at Greenwood Avenue, by Township; and Amboy Avenue under the leadership of Monmouth County. Route 35 is currently under construction; Lakeshore Drive is at advertisement/bid phase; and Amboy Avenue in in planning stage. Work plan for what role the Township can play in selection and implementation of mitigation activities for Amboy Avenue Bridge MA-14 reconstruction is being developed, including money/contextual support through the local capital improvement plan for utility relocation. The Township will also assist with public awareness through its web site.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The mitigation action would protect public and private property and public health and safety, eliminate extreme and lengthy traffictours, and would prevent the inability of emergency services personnel to reach flood prone areas of the Township during these events. Potential losses include loss of lives, property, and compromise of public health and safety. Losses, including travel time, gas, pollution, police for traffic control, potential fire damage, but EXCLUDING potential loss of life [incalculable], avoided by all of the projects are estimated to be approximately \$1,000,000 per year with approximately \$300,000 annually for just the Lakeshore Drive Project.</i>
Cost estimate	<i>Unknown. Significant capital costs are anticipated. Costs are estimated to be roughly on the order of \$10,000,000 for Route 35; \$5,000,000 for Amboy Avenue; and \$550,000 for Lakeshore Drive.</i>
Cost effectiveness (i.e., benefit/cost)	<i>Both the NJDOT Route 35 project and the Monmouth County Amboy Avenue Bridge project are beyond the financial authority of Aberdeen Township, except as a stakeholder. However, the Lakeshore Drive project is a Township project, partially funded by NJDOT Trust funds. The benefits of this project (\$300,000 per year due to flooding frequency) far outweigh the costs (\$550,000) and this project is likely to be cost effective.</i>
Technical	<i>Yes</i>
Political	<i>Yes. Supported by municipal council, NJDOT, and Monmouth County Freeholders.</i>
Legal	<i>Yes</i>
Environmental	<i>Yes. Impacts include reduction in flooding occurrences.</i>
Social	<i>The proposal will provide a benefit to the residents of flood prone sections of the Township and to the region as a whole.</i>
Administrative capability	<i>Yes</i>
Local champion	<i>NJDOT, Monmouth County, and Aberdeen Township Council</i>
Other community objectives	<i>Yes - the action reduces flooding, enhances emergency response abilities, and protects quality of life and public and private property.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Capital Improvement Plan Update</i>
Responsible party	<i>NJDOT/Township Engineer/Township Manager/Monmouth County Highway Dept.</i>
Potential funding sources	<i>combination of local, state and county capital improvement budgets and grants</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Aberdeen Township</i>
Community action number	3
<b>Assessing the Risk</b>	
Hazard(s) addressed	Storm surge, flooding, hurricanes, tropical storms, nor'easters
Risk finding	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
Action category	Structure and Infrastructure Projects
Action type	Protect Structures
Action description	Elevation of Floodprone Residential Structures. Elevation 16
Existing, future &/or NA	Existing
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	Losses avoided by this project are estimated to be \$3,500,000
Cost estimate	The cost of this project is estimated to be \$1,000,000..
Cost effectiveness (i.e., benefit/cost)	This projects is likely to be cost effective, with benefits of \$3,500,000 and costs of \$1,000,000.
Technical	Elevation is technically feasible
Political	Our political leadership enthusiastically supports this type of project.
Legal	While the municipality does not own the structures in questions, we fully support the homeowners in moving forward and has assisted in expediting applicable permits.
Environmental	No environmental impacts are anticipated as a result of elevating the homes.
Social	No particular social group in our community is likely to be disproportionately impacted by this project.
Administrative capability	Our municipality has the administrative capabilities to manage an elevation project through the Township Manager's office, Public Works Department, and the Building Department.
Local champion	affected homeowners: B 341,L 11;B 367, L 4.01; B370, L 14; B371, L 4, 5, 7; & B 376, L 14.
Other community objectives	Enhance neighborhood and community relationships through volunteer programs
<b>Implementing the Action</b>	
Priority	High
Local planning mechanism	Public Outreach
Responsible party	Township Manager, Construction Code Official, Director of Public Works, Township Engineer
Potential funding sources	FEMA hazard mitigation grant funding streams (i.e., HMGP)
Time line	ongoing
<b>Reporting on Progress</b>	
Action progress status	"new" - Block 341, Lot 11 - Damaged building demolished by volunteer contractor and relocated new structure currently under construction by non-profit organization

<b>Assessing the Risk</b>	
Hazard(s) addressed	Storm surge, flooding, hurricanes, tropical storms, nor'easters
Risk finding	Several astewater pumping stations structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
Action category	Structure and Infrastructure Projects
Action type	Protect Structures
Action description	Raise structures, or vulnerable components thereof, to either be above current BFEs, or otherwise waterproofed, to provide resiliency in future events and minimize waste water overflows.
Existing, future &/or NA	Existing
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	Losses avoided by this project are estimated to be \$950,000
Cost estimate	The cost of this project is estimated to be \$700,000.
Cost effectiveness (i.e., benefit/cost)	This projects is likely to be cost effective, with benefits of \$950,000 and costs of \$700,000.
Technical	Elevation is technically feasible
Political	the Township Council has support for this project and has authorized funds for same.
Legal	The municipality owns the structures in questions and fully supports the project in moving forward.
Environmental	Favorable environmental impacts are anticipated as a result of elevating, or waterproofing components, of the pump stations by minimizing the potential for
Social	No particular social group in our community is likely to be disproportionately impacted by this project
Administrative capability	Our municipality has the administrative capabilities to manage an elevation project.
Local champion	Township Manager, Director of Public Works, Township Engineer
Other community objectives	increased resiliency and minimize environmental impacts
<b>Implementing the Action</b>	
Priority	High
Local planning mechanism	Capital Improvement Plan
Responsible party	Township Manager, Director of Public Works, Township Engineer
Potential funding sources	FEMA hazard mitigation grant funding streams (i.e., HMGP)
Time line	ongoing - bid phase
<b>Reporting on Progress</b>	
Action progress status	new

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Township of Aberdeen</i>
<b>Community action number</b>	5
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters
<b>Risk finding</b>	Previously existing dunes and an ADA sidewalk on top of a seawall were damaged and/or destroyed by storm surge. The elimination of the dunes permitted the storm surge to adversely impact the Township's Beach Park recreation facilities, destroying an in-line skating rink and damaging basketball courts and play equipment. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Develop specific mitigation solutions for both dunes and sidewalk that would help mitigate future damages and provide a greater level of resiliency.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are estimated to be \$1,000,000.
<b>Cost estimate</b>	The cost of this project is estimated to be \$950,000.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This projects is likely to be cost effective, with benefits of \$1,000,000 per event and costs of \$950,000.
<b>Technical</b>	Reconstruction is technically feasible
<b>Political</b>	The Township Council supports this project
<b>Legal</b>	The municipality owns the lands and structures in question and fully supports the project moving forward.
<b>Environmental</b>	No adverse environmental impacts are anticipated as a result of reconstructing the dunes and sidewalk.
<b>Social</b>	No particular social group in our community is likely to be adversely impacted by this project.
<b>Administrative capability</b>	the Township of Aberdeen has the administrative capabilities to manage the projec.
<b>Local champion</b>	Township Manager, Director of Public Works, Township Engineer
<b>Other community objectives</b>	Restore valuable anesthetic facility and recreation facilities to improve neighborhood participation
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Township's Capital Improvement Plan update
<b>Responsible party</b>	Township Manager, Director of Public Works, Township Engineer
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP)and municipal capital improvement budget
<b>Time line</b>	Ongoing -- design stage

# Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Aberdeen Township</i>
<b>Community action number</b>	<i>6</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, extreme temperatures, lightning, winter storms
<b>Risk finding</b>	Storm events can be accompanied by loss of power, sometimes lasting over an extended period of time, resulting in a loss of communications, or heat or air conditioning and associated adverse impacts for the young and elderly. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events and power outages.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect structures and provide a community shelter.
<b>Action description</b>	Develop specific mitigation solutions that helps residents prepare for and mitigate loss of communications and seasonal severe temperature events by providing a community shelter. This project is intended to protect public health and safety and reduce the number of emergency calls during storm events.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are unable to be estimated as they are of a recurring nature. However, it is anticipated said losses could be estimated at \$50,000.00 per year, that the loss costs will be on a recurring basis and the construction costs will be a one-time event.
<b>Cost estimate</b>	The cost of this project is estimated to be \$500,000.
<b>Cost effectiveness (i.e., benefit/cost)</b>	Potential losses include loss of life and compromise of public health and safety. The benefits of this action far outweigh the costs, with benefits estimated to be on the order of \$50,000 per event and costs of \$500,000.
<b>Technical</b>	The conversion of an exist. fire/first aid bldg to a community center is technically feasible
<b>Political</b>	The Township Council, and public, support this project
<b>Legal</b>	The municipality owns the structure in question and fully supports the project moving forward.
<b>Environmental</b>	No environmental impacts are anticipated as a result of reconstructing the existing structure
<b>Social</b>	No particular social group in our community is likely to be adversely impacted by this project. public hearings on the proposal have been held with a favorable input from the local population.
<b>Administrative capability</b>	Aberdeen has the administrative capabilities to manage the reconstruction / conversion project.
<b>Local champion</b>	Township Manager, Director of Public Works, Township Engineer
<b>Other community objectives</b>	Create a Community Center to provide shelter during storm events, a local Police PBA community station, and seniors activity area
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	insert here

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>ALLENHURST BOROUGH</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Hurricane, tropical storm &amp; Storm surge</i>
Risk finding	<i>Structure damage in storm surge zone.</i>
<b>Describing the Action</b>	
Action category	<i>Structural Projects&amp; Planning mechanism.</i>
Action type	<i>Elevation of structures, portability of structures, creation of storm annex in basic plan.</i>
Action description	<i>The OEM Basic plan was amended to include a "major storm annex" detailing the removal of structures from the beach. Permanent beach structures were replaced with modular. Boardwalk elevation structures are being raised and replaced block constructed buildings.</i>
Existing, future &/or NA	<i>existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>There will be no effect on life safety. The current action will play a significant role in reducing any further damage to Borough beachfront structures.</i>
Cost estimate	<i>\$3,500,000.00 +/-</i>
Cost effectiveness (i.e., benefit/cost)	<i>These actions are 100% cost effective. When implemented and carried out it should significantly reduce or even eliminate any further damage to Borough beachfront structures.</i>
Technical	<i>The "major storm annex" is completely feasible. The structural actions were reviewed by the Borough engineer and determined to be prudent.</i>
Political	<i>The public and governing body held several public meetings where these measures were discussed and agrred upon.</i>
Legal	<i>The community has cleared all actions with appropriate authoriies prior to taking any action.</i>
Environmental	<i>There is no environmental impact regarding the Borough's actions. The DEP was queried prior to any action and approved of same prior to implementation.</i>
Social	<i>There is no social impact regarding any of the actions undertaken.</i>
Administrative capability	<i>The Borough is capable of handling these actions without outside assistance.</i>
Local champion	<i>The governing body of the Borough of Allenhurst.</i>
Other community objectives	<i>Not at this time.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Building codes, Borough Ordinances &amp; Resolutions, and OEM annexes.</i>
Responsible party	<i>BA Lori Osborn</i>
Potential funding sources	<i>Local budgeting, local staff time and possibly FEMA funding.</i>
Time line	<i>Much of the work has been completed. The remainder should be completed by 6/2015</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This is a new action due to storm damage from Hurricane Sandy. Cabanas have been replaced by modular units. Restaurant is in planning and should be complete by 6/2015</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Allenhurst</i>
<b>Community action number</b>	6
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Mayor and Council
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Allentown Borough</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding during periods of high rain and severe storms such as nor'easters, hurricanes and tropical storms, and thunderstorms; Dam failure</i>
Risk finding	<i>Route 524 in the vicinity of Conines Millpond is subject to flooding.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and infrastructure projects.</i>
Action type	<i>Improve drainage of Conines Millpond Dam</i>
Action description	<i>Location: The dam under County Rt. 524 and bridge U-12. Description: Clearing any debris deposited near the floodgate to facilitate the movement of water from the drainage out of Coninew Millpond. Eliminating debris from the flood gates under bridge U-12 on the dam will prevent flooding over the roadway and surrounding properties.</i>
Existing, future &/or NA	<i>It would protect both existing and future development (both commercial and private) along South Main St.</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action should greatly reduce or possibly stop all potential flooding in this area. It is estimated to eliminate about \$50,000 in flood losses each year.</i>
Cost estimate	<i>between \$500 and \$2000 per year.</i>
Cost effectiveness (i.e., benefit/cost)	<i>The action is very effective. ( Losses avoided are about \$50,000 annually , and costs are only about \$500 to \$2000 annually.)</i>
Technical	<i>the action is feasible.</i>
Political	<i>The action is supported by both the public and the politicians.</i>
Legal	<i>We have the authority.</i>
Environmental	<i>Unknown at this time.</i>
Social	<i>It will not impact either segment of the population.</i>
Administrative capability	<i>Unknown at this time.</i>
Local champion	<i>Unknown at this time.</i>
Other community objectives	<i>The project impacts both economic and environmental quality in the area.</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>Local elected officials will need to determine the way this project will be implimented.</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>City of Asbury Park</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Need for replacement back-up generator at City <b>Wastewater Treatment Plant</b> Facility. Lack of total power in the City's <b>Senior Center Building</b> - Community Relief Center during blackout periods. Existence of very limited power in <b>City Hall</b> - OEM Command Center.</i>
<b>Risk finding</b>	<i>During Super Storm Sandy: <b>Wastewater Treatment Plant Facility's</b> existing generator provided power to limited systems for approximately 7 days before cutting out. Upon cut-out, sewage began to back-up until nearly the point of having to discharge into to the Atlantic Ocean when the generator was able to be re-started limitedly until the power grid came back on. Existing generator needs replacement and an upgrade in size. <b>City Hall houses both the Police Station and OEM Command Center.</b> The existing generator ran very limited power systems that were barely enough to operate our OEM command center. The existing generator is severely undersized for the current and future demand of this building. <b>Senior Center Building</b> served as a <b>relief center</b> for a significant portion of the population of Asbury Park. Information, hot/cold food, blankets and other support services were routinely distributed at the center until shortly after the entire City was restored with power.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Human Life and Natural Resource, Structure and Infrastructure Project</i>
<b>Action type</b>	<i>Preservation of public health/safety, structures and natural resources</i>
<b>Action description</b>	<i>Replacement and upgrading overall emergency back-up power capabilities at crucial City owned facilities as described herein. All three facilities will require the purchase and installation of a properly sized diesel powered back-up generator, installation of a new automatic transfer switch at the Senior Building, replacement of existing transfer switches at City Hall and Wastewater Treatment plant; and permitting/installation of above ground diesel storage tanks at Senior Building and City Hall.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Wastewater Treatment Plant Generator Replacement/Upgrade - avoiding severe raw sanitary sewage flooding to the waterfront streets and all households and businesses located in upstream neighborhoods within the first 10 blocks west of the shore, from north to south across the City, thereby minimizing severe danger to public health, safety, sanitary sewage collection systems, sanitary treatment systems structures and sewer infrastructure. Citywide environmental ecosystem would be spared catastrophic damages due to sanitary flooding. City Hall and Senior Center losses would be limited to severe inconvenience of public during blackouts including deterioration of health and potential loss of life (difficult to put a number on). Total losses avoided are estimated to be \$200 million. Over a 50 year project life, total benefits are about \$4 million</i>
<b>Cost estimate</b>	<i>\$1 million (with a useful life of 35 years, this is about \$29,000 per year)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be very cost effective, with benefits of \$200 million and costs of \$1 million.</i>
<b>Technical</b>	<i>Absolutely so long as the funding will be made available to accomplish it.</i>
<b>Political</b>	<i>Yes there is overall public support and political will to support the action.</i>
<b>Legal</b>	<i>Asbury Park has the authority to implement the action.</i>
<b>Environmental</b>	<i>The potential environmental impacts of the action are all positive as they will enhance the ecology of the Wesley Lake area while simultaneously providing much needed mitigation to storm events. The action will comply with all environmental regulations.</i>
<b>Social</b>	<i>The proposed action will not affect existing neighborhoods, will not break up voting districts and will not cause the relocation of low income residents.</i>
<b>Administrative capability</b>	<i>Outside help may be needed administratively to supplement the implementation and maintain it.</i>
<b>Local champion</b>	<i>No one single advocate has been identified as of yet.</i>
<b>Other community objectives</b>	<i>This action will present a viable capital improvement, spur economic development, greatly serve as an environmental benefit and further preserve the Sunset Lake open space.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans and specifications initially for construction, then maintenance plan for DPW.</i>
<b>Responsible party</b>	<i>Director of Engineering and Public Works</i>
<b>Potential funding sources</b>	<i>FEMA, HMGP, NRCS, CDBG</i>
<b>Time line</b>	<i>Assuming full funding as of 1/1/15 - complete by 6/30/16</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>City of Asbury Park</i>
<b>Community action number</b>	<i>2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding of Sunset Lake and Surrounding Areas (flooding, hurricane and tropical storm, nor'easters)</i>
<b>Risk finding</b>	<i>Floodplains generally surround Deal Lake, Sunset Lake, and Wesley Lake. Bulkheads at Sunset Lake and Wesley Lake are in need of mitigation; sediment accumulation limits storage. Lack of storage volume and properly defined edges in Sunset Lake. The lake serves as a large drainage basin for a fairly large area of the City, before it discharges into Deal Lake via under ground piping.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Resource Protection, Structure and Infrastructure project</i>
<b>Action type</b>	<i>Drainage improvement and open space conservation</i>
<b>Action description</b>	<i>Replace all bulkheads in kind and deepening where needed, install an adjustable outlet structure on the lake and dredge the entire lake approximately 2-3' deep throughout while considering the installation of a deeper center channel for additional storage. This action will serve to provide additional storage capacity within Sunset Lake thereby allowing a larger volume of storm precipitation to accumulate in the lake before breaching the edge.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action would potentially decrease the chances of serious flooding on the surrounding roadways minimizing danger to public welfare and damage to surrounding structures due to flooding. During Sandy there were damages to public municipally owned property within the area as well as some private property in the immediate vicinity. Losses avoided are estimated to be about \$300,000 per year. Over a 40 year project life, total benefits are about \$12M.</i>
<b>Cost estimate</b>	<i>\$3.5M (with a useful life of 40 years, this is about \$87,500 per year)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective with benefits of \$12M and costs of only \$3.5M.</i>
<b>Technical</b>	<i>Absolutely so long as the funding will be made available to accomplish it.</i>
<b>Political</b>	<i>Yes there is overall public support and political will to support the action.</i>
<b>Legal</b>	<i>Asbury Park has the authority to implement the action.</i>
<b>Environmental</b>	<i>The potential environmental impacts of the action are all positive as they will enhance the ecology of the Sunset Lake area while simultaneously providing mitigation to storm events. The action will comply with all environmental regulations.</i>
<b>Social</b>	<i>The proposed action will not affect existing neighborhoods, will not break up voting districts and will not cause the relocation of low income residents.</i>
<b>Administrative capability</b>	<i>Outside help may be needed administratively to implement and maintain it.</i>
<b>Local champion</b>	<i>No one single advocate has been identified as of yet.</i>
<b>Other community objectives</b>	<i>This action will present a viable capital improvement, spur economic development, greatly serve as an environmental benefit and further preserve the Sunset Lake open space.</i>

<b>Action progress status</b>	<i>This action has been carried forward from the last version of the plan.</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>City of Asbury Park</i>
<b>Community action number</b>	<i>3</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding of Wesley Lake, Surrounding Areas and Upstream Neighborhoods including parts of Neptune Township</i>
<b>Risk finding</b>	<i>Lack of storage volume, lack of a properly located automatic flood gate in Wesley Lake and repairs needed to the outfall. The lake serves as a large drainage basin for an area accounting for nearly 50% of the total area of the City, plus a section of inland Neptune Township and parts of the Ocean Grove section of Neptune Township, before it discharges into the Atlantic Ocean via under ground piping beneath the beach.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Resource Protection, Structure and Infrastructure Project</i>
<b>Action type</b>	<i>Drainage improvement, open space conservation and protection of nearby commercial and residential structures within the City of Asbury Park (lower elevation than Ocean Grove / Neptune Township)</i>
<b>Action description</b>	<i>Replace bulkheads in kind and deepening where needed, reinforce concrete retaining walls as needed to allow for deepening of lake bottom, replace existing gate with an automatic adjustable outlet structure, while considering the installation of a deeper center channel with lower level gate for additional storage and faster emptying prior to arrival of impending storms.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action would potentially decrease the chances of serious flooding on the surrounding roadways and upstream neighborhoods that are prone to collateral flooding, thereby minimizing danger to public welfare and damage to structures and sewer infrastructure due to flooding. Losses avoided are estimated to be about \$500,000 per year. Over a 50 year project life, total benefits are about \$25M.</i>
<b>Cost estimate</b>	<i>\$12 million (with a useful life of 50 years, this is about \$240,000 per year)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits of \$25 million and costs of \$12 million.</i>
<b>Technical</b>	<i>Absolutely so long as the funding will be made available to accomplish it.</i>
<b>Political</b>	<i>Yes there is overall public support and political will to support the action.</i>
<b>Legal</b>	<i>Asbury Park has the authority to implement the action.</i>
<b>Environmental</b>	<i>The potential environmental impacts of the action are all positive as they will enhance the ecology of the Wesley Lake area while simultaneously providing much needed mitigation to storm events. The action will comply with all environmental regulations.</i>
<b>Social</b>	<i>The proposed action will not affect existing neighborhoods, will not break up voting districts and will not cause the relocation of low income residents.</i>
<b>Administrative capability</b>	<i>Outside help may be needed administratively to supplement the implementation and maintain it.</i>
<b>Local champion</b>	<i>No one single advocate has been identified as of yet.</i>
<b>Other community objectives</b>	<i>This action will present a viable capital improvement, spur economic development, greatly serve as an environmental benefit and further preserve the Sunset Lake open space.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans and specifications initially for construction, then maintenance plan for DPW.</i>
<b>Responsible party</b>	<i>Director of Engineering and Public Works</i>
<b>Potential funding sources</b>	<i>FEMA, HMGP, NRCS, CDBG</i>
<b>Time line</b>	<i>Assuming full funding as of 1/1/15 - complete by 6/30/16</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This action has been carried forward from the last version of the plan.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>City of Asbury Park</i>
<b>Community action number</b>	4
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation of Floodprone Residential Structures. Approximately 75 structures.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are estimated to be over \$19 million.
<b>Cost estimate</b>	The cost of this project is estimated to be under \$10 million.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This project is likely to be cost effective, with benefits of \$19 million and costs of \$10 million.
<b>Technical</b>	Elevation is technically feasible
<b>Political</b>	Our political leadership supports this type of project.
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward.
<b>Environmental</b>	No environmental impacts are anticipated as a result of elevating the homes.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation project.
<b>Local champion</b>	Affected homeowners.
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Coordination of building permits and verification of proposed first floor elevations.
<b>Responsible party</b>	Construction Department
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP)
<b>Time line</b>	Work shall commence immediately upon approval of adequate funding and notification of the affected homeowners of funds available.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>City of Asbury Park</i>
Community action number	5
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding of Deal Lake and Surrounding Areas (flooding, hurricane and tropical storm, nor'easters)</i>
Risk finding	<i>Floodplains generally surround Deal Lake, Sunset Lake, and Wesley Lake. Deal Lake's sediment accumulation limits storage. Lack of storage volume and an automated tide gate add to the flooding issues. The lake serves as a large drainage basin for large area of the City, before it discharges into the Atlantic Ocean via a long concrete underground flume. Sunset Lake drains into Deal Lake and the flooding of Deal can cause up stream flooding at Sunset Lake in certain instances.</i>
<b>Describing the Action</b>	
Action category	<i>Natural Resource Protection, Structure and Infrastructure project</i>
Action type	<i>Drainage improvement and open space conservation</i>
Action description	<i>Replace the existing tide gate with an automatic type with sensors to maintain the gate open for as long as possible before the Atlantic Ocean begins backing into the lake during extreme high tide or severe weather events. Dredge the entire lake east of the train bridge just west of Main St (Rt. 71) approximately 2' deeper throughout while considering the installation of a deeper center channel for additional storage. This action will serve to provide additional storage capacity within Sunset Lake thereby allowing a larger volume of storm precipitation to accumulate in the lake before breaching the edges.</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action would potentially decrease the chances of serious flooding on the surrounding roadways minimizing danger to public welfare and damage to surrounding structures due to flooding. During Sandy there were damages to public municipally owned property within the area as well as some private property in the immediate vicinity. Losses avoided are estimated to be about \$175,000 per year. Over a 40 year project life, total benefits are about \$7M.</i>
Cost estimate	<i>\$2.5M (with a useful life of 40 years, this is about \$62,500 per year)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective with benefits of \$7M and costs of only \$2.5M.</i>
Technical	<i>Absolutely so long as the funding will be made available to accomplish it.</i>
Political	<i>Yes there is overall public support and political will to support the action.</i>
Legal	<i>Asbury Park and the Deal Lake Commission have the authority to implement the action.</i>
Environmental	<i>The potential environmental impacts of the action are all positive as they will enhance the ecology of the Deal Lake and Sunset Lake area while simultaneously providing mitigation to storm events. The action will comply with all environmental regulations.</i>
Social	<i>The proposed action will not affect existing neighborhoods, will not break up voting districts and will not cause the relocation of low income residents.</i>
Administrative capability	<i>Outside help may be needed administratively to implement and maintain it.</i>
Local champion	<i>Deal Lake Commission</i>
Other community objectives	<i>This action will present a viable capital improvement, spur economic development, greatly serve as an environmental benefit and further preserve the Deal Lake and Sunset Lake open space.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Plans and specifications initially for construction, then maintenance plan for the Departments of Public Works for the various municipalitites bordering Deal Lake and members of the Deal Lake Commission.</i>
Responsible party	<i>Director of Engineering and Public Works</i>
Potential funding sources	<i>FEMA, HMGP, NRCS, CDBG</i>
Time line	<i>Assuming full funding as of 1/1/16 - complete by 12/31/16</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This is a new action.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>City of Asbury Park</i>
Community action number	<i>6</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>(flooding, hurricane and tropical storm, nor'easters)</i>
Risk finding	<i>Flooding of Southwest quadrant and other "pockets" of City streets While the storm collection systems located at the extreme south edge of the City from the western boundary to Wesley Lake near the eastern boundary were all reconstructed between 2009 and 2011, some of the branching systems that lead to the new systems are undersized or missing proper facilities in order to convey storm flow efficiently to the new systems causing severe backups and flooding.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure project</i>
Action type	<i>Drainage improvement and Quality of Life preservation</i>
Action description	<i>Pinpoint all areas of flooding thereby identifying existing storm facilities and their respective routes to the new systems. Reconstruct all storm lines and structures from the flooded areas leading and connecting to the new systems taking the path of least resistance while conveying the most possible storm flow.</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action would potentially decrease the continuous flash flooding that occurs in certain isolated areas of the City and its impact on the surrounding roadways, minimizing danger to public welfare and damage to surrounding structures due to flooding. Even during medium sized short duration rain storms, serious flash flooding measuring in excess of 3' of inundation without close proximity to a flooded waterway can be witnessed at various areas of the City. Over time the damage being caused to the municipally owned sanitary /storm systems in addition to sidewalks, street trees, other public utilities as well as many private properties can be minimized and possibly avoided overall. Losses avoided are estimated to be about \$1,200,000 per year. Over a 50 year project life, total benefits are about \$60M.</i>
Cost estimate	<i>\$18M (with a useful life of 50 years, this is about \$360,000 per year)</i>
Cost effectiveness	<i>This project is likely to be cost effective with benefits of \$60M and costs of only \$18M.</i>
Technical	<i>Absolutely so long as the funding will be made available to accomplish it.</i>
Political	<i>Yes there is overall public support and political will to support the action.</i>
Legal	<i>Asbury Park has the authority to implement the action.</i>
Environmental	<i>The potential environmental impacts of the action are all positive as they will enhance the quality of life in affected areas, minimizing public health hazards, while simultaneously providing mitigation to storm events. The action will comply with all environmental regulations.</i>
Social	<i>The proposed action will not affect existing neighborhoods in an impactful manner, will not break up voting districts and will not cause the relocation of low income residents.</i>
Administrative capability	<i>Outside help may be needed administratively to implement and maintain it.</i>
Local champion	<i>No one single advocate has been identified as of yet.</i>
Other community objectives	<i>This action will present a viable capital improvement, spur economic development and greatly serve as an environmental benefit.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Plans and specifications initially for construction, then maintenance plan for DPW.</i>
Responsible party	<i>Director of Engineering and Public Works</i>
Potential funding sources	<i>FEMA, HMGP, NRCS, CDBG</i>
Time line	<i>Assuming full funding as of 1/1/16 - complete by 1/1/18</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This action has been carried forward from the last version of the plan.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Atlantic Highlands</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, landslides, and severe storms such as hurricanes, tropical storms, and nor'easters</i>
<b>Risk finding</b>	<i>Hillside Road and Paper Street have issues with high velocity overland flows (outside of mapped foodplains) that cause both slope failure and flooding. If the drainage of water continues to erode Paper Street, the downhill properties will be in danger of failure as will the residents in the dwelling. If the wash out is severe, there is a possibility that the roadway will wash out and landlock over 12 homes. On Hillside Road, municipal and four private properties are at risk.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Project</i>
<b>Action type</b>	<i>Soil Stabilization through proper drainage</i>
<b>Action description</b>	<i>Design and construct proper drainage to eliminate the high velocity overland flows that cause slope failure and flooding - Hillside Road, and Paper Street..Phase II continues to carry the stormwater from the end of Hillside Road, down to Bayside Drive via CMP. All CMP will be on Borough property or in easements with the neighbors. A scour pad at the bottom will dissipate the water. This work will alleviate the pressure from stormwater along the hillside. The hillside has become progressively unstable. This action will protect structure, vacant land and roadway at bottom of hillside.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and new</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided by the project are estimated to be approximately \$ 2 million dollars</i>
<b>Cost estimate</b>	<i>\$950,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Yes. This project is likely to be cost effective, with benefits on the order of \$2 million dollars and costs of only \$950,000.</i>
<b>Technical</b>	<i>Yes. We, at a minimum, the roadway protected. This is a fragile area of hills and erosion.</i>
<b>Political</b>	<i>Yes. Residents of this area are all in favor or a solid repair/fix Yes. The Mayor and Council understand the importance of this project but they do not have funds to commit.</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>It is a steep slope area which is governed by Borough Ordinance. This would take great care in engineering a permanent repair. It will have to comply with environmental rules.</i>
<b>Social</b>	<i>This will effect some of the residents of Bayside Drive but have an overall effect on the Borough. The homes along the water are very valuable as they pay a great deal of property taxes.</i>
<b>Administrative capability</b>	<i>The Borough would need engineering and financial assistance. The Borough could manage the bid and other limited resources</i>
<b>Local champion</b>	<i>We believe the DEP will support as will our local Environmental Commission</i>
<b>Other community objectives</b>	<i>This will also allow the Environmental Commission to finish a walking trail which will connect the Bayside/Henry Hudson Trail to Lenape Woods which is a local walking trail preserve</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Engineering, Building Department, Finance</i>
<b>Responsible party</b>	<i>Borough of Atlantic Highlands - Adam Hubeny - Administrator</i>
<b>Potential funding sources</b>	<i>Local budget, grants, open space</i>
<b>Time line</b>	<i>2016 - strictly a financing issue</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This has been carried over from the last version of the plan. We have some very preliminary plans and a cost estimate but funding is holding this up.</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Atlantic Highlands</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding</i>
<b>Risk finding</b>	<i>Flooding is an issue at Fireman's Memorial Field on West Highland Avenue (south of Avenue B). This specific location is adjacent to the Many Mind Creek. The site is owned by town firemen's association. 3 baseball fields, converted for football in fall, soccer as well. While damages to the fields themselves are an issue, the affected area also includes the following improvements: bleachers, dugouts, electric scoreboards, PA system, night lights, cinder track at border and beside Many Mind Creek, tot lot near Leonard Avenue entrance, parking lot, chute, slide, monkey bars, climbing, other devices, field house with restrooms, and concession stand. In addition, the streets and surrounding homes are effected on Ave A. South Ave, Center Ave, Bay Ave and Harbor View Drive. The creek was desnagged in these specific area since the initial version of the plan, but flooding problems continue. In addition, the bridge hasnt changed thus the continuance of problems.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Study creek and tidal waters including Flood Risk Reduction Infrastructure Improvements along the entire Many Mind Creek from Highway 36 to the Snady Hook Bay. Construct flood control measures in appropriate</i>
<b>Action description</b>	<i>Plan would be to take the Fllod Risk Reduction suggestion and/or actions which may include the installation of gabion walls and drive sheathing into the ground to create a channel for water to follow. No further building will be allowed</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Damages avoided are estimated to be on the order of \$1 million dollars</i>
<b>Cost estimate</b>	<i>1 million dollars.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Yes - This will save the Borough money by eliminating constant repairs that have to be done in order to maintain the playing fields, surrounding street, overtime costs for street department and/or police to close roads. This project is likely to be cost effective, with benefits on the order of \$1 million dollars and costs of only \$1million.</i>
<b>Technical</b>	<i>Yes - It may be possible to eliminate the sheating on one side of the creek</i>
<b>Political</b>	<i>Yes. Residents of this area are all in favor of a solid repair/fix Yes. The Mayor and Council understand the importance of this project but they do not have funds to commit.</i>
<b>Legal</b>	<i>Yes but there are DEP permits required</i>
<b>Environmental</b>	<i>This specific site is part of a remediation clean up by NJ Natural Gas Co. The DEP is overseeing the clean up. Permitting will ne necessary and the handling of materials will require the Hazwoper 40 training.</i>
<b>Social</b>	<i>This action will actually assist several area's of the Borough so as to limit the amount of flooding in areas. There are approximately 12 businesses that are along this portion of the creek which will now have limited flood damage .</i>
<b>Administrative capability</b>	<i>The Borough would need engineering, permitting and financial assistance. The Borough could manage the bid and other limited resources</i>
<b>Local champion</b>	<i>We believe the DEP will support as will our local Enviromental Commissionand Fire Department</i>
<b>Other community objectives</b>	<i>This will also allow the Borough and Environmental Commission to finish a walking greenway trail which will run from Highway 36 to the Sandy Hook Bay. This is in line with a 2008 study that was conducted along the M any Mind Creek Greenway.The sheathing will also keep people out of the creek, improving safety at this site where at any one day can be occupied by over 350 people.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Engineering, Building Department, Finance</i>
<b>Responsible party</b>	<i>Borough of Atlantic Highlands - Adam Hubeny - Administrator</i>
<b>Potential funding sources</b>	<i>Local budget, grants, open space</i>
<b>Time line</b>	<i>2016 - This is a financing issue and permitting issue</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This has been carried over from the last version of the plan. We have a 2008 Weston study of the creek greenway but no cost basis at this time.</i>

## Action Worksheet

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Atlantic Highlands</i>
Community action number	3

### Assessing the Risk

Hazard(s) addressed	<i>Landslides</i>
Risk finding	<i>Slope stabilization is needed on Bayside Drive; this is an area of historic slump blocks (a type of landslide where the moving material moves in a block, more or less), particularly where hillsides are disturbed during construction activities, and or times where the soil is saturated and there is increased surface runoff. Roadway will be washed away landlocking 12 single family dwellings.</i>

### Describing the Action

Action category	<i>Structure and Infrastructure Projects</i>
Action type	<i>Slope Stabilization</i>
Action description	<i>Plan would be to design a fix for hillside stabilization along a 400+ foot of Bayside Drive. This would include a Nail Lancer type of fix where the hillside is shored up to prevent slump blocking and future landslides and failure of the slope.</i>
Existing, future &/or NA	<i>Existing - Project protects existing roadway, and reduces the likelihood of existing homes becoming landlocked, though the slope itself is an unbuildable area and nothing would be built there even with this action.</i>

### Evaluating the Action

Losses avoided (i.e., benefits)	<i>This action will improve a very unstable area along Bayside Drive which at the toe is at the foot of the Sandy Hook Bay. This will allow continued access for 12 homes that are beyond this specific area. Losses avoided are estimated to be approximately \$5 million dollars.</i>
Cost estimate	<i>\$1 million dollars. This will maintain the roadway that leads to 12 homes on Bayside Drive. These homes are some of the higher paying tax properties in town.</i>
Cost effectiveness (i.e., benefit/cost)	<i>Yes - This will save the Borough money by eliminating the failure of the roadway putting people in jeopardy. This project is likely to be cost effective, with benefits of roughly \$5 million and costs of only \$1 million.</i>
Technical	<i>Yes - we believe this will be very beneficial and technically feasible</i>
Political	<i>Yes. Residents of this area are all in favor of a solid repair/fix. Yes. The Mayor and Council understand the importance of this project but they do not have funds to commit.</i>
Legal	<i>Yes but there are potentially DEP permits required</i>
Environmental	<i>This specific area is located in an environmentally sensitive area and in a steep slope zone. Area has to be monitored and worked on in a very careful way.</i>
Social	<i>This action will actually assist 12 homes on Bayside Drive. This repair will allow the residents to feel they are more connected to the community now that the roadway would not be in the state it is now.</i>
Administrative capability	<i>The Borough would need engineering, permitting and financial assistance. The Borough could manage the bid and other limited resources</i>
Local champion	<i>We believe the DEP will support as will our local Environmental Commission and the residents of Bayside Drive</i>
Other community objectives	<i>This will bolster the steep slope / hillside along Bayside Drive. This will bring much needed stability to the area and will allow residents continued access to their homes as the other end of the road is closed off due to landslide issues.</i>

### Implementing the Action

Priority	<i>High</i>
Local planning mechanism	<i>Engineering, Building Department, Finance</i>
Responsible party	<i>Borough of Atlantic Highlands - Adam Hubeny - Administrator</i>
Potential funding sources	<i>Local budget, grants, open space</i>
Time line	<i>2016 - This is a financing issue and permitting issue</i>

### Reporting on Progress

Action progress status	<i>This has been carried over from the last version of the plan. We are continuing to monitor the street and have received a price quote to complete the work.</i>
------------------------	--

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Atlantic Highlands</i>
<b>Community action number</b>	4
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation of Floodprone Residential Structures. At the present time there are five families that are not able to live in their homes due to severe flooding that took place along the Many Mind Creek. These homes are located on South Avenue, Ave A, Avenue B and Center Avenue. It has been suggested that these 5 homes be raised above the flood elevation in their particular area.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are estimated to be \$ 1 million +.
<b>Cost estimate</b>	The cost of this project is estimated to be \$ 407,750.00.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This projects is likely to be cost effective, with benefits of over \$1 million dollars and costs of \$407,750.00.
<b>Technical</b>	Elevation is technically feasible
<b>Political</b>	Our political leadership supports this type of project 100%
<b>Legal</b>	While the municipality does not own the structures in questions, we fully support the homeowners in moving forward.
<b>Environmental</b>	No environmental impacts are anticipated as a result of elevating the homes.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation project.
<b>Local champion</b>	affected homeowners, politicians and others
<b>Other community objectives</b>	The Borough is trying to reduce the flooding in this area and are working with the NJ DEP and Army Corps. We want residents to stay in their homes and not move from the area after each severe storm.
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	All work and issued to work through the Atlantic Highlands Building Department
<b>Responsible party</b>	Individual homeowner
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP)
<b>Time line</b>	Would like to move this forward immediately. Residents are ready to respond.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Atlantic Highlands</i>
<b>Community action number</b>	5
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All Hazards</i>
<b>Risk finding</b>	<i>The Atlantic Highlands Water &amp; Sewer Utility is owned and operated by the Borough of Atlantic Highlands. Without the install and use of a generator, the water wells can't fill water holding tanks. They can only hold enough water to last for up to 2 days. Without the generator during a power failure, the Borough would be faced with unsanitary conditions throughout the Borough.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Installation of a natural gas generator with transfer switch</i>
<b>Action description</b>	<i>A new natural gas generator will be installed at the 1 million gallon holding tank on Observatory Place. This will allow continued power to the water well for public health and safety purposes.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing &amp; future - Project protects existing and future development of residential and commercial properties.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action will make certain that homes and businesses serviced by the Atlantic Highlands water &amp; Sewer Utility maintain the distribution and receiving of potable water. Benefits are for public health and safety. Benefits are unquantifiable but are expected to be well in excess of project costs.</i>
<b>Cost estimate</b>	<i>\$70,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Yes - Without doing this work many people could become ill or seriously sick. Benefits are unquantifiable but are expected to be well in excess of project costs of only \$70k.</i>
<b>Technical</b>	<i>Yes - we believe this will be very beneficial and technically feasible</i>
<b>Political</b>	<i>Yes. Residents of this area are all in favor of a solid repair/fix Yes. The Mayor and Council understand the importance of this project but they do not have funds to commit.</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>None known. Yes - the Borough would have to apply for an air quality permit from the NJ DEP</i>
<b>Social</b>	<i>This action will assist and continue to provide clean potable water to over 1900 homes who are serviced by the Utility.</i>
<b>Administrative capability</b>	<i>The Borough of Atlantic Highlands maintains a staff of 5 full time employees in the Water &amp; Sewer Utility.</i>
<b>Local champion</b>	<i>We believe the DEP will support this as will our local Environmental Commission, Mayor and Council and the residents of Atlantic Highlands</i>
<b>Other community objectives</b>	<i>This will bring much needed relief to our community, as a whole, when we experience frequent power outages during storms and unusual events.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Engineering, Building Department, Finance</i>
<b>Responsible party</b>	<i>Borough of Atlantic Highlands - Adam Hubeny - Administrator</i>
<b>Potential funding sources</b>	<i>Local budget, HMGP Grant, Monmouth County Working Group funding</i>
<b>Time line</b>	<i>Immediately - We have a public bid price on this and are ready to go upon commitment of funding.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Atlantic Highlands</i>
<b>Community action number</b>	6
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All Hazards</i>
<b>Risk finding</b>	<i>The Atlantic Highlands Harbor Utility is owned and operated by the Borough of Atlantic Highlands. Without the install and use of a generator, during power outages, emergency vehicles i.e. police, fire, ems &amp; oem, can't refuel for continued 24/7 emergency use. In addition, the Harbor refuels the vessels or the New Jersey State Police and the US Coast Guard in times of emergency and need.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Installation of a portable 100 KW diesel generator with transfer switch</i>
<b>Action description</b>	<i>A new portable 100 KW diesel generator will be on a trailer and transfer switch will be installed at the Harbor Office. This will allow continued power to the harbor office which will allow refueling for all emergency service vehicles and vessels. .</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing &amp; future - Project protects existing structure and infrastructure</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action will make certain that Atlantic Highlands receives the continued emergency service protection 24/7. This will allow continued police patrol, ems response and fire/rescue response to our 4,400 + residents via vehicle and/or vessel response. Benefits are unquantifiable, but are expected to be well in excess of project costs.</i>
<b>Cost estimate</b>	<i>\$62,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Yes - without doing this the Borough has to depend on 2 other gas stations in the Borough. Sunoco does not have diesel nor a generator and the Shell does not have a generator for pump operations.. Benefits are unquantifiable, but are expected to be well in excess of project costs of only \$62k.</i>
<b>Technical</b>	<i>Yes - we believe this will be very beneficial and technically feasible</i>
<b>Political</b>	<i>Yes. The Mayor &amp; Council and the Harbor Commissioners understand the importance of this project as does the police, fire, ems &amp; oem. They fully support this</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>None known. Yes - the Borough would not have to apply for an air quality permit from the NJ DEP since this unit is mounted on a portable trailer</i>
<b>Social</b>	<i>This action will allow continued emergency services protection.</i>
<b>Administrative capability</b>	<i>Yes. The Borough of Atlantic Highlands maintains a harbor staff of 9 full time employees..</i>
<b>Local champion</b>	<i>We believe the DEP will support this as will our local Environmental Commission, Mayor and Council and the Commission as well as our residents.</i>
<b>Other community objectives</b>	<i>This will bring much needed planning assistance to our emergency services / community, as a whole, when we experience frequent power outages during storms and unusual events.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Engineering, Building Department, Finance</i>
<b>Responsible party</b>	<i>Borough of Atlantic Highlands - Adam Hubeny - Administrator</i>
<b>Potential funding sources</b>	<i>Local budget, HMGP Grant</i>
<b>Time line</b>	<i>Immediately - We have a public bid price on this and are ready to go upon commitment of funding</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Plan</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Atlantic Highlands</i>
<b>Community action number</b>	7
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All hazards</i>
<b>Risk finding</b>	<i>The Atlantic Highlands Water &amp; Sewer Utility just took on the responsibility of the Atlantic Highlands-Highlands Sewer Authority after it was dissolved as of 3/31/14. The Borough now controls the collection system (under the ground/roadways) and the pumphouse which is located on First Avenue. The product pumps from the pumphouse to the Township of Middletown Sewer Authority where the product is processed/treated. The Borough now services water and sewer services throughout the Borough. The former AHHRSA learned after Super Storm Sandy that the pumpstation needed to be flood proofed with bulkheading at the entrance door and garage door and they needed to install a bulkhead in front of the generator that keeps the plant up and running during power outages. If this facility is not protected, the Borough would be faced with unsanitary conditions as sewer product would free flow onto the roadways and into the waterways.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Installation of bulkheading in doorways and around generator</i>
<b>Action description</b>	<i>Install bulkheading and flood proofing materials at door openings and around the generator to protect it from flood waters. This will allow continued power to the sewer wells that are pumped to TOMSA. This will protect public health and safety.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action will make certain that sewer operations throughout Atlantic Highlands will be maintain and the distribution system allowing product to get into the TOMSA gravity sewer lines will be maintain. Benefits are for public health and safety. Benefits are unquantifiable but are expected to be well in excess of project costs.</i>
<b>Cost estimate</b>	<i>\$40,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Yes - Without doing this work many people could become ill or seriously sick. Waterways will have sewer product flowing as will local roads. Benefits are unquantifiable but are expected to be well in excess of project cost of only \$40k.</i>
<b>Technical</b>	<i>Yes - we believe this will be very beneficial and technically feasible</i>
<b>Political</b>	<i>Yes. The Mayor and Council understand the importance of this project that is being touted by the Water &amp; Sewer Superintendent. .</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>It will comply with all Environmental regulations and it will greatly reduce, if not totally eliminate any environmental future disaster. DEP would look</i>
<b>Social</b>	<i>This action will assist and protect all of the population in Atlantic Highlands and those surrounding municipalities that are on the sandy Hook Bay. This action will protect other towns and neighborhoods because it will reduce or eliminate the raw sewer flowing into the streets and nearby creek.</i>
<b>Administrative capability</b>	<i>Yes. The Borough of Atlantic Highlands maintains a staff of 5 full time employees in the Water &amp; Sewer Utility.</i>
<b>Local champion</b>	<i>We believe the DEP will support this as will our local Enviromental Commission, Mayor and Council and the residents of Atlantic Highlands</i>
<b>Other community objectives</b>	<i>This is a public health &amp; safety matter that our community will support.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Engineering, Building Department, Finance</i>
<b>Responsible party</b>	<i>Borough of Atlantic Highlands - Adam Hubeny - Administrator</i>
<b>Potential funding sources</b>	<i>Local budget, HMGP Grant, Monmouth County Working Group funding</i>
<b>Time line</b>	<i>Immediately upon commitment of funding</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Plan</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Avon By The Sea</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All Hazards</i>
<b>Risk finding</b>	<i>The Borough of Avon By The sea is exposed to hazards from Coastal storms including Hurricanes, as well as wind storms, blizzards and other severe weather events. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events. The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level of disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Public Education and Awareness Programs</i>
<b>Action type</b>	<i>Increase Hazard Education and Risk Awareness</i>
<b>Action description</b>	<i>Community Outreach: Development of an Emergency Preparedness resource within the Borough Library for use throughout the year by residents and visitors. Also: Web Site updates, social media bi-annual newsletter and community gatherings such as Nation Night Out.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Increased recognitions of hazards and potential impacts from severe weather events and other events will aid in protecting residents. Benefits are unquantifiable, but are expected to be higher than the cost of maintaining the information repository.</i>
<b>Cost estimate</b>	<i>Minimal cost with brochures from FEMA and other agencies as well as materials gathered by Borough staff.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Highly cost effective, with minimal investment residents can be better informed and more prepared for the impacts of events to their lives and homes. Losses avoided are expected to be more than the cost of maintaining the repository.</i>
<b>Technical</b>	<i>This action is technically feasible</i>
<b>Political</b>	<i>The Office of Emergency Management receives support from both the Public and the Elected Officials in the Borough.</i>
<b>Legal</b>	<i>The Borough of Avon By The Sea has the full legal authority to implement this action.</i>
<b>Environmental</b>	<i>There are no Environmental implications with this action.</i>
<b>Social</b>	<i>There are no Social implications with this action.</i>
<b>Administrative capability</b>	<i>Performed with in-house staff at no cost.</i>
<b>Local champion</b>	<i>OEM Deputy Coordinator in conjunction with Library director.</i>
<b>Other community objectives</b>	<i>There are no other objectives associated with this action.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Annually the LEPC will discuss and impliment update as necessary.</i>
<b>Responsible party</b>	<i>OEM Deputy Coordinator and Library Director.</i>
<b>Potential funding sources</b>	<i>Funding for this action is very low. However, if funding is necessary it will be sought through grants or budget augmentation.</i>
<b>Time line</b>	<i>On-going; will require continuing effort</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Avon By The Sea</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, wind, storm surge, hurricanes, tropical storms, nor'easters</i>
<b>Risk finding</b>	<i>The Borough of Avon By The Sea is exposed to hazards from coastal storms including hurricanes, as well as wind storms, blizzards and other severe weather events which leaves some of our buildings and facilities vulnerable. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events. Of particular concern are critical facilities in flood and/or surge hazard areas (police, fire, EMS, and the water treatment plant)</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Protect Infrastructure and Critical Facilities</i>
<b>Action description</b>	<i>Review the vulnerability of municipal facilities to impacts from flooding, wind and related exposures and implement projects to reduce these vulnerabilities.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Future losses from flooding and storm surge should be avoided as structures have been elevated and made more flood resistant. Losses avoided by the proposed actions are estimated to be on the order of \$7,638,225</i>
<b>Cost estimate</b>	<i>Cost estimates on DPW facility still being developed, overall investment to exceed \$3.0 million when all improvements completed</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Cost effective as properties damaged during Sandy to be rebuilt with flood protection incorporated into the design (benefits on the order of \$7,638,225 and costs on the order of \$3.0 million).</i>
<b>Technical</b>	<i>Design work with Engineering firms and Architects providing technical guidance to support in house staff</i>
<b>Political</b>	<i>Elected officials have been highly supportive of these efforts</i>
<b>Legal</b>	<i>There is no potential legal impact as these facilities are own by the Borough.</i>
<b>Environmental</b>	<i>Where faculties are being rebuilt environmental issues have the potential to arise. In order to address these potential issues the Borough will utilize the engineer to explore and address them..</i>
<b>Social</b>	<i>Social implications are not anticipated as these were existing facilities. As for the on-going Vulnerability Assessment we do not anticipate and issues.</i>
<b>Administrative capability</b>	<i>Performed with in-house staff at no cost</i>
<b>Local champion</b>	<i>Borough Administrator with support from Deputy OEM Coordinator</i>
<b>Other community objectives</b>	<i>Re-building of damaged facilities does tie into capital improvement programs.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Engineers and Architects used to support in house resources</i>
<b>Responsible party</b>	<i>Borough Administrator supported by OEM Duty Coordinator</i>
<b>Potential funding sources</b>	<i>Insurance proceeds, FEMA and municipal bonding</i>
<b>Time line</b>	<i>Final work to be completed in 2015</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward: Assessment completed, improvements to reduce vulnerability underway. Community Marina Building 80% complete, Pavilion 30%, DPW facility in design stage and Sewer pump station upgrades in evaluation stag. Vulnerability Assessments are on-going.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Avon By The Sea</i>
<b>Community action number</b>	3
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, Hurricane and Tropical Storm, Nor'easter</i>
<b>Risk finding</b>	<i>The Borough of Avon By The Sea is exposed to hazards from coastal storms including hurricanes, as well as heavy rain events that may bring runoff from neighboring communities into the Sylvan Lake drainage area. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events. The floodplain is primarily around Sylvan Lake and the Shark River Inlet. Walls around the Lake are in need of mitigation. Sediment is accumulating in the lake.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Systems Protection</i>
<b>Action type</b>	<i>Lake dredging and sediment removal to reduce risk of flooding</i>
<b>Action description</b>	<i>Overall goal of project is to reduce sediment levels within the Sylvan Lake Drainage basin to improve the health of the waterway and to provide additional capacity for flood water runoff and coastal inundation during storm surge.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Future losses from flooding and storm surge may be avoided as the levels of the retention area will be better prepared to accommodate runoff or inundation from storms without impacting nearby residential properties. Properties damaged during Sandy will be better protected from storms of a similar size and impact if all work is complete. Losses avoided are estimated to be roughly on the order of \$3.0M</i>
<b>Cost estimate</b>	<i>Cost will exceed \$1.0M as dredge spoils must be trucked from the site</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective with benefits of \$3.0M and costs of about \$1M</i>
<b>Technical</b>	<i>Design work with Engineering firms providing technical guidance to support in house staff</i>
<b>Political</b>	<i>Elected officials have been highly supportive of these efforts</i>
<b>Legal</b>	<i>Cooperative effort between the Borough of Avon and Bradley Beach as both Boroughs border the retention area</i>
<b>Environmental</b>	<i>Environmental impact is an improvement in water quality and conditions in and around the retention area</i>
<b>Social</b>	<i>The only social impact from this action anticipated is a positive one as flood risk would be reduced and water quality improved.</i>
<b>Administrative capability</b>	<i>Performed with in-house staff at no cost</i>
<b>Local champion</b>	<i>Borough Administrator with support from Deputy OEM Coordinator</i>
<b>Other community objectives</b>	<i>Other objective addressed by this action would be expanding our storm water management and preservation of open space.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Engineers and used to support in house resources including environmental commission Monmouth County resources</i>
<b>Responsible party</b>	<i>Borough Administrator supported by OEM Duty Coordinator</i>
<b>Potential funding sources</b>	<i>NRCS grants, Sandy mitigation funds, local appropriations</i>
<b>Time line</b>	<i>Phase 1 completed with additional phases planned when funding becomes available</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried Forward - In progress</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Avon By The Sea</i>
Community action number	<i>4</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, Storm Surge, Hurricane and Tropical Storm, Nor'easter</i>
Risk finding	<i>Local flood management was not consistent and lacked the focus of full-time staff</i>
<b>Describing the Action</b>	
Action category	<i>Local planning and regulations</i>
Action type	<i>Improve floodplain management</i>
Action description	<i>Increased staffing and focus on floodplain management. Local Flood Plain Management was a split responsibility in the past, full time staff has been added to address flood management along with construction and zoning issues (mid 2013 with immediate impact on addressing outstanding issues and rebuilding from Sandy)</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Future losses from flooding and storm surge should be reduced as development and construction in these vulnerable areas is being aggressively managed through floodplain management. Benefits are unquantifiable, but are expected to be well in excess of project costs.</i>
Cost estimate	<i>Costs offset at this time from increased construction activity; Net costs are relatively minimal as actions are undertaken by existing staff, and are a requirement for the community to maintain good status in FEMA's NFIP.</i>
Cost effectiveness (i.e., benefit/cost)	<i>Cost effective with benefits expected to be well in excess of costs as properties damaged during Sandy will be better protected from storms of a similar size and impact if all work is completed</i>
Technical	<i>IN house staff receiving training and Borough is participating in the CRS and other floodplain management programs</i>
Political	<i>Elected officials have been highly supportive of these efforts</i>
Legal	<i>The Borough has legal authority to enforce actions through local ordinance and state laws.</i>
Environmental	<i>By taking these actions we reduce future losses and promote sound development.</i>
Social	<i>The Borough does not anticipate and social impact from this action.</i>
Administrative capability	<i>Performed with in-house staff at no cost</i>
Local champion	<i>Borough Construction Official with support of OEM Deputy Coordinator</i>
Other community objectives	<i>This action will assist the Borough with it's participation in the CRS.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>This action is directed by local ordinance.</i>
Responsible party	<i>Construction Official</i>
Potential funding sources	<i>Local.</i>
Time line	<i>On-going.</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action - In progress</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Avon-By-The-Sea</i>
Community action number	5
<b>Assessing the Risk</b>	
Hazard(s) addressed	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action
Risk finding	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
Action category	Structure and Infrastructure Projects
Action type	Protect Structures
Action description	Elevation of Flood prone Residential Structures 155
Existing, future &/or NA	Existing
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	Losses avoided by this project are estimated to be \$13,617,933
Cost estimate	The cost of this project is estimated to be \$4,650,000
Cost effectiveness (i.e., benefit/cost)	This projects is likely to be cost effective, with benefits of \$13,617,433 and costs of \$4,650,000.00
Technical	Elevation of a structure is technically feasible and a proper mitigation activity.
Political	Our political leadership is very supportive of this type of project
Legal	While the municipality does not own the structures in questions, we fully support the homeowners in moving forward. We are currently assisting homeowners with obtaining grant funding and ICC Claims.
Environmental	No environmental impacts are anticipated as a result of elevating the homes. Homes that have been accepted into the State HMGP do have an environmental reviews and inspections conducted.
Social	No particular social group in our community is likely to be disproportionately impacted by this project
Administrative capability	Our municipality has the administrative capabilities to manage an elevation project through our construction department.
Local champion	Not only affected homeowners but the community as a whole and local government.
Other community objectives	This objective is aligned with the Boroughs objective of obtaining a better CRS rating.
<b>Implementing the Action</b>	
Priority	High
Local planning mechanism	Homes in the Borough that have been substantially damaged must be raised.
Responsible party	This project is managed cooperatively with the Construction Department, Floodplain Administrator and the Office of Emergency Management.
Potential funding sources	FEMA hazard mitigation grant funding streams (i.e., HMGP) and ICC funding.
Time line	This is a very large project that will be on-going for the foreseeable future.
<b>Reporting on Progress</b>	
Action progress status	This is a new project that has been on-going since hurricane Sandy.

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Belmar, NJ</i>
<b>Community action number</b>	<i>1 - Lake Como Flooding Mitigation</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, hurricane and tropical storm, surge, nor'easter</i>
<b>Risk finding</b>	<i>Repetative storm water flooding at Coastal Lake Como, property damage, road closures</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Project</i>
<b>Action type</b>	<i>Drainage improvement</i>
<b>Action description</b>	<i>The Lake Como Flood Mitigation Project is to increase the amount of stormwater which can be removed from the lake before and during a storm event, by replacing the current outlet pipe and providing for a permanent forced main to pump out storm water in emergencies. At the same time, the ground level elevations on the north side of the lake would be elevated by regrading in order to prevent the lake from overflowing and flooding adjacent roadways and surrounding properties.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing &amp; Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The action will significantly reduce/eliminate the repetitive flooding that occurs during high rain events damaging residential property in the surrounding area. These actions will save millions of dollars in repetitive flooding loss claims from residential homes. The 100-Year Damage Value (20% for Zone AE) is \$3.9 Million for Belmar affected properties alone.</i>
<b>Cost estimate</b>	<i>\$1.5 Million</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with losses avoided in excess of project costs.</i>
<b>Technical</b>	<i>The actions are highly achievable from a technical aspect. The installation of a new outfall pipe and forcemain along with emergency pumping capabilities are technically within the expertise of the Borough Engineer.</i>
<b>Political</b>	<i>There is high community support for this project. Over 75 citizens recently attended a meeting at Belmar Borough Hall on this topic. Belmar's elected officials are advocates for the project as well as elected officials from neighboring towns.</i>
<b>Legal</b>	<i>Belmar represents one of three owners of the lake. Spring Lake and Lake Como share ownership. The three municipalities are already partners of an interlocal agreement for emergency management of the lake and are eager to implement a more permanent solution as outlined in this mitigation strategy.</i>
<b>Environmental</b>	<i>Yes</i>
<b>Social</b>	<i>This action will only improve the quality of life in surrounding neighborhoods. No disruptions are anticipated.</i>
<b>Administrative capability</b>	<i>Belmar has the capacity to administer this project.</i>
<b>Local champion</b>	<i>There are multiple advocates for this project: elected officials, community groups, municipal DPWs.</i>
<b>Other community objectives</b>	<i>This action furthers many objectives in addition to the mitigation of the flooding hazard, economic development and water quality just two of them.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Interlocal agreement between the three municipalities, municipal engineering, State and County permitting.</i>
<b>Responsible party</b>	<i>Borough Administrator, Colleen Connolly</i>
<b>Potential funding sources</b>	<i>HMPG 4086, CBDG, NJEIT Loans, Local Bonding</i>
<b>Time line</b>	<i>60 day work plan from obtaining permitting approvals</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward. The three municipalities have worked together through the interlocal to regularize the emergency management of the lake. Hurricane Sandy devastated the area surrounding the lake and has bolstered the resolve of the municipalities to secure the funding necessary for this long-term solution.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Belmar, NJ</i>
<b>Community action number</b>	<i>2 - Silver Lake Flooding Mitigation</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, hurricane and tropical storm, surge, nor'easter</i>
<b>Risk finding</b>	<i>Repetitive storm water flooding at Coastal Lake - Silver Lake, property damage, road closures</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Project</i>
<b>Action type</b>	<i>Drainage improvement</i>
<b>Action description</b>	<i>The Silver Lake Flooding mitigation project is presently in construction. A 48" gravity fed and forced main running from Silver Lake to the Shark River Inlet under A Street.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing &amp; Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The action will significantly reduce/eliminate the repetitive flooding that occurs during high rain events damaging residential property in the surrounding area. These actions will save millions of dollars in repetitive flooding loss claims from residential homes.</i>
<b>Cost estimate</b>	<i>\$1.3 Million</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is expected to be cost effective, with benefits in excess of estimated project costs.</i>
<b>Technical</b>	<i>The actions are highly achievable from a technical aspect. The installation of a new outfall pipe and forcemain along with emergency pumping capabilities are technically within the expertise of the Borough Engineer.</i>
<b>Political</b>	<i>There is high community and elected official support for this project.</i>
<b>Legal</b>	<i>None</i>
<b>Environmental</b>	<i>Yes</i>
<b>Social</b>	<i>This action will only improve the quality of life in surrounding neighborhoods. Other than road closures during construction - no disruptions are anticipated.</i>
<b>Administrative capability</b>	<i>Belmar has the capacity to administer this project.</i>
<b>Local champion</b>	<i>There are multiple advocates for this project: elected officials, community groups, municipal DPWs.</i>
<b>Other community objectives</b>	<i>This action furthers many objectives in addition to the mitigation of the flooding hazard, economic development and water quality just two of them.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Municipal engineering, State and County permitting.</i>
<b>Responsible party</b>	<i>Borough Administrator, Colleen Connolly</i>
<b>Potential funding sources</b>	<i>Local Bonding</i>
<b>Time line</b>	<i>Construction is expected to be complete by July 2014</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward. In construction as of 4/4/14.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Belmar, NJ</i>
Community action number	<i>3 - Belmar L Street Bulkhead Flood Mitigation Project</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, hurricane and tropical storm, surge, nor'easter</i>
Risk finding	<i>Repetative storm water flooding from the Shark River during storm surges and high volume rain events. Damage to residential property, borough recreational areas and street closures.</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Bulkhead Replacement and Elevation</i>
Action description	<i>Replace existing timber bulkhead with a new steel bulkhead along Route 35 at the L Street Beach and along Maclearie Park. The existing timer and concrete are deteriorated and too low to offer signifigant protection to the properties behind it.</i>
Existing, future &/or NA	<i>Existing &amp; Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The action will signifigantly reduce/elimate the repetative flooding that occurs during high rain events damaging residential property in the surrounding area along with repetative closures of Route 35, a main state highway.'These actions will save millions of dollars in repetitive flooding loss claims from residential homes as well as savings of public safety officials required to manage road closures during flooding.</i>
Cost estimate	<i>\$2.7 Million</i>
Cost effectiveness (i.e., benefit/cost)	<i>This action is likely to be cost effective, with benefits at least equal to (and possible more than) project costs.</i>
Technical	<i>The actions are highly achievable from a technical aspect. The installation of a new outfall pipe and forcemain along with emergency pumping capabilities are technically within the expertise of the Borough Engineer.</i>
Political	<i>There is high community and elected official support for this project.</i>
Legal	<i>Coordination with state entities NJDEP &amp; NJDOT</i>
Environmental	<i>Yes</i>
Social	<i>This action will only improve the quality of life in surrounding neighborhoods. No disruptions are anticipated.</i>
Administrative capability	<i>Belmar has the capacity to administer this project.</i>
Local champion	<i>There are multiple advocates for this project: elected officials, community groups, municipal DPWs.</i>
Other community objectives	<i>This action furthers many objectives in addition to the mitigation of the flooding hazard, economic development and water quality just two of them.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Municipal enginnering, State and County permitting.</i>
Responsible party	<i>Borough Administrator, Colleen Connolly</i>
Potential funding sources	<i>HMPG 4086, CDBG</i>
Time line	<i>90 day work plan from obtaining permitting approvals</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Belmar</i>
<b>Community action number</b>	<i>4 - Elevation</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation of Floodprone Residential Structures. Of the approximately 210 houses located in the Flood Hazard Zones V and A, 114 are primary residences that are eligible for federal funding to cover the Increased Cost of Compliance to elevate the structures. These primary residences range from Elevation 6 - 11.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are estimated to be \$6,840,000.
<b>Cost estimate</b>	The cost of this project is estimated to be \$3,420,00.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This projects is likely to be cost effective, with benefits of \$6,840,000 and costs of \$3,420,000.
<b>Technical</b>	Elevation is technically feasible
<b>Political</b>	Our political leadership strongly supports this type of project
<b>Legal</b>	While the municipality does not own the structures in questions, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated as a result of elevating the homes
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation project
<b>Local champion</b>	affected homeowners
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Belmar Planning Board, Belmar Zoning Board
<b>Responsible party</b>	affected homeowners
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP)
<b>Time line</b>	variable based on size of home and timing of award, approximate is 60 days.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Belmar</i>
<b>Community action number</b>	<i>5 - Seawall</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters
<b>Risk finding</b>	Most of Belmar is at elevation 6-9 feet. Ocean Avenue (bordering the Atlantic Ocean) is at Elevation 11 feet. Storm surges above elevation 11 feet flood the town and Ocean Avenue becomes a damn trapping flood waters in town.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	The installation of a steel sheet pile, 30-feet long driven into the beach on the east side of the boardwalk (on the east side of Ocean Avenue) will establish surge protection at elevation 13 feet.
<b>Existing, future &amp;/or NA</b>	Future
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are estimated to be \$130,000,000.
<b>Cost estimate</b>	The cost of this project is estimated to be \$5,000,000.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This projects is likely to be cost effective, with benefits of \$130,000,000 and costs of \$5,000,000.
<b>Technical</b>	Installation of the seawall is technically feasible
<b>Political</b>	Our community and political leadership strongly supports this type of project
<b>Legal</b>	None
<b>Environmental</b>	No environmental impacts are anticipated - All appropriate permits from DEP will be aquired.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation project
<b>Local champion</b>	There are many advocates for this project: Elected Officials, community groups, municipal DPW, Homeowners, Business Owners
<b>Other community objectives</b>	This action furthers may objectives in addition to the flooding hazard, economic development and water quality among them.
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Borough of Belmar, NJDEP
<b>Responsible party</b>	Borough of Belmar, Colleen Connolly
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP)
<b>Time line</b>	90 days from funding authorization
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>BOROUGH OF BRADLEY BEACH</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>STORM SURGE, FLOODING, HURRICANES, TROPICAL STORMS, NOR'EASTERS</i>
<b>Risk finding</b>	<i>Due to Super Storm Sandy, Bradley Beach incurred significant damages along its beach front and dune system. There were also significant damages to the bulkhead system. The Borough experiences ocean and lake flooding during hurricanes and large storms. Virtually all of Bradley Beach is in mapped storm surge hazard areas. Climate change will contribute to more frequent and severe weather events. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>STRUCTURE AND INFRASTRUCTURE PROJECTS</i>
<b>Action type</b>	<i>STRUCTURAL CONTROL TECHNIQUES</i>
<b>Action description</b>	<i>SAND DUNE/BERM CONSTRUCTION - INSTALL SNOW FENCING IN A ZIG ZAG PATTERN, PLACE FIR TREES INSIDE THUS ALLOWING SAND TO ACCUMULATE NATURALLY ALONG ENTIRE BEACHFRONT FOR FLOODPLAIN MANAGEMENT</i>
<b>Existing, future &amp;/or NA</b>	<i>ACTION PROTECTS EXISTING AND FUTURE DEVELOPMENT AND PREVENTS FLOODING</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>FORMER DUNE STRUCTURE CONTRIBUTED TO A SIGNIFICANT REDUCTION IN FLOOD DAMAGE OF ROADWAY AND STRUCTURES AND ALSO REMAINS IN COMPLIANCE WITH OUR COMMUNITY RATING SYATEM DURING SUPERSTORM SANDY. LOSSES AVOIDED AS A RESULT OF THE PROJECT COULD EXCEED \$500,000 HAD THE STORM SURGE PROCEEDED FULL FORCE IN A WESTERLY DIRECTION INTO THE BOROUGH WITH NO DUNE BARRIERS TO NEUTRALIZE IT.</i>
<b>Cost estimate</b>	<i>APPROXIMATELY \$50,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>A PROVEN METHOD TO REDUCE LOSSES TO BOROUGH INFRASTRUCTURE AND STRUCTURES. THIS PROJECT IS LIKELY TO BE COST EFFECTIVE, WITH BENEFITS ON THE ORDER OF APPROXIMATELY \$750,000 AT A MINIMUM COST OF \$50,000 TO REPLACE THE DUNE INFRASTRUCTURE. AND COSTS ON THE ORDER OF \$50,000.</i>
<b>Technical</b>	<i>FEASIBLE AND PROVEN SUCCESSFUL METHOD USED PRIOR TO SUPERSTORM SANDY</i>
<b>Political</b>	<i>GOVERNING BODY AND CITIZENS FAVOR THIS PROJECT</i>
<b>Legal</b>	<i>REPLACES FORMER DUNES, SO THERE SHOULD BE NO LEGAL ISSUES</i>
<b>Environmental</b>	<i>NO ANTICIPATED IMPACT SINCE THIS PROJECT REPLACES A FORMER EXISTING DUNE NETWORK</i>
<b>Social</b>	<i>NO NEGATIVE SOCIAL IMPACT ANTICIPATED</i>
<b>Administrative capability</b>	<i>BOROUGH IS FULLY CAPABLE TO IMPLEMENT THIS PROJECT</i>
<b>Local champion</b>	<i>MAYOR, COUNCIL AND LOCAL OFFICE OF EMERGENCY MANAGEMENT</i>
<b>Other community objectives</b>	<i>PROTECT BOROUGH ROADWAYS AND STRUCTURES FROM SEVERE STORM IMPACT AND REMAIN IN COMPLIANCE WITH THE BOUROUGH COMMUNITY RATING SYATEM.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>HIGH</i>
<b>Local planning mechanism</b>	<i>BOROUGH ENGINEER, BOROUGH COUNCIL AND PUBLIC WORKS DEPARTMENT</i>
<b>Responsible party</b>	<i>SUPERVISOR OF PUBLIC WORKS, R. BIANCHI</i>
<b>Potential funding sources</b>	<i>FEMA, LOCAL BONDING AND PUBLIC WORKS LABOR</i>
<b>Time line</b>	<i>START BY JULY 1, 2014, COMPLETION EST 12/31/2014 (NATURAL SAND BUILD UP)</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>BOROUGH OF BRADLEY BEACH</i>
Community action number	5
<b>Assessing the Risk</b>	
Hazard(s) addressed	ALL
Risk finding	DEFICIENCIES WERE IDENTIFIED WITH LOCAL AND INTER AGENCY COMMUNICATION AS WELL AS COMMUNITY NOTIFICATIONS DURING PAST EMERGENCIES
<b>Describing the Action</b>	
Action category	COMMUNICATION AND NOTIFICATION SYSTEM IMPROVEMENTS
Action type	THE BOROUGHS IS CURRENTLY EXPLORING THE FEASIBILITY OF NETWORKING WITH OTHER MUNICIPALITIES IN ORDER TO ESTABLISH AND IMPLEMENT CONTINGENCY PLANS FOR COMMUNICATIONS CONTINUITY. THE BOROUGH HAS RECENTLY IMPLEMENTED SEVERAL METHODS OF NOTIFICATION TO THE PUBLIC TO IMPROVE THE EMERGENCY NOTIFICATION PROCESS.
Action description	DISCUSSIONS UNDERWAY TO EXPLORE THE USE OF SATELLITE AND DIGITAL METHODS OF COMMUNICATION. ALSO A NEW EMERGENCY NOTIFICATION SYSTEM HAS BEEN IMPLEMENTED THAT INCORPORATES THE USE OF TELEPHONE, TEXT, INTERNET AS WELL AS SOCIAL MEDIA NOTIFICATIONS.
Existing, future &/or NA	N/A
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	IMPLEMENTATION OF THESE NOTIFICATION UPGRADES ARE VITAL TO PROTECTING LIVES AND PREVENTING INJURIES. LOSSES AVOIDED AS A RESULT OF COMMUNICATIONS AND NOTIFICATION SYSTEM UPGRADES ARE ESTIMATED TO BE ROUGHLY \$350,000.
Cost estimate	THE COST ASSOCIATED WITH COMMUNICATIONS UPGRADES IS ESTIMATED TO BE APPROXIMATELY \$300,000. THERE IS NO COST ASSOCIATED WITH THE NOTIFICATION SYSTEM UPGRADES.
Cost effectiveness (i.e., benefit/cost)	A CONTINGENCY PLAN FOR COMMUNICATIONS IS IMPERATIVE FOR THE LIFE HEALTH AND WELL BEING OF ALL RESIDENTS, VISITORS, AS WELL FOR CONTINUITY OF GOVERNMENT AND LOCAL COMMERCE. FURTHER THERE IS NO COST ASSOCIATED WITH NOTIFICATION SYSTEM UPGRADES THAT PROVIDE QUICKER MORE EFFICIENT METHODS OF COMMUNICATION TO BOROUGH RESIDENTS IN AN EMERGENCY SITUATION. THIS PROJECT IS LIKELY TO BE COST EFFECTIVE, WITH BENEFITS ON THE ORDER OF \$500,000 AND COSTS OF APPROXIMATELY \$300,000.
Technical	THESE MITIGATION ACTIONS ARE TECHNICALLY FEASIBLE. THE NOTIFICATION UPGRADES HAVE ALREADY BEEN IMPLEMENTED
Political	LOCAL GOVERNMENT AND PUBLIC SUPPORT THESE MITIGATION ACTIONS.
Legal	THESE ARE ADMINISTRATIVE ISSUES
Environmental	NO NEGATIVE ENVIRONMENTAL IMPACT
Social	THESE ACTIONS WILL AFFECT THE ENTIRE POPULATION IN A POSITIVE WAY.
Administrative capability	THE BOROUGH IS FULLY CAPABLE OF IMPLEMENTING AND MAINTAINING THESE ACTIONS ONCE THE INITIAL FUNDING MECHANISM HAS BEEN PUT IN PLACE FOR THE PURCHASE OF REQUIRED COMMUNICATIONS EQUIPMENT.
Local champion	MAYOR, COUNCIL, POLICE DEPARTMENT AND LOCAL OFFICE OF EMERGENCY MANAGEMENT
Other community objectives	DISPENSE NOTIFICATIONS AS REQUIRED FOR ANY EMERGENCIES OR EVENTS THAT ARISE
<b>Implementing the Action</b>	
Priority	HIGH
Local planning mechanism	THESE UPGRADES WILL BE INCORPORATED IN THE LOCAL EMERGENCY PLANS AND PROCEDURES WILL BE IN PLACE FOR USE.
Responsible party	EMERGENCY MANAGEMENT COORDINATOR
Potential funding sources	GRANTS, LOCAL BUDGET AND MUNICIPAL BONDS
Time line	COMMUNICATIONS UPGRADE BY JANUARY 2015, NOTIFICATION CURRENTLY IMPLEMENTED
<b>Reporting on Progress</b>	
Action progress status	NEW SINCE THE LAST VERSION OF THE PLAN

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<b>BOROIGH OF BRADLEY BEACH</b>
<b>Community action number</b>	6
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation of Floodprone Residential Structures. (135)
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are estimated to be \$120,000 per home (times 135 homes, total benefits = \$16.2M)
<b>Cost estimate</b>	The cost of this project is estimated to be \$16.2M
<b>Cost effectiveness (i.e., benefit/cost)</b>	This projects is likely to be cost effective, with benefits equal to project costs of \$16.2M.
<b>Technical</b>	Elevation is technically feasible
<b>Political</b>	The Governing Body and citizens support this project
<b>Legal</b>	While the municipality does not own the structures in questions, we fully support the homeowners in moving forward. Proper permitting as utilized in the past will be required.
<b>Environmental</b>	No environmental impacts are anticipated as a result of elevating the homes.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project. There will be no negative social impact.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation project.
<b>Local champion</b>	Affected homeowners, Mayor and Council, OEM and Environmental groups.
<b>Other community objectives</b>	Improve and protect lifestyles of residents residing along Fletchewr and Sylvan Lakesas well as reduction of costly property damage.
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Mayor, Council, & Borough Engineer.
<b>Responsible party</b>	Mayor, Council, & Borough Engineer.

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>BOROUGH OF BRADLEY BEACH</i>
<b>Community action number</b>	<i>7</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Continue to support and fund the Borough's Community Emergency Response Team</i>
<b>Risk finding</b>	<i>During Community Emergencies (Fire, Storms, etc) the team provides emergency assistance as required</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency support for Police, Fire and First Aid</i>
<b>Action type</b>	<i>Provide team members to assist as required</i>
<b>Action description</b>	<i>Ongoing training of team members to assist in emergencies thru training in areas such as traffic control, medical assistance, and/or weather related matters.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>It is an established fact that the existence of a CERT unit in a community provides financial benefits to the community. Losses avoided are unquantifiable but are expected to be in excess of project costs as the project would provide training to the team which would allow them to respond more efficiently and effectively and, in turn, minimizing overall losses during an emergency.</i>
<b>Cost estimate</b>	<i>Ongoing efforts funded as required by the Borough. The costs of training are provided free of charge to the Borough.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>A well established method to provide citizen support in emergencies is cost effective for Bradley Beach, with zero dollars in out of pocket training costs and substantial benefits as losses are avoided as properly trained staff execute efficient, effective, and coordinated response actions during an emergency.</i>
<b>Technical</b>	<i>Feasible and proven successful</i>
<b>Political</b>	<i>Governing body and citizens favor this project</i>
<b>Legal</b>	<i>No legal issues</i>
<b>Environmental</b>	<i>No environmental impact</i>
<b>Social</b>	<i>Positive social impact</i>
<b>Administrative capability</b>	<i>Borough is fully capable to continue this project</i>
<b>Local champion</b>	<i>Mayor, Council and Office of Emergency Management</i>
<b>Other community objectives</b>	<i>Continue to provide assistance through local community involvement</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Ongoing activity</i>
<b>Local planning mechanism</b>	<i>Police Department, Mayor and Council, Office of Emergency Management</i>
<b>Responsible party</b>	<i>Mayor and Emergency Management Coordinator</i>
<b>Potential funding sources</b>	<i>Mayor and Council</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing activity since 2009 plan (carried forward)</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Brielle</i>
<b>Community action number</b>	<i>Borough of Brielle - Action No. 1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, &amp; Wave Action, Hurricanes, Tropical Storms, Nor'easters, Surge</i>
<b>Risk finding</b>	<i>Flooding of residential structures is a key problem in the community. Much of the town is in mapped floodplains and/or surge hazard areas. Wave action is also an issue in many locations. Approximately, 200 single family homes are within the 100 year flood zone throughout the Borough. During extreme storm events these properties can experience flooding and property damage. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Single Family Homes - Raising of Structure</i>
<b>Action description</b>	<i>The Borough is proposing mitigation through house elevation for homes within the 100 year flood zone.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces tidal storm surge damage and provides protection to waterfront homes within the 100 year flood zone. Losses avoided by elevating these homes are estimated to be roughly on the order of \$58,400,000 (or about \$292,000 per property)</i>
<b>Cost estimate</b>	<i>\$20,000,000 (about \$100,000 per each of 200 properties)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be on the order of \$58,400,000 and costs of only \$20,000,000.</i>
<b>Technical</b>	<i>Technically feasible. Will help prevent flood damage to residential homes.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve flood loss and mitigate debris entering into the river.</i>
<b>Social</b>	<i>Will help residents along shoreline area of the Borough within the 100 year flood zone.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer (after technical assistance from the State)</i>
<b>Local champion</b>	<i>Residents along the shoreline.</i>
<b>Other community objectives</b>	<i>Flood Damage Prevention Ordinance</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Flood Damage Prevention Ordinance</i>
<b>Responsible party</b>	<i>Borough - Engineer</i>
<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
<b>Time line</b>	<i>2 year</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action Proposed in 2014</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Brielle</i>
<b>Community action number</b>	<i>Borough of Brielle - Action No. 2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood &amp; Storm Surge, Hurricanes, Tropical Storms, Nor'easters, erosion</i>
<b>Risk finding</b>	<i>The existing bulkhead system is not sufficient to provide adequate flood protection and protect existing roadways. A key location identified is Ocean Avenue where bulkhead mitigation is needed to prevent the end of the roadway from collapsing, which would undermine the adjacent properties and can cause flooding during a period of high tide. Any storm that creates a tidal surge would then pose a severe threat to the area and further undermine Ocean Avenue. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Bulkhead Mitigation</i>
<b>Action description</b>	<i>The Borough is proposing bulkhead upgrades within key right-of-way areas. Multiple Bulkhead restoration projects throught the Borough with priority being Ocean Avenue to prevent the end of the roadway from collapsing, which would undermine the adjacent properties and can cause flooding during a period of high tide.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces tidal storm surge and provides protection to waterfront homes within the individual bulkhead areas. Will provide protection for residents and waterfront homes within the bulkhead area. Losses avoided by upgrading the bulkheads are estimated to be roughly on the order of \$3,000,000.</i>
<b>Cost estimate</b>	<i>\$750,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits on the order of \$3,000,000 and costs of only \$750,000.</i>
<b>Technical</b>	<i>Technically feasbile. Will help control flooding.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Well help improve flood control and mitigate debris entering into the river.</i>
<b>Social</b>	<i>Will help residents along shoreline area of the Borough.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer (after technical assistance from the State)</i>
<b>Local champion</b>	<i>Residents along the shoreline.</i>
<b>Other community objectives</b>	<i>Municipal Stormwater Management Regulation Program</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Municipal Stormwater Management Regulation Program</i>
<b>Responsible party</b>	<i>Borough - Engineer</i>
<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
<b>Time line</b>	<i>1 year</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing action from 2009 Plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Colts Neck Township</i>
Community action number	<i>Colts Neck Township # 1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Drought</i>
Risk finding	<i>To secure a potable water source for our public buildings during times of drought conditions. The township relies solely on water wells for their water supply.</i>
<b>Describing the Action</b>	
Action category	<i>Structural/infrastructure projects</i>
Action type	<i>Improvement to ensure a safe/reliable water source</i>
Action description	<i>Ability to drill new water wells at strategic public buildings to keep them operational during a drought occurrence. Drill replacement wells for residents on a case by case basis.</i>
Existing, future &/or NA	<i>Future development</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Would allow strategic public buildings to operate and serve the public during times of drought.</i>
Cost estimate	<i>Well drilling- 12,000 x 5 = \$60,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Maintaining a water supply for strategic public buildings will allow operations to continue and prevent the cost of relocating personnel and equipment to an alternate location</i>
Technical	<i>Technically feasible -allows operations in township facilities to function in order to assist residents in need of assistance.</i>
Political	<i>Keeping township facilities open during a drought occurrence is politically expendent.</i>
Legal	<i>No apparent legal issues.</i>
Environmental	<i>No apparent environmental issues. Wells to be installed by a licensed well driller.</i>
Social	<i>This improvement would benefit the entire community.</i>
Administrative capability	<i>we have the administrative capability to implement and maintain project</i>
Local champion	
Other community objectives	<i>This would be a capital improvement providing the ability to service the community during a drought occurrence.</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>Decision to be made by the township committee</i>
Responsible party	<i>Health Officer and Township Administrator</i>
Potential funding sources	<i>Local Budget</i>
Time line	<i>3 years.</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action in 2014</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Colts Neck Township</i>
Community action number	<i>Colts Neck Township Plan# 2</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, hurricanes/tropical storms, nor'easters</i>
Risk finding	<i>There is a residential home in the township that was originally built in the 1700's with the first floor elevation below the current base flood elevation. The structure on this property is already defined as a repetitive loss property with multiple flood insurance claims. This strategy will also apply to any existing structures built below the base flood elevation. It is hoped that this action may be applied to additional structures built below the base flood elevation, to be included in future plan updates.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure Project</i>
Action type	<i>Objective is to mitigate financial losses resulting from storm events.</i>
Action description	<i>Elevate existing single-family home located in floodplain.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The cumulative losses avoided by this project over time are estimated to be 350,000 dollars +/- per structure.</i>
Cost estimate	<i>Estimated implementation cost for the first structure is 150,000 dollars +/- Cost of any subsequent structures subject to similar actions would be determined on a case to case basis but anticipated to be similar.</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective with benefits provisionally estimated to exceed the projected cost</i>
Technical	<i>Elevation is technically feasible</i>
Political	<i>Government body fully supports this project</i>
Legal	<i>While the township does not own the structure there are no legal impediments.</i>
Environmental	<i>No adverse environmental impacts are anticipated</i>
Social	<i>No social group is likely to be impacted.</i>
Administrative capability	<i>Municipality has the required administrative capabilities</i>
Local champion	<i>Yes-supports townships master plan</i>
Other community objectives	<i>Improve the hydrologic function of the flood plain</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>All permitting to be managed thru the Building Dept.</i>
Responsible party	<i>Individual homeowner</i>
Potential funding sources	<i>FEMA hazard mitigation grant</i>
Time line	<i>As soon as possible subject to funding availability.</i>
<b>Reporting on Progress</b>	
Action progress status	<i>NEW</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Colts Neck Township</i>
Community action number	<i>Colts Neck Township Plan # 3</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All Natural Hazards - Hardening of Shelters</i>
Risk finding	<i>Existing facilities designed to be utilized as shelters are currently not hardened to withstand severe weather events to protect residents from the elements. It is critical that these structures have the appropriate tools/equipment etc needed and be readily available before an event occurs.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure Projects</i>
Action type	<i>Protection of shelters during a natural hazard</i>
Action description	<i>Protect exterior of facility by covering windows, stacking up sand bags around potential flood prone areas; providing additional embankments, supply facility with an emergency generator. There is also a need to obtain emergency equipment for use in the shelter as well as adding additional communication strategies.</i>
Existing, future &/or NA	<i>New</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The real benefits will be measures on the saving and/or the reduction of injury to human lives during such an event. By having the availability of a hardened shelter it will also minimize the need to relocate residents from one shelter to another if one shelter becomes damaged. The cumulative losses avoided could be estimated to be over \$1,000,000 dollars.</i>
Cost estimate	<i>\$150,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective with benefits provisionally estimated to exceed the projected cost</i>
Technical	<i>Technically feasible</i>
Political	<i>Government body fully supports this project</i>
Legal	<i>No legal impediments</i>
Environmental	<i>No environmental impact from this action. Will comply with environmental regulations</i>
Social	<i>Action will effect all segments of the population equally and will not disrupt established neighborhood, break up voting districts or cause relocation of low income households.</i>
Administrative capability	<i>Municipality has the required administrative capabilities</i>
Local champion	<i>Local OEM</i>
Other community objectives	<i>resident are assured and have more confidence that the township is able to assist and protect them during such an event</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Local OEM</i>
Responsible party	<i>Local OEM</i>
Potential funding sources	<i>Grant, township funding</i>
Time line	<i>ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Colts Neck Township</i>
<b>Community action number</b>	<i>Colts Neck Township Plan# 4</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Severe wind events and/or highwinds occurring from but not limited to thunderstorms, hurricanes, nor'easters etc - Tree Trimming</i>
<b>Risk finding</b>	<i>Downed trees or other structures on residential or commercial properties damaging power lines during a severe weather event which contributes to local or widespread power outages and obstructing vehicle movement on public streets.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Project</i>
<b>Action type</b>	<i>Improvement of reliability of power lines</i>
<b>Action description</b>	<i>Trim tree branches or remove trees and/or other structures that may cause an interruption of electrical power and removing obstruction of vehicle movement on public streets.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Historically the township has experienced loss of electrical power caused by downed power lines due to tree branches and/or trees causing. Having an action plan to address this issue would benefit the general public by reducing a major safety issue by the public not being exposed to live power lines. Also the loss of business in the townships business district would be minimized due to the loss of revenues. Insurance carriers would not have to pay out any claims due to these occurrences. The infrastructure for the general public would be minimized. Losses avoided for this project could range from \$8,000 to over \$2,500,000</i>
<b>Cost estimate</b>	<i>Depending on the amount of tree and tree branches to be removed the amount would range from \$200,000 to \$500,000.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>We believe this project would be cost effective. The benefits are estimated up to 1 million dollars per occurrence and costs are between \$200,000 to \$500,000 per year depending on the amount of lines/ branches needing to be (re)moved or the areas impacted.</i>
<b>Technical</b>	<i>Trimming and/or tree removal has been effective historically thereby assisting with future reliability.</i>
<b>Political</b>	<i>This improvement would be very widely supported</i>
<b>Legal</b>	<i>The project would remove and/or trim trees near power lines owned by the township.</i>
<b>Environmental</b>	<i>Would have no adverse environmental impact</i>
<b>Social</b>	<i>Would benefit the entire township</i>
<b>Administrative capability</b>	<i>Professional tree removal companies would be hired to conduct the work, under close township supervision</i>
<b>Local champion</b>	<i>Local OEM</i>
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Future township projects will take into consideration the planting of trees near power lines.</i>
<b>Responsible party</b>	<i>Local OEM/Public Works</i>
<b>Potential funding sources</b>	<i>Grants</i>
<b>Time line</b>	<i>2020</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Colts Neck Township</i>
Community action number	<i>Colts Neck Township Plan# 5</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All natural and man-made disasters -Shelters/Comfort Stations</i>
Risk finding	<i>During superstorm Sandy the township experienced extensive loss of power for an extended period of time. Since the majority of the township is supported by both individual subsurface sewage disposal systems and water wells many residents has no potable water supply and/or sewage facilities. There was a demand for the township to provide a facility(ies) providing basic living necessities (showers, laundry ect) for residents who were out of power for extended period of time.</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Establishment of comfort stations (shelters) in fire stations and first aid buildings to provide shelter and provide basic living services to residents during a disaster</i>
Action description	<i>The township to utilize either township facilities or other buildings in the community to temporary house residents during or after a disaster type situation.</i>
Existing, future &/or NA	<i>All</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Comfort stations are an effective method providing basic living services to large populations in need of hygienic grooming, fresh water, clean cloths, recharging electronic device ect.</i>
Cost estimate	<i>Cost is estimated at 10,000 to 100,000 per station/shelter per occurrence</i>
Cost effectiveness (i.e., benefit/cost)	<i>Comfort stations benefits are not readily quantifiable in dollar terms. Stations prevent disease, personal injury and loss of life.</i>
Technical	<i>Local fire and first aid buildings have sufficient infrastructure to host as comfort stations / shelters.</i>
Political	<i>There is community apd political desire to establish comfort stations during state's of emergencies.</i>
Legal	<i>No legal impediments</i>
Environmental	<i>No adverse environmental impacts anticipated.</i>
Social	<i>Will assist all segiments of the community equality. No distuption to neighborhoods, voting districts and will not cause relocation of lower income households.</i>
Administrative capability	<i>Yes ,but may need outside support to run comfort stations</i>
Local champion	<i>OEM / fire and first aid personnel</i>
Other community objectives	<i>N/A</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Local OEM</i>
Responsible party	<i>Local OEM</i>
Potential funding sources	<i>Grants</i>
Time line	<i>3 years</i>

Action progress status	<i>New</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Colts Neck Township</i>
<b>Community action number</b>	<i>Colts Neck Township Plan #6</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All Types</i>
<b>Risk finding</b>	<i>The communities understanding of natural and man-made hazards as far as preparation and preventative practices could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small scale mitigation activities. It is believed that promoting disaster resistant development will be critical in achieving sustainability.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Education and Community Awareness</i>
<b>Action type</b>	<i>Public Outreach</i>
<b>Action description</b>	<i>Develop a safety and public health outreach program that assists residents prepare and mitigate disasters. Develop an educational program to educate the public about hazard mitigation techniques and promote disaster-resistant development.</i>
<b>Existing, future &amp;/or NA</b>	<i>All</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Community members that are well informed, educated and follow-up on recommended mitigation practices will reduce the number of emergency calls during storm events and other natural disasters as well as protect public health and safety. Although it is difficult to fully quantify losses avoided, as are reoccurring on a annual basis, it is estimated to be at \$60,000 per year and are likely to be more than the cost estimate listed below.</i>
<b>Cost estimate</b>	<i>Minimal - Approximately \$20,000 initially with an approximate recurring annual cost of \$2,000 for the out-reach program.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Possible loss of life and the impact to public health and safety could be significant. The benefits of this project far outweigh the costs, with the benefits estimated to be on the order of \$50,000 and costs of only around \$20,000.</i>
<b>Technical</b>	<i>No technical impediments</i>
<b>Political</b>	<i>Yes- supported by township committee</i>
<b>Legal</b>	<i>Yes - supported by township committee</i>
<b>Environmental</b>	<i>N/A</i>
<b>Social</b>	<i>The project will provide outreach to the entire community.</i>
<b>Administrative capability</b>	<i>Municipality has the required administrative capabilities</i>
<b>Local champion</b>	<i>Local OEM</i>
<b>Other community objectives</b>	<i>Increase community awareness and overall resiliency to emergency situations</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>

<b>Action progress status</b>	<i>New</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough Of Deal</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, hurricane and tropical storms, nor'easters</i>
<b>Risk finding</b>	<i>Above normal rainfall causes flooding on roadways and onto private property partially due to drain pipes being of insufficient size under roadways. Several roadways in the town require mitigation of drainage systems to prevent recurrent flooding. Flooding has historically been an issue from Poplar Brook at various locations through the years; particularly between Norwood Ave and Ocean Ave. Undersized culverts under roadways in three different streets along Poplar Brook result in flooding (Norwood Ave, Alymar Ave and Ocean Ave; but the Ocean Ave mitigation portion is recently completed) . Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Drain pipe improvement</i>
<b>Action description</b>	<i>Overflow pipes need to be increased to improve waterflow during storms and reduce flooding on roadways and onto private property. Similar issue at Ocean Avenue has already been mitigated, but Norwood Avenue and Alymar Avenue remain in need of mitigation.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Property and infrastructure damage reductions as well as slowing traffic and public safety hazards would serve as long term benefit to the community. Prevention of injuries. Flooding presents a hazard for the public and to emergency responders who have to enter to render aid. Protection of Property: Reduce water damage to public and private lands as well as vehicles. Losses avoided by this mitigation project are estimated to be roughly on the order of \$100,000.00 per year per location.</i>
<b>Cost estimate</b>	<i>\$200,000.00 per location. Total - \$400,000.00 (based on a useful life of 20 years, this cost is about \$10,000.00 per year per location).</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits on the order of \$100,000.00 per site and costs on the order of \$10,000.00 per site.</i>
<b>Technical</b>	<i>One portion has already been successfully completed (Ocean Ave) so the remaining two would be similar and technically feasible.</i>
<b>Political</b>	<i>Support has been received from local governing bodies.</i>
<b>Legal</b>	<i>Both are owned by outside agencies. One by the County and one by the State. Approval is not the issue, funding is.</i>
<b>Environmental</b>	<i>Improvements to the underpasses would improve the environmental impact on the area. Flooding and erosion would be reduced.</i>
<b>Social</b>	<i>No negative social impact. Will improve the neighborhood without relocating anyone and will improve traffic flow in the area.</i>
<b>Administrative capability</b>	<i>The Borough is unable to undertake the project with its staff, an outside contractor will be used.</i>
<b>Local champion</b>	<i>The residents that live along the length of Poplar Brook are strong supporters as well as the governing body and motorists that are frequently redirected by flooding.</i>
<b>Other community objectives</b>	<i>No other objectives with this project.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Low</i>
<b>Local planning mechanism</b>	<i>Codes, Engineering, Plans, Traffic</i>
<b>Responsible party</b>	<i>Borough Administrator overseeing engineering firm</i>
<b>Potential funding sources</b>	<i>Federal and State Grants possibly related to beach replenishment project</i>
<b>Time line</b>	<i>2016</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>One third of project completed - remaining on hold until funding source is secured.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough Of Deal</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, storm surge, hurricanes and tropical storms, nor'easters, wave action</i>
<b>Risk finding</b>	<i>Beachfront areas were significantly damaged during Hurricane Sandy. Including, but not limited to, municipal sewer facility which is located on the oceanfront. During Hurricane Sandy storm surge and waves destroyed the protective wall and infiltrated the sewerage facility causing catastrophic damage. The project will build a new protective wall that will withstand future threats from tidal surge and storm surge. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure projects</i>
<b>Action type</b>	<i>Construction of Protective Seawall around the Sewerage Facility</i>
<b>Action description</b>	<i>- A new and improved seawall will be constructed to protect the building at the sewerage facility.. The original wall was built in the 1940's and was approximately 12 inches thick and was made with simple cinderblock construction. The new wall will be a reinforced poured concrete structure with secure footings, 36 inches thick and 20 foot higher than the previous wall. It will also be placed in a more strategic position to better protect the building.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The action will be significant in protecting the critical building from storm surge and wave damage. Expenditures now will result in long term savings in repairs from future storms and interruption of service losses avoided by improving the seawall protection around the sewer treatment plant are estimated to be roughly on the order of \$8160.00 per year.</i>
<b>Cost estimate</b>	<i>\$408,000 (or, based on a useful life of 50 years, this is \$8160.00 per year)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Property and infrastructure damage from past storms as well as the catastrophic loss from superstorm sandy show a need for better protection of this facility. Expenditures now will result in long term savings in repairs from future storms and interruption of service This project is likely to be cost effective, with benefits of \$50,000.00 per year and costs of \$8160.00 per year.</i>
<b>Technical</b>	<i>The project is technically feasible.</i>
<b>Political</b>	<i>The public welcomes and supports this project as does the governing body.</i>
<b>Legal</b>	<i>The Borough has the legal authority to undertake this project.</i>
<b>Environmental</b>	<i>The project will improve the overall appearance of the area as well as provide a safer recreational area for the public. It has no negative environmental impact and has been approved by environmental agencies.</i>
<b>Social</b>	<i>Improves the recreational area making the waterfront safer for the public and more accessible.</i>
<b>Administrative capability</b>	<i>The Borough is unable to undertake the project with its staff, an outside contractor will be used.</i>
<b>Local champion</b>	<i>All residents of the Borough benefit from the project. The governing body is a strong supporter of improving the location.</i>
<b>Other community objectives</b>	<i>Improves environmental quality, improves recreational beachfront area.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Codes, Engineering, Plans, Administrative Oversight</i>
<b>Responsible party</b>	<i>Borough Administrator overseeing engineering firm</i>
<b>Potential funding sources</b>	<i>HMGP Grant</i>
<b>Time line</b>	<i>2016- Final stages of grant application process.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Deal</i>
<b>Community action number</b>	<i>3</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Engineer
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Eatontown</i>
Community action number	<i>#1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding due to Hurricanes, tropical storms, nor'easters an strom surge flooding</i>
Risk finding	<i>Husky Brook runs through the borough, Local Officials not excess sedimentation impedes the brooks ability to drain water and in turn flooding of local areas is a result. Floodings is a recurrent issue at the Lewis Street Public Works Yard. Sea level rise and current change will contribute to more frequest and severe flooding and surge eventsover a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Structural project</i>
Action type	<i>Drainage improvement</i>
Action description	<i>We have started the process having an engineer start the planning on how to fix the problem, Possible components of the fix will be dredging of Husky Brook and improvements to the drainage system</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Prevent the loss of DPW equipment, truck garages and office building, we estimate that by doing this the benefits would be much higher that its cost. We are looking a a savings of around \$500,000 to 1 million</i>
Cost estimate	<i>\$150,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is expected to be cost effective with benefits of \$500,000+ and costs of \$150,000</i>
Technical	<i>project is feasible</i>
Political	<i>we have public support along with town Council on board</i>
Legal	<i>town owns property that the brook run thru</i>
Environmental	<i>We need to do an environmental impact study due to work on a waterway</i>
Social	<i>when the project starts traffic will have to re-routed around the construction site for at least 1-18 months</i>
Administrative capability	<i>once project is completed town has capabilities to maintain brook</i>
Local champion	<i>DPW, OEM</i>
Other community objectives	<i>by fixing flooding problem, we will be able to make capital imorvements to DPW yard and buildings</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Eatontown Building Department</i>
Responsible party	<i>Mayor/Council, Borough Engineer</i>
Potential funding sources	<i>local budget and grant</i>
Time line	<i>Jul-15</i>
<b>Reporting on Progress</b>	
Action progress status	<i>this is a carry over project that is waiting on funding</i>

Your plan name	<i>Monmouth County Multi-Jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Eatontown</i>
Community action number	<i>#2</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All Hazards</i>
Risk finding	<i>Downed trees on power lines contribute to power outages during severe storms and high winds such as nor'easters, hurricanes and tropical storms, ect. Shelters do not currently have sufficient systems in place to ensure power can be maintained for telecommunications, ect.. during severe storm events. Climate change will contribute to more frequent and severe storms</i>
<b>Describing the Action</b>	
Action category	<i>Emergency Planning</i>
Action type	<i>provide power to run and operate emergency shelters</i>
Action description	<i>Install backup generators to run and operate emergency evacuation shelters. This will involve monitoring the state site on a daily basis and when we see an available generator we will start the process to acquire the generator</i>
Existing, future &/or NA	<i>N/A</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>this will prevent the loss of life and serious injury by taking the residents out of harm's way and providing them shelter during incidents. Also by using emergency generators we will not have to build a new building for an emergency evacuation shelter. These types of benefits are hard to quantify, but are high, we estimate about \$10,000 per year.</i>
Cost estimate	<i>\$40,000-\$60,000.00 Divided by the useful life of a generator of 10 years, this represents an annual cost of about \$5,000 per year</i>
Cost effectiveness (i.e., benefit/cost)	<i>It is estimated that project would be cost effective with benefits of about \$10,000 per year and costs of only about \$5,000 per year</i>
Technical	<i>project is feasible</i>
Political	<i>we have public support along with town Council and the Eatontown Board of Education</i>
Legal	<i>we have already have the permission of the Board of Education to use property to place the emergency generators on</i>
Environmental	<i>no study is needed</i>
Social	<i>will bring the community together</i>
Administrative capability	<i>once project is completed, Eatontown Board of Education will maintain generators</i>
Local champion	<i>OEM and Eatontown Board of Education</i>
Other community objectives	<i>By installing generators at the existing shelters, we will not have to build a new building</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>Eatontown Office of Emergency Management</i>
Responsible party	<i>Eatontown Office of Emergency Management</i>
Potential funding sources	<i>local budget and grant</i>
Time line	<i>Sep-14</i>
<b>Reporting on Progress</b>	
Action progress status	<i>this is a carry over project that is waiting on funding and the availability of generators that are on the NJ GXXS program</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Eatontown</i>
<b>Community action number</b>	3
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Administrator
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Englishtown Borough</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, hurricanes, tropical storms, nor'easters</i>
Risk finding	<i>Heavy sediments deposits, debris and fallen trees, in segments of Weamaconk Creek and McGellairds Brook contribute to flooding of properties during heavy rain events, nor'easters and hurricanes, and the spring thaw</i>
<b>Describing the Action</b>	
Action category	<i>Natural Systems Protection</i>
Action type	<i>Improve stormwater drainage system capacity</i>
Action description	<i>Use stream restoration to ensure adequate drainage and diversion of stormwater. Conduct routine stream maintenance to remove sediment, debris, and fallen trees. Coordinate with County Bridge Department and Mosquito Control Commission to perform stream cleaning and maintenance at Weamaconk Creek and McGellairds Brook.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action will be significant to reduce damage to building structures and municipal and County infrastructure. Losses avoided are estimated to be \$300,000 annually.</i>
Cost estimate	<i>The cost is estimated to be \$20,000 annually</i>
Cost effectiveness (i.e., benefit/cost)	<i>The cost to implement this project is small compared to potential financial losses to property. This project is cost effective, with benefits on the order of \$300,00 and costs on the order of \$20,000 annually.</i>
Technical	<i>This mitigation action is technically feasible</i>
Political	<i>There is both political and public support for this mitigation action</i>
Legal	<i>The Borough can implement this mitigation action with the proper permits</i>
Environmental	<i>There are no environmental impacts associated with this mitigation action</i>
Social	<i>This mitigation action will have no social impacts</i>
Administrative capability	<i>Outside help to implement this mitigation action will be necessary</i>
Local champion	<i>The Mayor and Council will advocate for this mitigation action</i>
Other community objectives	<i>This mitigation action improves the quality of life to property owners adjacent to the streams that traverse the Borough</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Permits and coordination with County agencies</i>
Responsible party	<i>Thomas J Herits PE PP PLS</i>
Potential funding sources	<i>Grants, assistance from the County agencies</i>
Time line	<i>Summer 2015</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward from the 2009 plan.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Howell Township/Farmingdale</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All natural hazards</i>
<b>Risk finding</b>	<i>The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities and were better able to shelter in place.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Education and Awareness Programs</i>
<b>Action type</b>	<i>Increase hazard education and risk awareness</i>
<b>Action description</b>	<i>Mass mailing to all residents to obtain contact info of all residents (email list) for constant contact, updates, and education of Township operations regarding Emergencies</i>
<b>Existing, future &amp;/or NA</b>	<i>NA</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This communication and information will empower citizens to make better decisions, increase better planning around township emergencies (staying away from risks). It will empower emergency response personnel to mitigate risks by informing people to either stay home, steer clear, evacuate, etc. This will allow smoother operations for the Township. Losses avoided are difficult to quantify but are inclusive of preventing injuries and loss of life as well as preventing property damages through homeowner mitigation efforts, and these are likely to be well over the project costs of \$15,000 per year.</i>
<b>Cost estimate</b>	<i>\$15,000/year</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be well in excess of project costs of \$15,000 per year.</i>
<b>Technical</b>	<i>Yes</i>
<b>Political</b>	<i>Yes</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>N/A</i>
<b>Social</b>	<i>Entire Township</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Howell Township/Farmingdale</i>
Community action number	<i>2</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All Natural Hazards</i>
Risk finding	<i>Existing shelters are not designed to withstand hazards to which they are exposed during severe storm events. In order to best serve the community during natural disasters, identified pre-existing Shelters must be hardened to improve safety and resiliency during and after the event.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure projects</i>
Action type	<i>Protect critical facilities used for sheltering</i>
Action description	<i>Harden Shelter physically by shielding windows, adding sand bags, adding embankments. Internally will add communication capabilities, add additional emergency supplies (first aid, water, cots, MREs,ec)</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Hardening pre-existing shelters will minimize the need to move citizens from shelter to shelter if the hazard overwhelms the structure. This will also allow HTOEM to stock shelters permanently with supplies ready for a sudden hazard that requires sheltering. Losses avoided are estimated to be \$1,000,000.</i>
Cost estimate	<i>\$120,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits of \$1,000,000 on the cost of \$120,000.</i>
Technical	<i>Yes</i>
Political	<i>Yes</i>
Legal	<i>Yes</i>
Environmental	<i>Yes</i>
Social	<i>Yes</i>
Administrative capability	<i>Yes</i>
Local champion	<i>Yes</i>
Other community objectives	<i>Improves faith and piece of mind for all residents in township emergency operations.</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>EOP Shelter Annex.</i>
Responsible party	<i>HTOEM</i>
Potential funding sources	<i>PDMP, FMAP, EMPG, HLS</i>
Time line	<i>ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Howell Township/Farmingdale</i>
Community action number	<i>3</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, surge, durrricanes and tropical storms, nor'easters</i>
Risk finding	<i>Areas of township are prone to severe river flooding, including normal rainfall. While Howell is not located along the coast, some of its streams are susceptible to storm surge flooding.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and infrastructure projects</i>
Action type	<i>Elevate structures</i>
Action description	<i>Raise identified structures to safe height to not allow for floodin.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Potential loss of life will be avoided as well as structure damage and potential collapse. Elevation will also be preventing constant dispatch of emergency personnel and supplies to support victims of flooding. Losses avoided are estimated to be in excess of project costs.</i>
Cost estimate	<i>\$3,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of \$5 million and costs of \$3 million.</i>
Technical	<i>Yes</i>
Political	<i>Yes</i>
Legal	<i>Yes</i>
Environmental	<i>Yes</i>
Social	<i>Yes</i>
Administrative capability	<i>Yes</i>
Local champion	<i>Yes</i>

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Howell Township/Farmingdale</i>
Community action number	<i>4</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All Hazards</i>
Risk finding	<i>Emergency operations center lacks redundant systems (power and communication) to maintain critical functions before, during and after a disaster.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and infrastructure projects</i>
Action type	<i>Protect critical facilities</i>
Action description	<i>'Improve communications of EOC and Dispatch. EOC needs communication equipment including all office equipment, and Redundant Dispatch system needs to be upgraded.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Loss of robust communications between ALL response agencies will be avoided to best carry out operations during a hazard. The project will improve collective and organized response from all emergency agencies in township. Losses avoided are estimated to be in excess of projects costs.</i>
Cost estimate	<i>\$750,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits of preservation of life on the cost of \$750,000 .</i>
Technical	<i>Yes</i>
Political	<i>Yes</i>
Legal	<i>Yes</i>
Environmental	<i>Yes</i>
Social	<i>Yes</i>
Administrative capability	<i>Yes</i>

Other community objectives	
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>EOP - 'EOC and Communications Annexes</i>
Responsible party	<i>HTOEM, HTPD</i>
Potential funding sources	<i>PDMP, FMAP, EMPG, HLS, Local Budget</i>
Time line	<i>ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Howell Township/Farmingdale</i>
<b>Community action number</b>	<i>5</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All Hazards</i>
<b>Risk finding</b>	<i>Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easters hurricanes, and tropical storms, etc. Power outages have impacted emergency services, water purification systems, and shelters that lack secondary power sources.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and infrastructure projects</i>
<b>Action type</b>	<i>Protect critical facilities</i>
<b>Action description</b>	<i>Power for essential equipment to sustain Continuity of Operations during hazards that cause loss of power.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Loss of communication and operations will be avoided to allow for response procedures to continue during power loss. Losses avoided are estimated to be in excess of project costs.</i>
<b>Cost estimate</b>	<i>\$100,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits of well in excess of costs of \$100,000.</i>
<b>Technical</b>	<i>Yes</i>
<b>Political</b>	<i>Yes</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>Yes</i>

<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Howell Township/Farmingdale</i>
<b>Community action number</b>	<i>6</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All Hazards</i>
<b>Risk finding</b>	<i>Power outages have impacted emergency services, water purification systems, and shelters that lack secondary power sources. Power outages for water purification systems results in contaminated Water during hazards.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and infrastructure projects</i>
<b>Action type</b>	<i>Protect critical facilities</i>
<b>Action description</b>	<i>During outages contaminated water needs to be purified and potable to disseminate to residents in shelters and all other needed areas so backup systems are needed to sustain purified water.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The project will keep residents healthy and not requiring additional EMS response to sick residents. While difficult to quantify, this is considered to be well in excess of the project costs.</i>
<b>Cost estimate</b>	<i>\$100,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits in excess of project costs.</i>
<b>Technical</b>	<i>Yes</i>
<b>Political</b>	<i>Yes</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>Yes</i>
<b>Social</b>	<i>Yes</i>
<b>Administrative capability</b>	<i>Yes</i>
<b>Local champion</b>	<i>Yes</i>

<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>EOP - 'Shelter &amp; Public Health Annex</i>
<b>Responsible party</b>	<i>HTOEM, Health</i>
<b>Potential funding sources</b>	<i>PDMP, FMAP, EMPG, HLS, Local Budget</i>
<b>Time line</b>	<i>ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Freehold Borough</i>
<b>Community action number</b>	<i>Project #1 - Update generator for Firehouse Emergency Operations Center</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Loss of power at Emergency Operation Center due to Hurricane, tropical storm, nor'easter, winter storm, heavy winds</i>
<b>Risk finding</b>	<i>Critical facilities are particularly susceptible to power outages where backup power does not exist; this is a significant issue at the emergency operations center. The Firehouse EOC is used as the OEM Emergency Operations Center for Emergency Management, fire operations, police operations and EMS Operations</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency Generator</i>
<b>Action type</b>	<i>Acquisition of emergency generator for EOC</i>
<b>Action description</b>	<i>Upgarde the current and outdated generator at the Firehouse which houses the Emergency Operations Center for OEM, Fire Department, Police Department and EMS</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Prevent injury and loss of life by continuing the dispatching and response of Emergency Services during times of severe weather and other evenys. These types of losses avoided are hard to quantify, but it is likely that damages avoided by maintaining backup power at this EOC could be at least \$20,000 per year borough-wide (which, over the next 5 year planning cycle = \$100,000) - even more as soon as a single life is saved.</i>
<b>Cost estimate</b>	<i>100, 000.00 in total. The useful life of the generator is about 30 years, so annual costs are about \$3,330.00per year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Based on the loss of power in Freehold Borough due to the outdated electrical grid and the possibility of falling trees and brancheswhich could shut down power in the whole Borough. The project is likely to be cost effective. Losses avoided would be about \$10,000.00 per year and costs would only be about \$ 5,000.00 per year.</i>
<b>Technical</b>	<i>It is technically feasible</i>
<b>Political</b>	<i>Political actions present in support of the project</i>
<b>Legal</b>	<i>No legal issues</i>
<b>Environmental</b>	<i>Generator will be diesel, which is what is presently there and location has already been established. Generator output size will be increased to handle future additional electrical loads.</i>
<b>Social</b>	<i>No social impact expected, it will not affect any Residential Areas and replace existing generator.</i>
<b>Administrative capability</b>	<i>Borough Engineer</i>
<b>Local champion</b>	<i>Elected Officials, Borough Administrator, OEM, Fire Department Officials, Police Department Officials, and EMS Officials.</i>
<b>Other community objectives</b>	<i>None with this project</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Borough Adminstrator, Engineer, OEM, Fire, Police and EMS</i>
<b>Responsible party</b>	<i>Borough Adminstrator, Engineer, OEM,</i>
<b>Potential funding sources</b>	<i>Federal and State Grantsand some local funding</i>
<b>Time line</b>	<i>2015</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried over from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Freehold Borough</i>
<b>Community action number</b>	<i>Project #2 - Emergency Generator for Evacuation Center</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Loss of power at Evacuation Center due to Hurricane, tropical storm, nor'easter, winter storm, heavy winds</i>
<b>Risk finding</b>	<i>Critical facilities are particularly susceptible to power outages where backup power does not exist; this is a significant issue at schools that are designated as evacuation centers/shelters. The Freehold Learning Center is used in major storm events for sheltering and reception center needs upgraded emergency generators for power.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency Generator</i>
<b>Action type</b>	<i>Purchasing of emergency generator for shelter</i>
<b>Action description</b>	<i>Upgrade of current generator at the Freehold Learning Center used as an evacuation center</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Prevent injury and loss of life by providing a location that first responders and the public can go for shelter during severe weather events. These types of losses avoided are hard to quantify, but it is likely that damages avoided by maintaining backup power at this shelter and being able to safely and securely house evacuees, particularly those who may need power to operate life saving equipment that they may require, preventing injuries and saving lives could be at least \$20,000 per year borough-wide (which, over the next 5 year planning cycle = \$100,000) - even more as soon as a single life is saved.</i>
<b>Cost estimate</b>	<i>100,000 in total. The useful life of the generator is about 30 years, so annual costs are about \$3,330.00 per year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Based on the loss of power in Freehold Borough due to the outdated electrical grid and the possibility of falling trees and branches which could shut down power in the whole Borough. The chance during severe weather events have increased and the chance of needing shelter has increased. The project is likely to be cost effective. Losses avoided would be about \$10,000.00 per year and costs would only be about \$5,000.00 per year.</i>
<b>Technical</b>	<i>Technically feasible, yes</i>
<b>Political</b>	<i>Political actions are present in support of this project</i>
<b>Legal</b>	<i>No legal issues, agreements in place for use of building as shelter.</i>
<b>Environmental</b>	<i>None anticipated, location of generator would not impact area</i>
<b>Social</b>	<i>No social impact</i>
<b>Administrative capability</b>	<i>Engineering</i>
<b>Local champion</b>	<i>Borough Administrator, OEM, School Administrators, Board of Education.</i>
<b>Other community objectives</b>	<i>No other objectives with this project</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Borough Administrator, OEM, School Maintenance, Engineer</i>
<b>Responsible party</b>	<i>Borough Administrator, School Maintenance, Engineer</i>
<b>Potential funding sources</b>	<i>Federal, state and county grants</i>
<b>Time line</b>	<i>2016</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried over from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Freehold Borough</i>
<b>Community action number</b>	<i>Project #3 Outreach Program and Emergency Notification / Everbridge Reverse 911</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>- All</i>
<b>Risk finding</b>	<i>The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency Notification System</i>
<b>Action type</b>	<i>Continuation of Notification System</i>
<b>Action description</b>	<i>System that is presently in place will lose grant funding and will be continued for notification of first responders and public in emergencies</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Prevent injury and loss of life by early notification of severe weather events and other emergencies. These types of losses avoided are hard to quantify, but it is likely that damages avoided by individuals making more informed decisions to protect themselves and their families and their personal property during hazard occurrences would be at the very least \$5,000 per year borough-wide (which, over the next 5 year planning cycle = \$25,000)</i>
<b>Cost estimate</b>	<i>10,000 total (which, over the next 5 year planning cycle, is about \$2,000 per year).</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Notification of first responders and the public is critical in emergencies and severe weather events. The project is likely to be cost effective. Losses avoided are likely to be at least \$25,000 while total costs are about \$10,000.</i>
<b>Technical</b>	<i>Technically feasible; Yes</i>
<b>Political</b>	<i>Political actions are present in support of this project</i>
<b>Legal</b>	<i>No legal issues; system in place</i>
<b>Environmental</b>	<i>No environmental issues anticipated</i>
<b>Social</b>	<i>No social impact; system in place</i>
<b>Administrative capability</b>	<i>Borough Administrator</i>
<b>Local champion</b>	<i>Borough Administrator, Elected Officials, OEM, Fire Department Officials, Police Department Officials, EMS Officials</i>
<b>Other community objectives</b>	<i>Outreach Program to public</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Borough Administrator, OEM, Fire, Police and EMS Officials</i>
<b>Responsible party</b>	<i>Borough Administrator and OEM</i>

<b>Time line</b>	<i>2014</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried over from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Freehold Borough</i>
<b>Community action number</b>	<i>Project #4 - Removal of dead and hazardous trees</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All events that include high winds including wind only, thunderstorms, hurricanes, tropical storms, nor'easters, winter storms, etc</i>
<b>Risk finding</b>	<i>Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc. There is more emphasis on a shade tree program to remove trees that are a hazard since the Borough of Freehold experienced the Super Cell Storm in July 2012 and Hurricane Sandy in 2012.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Resources Protection</i>
<b>Action type</b>	<i>Vegetation management</i>
<b>Action description</b>	<i>Shade tree program to remove trees and limbs that are dead or hazardous and in the area where they could fall on powerlines.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided by maintaining power are hard to quantify. We estimate that losses avoided could be \$100,000.00 per year.</i>
<b>Cost estimate</b>	<i>Annual costs to dispatch crews for this project are estimated to be \$50,000.00 per year</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The project is likely to be cost effective. Losses avoided are likely to be \$100,000.00 per year while costs are about \$50,000.00 per year.</i>
<b>Technical</b>	<i>Technically feasible; Yes</i>
<b>Political</b>	<i>Political actions are present in support of this project</i>
<b>Legal</b>	<i>No legal issues; system in place</i>
<b>Environmental</b>	<i>No environmental issues anticipated</i>
<b>Social</b>	<i>No social impact; system in place</i>
<b>Administrative capability</b>	<i>Borough Administrator</i>
<b>Local champion</b>	<i>Borough Administrator , Elected Officials, OEM, Fire Department Officials, Police Department Officials, EMS Officials, Shade Tree Commission</i>
<b>Other community objectives</b>	<i>Shade tree program</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Borough Administrator, OEM, Fire, Police and EMS Officials, Shade Tree Commission</i>
<b>Responsible party</b>	<i>Borough Administrator and OEM, Shade Tree Commission</i>
<b>Potential funding sources</b>	<i>Federal, state, county grants or local funding source</i>
<b>Time line</b>	<i>2014</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Freehold Township</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Storm sewer outfall scouring and erosion exacerbated during severe rain storms, hurricanes, tropical storms and certain nor'easters.</i>
<b>Risk finding</b>	<i>Undermining and damage to storm drainage pipe and flared end section at the top of a steep embankment (Rose Court, at the end of the cul-de-sac). Continued exposure to erosion will lead to further destruction to the adjacent storm drainage system as well the cause the flared end section to separate and fall off of the embankment. The continued erosion represent a environmental impact as well as a potential impact to existing structures and development.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Stabilization and drainage improvement</i>
<b>Action description</b>	<i>Location: Rose Court, at the end of the cul-de-sac. Remediation of this hazard will include; excavation and removal of the existing storm drainage pipe and flared end section, stabilization of stream banks, replacement of storm pipe, installation of a new drainage structure at a lower elevation, and installation of a flared end section. The banks of the stream and the area around the flared end section will be stabilized with river stone and/or gabion baskets.</i>
<b>Existing, future &amp;/or NA</b>	<i>This action would protect existing development and improvements.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Further environmental impacts, damage to improvements, and impacts to existing development will be avoided by remediating this hazard. Losses avoided by the project are unknown but are estimated to be roughly on the order of \$ <u>2,000,000</u>.</i>
<b>Cost estimate</b>	<i>Unknown (though estimated to be on the order of \$ <u>500,000</u>).</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The losses avoided are outweighed by the cost of this project (with benefits on the order of \$ <u>2,000,000</u> and costs on the order of \$ <u>500,000</u>).</i>
<b>Technical</b>	<i>This action is technically feasible</i>
<b>Political</b>	<i>The potential for political and public support does exist for this project.</i>
<b>Legal</b>	<i>The Township does have the legal authority to implement this project.</i>
<b>Environmental</b>	<i>The completion of this project would reduce the overall environmental impact to the tributaries in the area.</i>
<b>Social</b>	<i>Proposed action will have little affect on neighboring residents. No neighborhoods, voting districts, or persons of lower income will be affect.</i>
<b>Administrative capability</b>	<i>While an outside contractor will be required to complete the rehabilitation work the township does have the personnel and administrative capability to implement this action.</i>
<b>Local champion</b>	<i>The engineering department is the advocate for this project.</i>
<b>Other community objectives</b>	<i>This action will meet other objectives including capital improvement and environmental.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>The engineering department will implement and oversee this project.</i>
<b>Responsible party</b>	<i>Township Engineer</i>
<b>Potential funding sources</b>	<i>Federal or state grants</i>
<b>Time line</b>	<i>2015</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action - Preliminary inspection and evaluation of the area is completed. The township is in the beginning phases of developing a plan and alternatives to remediate this situation.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Freehold Township</i>
<b>Community action number</b>	<i>2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding during severe rain storms, hurricanes, tropical storms and certain nor'easters.</i>
<b>Risk finding</b>	<i>The existing culvert at Plymouth Drive (Structure No. 1316X68) over the Tributary to the Manasquan River is in poor condition and has advanced section loss to the primary structural elements. Continued exposure to average and high frequency storms will further degrade the structure and lead to failure. The structure should rehabilitated.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural / Natural Resource Protection</i>
<b>Action type</b>	<i>Replacement of culvert</i>
<b>Action description</b>	<i>Culvert is located on Plymouth Drive in Freehold Township NJ structure number 1316X68. Rehabilitation of the structure will include repairing the existing voids behind the side walls of the culvert with a concrete type material, lining the culvert with a high-density polyethylene elliptical pipe and grouting the annular space between the existing culvert and the lining. In conjunction with repair to the culvert rehabilitation to the adjacent embankments to prevent undermining and reduce or eliminate erosion.</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects existing development</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Replacement of this culvert will eliminate the potential risk of roadway settlement, failure, and collapse. This reduces the potential impact to human life as well as environmental impacts to the tributary should the culvert continue to erode or fail. This action will save the community money in the long term through the reduced or eliminated impacts to the tributary and the public. Additionally, the reduction or elimination of continued maintenance and repair costs. Losses avoided though unknown are estimated to be roughly on the order of \$ 750,000.</i>
<b>Cost estimate</b>	<i>The cost of this project is estimated to \$ <u>250,000</u>.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits on the order of \$<u>750,000</u> and costs on the order of \$ <u>250,000</u>.</i>
<b>Technical</b>	<i>The action is feasible.</i>
<b>Political</b>	<i>The potential for public and political support for this action does exist.</i>
<b>Legal</b>	<i>Freehold Township does have the authority to implement this action.</i>
<b>Environmental</b>	<i>This action will comply with environmental actions as well as reduce or eliminate environmental impacts that are a direct result of the existing hazard.</i>
<b>Social</b>	<i>The neighboring residential properties will only be affected during the construction. This action will <u>not</u> disrupt established neighborhoods, break up voting districts, or cause the relocation of lower income people.</i>
<b>Administrative capability</b>	<i>The Township does have the personnel and administrative capabilities to implement, maintain, and inspect the action however, a contractor will be required in order to complete the demolition and construction.</i>
<b>Local champion</b>	<i>A strong advocate for the action among local departments will support the implementation</i>
<b>Other community objectives</b>	<i>This action will further other community objectives including capital improvements and environmental quality.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Engineering will be used to implement the action</i>
<b>Responsible party</b>	<i>Township Engineer</i>
<b>Potential funding sources</b>	<i>Federal or state grants</i>
<b>Time line</b>	<i>Target completion of fall 2015</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action - Culvert has been evaluated, and analyzed by an outside consultant. Three alternatives have been provided and are being evaluated by the township engineering office.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Freehold Township</i>
Community action number	3
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding during severe rain storms, hurricanes, tropical storms and certain nor'easters.</i>
Risk finding	<i>'The existing culvert at Hampton Drive (Structure No. 1316X57) over the Tributary to the Manasquan River is in poor condition and has advanced section loss to the primary structural elements. Continued exposure to average and high frequency storms will further degrade the structure and lead to failure. The structure should rehabilitated.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Rehabilitation and improvement to structure.</i>
Action description	<i>Culvert is located on Hampton Drive in Freehold Township NJ structure number 1316X57. Rehabilitation of the structure will include repairing the existing voids behind the side walls of the culvert with a concrete type material, lining the culvert with a high-density polyethylene elliptical pipe and grouting the annular space between the existing culvert and the lining. In conjunction with repair to the culvert rehabilitation to the adjacent embankments to prevent undermining and reduce or eliminate erosion.</i>
Existing, future &/or NA	<i>This action will protect existing development.</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action will eliminate the potential damage to and/or failure of the structure. By mitigating the risk of further damage and/or failure the risk of injury or loss of life is also mitigated. Losses avoided are unknown although estimated to be \$ <u>750,000</u>.</i>
Cost estimate	<i>\$275,000 - \$325,000 to complete the required rehabilitation</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits of \$ <u>750,000</u> in excess of average estimated project costs of approximately \$300,000. The potential loss and continued environmental impact that will be mitigated outweigh the cost of the work.</i>
Technical	<i>This action is technically feasible.</i>
Political	<i>There is potential for political and public support for this action.</i>
Legal	<i>NJ DEP permits will be required for the work however, the township does have the authority to implement the action.</i>
Environmental	<i>This action will comply with all environmental regulations. The completion of this action will mitigate the erosion of the Tributary.</i>
Social	<i>This action will temporarily affect the neighboring properties during construction however, there will be no long term disruption to neighborhoods, voting districts, or lower income people.</i>
Administrative capability	<i>While a contractor will be needed to complete the rehabilitation work the township does have the personnel and administrative capability to implement and maintain the action.</i>
Local champion	<i>The township as a whole will support this action.</i>
Other community objectives	<i>This action will meet other community objectives including capital improvements and environmental quality.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Township Engineering Department will implement and oversee this action</i>
Responsible party	<i>Township Engineer</i>
Potential funding sources	<i>Federal or state grants</i>
Time line	<i>Spring 2015</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action - Preliminary evaluation has been completed and alternative solutions have been provided by an outside consultant for township review and consideration.</i>

Your community name	<i>Freehold Township</i>
Community action number	5
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Erosion, flooding exacerbated during severe rain storms, hurricanes, tropical storms and certain nor'easters.</i>
Risk finding	<i>Heavy sediment, and vegetative, deposits and manmade debris in certain stream segments contribute to flooding during heavy rain events, nor'easters and hurricanes, etc. Damage to existing and future development and improvements.</i>
<b>Describing the Action</b>	
Action category	<i>Natural resource protection, structural protection, environmental protection.</i>
Action type	<i>Cleaning and desnagging of streams for improved storm water management.</i>
Action description	<i>Clean vegetative and man made debris, logs, and other items that are contributing to erosion, reducing capacity, or causing over saturation or flood issues.</i>
Existing, future &/or NA	<i>This action would protect both existing and future development and improvements.</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action would reduce erosion and flooding impacts and damage to structures. Losses avoided though unknown, are expected to be roughly \$ <u>5,000,000</u>.</i>
Cost estimate	<i>Time &amp; material cost unknown at this time, though roughly estimated to be on the order of \$ <u>500,000</u></i>
Cost effectiveness (i.e., benefit/cost)	<i>The potential losses avoided from this hazard outweigh the cost (with \$ <u>5,000,000</u> in benefits expected, as compared to \$ <u>500,000</u> in costs).</i>
Technical	<i>This action is feasible.</i>
Political	<i>The potential for political and public support does exist.</i>
Legal	<i>While DEP permits will be required the township does have the authority to implement this action.</i>
Environmental	<i>The environmental impacts will be reduced as a result of this action. This action will comply with all environmental regulations.</i>
Social	<i>The proposed action will <u>not</u> adversely affect the population, break up neighborhoods, voting districts, or lower income people.</i>
Administrative capability	<i>The township does have the administrative and personnel capability to implement this action.</i>
Local champion	<i>The engineering department is the advocate for this project.</i>
Other community objectives	<i>This project will help accomplish other objectives including reducing environmental impacts, and improving storm water management and water quality.</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>Engineering department will implement and oversee this action in conjunction with the township Public Works Department.</i>
Responsible party	<i>Township Engineer, Superintendent of Public Works</i>
Potential funding sources	<i>Federal or state grants</i>
Time line	<i>Starting summer 2014 and continuing.</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward - The township is in preliminary phases of identifying and prioritizing streams for cleaning.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Freehold Township</i>
<b>Community action number</b>	<i>6</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All hazards</i>
<b>Risk finding</b>	<i>The general public's understanding of natural hazards and mitigation possibilities could be improved. By the year 2040, it is projected to have a population increase of 16.3% over 2010 values, exposing more people to hazards. The community's overall level of disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Public Education</i>
<b>Action type</b>	<i>Provide information and training to township residents, increase awareness, and preparedness.</i>
<b>Action description</b>	<i>Provide information and links to websites where residents can obtain more information about preparedness, water quality, and emergency alerts.</i>
<b>Existing, future &amp;/or NA</b>	<i>N/A - This action will aid in the townships readiness.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action will result in a community better prepared to handle potential events and hazards. Losses avoided by outreach and education are hard to quantify, but in general, we feel they are likely to be more than the project's costs of \$ <u>10,000</u>.</i>
<b>Cost estimate</b>	<i>Costs are hard to quantify at this time; however, we expect that they will be less than \$ <u>10,000</u>.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>We expect that this action is likely to be cost effective, with benefits at least equal to, if not more than, project costs (where benefits are estimated at more than \$ <u>10,000</u> and costs are estimated to be less than \$ <u>10,000</u>. Educating residents to be prepared and ready for potential events and hazards outweighs the cost of potential damage caused by same.</i>
<b>Technical</b>	<i>This action is feasible</i>
<b>Political</b>	<i>Political and public support does exist to support this action.</i>
<b>Legal</b>	<i>The township does have the authority to implement this action.</i>
<b>Environmental</b>	<i>none</i>
<b>Social</b>	<i>This action will not negatively affect any segment of the population.</i>
<b>Administrative capability</b>	<i>The township does have the administrative and personnel capabilities to implement this plan.</i>
<b>Local champion</b>	<i>Advocacy for this action within the township does exist.</i>
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Multiple township departments</i>
<b>Responsible party</b>	<i>Multiple township departments</i>
<b>Potential funding sources</b>	<i>Federal or state grants</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward - Water quality initiatives and emergency alert notification system are in place.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Freehold Township</i>
<b>Community action number</b>	<i>7</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Wind, nor'easters, hurricanes, tropical storms, winter storms</i>
<b>Risk finding</b>	<i>Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc. Climate change will contribute to more frequent and severe weather events. Power outages impact the Township's ability to maintain critical services and public safety. Power failure may result in lack of water and sewer service for township.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Protection of infrastructure and critical facilities</i>
<b>Action description</b>	<i>Purchase a mobile emergency generator to enable back up electricity at each water and sewer pump station location.</i>
<b>Existing, future &amp;/or NA</b>	<i>N/A - This action will aid in the townships readiness.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action will result in a community better prepared to handle potential events and hazards. The actual value of the losses avoided are unknown however, they generally estimated to be on the order of \$ <u>2,000,000</u>.</i>
<b>Cost estimate</b>	<i>Project costs are estimated to be approximately \$ <u>100,000</u>.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits likely to be approximately \$ <u>2,000,000</u> as compared to costs on the order of \$ <u>100,000</u>.Purchase of the unit to enable back up electricity at each pump station location will outweigh the potential costs associated with the loss of water or sewer service.</i>
<b>Technical</b>	<i>This action is feasible</i>
<b>Political</b>	<i>Political and public support does exist to support this action.</i>
<b>Legal</b>	<i>The township does have the authority to implement this action.</i>
<b>Environmental</b>	<i>Sewage back-up and overflow into local storm sewer or tributaries will be avoided</i>
<b>Social</b>	<i>This action will not negatively affect any segment of the population.</i>
<b>Administrative capability</b>	<i>The township does have the administrative and personnel capabilities to implement this plan.</i>
<b>Local champion</b>	<i>Advocacy for this action within the township does exist.</i>
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Purchase of unit will be implemented by appropriate township personne.</i>
<b>Responsible party</b>	<i>Superintendent of Utilities</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Freehold Township</i>
<b>Community action number</b>	<i>2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Emergency Management
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Hazlet Township</i>
Community action number	1
<b>Assessing the Risk</b>	
Hazard(s) addressed	Flooding during periods of heavy rain and nor'easters, hurricanes and tropical storms.
Risk finding	During major storms, there are areas within the township where creeks overflow due to debris and sedimentation causing flooding of properties and buildings.
<b>Describing the Action</b>	
Action category	Natural Resource Protection
Action type	Stream corridor restoration
Action description	Mosquito Commission cleaning debris and sediment from many creeks and waterways at Township requests, to improve carrying capacity of flood flows and reduce overbank flooding.
Existing, future &/or NA	This will protect both existing and future development
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	We hope this will reduce flooding to properties and buildings within the township and contiguous flood hazard zones. Avoided losses are estimated to be approximately one million dollars.
Cost estimate	Land acquisition cost - under negotiation/confident. The final cost could range from about \$ 250,000 - 450,000. Currently under court order sale.
Cost effectiveness (i.e., benefit/cost)	This project will save the community money in the long run with benefits ranging from \$500,000 to 1,000,000.
Technical	This action is technically feasible.
Political	There is support from both the township committee as well as the county government for this action.
Legal	<i>Does the community have the authority to implement the action?</i> Most of the work yes, excluding NJDEP approvals.
Environmental	- No negative impacts; positive improvements for environment. - Will it comply with environmental regulations? Yes.
Social	This action will affect numerous sections of the township. It should not disrupt any neighborhoods.
Administrative capability	The majority of this action will be done by the Monmouth County Road Department with assistance from the Hazlet Township Road Dept.
Local champion	Hazlet Environmental Commission.
Other community objectives	Environmental quality and open space preservation.
<b>Implementing the Action</b>	
Priority	This is a high priority action
Local planning mechanism	Master Plan and Open Space Plan
Responsible party	Dennis Pino, Acting Township Administrator
Potential funding sources	Unknown at this time
Time line	2015
<b>Reporting on Progress</b>	
Action progress status	This is a new action.

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Hazlet Township</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Drainage system features in certain areas of the town are contributing to flooding during periods of heavy rain and nor'easters, hurricanes, tropical storms.
<b>Risk finding</b>	During major storms, there are areas within the township where drainage systems overflow causing flooding street, properties and buildings.
<b>Describing the Action</b>	
<b>Action category</b>	Structural Project
<b>Action type</b>	Improved stormwater drainage system capacity; improved stormwater drainage system inspection and maintenance program
<b>Action description</b>	Township wide storm water system maintenance and upgrades. Cleaning all lines, televising, and replacing inlets and catch basins throughout the entire system - township wide.
<b>Existing, future &amp;/or NA</b>	This will protect both existing and future development
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	This should reduce flooding to streets, properties and buildings within the township. Losses avoided could range from about \$500,000 to \$750,000 per year.
<b>Cost estimate</b>	100K - 2014 costs.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This project is likely to be cost effective and will save the community approximately \$500,000 to \$750,000 annually costing \$80,000 to 100,000 per year.
<b>Technical</b>	This action is technically feasible.
<b>Political</b>	- <i>Is there overall public support for the mitigation action?</i> <b>Yes</b> - <i>Is there the political will to support it?</i> <b>Yes</b>
<b>Legal</b>	- <i>Does the community have the authority to implement the action?</i> <b>Yes.</b>
<b>Environmental</b>	Positive protection of the system and waterways as a result of the improvements.
<b>Social</b>	This action will affect numerous sections of the township. There may be some minor disruption to traffic in affected areas.
<b>Administrative capability</b>	Township personnel will administer and maintain this project.
<b>Local champion</b>	Township Committee and Environmental Commission.
<b>Other community objectives</b>	Capital improvements.
<b>Implementing the Action</b>	
<b>Priority</b>	This is a high priority action
<b>Local planning mechanism</b>	NJDEPE Storm Water Regulations.
<b>Responsible party</b>	Dave Rooke, Head, Public Works Department
<b>Potential funding sources</b>	Unknown- Township
<b>Time line</b>	2015
<b>Reporting on Progress</b>	
<b>Action progress status</b>	This is a new action. Effective 1/1/2014.

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Hazlet Township</i>
<b>Community action number</b>	<i>3</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Flooding during periods of heavy rain and nor'easters, hurricanes, and tropical storms.
<b>Risk finding</b>	Climate change will contribute to more frequent and severe weather events, and, along with sea level rise, will exacerbate flooding.
<b>Describing the Action</b>	
<b>Action category</b>	Natural Resource Protection
<b>Action type</b>	Preserve floodplains as open space
<b>Action description</b>	Purchase of McNamy property in partnership with Port Authority to preserve floodways and mitigate flood losses.
<b>Existing, future &amp;/or NA</b>	This will protect both existing and future development
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	We hope this will reduce flooding to properties and buildings within the township and contiguous flood hazard zones. Avoided loses are estimated to be approximately one million dollars.
<b>Cost estimate</b>	Land acquisition cost - under negotiation/confident. The final cost could range from about \$ 250,000 - 450,000. Currently under court order sale.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This project is likely to be cost effective and will cost approximatley \$250,000 - 450,000 saving the community money in the long run with benefits ranging from \$800,000 to 1,000,000.
<b>Technical</b>	This action is technically feasible.
<b>Political</b>	There is support from both the township committee as well as the county government for this action.
<b>Legal</b>	<i>Does the community have the authority to implement the action?</i> Most of the work yes, excluding NJDEP approvals.
<b>Environmental</b>	- No negative impacts; positive improvements for environment. - Will it comply with environmental regulations? Yes.
<b>Social</b>	This action will affect numerous sections of the township. It should not disrupt any neighborhoods.

<b>Action progress status</b>	This is a new action.

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Hazlet Township</i>
<b>Community action number</b>	4
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Flooding during periods of heavy rain and nor'easters, hurricanes and tropical storms. Elevation of Residential Structures
<b>Risk finding</b>	During major storms, there are areas within the township where flooding occurs. Elevating homes above the best available flood data will reduce loss.
<b>Describing the Action</b>	
<b>Action category</b>	State Mitigation Plan - Elevation of Residential Dwellings.
<b>Action type</b>	Support - Elevation of Residential Dwellings.
<b>Action description</b>	Support resident applications and provide assistance to the fullest extent possible in regards to the elevation of existing properties within the flood zone and under the known elevations.
<b>Existing, future &amp;/or NA</b>	This will protect both existing and future development
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	We hope this will mitigate existing flood related issues and reduce flooding to existing properties and buildings within the township.
<b>Cost estimate</b>	There is no known cost to the Township.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This project is likely to be 100% cost effective, there are no known cost values at this time.
<b>Technical</b>	This action is technically feasible.
<b>Political</b>	There is support from both the township committee as well as the county government for this action.
<b>Legal</b>	The administration has the authority to implement these programs.
<b>Environmental</b>	- No negative impacts; positive improvements for environment. - Will it comply with environmental regulations? Yes.
<b>Social</b>	This action will affect over 1,000 households within the township and will not disrupt any neighborhoods.
<b>Administrative capability</b>	The majority of this action will be performed by the State of New Jersey under various grant programs.
<b>Local champion</b>	Hazlet Floodplain Administrator
<b>Other community objectives</b>	Environmental quality and open space preservation.
<b>Implementing the Action</b>	
<b>Priority</b>	This is a high priority action
<b>Local planning mechanism</b>	Master Plan and Open Space Plan
<b>Responsible party</b>	Dennis Pino, Acting Township Administrator
<b>Potential funding sources</b>	Unknown at this time
<b>Time line</b>	2015
<b>Reporting on Progress</b>	
<b>Action progress status</b>	This is a new action.

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Highlands</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, storm surge, wave action, hurricane and tropical storm, nor'easter</i>
<b>Risk finding</b>	<i>Structures and property are routinely subject to various damage due to storm related and tidal events. Most of Highlands (from the Bay up to Shore Drive) is in the mapped special flood hazard area. Severe storm events in recent years, particularly Hurricane Sandy, have devastated the Borough. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Elevation and floodproofing</i>
<b>Action description</b>	<i>Thorough plan review and guidance to property owners in the downtown area to elevate residences and floodproofing of multifamily and commercial structures.</i>
<b>Existing, future &amp;/or NA</b>	<i>Addresses existing and new structures</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided are estimated to be on the order of \$2,500 per year, per property.</i>
<b>Cost estimate</b>	<i>\$100,000/property assuming a useful life of 40 years, this is a cost of about \$2,500 per year per property</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be equal to project costs.</i>
<b>Technical</b>	<i>The mitigated properties see a long term benefit as damages from flooding are greatly reduced.</i>
<b>Political</b>	<i>The entire Governing Body supports this effort.</i>
<b>Legal</b>	<i>Legal issues may arise if substantially damaged properties are not mitigated.</i>
<b>Environmental</b>	<i>No adverse impacts environmentally</i>
<b>Social</b>	<i>Supported by majority of the Borough as it will assist in stabilizing property values and taxes.</i>
<b>Administrative capability</b>	<i>Have been addressing this with current staffing.</i>
<b>Local champion</b>	<i>Governing Body</i>
<b>Other community objectives</b>	<i>Supports current objectives within the Borough Master Plan. The mitigated properties can assist in bringing the Borough into compliance with the CRS requirements and the Borough can finally enter the program. Additionally, this will ultimately increase property values</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Flood Damage Prevention Ordinance</i>
<b>Responsible party</b>	<i>Floodplain Administrator and Construction Official</i>
<b>Potential funding sources</b>	<i>Federal and State funded grants</i>
<b>Time line</b>	<i>Goal for 100% mitigation by 2017.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward (with more of a focus on elevation and floodproofing)</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Highlands</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, storm surge, wave action, hurricane and tropical storm, nor'easter</i>
<b>Risk finding</b>	<i>The downtown area frequently experiences flooding due to storm related and tidal events. Most of Highlands (from the Bay up to Shore Drive) is in the mapped special flood hazard area. Severe storm events in recent years, particularly Hurricane Sandy, have devastated the Borough. The existing drainage system does not accommodate stormwater runoff from hill sections; this is exacerbated when coastal waters are high. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Infrastructure improvements and upgrades.</i>
<b>Action description</b>	<i>The Borough has designed a storm system improvement project in portions of the downtown area.</i>
<b>Existing, future &amp;/or NA</b>	<i>Addresses existing infrastructure and provides new infrastructure where none currently exists.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces flooding due to storms and minor tidal events. This project will reduce flooding within the downtown area and can act as a main catalyst for revitalizing the existing downtown business districts. This project will also assist in minimizing flooding issues in various flood prone residential areas. Losses avoided by the project are estimated to be roughly on the order of \$10 Million.</i>
<b>Cost estimate</b>	<i>\$4.5 million</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project will reduce flooding within the downtown area and can act as a main catalyst for revitalizing the existing downtown business districts. This project will also assist in minimizing flooding issues in various flood prone residential areas. This project is likely to be cost effective, with benefits on the order of \$10 Million and costs on the order of \$4.5 Million.</i>
<b>Technical</b>	<i>Technically feasible. Addresses majority of Bay Avenue flooding thus minimizing adverse impacts to the businesses downtown also minimizes nuisance flooding in residential areas.</i>
<b>Political</b>	<i>The entire Governing Body supports this effort.</i>
<b>Legal</b>	<i>No apparent legal issues</i>
<b>Environmental</b>	<i>No adverse impacts environmentally</i>
<b>Social</b>	<i>Does not adversely impact the Borough. However there will be a tax increase to cover the bonding for the project.</i>
<b>Administrative capability</b>	<i>The Borough and Borough Engineer will be working together throughout the project.</i>
<b>Local champion</b>	<i>Governing Body</i>
<b>Other community objectives</b>	<i>Addresses longstanding concern of flooding in the business districts and can positively impact revitalization of the business districts.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans and specifications prepared by the Borough Engineer</i>
<b>Responsible party</b>	<i>Governing Body</i>
<b>Potential funding sources</b>	<i>EIT loan through the NJDEP; constantly seeking other funding sources to minimize the Borough's financial obligations.</i>
<b>Time line</b>	<i>Start construction 2014</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Highlands</i>
<b>Community action number</b>	3
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Coastal Erosion, Flooding, Wave Action, Hurricanes, Tropical Storms, Nor'easters</i>
<b>Risk finding</b>	<i>Bulkheads and shorelines are frequently subject to tidal/coastal flooding. Damages from coastal erosion and wave action in recent storms have been significant. Several critical facilities in Highlands are located in one or more mapped hazard areas (including but not limited to flood, surge, and erosion). Several critical facilities in Highlands are located in one or more mapped hazard areas (including, but not limited to: flood, surge, and coastal erosion). Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Systems Protection (coastlines); Structure and Infrastructure Projects (bulkheads)</i>
<b>Action type</b>	<i>Protection and restoration of existing natural protective features (coastlines) and flood control measures (bulkheads).</i>
<b>Action description</b>	<i>Routine visual inspection of coastlines and bulkheads, identification of areas of concern, and prompt repairs of troubled areas, with mitigation as needed, to ensure levels of protection afforded by the Borough's beach and bulkhead system.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces risk of potential property damages. We believe this action can potentially save tens of millions of dollars in damages by identifying and repairing troubled areas.</i>
<b>Cost estimate</b>	<i>\$3,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost-effective, with benefits estimated to be in the tens of millions of dollars, and costs of only \$3 million.</i>
<b>Technical</b>	<i>Technically feasible.</i>
<b>Political</b>	<i>The entire Governing Body supports this effort.</i>
<b>Legal</b>	<i>Legal issues may arise when a privately owned bulkhead adversely impacts neighboring and/or publically owned property.</i>
<b>Environmental</b>	<i>No adverse impacts environmentally</i>
<b>Social</b>	<i>Does not adversely impact any known social groups.</i>
<b>Administrative capability</b>	<i>The Borough DPW performs the visual inspections and solicits the assistance from others as necessary.</i>
<b>Local champion</b>	<i>Governing Body</i>
<b>Other community objectives</b>	<i>Addresses potential safety and property damage concerns.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Part of routine inspections performed by the DPW</i>
<b>Responsible party</b>	<i>DPW will perform quarterly inspections and will provide reports to the Borough Administrator. The Administrator will then forward to the Borough Engineer as appropriate for further action.</i>
<b>Potential funding sources</b>	<i>Locally funded with the constant search for potential grant funding.</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Highlands</i>
Community action number	4
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Landslides</i>
Risk finding	<i>The geography of the Borough of Highlands makes it highly susceptible to landslides and slump blocks; which occur regularly in the borough. Conditions are exacerbated on steepest slopes when soil water content is high and particularly when the ground is being disturbed (i.e. during construction). Slump blocks and slope failures have been experienced in prior storm events.</i>
<b>Describing the Action</b>	
Action category	<i>Local Planning and Regulations (ordinances); Structure and Infrastructure Projects (implement monitoring mechanisms and apply soil stabilization measures.</i>
Action type	<i>Manage development in landslide hazard areas through ordinances; and implement monitoring mechanisms and apply soil stabilization measures as needed.</i>
Action description	<i>Borough Ordinances have been revised over recent years to make disturbance on or near a steep slope prohibited without seeking variance relief. Implement monitoring mechanisms for areas of concern and apply soil stabilization measures, as needed to prevent impacts to improved property and infrastructure. Revise Ordinances as necessary. Prohibit slope disturbances within specific areas.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Reduces risk of potential property damages. We believe this action can potentially save tens of millions of dollars in damages by identifying and repairing troubled areas.</i>
Cost estimate	<i>\$2,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost-effective, with benefits estimated to be in the tens of millions of dollars, and costs of only \$2 million.</i>
Technical	<i>Technically feasible.</i>
Political	<i>The entire Governing Body supports this effort.</i>
Legal	<i>Legal issues may arise when a privately owned slope adversely impacts neighboring and/or publically owned property.</i>
Environmental	<i>No adverse impacts environmentally</i>
Social	<i>Does not adversely impact any known social groups.</i>
Administrative capability	<i>The Borough DPW performs the visual inspections and solicits the assistance from others as necessary.</i>
Local champion	<i>Governing Body</i>
Other community objectives	<i>Addresses potential safety and property damage concerns.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Part of routine inspections performed by the DPW</i>
Responsible party	<i>DPW will perform quarterly inspections or additional inspections as needed. They will report findings to the Borough Administrator who will forward to the Borough Engineer for further attention.</i>
Potential funding sources	<i>Locally funded with the constant search for potential grant funding.</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward</i>

<b>Action Worksheet</b>

<b>Your community name</b>	<i>Borough of Highlands</i>
<b>Community action number</b>	5
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All</i>
<b>Risk finding</b>	<i>Various hazards have historically crippled Borough communications and electrical systems for critical facilities including EOC and local shelters.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Protect infrastructure and critical facilities</i>
<b>Action description</b>	<i>Improvements to electrical and telecommunication systems at critical facilities including EOC and local shelters to minimize future damage and system failures, and maximize the borough's ability to perform and maintain critical functions during emergencies. These improvements will include generators and mitigation measures of various features.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces risk of potential communication losses which can adversely affect the health, safety and welfare of the Borough residents as well as the general public. Ability to respond for things like fires can protect the built environment as well as the people. Losses avoided by ensuring continuous telecommunications and electrical systems for EOC and local shelters can be in the millions of dollars.</i>
<b>Cost estimate</b>	<i>\$250,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with lifetime benefits potentially to be millions of dollars and costs on the order of only \$250,000</i>
<b>Technical</b>	<i>Technically feasible.</i>
<b>Political</b>	<i>The entire Governing Body supports this effort.</i>
<b>Legal</b>	<i>Positive legal impacts in that the Borough is maintaining its critical functions.</i>
<b>Environmental</b>	<i>No adverse impacts environmentally</i>
<b>Social</b>	<i>Does not adversely impact any known social groups.</i>
<b>Administrative capability</b>	<i>The Borough OEM Office and Police Department continuously monitor the electrical and communication facilities and take appropriate action as necessary.</i>
<b>Local champion</b>	<i>Governing Body</i>
<b>Other community objectives</b>	<i>Maintains effective communication and vital services for the Borough and general public.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Dialogue with OEM office and Borough PD</i>

<b>Potential funding sources</b>	<i>Locally funded with the constant search for potential grant funding.</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Highlands</i>
<b>Community action number</b>	6
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Extreme Wind Events, hurricane and tropical storms, nor'easter, winter storms, tornado</i>
<b>Risk finding</b>	<i>Some emergency facilities and shelters built before existing codes were adopted are not designed to accommodate high wind loads that could be experienced during severe storms. Most Borough facilities were rendered uninhabitable due to storm damage from Superstorm Sandy. While some of the damages were related to flooding and surge, a large portion was also attributable to wind damages.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Implementation of wind resistant building techniques</i>
<b>Action description</b>	<i>Installation of hurricane clips and wind shutters on existing Borough facilities including emergency facilities.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Minimize risk of future damage thus maintaining Borough services within the intended facilities. The dollars spent will minimize risk of future wind damage allowing the Borough to operate at the intended facilities and not have to seek alternate locations to rent/lease to operate from. Losses avoided are difficult to quantify, but could potentially be on the order of several million dollars.</i>
<b>Cost estimate</b>	<i>\$2,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective with potential benefits on the order of several million dollars as compared to costs of only \$2 million.</i>
<b>Technical</b>	<i>Technically feasible.</i>
<b>Political</b>	<i>The entire Governing Body supports this effort.</i>
<b>Legal</b>	<i>No legal issues are anticipated with this project.</i>
<b>Environmental</b>	<i>No adverse impacts environmentally</i>
<b>Social</b>	<i>Does not adversely impact any known social groups.</i>
<b>Administrative capability</b>	<i>The Borough and its professionals have the means to implement this project.</i>
<b>Local champion</b>	<i>Governing Body</i>
<b>Other community objectives</b>	<i>Maintains effective communication and vital services for the Borough and general public.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Damage assessments and cost benefit analysis from Borough professionals.</i>
<b>Responsible party</b>	<i>Governing Body</i>
<b>Potential funding sources</b>	<i>Locally funded with the constant search for potential grant funding.</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Highlands</i>
Community action number	7
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All - particularly flooding</i>
Risk finding	<i>Most of Highlands downtown area from the river/bay to Shore Drive) is in the mapped special flood hazard area. Most Borough facilities were rendered uninhabitable due to storm damage from Superstorm Sandy.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure Improvements</i>
Action type	<i>Protect structures, infrastructure, and critical facilities.</i>
Action description	<i>Conduct a study to determine the year built and level of protection for each borough facility for various hazards (foremost: flooding). Then, seek funding for mitigation projects for those facilities that are not currently designed for an appropriate level of protection. This includes but is not limited to increasing interior drainage and adding an additional stormwater pumpstation at Jones Creek, rebuilding the North Street Stormwater Pumpstation to current codes and standards, constructing new Borough facilities to replace the storm damaged, flood prone facilities and/or floodproof existing facilities that can feasibly be repaired and mitigated.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Minimize risk of future damage thus maintaining Borough services within the intended facilities. The dollars spent will minimize risk of future storm damage allowing the Borough to operate at the intended facilities and not have to seek alternate locations to rent/lease to operate from. Losses avoided are difficult to quantify directly. They are estimated to be as high as around \$24 million, but at least \$16 million.</i>
Cost estimate	<i>\$12,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Likely to be cost effective, with benefits on the order of \$20 million and costs of approximately \$12 million.</i>
Technical	<i>Technically feasible.</i>
Political	<i>The entire Governing Body supports this effort.</i>
Legal	<i>No legal issues are anticipated for this project.</i>
Environmental	<i>No adverse impacts environmentally</i>
Social	<i>Does not adversely impact any known social groups.</i>
Administrative capability	<i>The Borough and its professionals have the capability to bring these projects to fruition. The interior drainage and pumpstations are "shovel ready" projects. The Borough has recently bonded approximately \$6,000,000 towards these projects.</i>
Local champion	<i>Governing Body</i>
Other community objectives	<i>Maintains effective communication and vital services for the Borough and general public as well as maintaining services and infrastructure functionality.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Borough and Bond Ordinances</i>
Responsible party	<i>No adverse impacts environmentally</i>
Potential funding sources	<i>Locally funded with the constant search for potential grant funding.</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Highlands</i>
Community action number	<i>#8</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Tidal Flooding from various weather events(Hurricane and tropical storms, nor'easter, storm surge, flood)</i>
Risk finding	<i>Flooding occurs during extreme high tides; storm surge, covering property and roadways</i>
<b>Describing the Action</b>	
Action category	<i>Structure/ infrastructure projects</i>
Action type	<i>Protection of residential property and infrastructure</i>
Action description	<i>Physical barrier with a movable flood gate</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>placement of a physical barrier with a moveable flood gate at the mouth of the Shrewsbury River would benefit 10 municipalities that border the river, saving \$1.8 billion dollars of flood impacted property in residential, commercial and governmental facilities; this figure does not include vehicles and boats; numerous lives. These ten towns reflect 4.69% of the total flood insurance coverage in NJ.</i>
Cost estimate	<i>\$500 million</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective based on the value of property in 10 towns to the one time cost to develop a barrier.</i>
Technical	<i>Technically feasible; Yes</i>
Political	<i>Political actions would need to be brought into play from several fronts</i>
Legal	<i>legal issues could be present as to jurisdictional oversight. Establish Two River</i>
Environmental	<i>locations under consideration will need environmental review</i>
Social	<i>no social impact, would actually improve the community.</i>
Administrative capability	<i>Project management would be needed</i>
Local champion	<i>Council/Public and Engineering</i>
Other community objectives	<i>floodplain management with the towns of Sea Bright, Monmouth Beach, Long Branch, Little Silver, Fair Haven, Rumson, Red Bank, Highlands, Middletown, all in Monmouth County</i>
<b>Implementing the Action</b>	
Priority	<i>Priority 3</i>
Local planning mechanism	<i>Committee consisting Federal/ State/ County/Local officials and engineering</i>
Responsible party	<i>Engineering</i>
Potential funding sources	<i>FEMA funding, Grants, bond, mitigation funds, State transportation fund</i>
Time line	<i>within the year of 2020</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New proposal</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Holmdel Township</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Hurricane, Tropical Storm, Nor'easter, Winter Storm, Flood, Surge</i>
Risk finding	<i>- Failure of an emergency generator at a sewer pump station during Sandy highlighted that the Township sanitary sewer infrastructure (pump stations, sewer lines) is in need of mitigation at many locations.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure Projects.</i>
Action type	<i>Protect Infrastructure and Critical Facilities</i>
Action description	<i>Repair and/or replacement of ageing generators, pumps and some sections of sewer lines. One emergency generator has already been replaced at the pump station at Valley Point Drive. A comprehensive examination of the complete sanitary sewer infrastructure is currently underway to prioritize mitigation activities.</i>
Existing, future &/or NA	<i>Protects existing and potential future developments and sub-divisions.</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Due to the topographical nature of the Township this action will be essential in maintaining the useability of hundreds of housing units and township buildings. Also in preventing possible environmental damage. We expect that losses avoided as a result of this project could be approximately \$120,000 per year.</i>
Cost estimate	<i>Initial \$1,200,000. Based on a useful life of # 20 years, this is an annual cost of roughly \$60,000 per year.</i>
Cost effectiveness (i.e., benefit/cost)	<i>High benefit/cost with benefits estimated to be on the order of \$120,000 per year and costs estimated to be on the order of \$60,000 per year.</i>
Technical	<i>Completely feasible.</i>
Political	<i>Public and political support extremely high. The initial bond ordinance for the \$1.2 million passed unopposed in late 2013.</i>
Legal	<i>There are no known legal impediments.</i>
Environmental	<i>From an environmental standpoint this will stand to prevent possible environmental damage and will have no negative impacts. It will comply with all environmental regulations.</i>
Social	<i>There are no known social impacts other than being a positive for all.</i>
Administrative capability	<i>The Township has the personnel and administrative capabilities.</i>
Local champion	<i>All local departments and agencies support this.</i>
Other community objectives	<i>Full implementation will serve to protect the environment and will also serve to support re-investment in older housing stock.</i>
<b>Implementing the Action</b>	
Priority	<i>High.</i>
Local planning mechanism	<i>All existing local codes and ordinances.</i>
Responsible party	<i>Township Administrator.</i>
Potential funding sources	<i>Fully funded by local Bond Issue which is already approved and in place.</i>
Time line	<i>January 2016.</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This is a new action.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Holmdel</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000 and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Mayor and Council
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Howell Township/Farmingdale</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All natural hazards</i>
<b>Risk finding</b>	<i>The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities and were better able to shelter in place.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Education and Awareness Programs</i>
<b>Action type</b>	<i>Increase hazard education and risk awareness</i>
<b>Action description</b>	<i>Mass mailing to all residents to obtain contact info of all residents (email list) for constant contact, updates, and education of Township operations regarding Emergencies</i>
<b>Existing, future &amp;/or NA</b>	<i>NA</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This communication and information will empower citizens to make better decisions, increase better planning around township emergencies (staying away from risks). It will empower emergency response personnel to mitigate risks by informing people to either stay home, steer clear, evacuate, etc. This will allow smoother operations for the Township. Losses avoided are difficult to quantify but are inclusive of preventing injuries and loss of life as well as preventing property damages through homeowner mitigation efforts, and these are likely to be well over the project costs of \$15,000 per year.</i>
<b>Cost estimate</b>	<i>\$15,000/year</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be well in excess of project costs of \$15,000 per year.</i>
<b>Technical</b>	<i>Yes</i>
<b>Political</b>	<i>Yes</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>N/A</i>
<b>Social</b>	<i>Entire Township</i>
<b>Administrative capability</b>	<i>Yes</i>
<b>Local champion</b>	<i>Yes</i>
<b>Other community objectives</b>	<i>Improves overall Communications from Government to Resident</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>EOP communication annex.</i>
<b>Responsible party</b>	<i>Dan Foglia - OEM Coordinator</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Howell Township/Farmingdale</i>
Community action number	<i>2</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All Natural Hazards</i>
Risk finding	<i>Existing shelters are not designed to withstand hazards to which they are exposed during severe storm events. In order to best serve the community during natural disasters, identified pre-existing Shelters must be hardened to improve safety and resiliency during and after the event.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure projects</i>
Action type	<i>Protect critical facilities used for sheltering</i>
Action description	<i>Harden Shelter physically by shielding windows, adding sand bags, adding embankments. Internally will add communication capabilities, add additional emergency supplies (first aid, water, cots, MREs,ec)</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Hardening pre-existing shelters will minimize the need to move citizens from shelter to shelter if the hazard overwhelms the structure. This will also allow HTOEM to stock shelters permanently with supplies ready for a sudden hazard that requires sheltering. Losses avoided are estimated to be \$1,000,000.</i>
Cost estimate	<i>\$120,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits of \$1,000,000 on the cost of \$120,000.</i>
Technical	<i>Yes</i>
Political	<i>Yes</i>

<b>Community action number</b>	<i>6</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All Hazards</i>
<b>Risk finding</b>	<i>Power outages have impacted emergency services, water purification systems, and shelters that lack secondary power sources. Power outages for water purification systems results in contaminated Water during hazards.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and infrastructure projects</i>
<b>Action type</b>	<i>Protect critical facilities</i>
<b>Action description</b>	<i>During outages contaminated water needs to be purified and potable to disseminate to residents in shelters and all other needed areas so backup systems are needed to sustain purified water.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The project will keep residents healthy and not requiring additional EMS response to sick residents. While difficult to quantify, this is considered to be well in excess of the project costs.</i>
<b>Cost estimate</b>	<i>\$100,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits in excess of project costs.</i>
<b>Technical</b>	<i>Yes</i>
<b>Political</b>	<i>Yes</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>Yes</i>
<b>Social</b>	<i>Yes</i>
<b>Administrative capability</b>	<i>Yes</i>
<b>Local champion</b>	<i>Yes</i>
<b>Other community objectives</b>	<i>Public Health</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>

<b>Time line</b>	<i>ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough Of Interlak5n</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Infiltration of storm water into sewer system and poor drainage of storm waters Flooding, hurricanes and tropical storms, nor'easters</i>
<b>Risk finding</b>	<i>Deal Lake continues to be a major source of flooding in the Borough. During severe storms, water drains into the Lake but outfall design constraints prevent the water from making its way into the ocean before water overflows the banks and floods back into surrounding areas. Sedimentation and debris in Deal Lake and its tributaries impedes flood flows. Damage and losses due to flooding are also incurred in Interlaken as a result of drainage system shortcomings; the Borough's drainage system cannot efficiently accommodate today's stormwater runoff volumes, and discharge this stormwater efficiently to ocean waters. This combined with flooding from Deal Lake which can be exacerbated</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Make upgrades and improvements to old sewer and storm water management systems</i>
<b>Action description</b>	<i>Over the course of several years systematically make upgrades and improvements to sewer systems, storm water management systems, and outflow pipes. These improvements will increase capacity, will reduce blockage, and outflow pipes will be retrofitted with backflow valves.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The action will be significant in protecting the sewer systems from rain water infiltration and reducing flooding by improving the flow into local lakes and streams. In addition, storm water entering into sewer systems damages the infrastructure and dramatically increases the product treated in treatment facilities which results in much higher bills for residents. Losses avoided by this project are estimated to be roughly on the order of \$75 million dollars over a projected 50 year period.</i>
<b>Cost estimate</b>	<i>\$1,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, over an anticipated 50 year period at 150,000.00 per year of losses avoided the benefits could exceed \$75 million and costs of only \$1 million.</i>
<b>Technical</b>	<i>The project is technically feasible.</i>
<b>Political</b>	<i>The public welcomes and supports this project as does the governing body.</i>
<b>Legal</b>	<i>The Borough has the legal authority to undertake this project.</i>
<b>Environmental</b>	<i>The project will improve environmental conditions by reducing flooding, regulating flow into bodies of water, and preventing sewerage from entering natural resources.</i>
<b>Social</b>	<i>Improvements benefit all residents within the community equally.</i>
<b>Administrative capability</b>	<i>The Borough is unable to undertake the project with its staff, an outside contractor will be used.</i>
<b>Local champion</b>	<i>All residents of the Borough benefit from the project. The governing body is a strong supporter of improving the location.</i>
<b>Other community objectives</b>	<i>Improves environmental quality in lakes and streams.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Codes, Engineering, Plans, Administrative Oversight</i>
<b>Responsible party</b>	<i>Borough Administrator overseeing engineering firm</i>
<b>Potential funding sources</b>	<i>Sewer Taxes / Local Budget</i>
<b>Time line</b>	<i>Some improvements have been made as budget allows. Project will continue into the future as much as possible.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Interlaken</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Engineer
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Keansburg</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Damage and losses due to flooding are incurred in some parts of Keansburg as a result of drainage system shortcomings; the Borough's drainage system cannot efficiently accommodate today's stormwater runoff volumes, and discharge this stormwater efficiently to ocean waters.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Install new stormwater pump stations and make improvements to existing pump stations</i>
<b>Action description</b>	<i>Install three new flood proofed stormwater pump stations in the borough with a permanent back-up generator at each and to flood proof two existing pump stations and install a back up generator at each station. As well as remove and replace the existing deteriorated storm water collections infrastructure</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed improvements will protect against pump station failure in the event of power loss and/or flooding and will ensure continued operation of the Borough's stormwater conveyance system. It is estimated that the proposed mitigation activity will result in a \$279,938,400.00 (per the average real estate values in the Borough of \$159,600 x the 1,754 homes that received minor damage) reduction in damages to residential structures and personal property and will protect public health and safety.</i>
<b>Cost estimate</b>	<i>\$15,000,000 for storm water pump stations and an additional \$10,000,000 for collections system rehabilitation, total cost: \$25,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is likely to be cost effective, with benefits as high as \$279,938,400 and costs of only \$25,000,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
<b>Local champion</b>	<i>Commisioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
<b>Responsible party</b>	<i>Borough Administrator</i>
<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
<b>Time line</b>	<i>Dependent upon municipality securing grant funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Keansburg</i>
Community action number	2
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Most of the Borough lies within mapped storm surge hazard areas. Keansburg was devastated by storm surge flooding during Hurricane Sandy. As a result of Hurricane Sandy, Police vehicles and equipment in the borough were damaged and response services were hindered because of the flood waters, debris and power outages.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Relocate the police headquarters and emergency operation center</i>
Action description	<i>Relocate the police headquarters and emergency operation center from 179 Carr Avenue to a vacant property in the Borough</i>
Existing, future &/or NA	<i>Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>As a result of Hurricane Sandy, Police vehicles and equipment in the borough were damaged and response services were hindered because of the flood waters, debris and power outages. The relocation of the police building would allow the department to run an effective response to future emergency, and reduce risk to equipment and personnel. Losses avoided could range from \$250,000 to \$500,000 each year.</i>
Cost estimate	<i>\$2,812,500.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective with benefits ranging from \$250,000 to \$500,00 per year; and costs of \$2,812,500.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by commissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no social impacts from this project on the community</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid to construction</i>
Local champion	<i>Commissioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Keansburg</i>
Community action number	3
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Coastal Erosion</i>
Risk finding	<i>As a result of the drastic inundation of floodwater caused by Hurricane Sandy and other major storm events, the banks of Waackaack Creek have become severely eroded and laden with silt and sand that was washed in from the bayshore beaches. As a result, areas of roadway located along the creek have begun to collapse. In addition the structural integrity of surrounding residential properties has been compromised, posing an imminent threat to life, health, &amp; public safety.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Flood Proofing</i>
Action description	<i>Extend bulkhead for the entire length of Waackaack Creek as well as dredge the creek to increase stormwater storage capacity</i>
Existing, future &/or NA	<i>Future and existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed improvements will protect the borough from storm surges and limit the access points of the stormwater into the borough. Losses avoided could be in the hundreds of millions of dollars. This work is needed to safeguard lives and property from imminent hazard of floodwater and erosion.</i>
Cost estimate	<i>The cost of the Bulkhead and dredging is estimated at \$22,500,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits in the hundreds of millions and costs estimated at only \$22.5 million.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by commissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are potential environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>

## Action Worksheet

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Keansburg</i>
Community action number	4
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Coastal Erosion</i>
Risk finding	<i>Keansburg is part of the USACE Raritan Bay and Sandy Hook Bay, New Jersey, Beach Erosion and Hurricane Protection Project. The project was constructed in 1973 provides beach erosion and hurricane protection (through reducing the risk of flooding and damages caused by storm surge and wave action). It includes sacrificial beach berm, groins, levees, floodwall, a storm closure gate, and a pump station. Hurricane Sandy exceeded the design level for this system, but the system did provide some protection nonetheless.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Improve borough shoreline and dunes</i>
Action description	<i>Improve 2.6 miles of beach that is 200 feet wide that was substantially damaged due to storm by increasing the height and width of the dunes to the 100 year storm elevation. Also included in this project is dune maintenance planting dune grass and maintaining access points</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The goal of this project is to protect lives and property from flood inundation and flood hazards of the Raritan River, to reduce the need for emergency services during flood events and to reduce or eliminate repetitive flooding of these homes thereby reduce claims under the National Flood Insurance Program. The proposed improvements will protect the borough from storm surges and limit the access points of the stormwater into the borough. Losses avoided could be in the hundreds of millions of dollars.</i>
Cost estimate	<i>\$7,383,750.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits estimated to be as high as the hundreds of millions and costs of only \$7 million</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by commissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are potential environmental impacts caused by this project, these will be considered and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no social impacts from this project on the community</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
Local champion	<i>Commissioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Borough Administrator</i>
Potential funding sources	<i>Monmouth County CDBG Program and the Post Disaster CDBG Funding Program</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Keansburg</i>
Community action number	5
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Most of the Borough lies within mapped storm surge hazard areas. Keansburg was devastated by storm surge flooding during Hurricane Sandy.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Home Elevation</i>
Action description	<i>Elevating of approx. 3,843 homes to new FEMA FIRM maps</i>
Existing, future &/or NA	<i>Protecting existing structures</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed mitigation will result in reduced future storm damages to residential structures, personal property and protect public health and safety during future events. These mitigation activities could potentially result in a \$613,342,800.00 (based on 3,843 homes at \$159,600 each) reduction in future storm damages to residential structures and personal property.</i>
Cost estimate	<i>\$345,870,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits as high as \$613 million and costs of \$345 million.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by commissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>Property owners may need to relocate while the home raising is implemented</i>
Administrative capability	<i>The community does have the personnel and homeowners will maintain projects</i>
Local champion	<i>Commissioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents, additionally current code requires substantially damaged to elevate home</i>
Responsible party	<i>Homeowners and/or Borough Administrator</i>
Potential funding sources	<i>Private, ICC or FEMA SRL</i>
Time line	<i>Dependent upon municipality securing residential funding and code compliance, a start date has not been identified</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Keansburg</i>
<b>Community action number</b>	<i>6</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Wind, Ice, Lightning, Hurricane and Tropical Storm, Nor'easter</i>
<b>Risk finding</b>	<i>'Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Maintenance</i>
<b>Action type</b>	<i>Tree trimming/pruning</i>
<b>Action description</b>	<i>Tree trimming and pruning to prevent downed power lines.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Downed trees on power lines contribute to power outages during severe storms. The loss of power can be devastating to the community as was observed during Hurricane Sandy. Keeping the wildlife around power line structures properly maintained is very important in preventing the loss of power to the community as well as preventing injury to people as a result of downed power lines. The losses avoided due to loss of power can be in the hundreds of thousands to millions of dollars per year.</i>
<b>Cost estimate</b>	<i>\$135,000.00 / year</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be in the hundreds of thousands to millions of dollars per year, and costs of only \$135,000 per year.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by commissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are potential environmental impacts caused by this project, these will be considered and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
<b>Local champion</b>	<i>Commissioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>

<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New project to previously in the 2009 plan; work is Ongoing</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Keansburg</i>
<b>Community action number</b>	7
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Most of the Borough lies within mapped storm surge hazard areas. Keansburg was devastated by storm surge flooding during Hurricane Sandy. Some vacant homes are repetatively damaged by storm and flood events, these homes should be acquired by the borough and returned to their natural state to promote groundwater recharge and decrease stormwater runoff.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Drainage</i>
<b>Action description</b>	<i>Purchasing of vacant homes througout the borough for flood mitigation</i>
<b>Existing, future &amp;/or NA</b>	<i>Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Purchasing of vacant homes which are repeatedly devastated by storms to convert to their natural state is in the boroughs best interest. The proposed mitigation activities could potentially result in millions to tens of millions of dollars in reducton in future storm damages to residential structures and personal property</i>
<b>Cost estimate</b>	<i>20 lots at \$150,000 per lot = \$3,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is likely to be cost effective with benefits of tens of millions and costs of \$3 million</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts of implementing this action</i>
<b>Administrative capability</b>	<i>The community does have the personnel</i>
<b>Local champion</b>	<i>Commisioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
<b>Responsible party</b>	<i>Homeowners and/or Borough Administrator</i>
<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding, Blue Acres program</i>
<b>Time line</b>	<i>Dependent upon municipality securing funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Keansburg</i>
<b>Community action number</b>	<i>8</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Power outages can severely impact critical facilities that lack secondary power</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency Power Generators</i>
<b>Action type</b>	<i>Developing funding plan</i>
<b>Action description</b>	<i>Develop a plan to acquire funding for emergency backup power generators in critical care facilities.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed plan will aide the borough in acquiring funding for emergency power generators to be installed in critical care facilities. During major storms like Hurricane Sandy these facilities were not adequate enough to sustain life without power. Residents were transferred to hospitals at the boroughs expense, which was in the hundreds of thousands of dollars. Backup power generation will allow these facilities to act as emergen3y shelters during storm events and prevent unnecessary coste to the borough and protect health and safety of its residents.</i>
<b>Cost estimate</b>	<i>\$10,000 to develop funding plan</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is likely to be cost effective, with benefits in the hundreds of thousands of dollars and a cost of only \$10,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
<b>Local champion</b>	<i>Commisioners and the mayor</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Keansburg</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Keansburg's level of disaster resistance would benefit from enacting and enforcing flood hazard zoning ordinances.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>New Ordinance</i>
<b>Action type</b>	<i>Developing flood hazard zoning ordinances</i>
<b>Action description</b>	<i>Develop flood hazard zoning ordinances to better protect the borough from natural disasters</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed ordinances will prevent future losses due to damages from natural disasters and better protect the health and safety of the borough residents. Benefits of completing this project could be in the tens of millions to hundreds of millions of dollars by requiring new structures to be built above the flood elevation</i>
<b>Cost estimate</b>	<i>\$5,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is likely to be cost effective, with potential benefits as high as the hundreds of millions of dollars and a cost of only \$5,000</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
<b>Local champion</b>	<i>Commisioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
<b>Responsible party</b>	<i>Borough Administrator</i>
<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
<b>Time line</b>	<i>Flood hazard zoning revisions are already being undertaken by the borough. These will continue to be revised and modified based on the best available flood data and FEMA/NJOEM/NJUCC direction and requirements</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing- carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Keansburg</i>
<b>Community action number</b>	<i>10</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Winh, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Substantial damage throughout the Borough was incurred as a result of Superstorm Sandy. Many homes are being elevated as a result to comply with local ordinances.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>New Ordinance</i>
<b>Action type</b>	<i>Specifically allow variances on foundations of newly built structures</i>
<b>Action description</b>	<i>Develop a plan to allow variances on foundations of newly built structures</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed mitigation will result in reduced future storm damages to residential structures, personal property and protect public health and safety during future events. This could result in the reduction of millions of dollars in clean-up cost to teh borough and potentially hundreds of millions in damage to private property dependent upon the number of proerty owners who take advantage of the allowable variances.</i>
<b>Cost estimate</b>	<i>\$5,000 to develop ordinance</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is likely to be cost effective, with benefits in the millions to hundreds of millions of dollars and a cost of only \$5,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
<b>Local champion</b>	<i>Commisioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>

<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
<b>Responsible party</b>	<i>Borough Administrator</i>
<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
<b>Time line</b>	<i>The Borough has already begun revising ordinances and procedures to grant variances to property owners</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing -carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Keansburg</i>
<b>Community action number</b>	<i>11</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Drought</i>
<b>Risk finding</b>	<i>Use of water for landscaping purposes during periods of drought exacerbates drought impacts by shifting limited water resources away from the most critical needs.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>New Ordinance</i>
<b>Action type</b>	<i>Developing water use restriction ordinances</i>
<b>Action description</b>	<i>Develop ordinances to restrict landscaping water useage in times of drought</i>
<b>Existing, future &amp;/or NA</b>	<i>Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed ordinances will prevent over use of the boroughs water resources decreasing the boroughs dependency on outside water service provider (NJ American Water) and the costs incurred thereof which could potentially be in the hundreds of thousands of dollars</i>
<b>Cost estimate</b>	<i>\$5,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is likely to be cost effective, with potential benefits as high as the hundreds of thousands of dollars and a cost of only \$5,000</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>

<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
<b>Time line</b>	<i>Not yet initiated, actively seeking funding</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing - carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Keansburg</i>
<b>Community action number</b>	<i>19</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding due to inland and coastal floods, hurricanes, nor'easters, and storm surges</i>
<b>Risk finding</b>	<i>The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities .</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Community Outreach Program</i>
<b>Action type</b>	<i>Developing Outreach Program</i>
<b>Action description</b>	<i>Create an outreach program to help residents prepare for disasters</i>
<b>Existing, future &amp;/or NA</b>	<i>Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed outreach program will help to better prepare the boroughs residents for natural disasters. Hurricane Sandy devastated homes in the borough causing hundreds of millions of dollars in damages. Some of these damages could be mitigated if the public stays informed on potential low-cost, small-scale mitigation activities.</i>
<b>Cost estimate</b>	<i>\$10,000 to develop program</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is likely to be cost effective, with potential benefits in the hundreds of millions of dollars and a cost of only \$10,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by council and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
<b>Local champion</b>	<i>Council and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
<b>Responsible party</b>	<i>Mayor and Council, Borough Manager, OEM Coordinators</i>
<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
<b>Time line</b>	<i>Dependent upon municipality securing grant funding</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing- carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Keyport</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, storm surge, wave action, hurricanes, tropical storms, nor'easters</i>
<b>Risk finding</b>	<i>About half of the Borough of Keyport is susceptible to storm surge, mainly via tidal surges up local streams. 95 homes encountered flood damage from storm tides and surges during Sandy, and elevation would mitigate against repeated loss of homes due to flooding. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Project</i>
<b>Action type</b>	<i>Elevation</i>
<b>Action description</b>	<i>Elevation of 95 Homes</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects existing development</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Elevating the residential properties to move them out of dangerous flood levels, and avoid the loss of homes. Losses avoided are estimated to be \$8,850,000.</i>
<b>Cost estimate</b>	<i>\$2,850,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The long term social and environmental benefits outweigh the cost. This project is likely to be cost effective, with benefits in the order of \$8,850,000 and project costs of \$2,850,000.</i>
<b>Technical</b>	<i>This mitigation action is technically feasible, voluntarily</i>
<b>Political</b>	<i>The project is viewed favorably in the Borough</i>
<b>Legal</b>	<i>The borough has the authority to implement this action, on a voluntary basis.</i>
<b>Environmental</b>	<i>This project will comply with environmental regulations, no negative impacts are expected.</i>
<b>Social</b>	<i>The improvements will effect the current property owners in a beneficial way, but will not disrupt the community on a whole.</i>
<b>Administrative capability</b>	<i>The community has the capacity to implement and maintain the project, outside contractor assistance will be needed for the action.</i>
<b>Local champion</b>	<i>Post Sandy Strategic Planning Committee</i>
<b>Other community objectives</b>	<i>Further Keyport's environmental quality and safety objectives.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Zoning Officer/ planning board</i>

<b>Time line</b>	<i>Dec-15</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Keyport</i>
Community action number	2
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, - storm surge, wave action, hurricanes, tropical storms, nor'easters</i>
Risk finding	<i>About half of the Borough of Keyport is susceptible to storm surge, mainly via tidal surges up local streams. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Acquisition</i>
Action description	<i>Acquire 2 flood prone properties and prohibit future building in flood prone areas.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Losses avoided by acquiring these 2 properties are estimated to be on the order of \$12,324,200.</i>
Cost estimate	<i>\$3,566,800</i>
Cost effectiveness (i.e., benefit/cost)	<i>The long term social and environmental benefits outweigh the cost. This project is likely to be cost effective, with benefits on the order of \$12,324,200 and costs of about \$3,566,800.</i>
Technical	<i>This mitigation action is technically feasible</i>
Political	<i>The project is viewed favorably in the Borough</i>
Legal	<i>The borough has the authority to implement this action.</i>
Environmental	<i>This project will comply with environmental regulations, no negative impacts are expected.</i>
Social	<i>The improvements will effect the current property owners in a beneficial way, but will not disrupt the community on a whole.</i>
Administrative capability	<i>The Borough has the administrative capacity to implement and maintain this project.</i>
Local champion	<i>Post Sandy Strategic Planning Committee</i>
Other community objectives	<i>Further Keyport's environmental quality and safety objectives.</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>Zoning officer/ planning board</i>
Responsible party	<i>Business Administrator</i>
Potential funding sources	<i>Grants, bonds</i>
Time line	<i>Dec-15</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Keyport</i>
Community action number	3
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding</i>
Risk finding	<i>The existing bulkhead system is comprised of both public and private bulkheads, and there are certain areas with no bulkheads. While the bulkhead system, in combination with some roads which have been raised, have worked to protect certain areas, locations where there are breaks in the line of protection are more vulnerable than other areas. Affected properties are residential and commercial.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure Projects</i>
Action type	<i>Construct Flood Control Measures</i>
Action description	<i>Increase elevation and replacement of existing bulkhead</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The roadway affected is a major artery leading to the New Jersey Evacuation Route. Residences and commercial use properties are vulnerable. Losses avoided by this project are estimated to be roughly \$10,670,800.</i>
Cost estimate	<i>\$951,800</i>
Cost effectiveness (i.e., benefit/cost)	<i>The long term social and environmental benefits outweigh the cost. This project is likely to be cost effective, with benefits in the order of \$10,670,800 and project costs of \$951,800.</i>
Technical	<i>This action is technically feasible.</i>
Political	<i>The project is viewed favorably in the Borough</i>
Legal	<i>The borough has the authority to implement this action.</i>
Environmental	<i>Elevation of the height and replacement of the bulkhead will comply with environmental regulations.</i>
Social	<i>The improvements will be beneficial to the population as a whole, and it will not disrupt any residents, neighborhoods, or districts.</i>
Administrative capability	<i>The community has the capacity to implement and maintain the project, outside contractor assistance will be needed for the action.</i>
Local champion	<i>Post Sandy Strategic Planning Committee</i>
Other community objectives	<i>Further Keyport's environmental quality and safety objectives.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Zonig officer/ planning board approval</i>
Responsible party	<i>Business Administrator</i>
Potential funding sources	<i>Grants, bonds</i>
Time line	<i>Dec-15</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Keyport</i>
Community action number	<i>4</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, storm surge, hurricanes, tropical storms, nor'easters</i>
Risk finding	<i>Flooding and damage to the sewer system pump stations (i.e., Maple Place) that can result in overflow of untreated sewage into natural waterways. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Natural Resource protection/structural improvements</i>
Action type	<i>Protect Infrastructure and Critical Facilities</i>
Action description	<i>Maple Place Pump Station Improvements- Elevating electrical panels, modifications for water tightness, generators to mitigate power loss and surging.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Make improvements to the pump station in the event of a storm and flooding to prevent untreated sewage leakage, and protect the natural waterways as well as public health. Elevating electrical panels and modifications for watertightness will eliminate damage repair costs for various system components. Unfortunately historic records for this station are no longer available and cannot be incorporated into a benefits analysis. Secondary benefits include reduced environmental impacts to the adjacent waterway due to untreated wastewater overflows and the fact that the station is situated in a flooding area that presents a health and safety concern to Borough personnel that need to maintain and keep the station operational during adverse weather conditions. Benefits are unquantifiable but are expected to be at least equal to the \$718,900 project costs.</i>
Cost estimate	<i>\$718,900</i>
Cost effectiveness (i.e., benefit/cost)	<i>It is in the opinion of the Borough that the proposed mitigation solution is a cost effective measure when considering environmental impacts to the adjacent waterway due to untreated wastewater overflows and the fact that the station is situated in a flooding area that presents a health and safety concern to Borough personnel that need to maintain and keep the station operational during adverse weather conditions, with total benefits at least equal to the \$718,900 project costs.</i>
Technical	<i>This mitigation action is technically feasible</i>
Political	<i>The project is viewed favorably in the Borough</i>
Legal	<i>The borough has the authority to implement this action.</i>
Environmental	<i>This project will comply with environmental regulations, no negative impacts are expected.</i>
Social	<i>The improvements will be beneficial to the population as a whole, and it will not disrupt any residents, neighborhoods, or districts.</i>
Administrative capability	<i>The community has the capacity to implement and maintain the project, outside contractor assistance will be needed for the action.</i>
Local champion	<i>Post Sandy Strategic Planning Committee</i>
Other community objectives	<i>Further Keyport's environmental quality and safety objectives.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Sewer Sytem and Roads ordinances</i>
Responsible party	<i>Business Administrator</i>
Potential funding sources	<i>Grants, bonds</i>
Time line	<i>Dec-15</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Keyport</i>
Community action number	5
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, storm surge, hurricanes, tropical storms, nor'easters</i>
Risk finding	<i>Flooding and damage to the sewer system pump stations that can result in overflow of untreated sewage into natural waterways. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Natural Resource protection/structural improvemynts</i>
Action type	<i>Protect Infrastructure and Critical Facilities</i>
Action description	<i>Install generator to ensure proper performance in the event of a loss of power.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Efficiently power the pump station in the event power is lost to prevent untreated sewage leakage, and protect the natural waterways as well as public health. Losses avoided are estimated to be approximately \$55,543</i>
Cost estimate	<i>44,301</i>
Cost effectiveness (i.e., benefit/cost)	<i>The long term social and environmental benefits outweigh the cost. This project is likely to be cost effective, with benefits of \$55,543 and costs of only \$44,301.</i>
Technical	<i>This mitigation action is technically feasible</i>
Political	<i>The project is viewed favorably in the Borough</i>
Legal	<i>The borough has the authority to implement this action.</i>
Environmental	<i>This project will comply with environmental regulations, no negative impacts are expected.</i>
Social	<i>The improvements will be beneficial to the population as a whole, and it will not disrupt any residents, neighborhoods, or districts.</i>
Administrative capability	<i>The community has the capacity to implement and maintain the project, outside contractor assistance will be needed for the action.</i>
Local champion	<i>Post Sandy Strategic Planning Committee</i>
Other community objectives	<i>Furtheres Keyport's environmental quality and safety objectives.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Keyport</i>
Community action number	<i>10</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, hurricane and tropical storms, nor'easters, coastal erosion, surge</i>
Risk finding	<i>Silting continually blocks the discharge of stormwater in several areas of town resulting in flooding, and inhibits the Borough's ability to complete beach restoration projects and future maintenance projects on the beach without risk of obstructing the pipe. (i.e., Beach Park pipe discharging Division Street)</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure Projects</i>
Action type	<i>Drainage System Improvements</i>
Action description	<i>Extend the Beach Park pipe discharging Division Street to prevent flooding due to obstruction of the pipe.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Prevents the backup of stormwater discharge in several areas of town, and allow future maintenance projects on the beach without risk of obstructing the pipe thus providing secondary erosion and surge protection from having adequate and maintained beach..Losses avoided by this project are estimated to be on the order of \$8,000,000.</i>
Cost estimate	<i>\$700,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The long term social and environmental benefits outweigh the cost. This project is likely to be cost effective, with benefits on the order of \$8,000,000 and costs of only \$700,000.</i>
Technical	<i>This mitigation action is technically feasible</i>
Political	<i>The project is viewed favorably in the Borough</i>
Legal	<i>The borough has the authority to implement this action.</i>
Environmental	<i>This project will comply with environmental regulations, no negative impacts are expected.</i>
Social	<i>The improvements will be beneficial to the population as a whole, and it will not disrupt any residents, neighborhoods, or districts.</i>
Administrative capability	<i>The community has the capacity to implement and maintain the project, outside contractor assistance will be needed for the action.</i>
Local champion	<i>Post Sandy Strategic Planning Committee</i>
Other community objectives	<i>Furthers Keyport's environmental quality and safety objectives.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Sewer Sytem and Roads ordinances</i>
Responsible party	<i>Business Administrator</i>
Potential funding sources	<i>Grants, bonds</i>
Time line	<i>Dec-15</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Lake Como Borough</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding and Storm Surge , Hurricane and Tropical Storm, Nor'easters</i>
<b>Risk finding</b>	<i>Lake Como is the primary source of flooding in the Borough. During severe storms, water drains into the Lake but outfall design constraints prevent the water from making its way into the ocean before water overflows the banks and floods back into surrounding areas. The entirety of Lake Como is in mapped storm surge hazard areas. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Drainage, berm build up</i>
<b>Action description</b>	<i>Lake Como, Spring Lake &amp; Belmar are seeking remedies to prevent flooding. Currently implementing a quick solution to reduce the amount of water in the lake prior to heavy rain events. The outfall pipe and area for pumps has to be designed to allow water to be released to the ocean, but not allow the ocean water to fill in the lake. During heavy rain events the water level fills faster than the water is removed- this is the remedy we have to design to prevent future flooding.</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects existing and future development.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Action is needed to prevent loss of structures as a result of flooding. This project will eliminate the cost of rebuilding following a major rain event. Losses avoided by the project could be on the order of \$2,000,000 to 3,000,000 per major event..</i>
<b>Cost estimate</b>	<i>Cost estimates will be generated upon plans of final solution. The cost of the project is expected to be on the order of \$2,000,000.. Assuming a project useful life of about 50 years, this could represent an annual cost of roughly \$40,000.00.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Will eliminate the cost of rebuilding following a major rain event. This project is likely to be cost effective, with annual benefits of roughly \$3,000,000 per year and annual costs of roughly \$50,000 per year.</i>
<b>Technical</b>	<i>Feasible: Need the 3 towns to agree on one firm to engineer the project.</i>
<b>Political</b>	<i>There is overall public support in Lake Como for this project.</i>
<b>Legal</b>	<i>No, rely on the 3 towns to agree on the plan.</i>
<b>Environmental</b>	<i>Will reduce the impact of flooding.</i>
<b>Social</b>	<i>This action will effect those living in the neighborhoods surrounding and near the lake.</i>
<b>Administrative capability</b>	<i>All three communities participation will be needed.</i>
<b>Local champion</b>	<i>A Lake Planning committee was formed between the 3 communities.</i>
<b>Other community objectives</b>	<i>Yes, this project would effect the other projects if the flooding and storm surge were reduced.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Committee of three towns will participate and plan</i>
<b>Responsible party</b>	<i>Lake Como, Spring Lake &amp; Belmar all responsible</i>
<b>Potential funding sources</b>	<i>Environmental Infrastructure and Hazard Mitigation grant</i>
<b>Time line</b>	<i>Waiting on Engineer estimate</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is carried forward from prior plan, but action has moved forward by the three communities.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Lake Como Borough</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding and Storm Surge, Hurricane and Tropical Storm, Nor'easters</i>
<b>Risk finding</b>	<i>Home structure damage as a result of flooding. Flooding of residential structures around Lake Como is a big issue for the Borough. Lake Como is the primary source of flooding in the Borough. During severe storms, water drains into the Lake but outfall design constraints prevent the water from making its way into the ocean before water overflows the banks and floods back into surrounding areas. The entirety of Lake Como is in mapped storm surge hazard areas. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Elevation</i>
<b>Action description</b>	<i>Home elevations to comply with the FEMA flood base guidelines.</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects existing and future development.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Action is needed to prevent loss of structures as a result of flooding. Will eliminate the cost of rebuilding following a major rain event. Losses avoided by the project could be on the order of \$2,000,000 to 3,000,000 per major event..</i>
<b>Cost estimate</b>	<i>\$100,000 per home. If 100 homes were elevated the total cost would be \$10,000,000.00.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective. Generally speaking, elevations tend to be a very cost effective way of reducing damages when projects are focused on a subset of the most at-risk structures in a community (in this case, where annual damages are at least about \$2,000 per year overall). This elevation project is likely to pay for itself after only about 3 to 5 large events.</i>
<b>Technical</b>	<i>Action is feasible.</i>
<b>Political</b>	<i>There is overall public support in Lake Como for this project.</i>
<b>Legal</b>	<i>No, homeowners would have to agree to the home elevations.</i>
<b>Environmental</b>	<i>Will reduce structural damage to homes in the flood hazard area.</i>
<b>Social</b>	<i>This action will effect those living in the neighborhoods surrounding and near the lake.</i>
<b>Administrative capability</b>	<i>Borough personnel would work with contractors to implement this action.</i>
<b>Local champion</b>	<i>The administrative, planning, building and office of emergency management all working together to make this happen.</i>
<b>Other community objectives</b>	<i>This action does not further other projects, however has an overall positive effect for the community.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Local ordinance has already been adopted reflecting the new Flood Base plan elevations.</i>
<b>Responsible party</b>	<i>Lake Como Construction Official will be the lead person.</i>
<b>Potential funding sources</b>	<i>Hazard Mitigation grants, and individual homeowner insurance and FEMA monies.</i>
<b>Time line</b>	<i>Completion for entire project 2 to 3 years.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is carried forward from prior plan, but action has moved forward by the three communities.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Lake Como Borough</i>
Community action number	3
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Other : Brown DrinkingWater, Water quality issues</i>
Risk finding	<i>Secondary contaminant is causing the brown water and is aesthetically unpleasing. High iron and magonese in testing.</i>
<b>Describing the Action</b>	
Action category	<i>Infrastructure project</i>
Action type	<i>System improvements</i>
Action description	<i>Lining project and replacement to upgrade the distribution of water system</i>
Existing, future &/or NA	<i>Protects existing and future development.</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Action is needed to improve the water quality which has been steadily decreasing in the past year.</i>
Cost estimate	<i>\$5,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Cost effective because citizens are not drinking the water.</i>
Technical	<i>Action is feasible.</i>
Political	<i>There is overall public support in Lake Como for this project.</i>
Legal	<i>Yes, authorized by Governing Body.</i>
Environmental	<i>Will eliminate the negative effects caused by brown water. Working with the DEP on system improvements.</i>
Social	<i>This project will affect the entire population as we will upgrade the lines in the entire town.</i>
Administrative capability	<i>Borough personnel would work with contractors to implement this action.</i>
Local champion	<i>The Governing Body, administrative, Engineering, legal and Public Works/Water Department all working together to make this happen.</i>
Other community objectives	<i>This action does not further other projects, however has an overall positive effect for the community.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Engineering is designing plans to complete this project; The Governing Body has approved the capital improvements.</i>
Responsible party	<i>Municipal Engineer</i>
Potential funding sources	<i>NJ Environmental Infrastructure program; US Department of Agriculture; possible mitigation grant; local funding through bonds issued</i>
Time line	<i>Completion for entire project 2 to 3 years.</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This item is a new action item which was added during this cycle and was not part of the last plan update.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Little Silver</i>
Community action number	<i>Borough of Little Silver - Action No. 1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Hydrologic Hazards - Flooding (during severe rainstorms, thunderstorms, hurricanes, tropical storms, and nor'easters)</i>
Risk finding	<i>Streams and ditches, do not convey stormwater runoff as efficiently as they should; this results in flooding in several areas.</i>
Action category	<i>Structure/ Infrastructure</i>
Action type	<i>Drainage Improvements</i>
Action description	<i>The Borough improves their stormwater system every year with their yearly roadway program, updating drainage inlets to eco grates. Develop mitigation steps to reduce damage and losses due to flooding through control of stormwater runoff and more efficient drainage and discharge to three major streams. Stream cleaning reduces sediment/ debris within watershed providing better overall volume/ flow throughout</i>
Existing, future &/or NA	<i>Existing and future development</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Annual flood losses in Little Silver are typically on the order of \$100,000 to \$250,000. We estimate the proposed project could save about \$250,000 per year in flood losses.</i>
Cost estimate	<i>\$50,000 per year for annually road program, update drainage inlets to eco grates.</i>
Cost effectiveness (i.e., benefit/cost)	<i>We expect that this will be cost effective because losses avoided are estimated to be roughly \$250,000 while the costs are less (\$50,000 per year)</i>
Technical	<i>Technically feasible. Will help remove stormwater runoff more effectively and Eco</i>
Political	<i>No apparent political issues.</i>
Legal	<i>No apparent legal issues.</i>
Environmental	<i>No adverse environmental effects. Will help improve flood control and debris within watershed.</i>
Social	<i>Borough of Little Silver residents.</i>
Administrative capability	<i>Need at least 3 people to administer (After technical assistance from the State)</i>
Local champion	<i>Residents of Little Silver, Borough Environmental Commission</i>
Other community objectives	<i>Municipal Stormwater Management Regulation Program</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Municipal Stormwater Management Regulation Program</i>
Responsible party	<i>Borough - Engineer</i>
Potential funding sources	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
Time line	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Ongoing action carried forward from 2009 Plan</i>

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Little Silver</i>
<b>Community action number</b>	<i>Borough of Little Silver - Action No. 2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, storm surge, hurricane &amp; tropical storm, nor'easter</i>
<b>Risk finding</b>	<i>Approximately, 98 single family homes are within the 100 year flood zone throughout the Borough. During extreme storm events these properties can experience flooding and property damage.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Single Family Homes - Raising of Structure</i>
<b>Action description</b>	<i>The Borough is proposing mitigation through house elevation for homes within the 100 year flood zone.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces tidal storm surge damage and provides protection to waterfront homes within the 100 year flood zone. Will provide protection for residents and waterfront homes within the 100 year flood area. Average median home within the Borough is \$595, 100.00 from 2010 census. Losses avoided by this project are estimated to be roughly \$55,939,400.</i>
<b>Cost estimate</b>	<i>\$24,990,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Will provide protection for residents and waterfront homes within the 100 year flood area. Average median home within the Borough is \$595, 100.00 from 2010 census. This project is likely to be cost effective, with benefits on the order of \$55,939,400 and costs of \$24,990,000.</i>
<b>Technical</b>	<i>Technically feasible. Will help prevent flood damage to residential homes.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve flood loss and mitigate debris entering into the river.</i>
<b>Social</b>	<i>Will help residents along shoreline area of the Borough within the 100 year flood zone.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer (after technical assistance from the State)</i>
<b>Local champion</b>	<i>Residents along the shoreline.</i>
<b>Other community objectives</b>	<i>Flood Damage Prevention Ordinance</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Little Silver</i>
Community action number	<i>Borough of Little Silver - Action No. 3</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Storm Surge (hurricanes, tropical storms, and nor'easters)</i>
Risk finding	<i>More than 50 percent of Little Silver lies within mapped storm surge hazard areas (tidal waters surging up the Shrewsbury River). New age restricted housing is within the mapped storm surge hazard area. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
Action category	<i>Structure/ Infrastructure</i>
Action type	<i>Outfall Drainage Improvements</i>
Action description	<i>The Borough is proposing mitigation of each drainage outfall pipe located within the Borough. The installation of a Tideflex valve is proposed to mitigate storm surge within the Borough existing storm drain system to help protect during a flooding event.</i>
Existing, future &/or NA	<i>Existing and future development.</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Annual flood losses in Little Silver are typically on the order of \$100,000 to \$250,000. We estimate the proposed project could save about \$250,000 per year in flood losses.</i>
Cost estimate	<i>\$200,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>We expect that this will be cost effective because losses avoided are estimated to be roughly \$250,000 while the costs are less \$200,000</i>
Technical	<i>Technically feasible. Will help prevent flood damage to residential homes.</i>
Political	<i>No apparent political issues.</i>
Legal	<i>No apparent legal issues.</i>
Environmental	<i>No adverse environmental effects.</i>
Social	<i>Will help residents along shoreline area of the borough and within the lowline areas of the drainage system.</i>
Administrative capability	<i>Need at least 3 people to administer (after technical assistance from the State)</i>
Local champion	<i>Residents of the Borough</i>
Other community objectives	<i>Flood Damage Prevention Ordinance</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Flood Damage Prevention Ordinance</i>
Responsible party	<i>Borough - Engineer</i>
Potential funding sources	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
Time line	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Little Silver</i>
<b>Community action number</b>	<i>Borough of Little Silver - Action No. 2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Storm Surge (hurricanes, tropical storms, and nor'easters)</i>
<b>Risk finding</b>	<i>More than 50 percent of Little Silver lies within mapped storm surge hazard areas (tidal waters surging up the Shrewsbury River). New age restricted housing is within the mapped storm surge hazard area. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Action category</b>	<i>Regional Dyke Structure/ Infrastructure</i>
<b>Action type</b>	<i>Regional Drainage Improvements</i>
<b>Action description</b>	<i>The Borough is proposing a regional mitigation dyke structure along the Sandy Hook Inlet into the Navesink and Shrewsbury River. The installation of a dyke structure is proposed to mitigate storm surge within the Borough existing storm drain system to help protect during a flooding event.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future development.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Annual flood losses in Little Silver are typically on the order of \$100,000 to \$250,000. We estimate the proposed project could save about \$250,000 per year in flood losses.</i>
<b>Cost estimate</b>	<i>\$30 Million</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>We expect that this will be cost effective because losses avoided are estimated to be billions of dollars for the surrounding municipalities</i>
<b>Technical</b>	<i>Technically feasible. Will help prevent flood damage to residential homes.</i>
<b>Political</b>	<i>Inter local agreements with surrounding municipalities</i>
<b>Legal</b>	<i>Inter local agreements with surrounding municipalities</i>
<b>Environmental</b>	<i>No adverse environmental effects. Design must confirm no additional flooding along coast.</i>
<b>Social</b>	<i>Will help residents along shoreline area of the region and within the lowline areas of the drainage system.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer (after technical assistance from the State)</i>
<b>Local champion</b>	<i>Residents and Municipalities surrounding the Navesink and Shrewsbury</i>
<b>Other community objectives</b>	<i>Flood Damage Prevention Ordinance</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Flood Damage Prevention Ordinance</i>
<b>Responsible party</b>	<i>County Engineer and Inter - municipal agreements</i>
<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
<b>Time line</b>	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Village of Loch Arbour</i>
<b>Community action number</b>	<i>Village of Loch Arbour - Action No. 1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Surge, Hurricane, Tropical Storm, Nor'easter</i>
<b>Risk finding</b>	<i>Over 50% of the Village of Loch Arbour is within mapped storm surge hazard areas. Deal Lake continues to be a major source of flooding in the Village. During severe storms, water drains into the Lake but outfall design constraints prevent the water from making its way into the ocean before water overflows the banks and floods back into surrounding areas, during emergencies. In order to respond quicker to significant rain events and prevent flooding, the open and closing mechanism of the flume gates should be automated. During significant storm events when tidal surges occur, it becomes necessary to close the gates quickly to minimize ocean water infiltrating into the lake. The normal level of Deal Lake is only 3.2 feet above mean high tide.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Drainage Improvements - Automated Flume Gate</i>
<b>Action description</b>	<i>Deal Lake Commission is actively in the process of design for the development of automatic flume gate.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future development surrounding Deal Lake</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces tidal storm surge and provides protection to waterfront homes within watershed area. Average annual losses estimated in excess of \$60,000; plus unquantifiable life safety benefits associated with maintaining emergency services for the residents within the five municipalities surrounding the watershed.</i>
<b>Cost estimate</b>	<i>\$60,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Benefits estimated in excess of \$60,000 plus unquantifiable life safety benefits associated with maintaining emergency services for the residents within the five municipalities surrounding the watershed.</i>
<b>Technical</b>	<i>Technically feasible. Will help to control flooding</i>
<b>Political</b>	<i>Multiple municipal agencies involved with Deal Lake Commission. Municipalities include Allenhurst, City of Asbury Park, Borough of Deal, Borough of Interlaken, Neptune Township, Ocean Township and Village of Loch Arbour.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve flood control.</i>
<b>Social</b>	<i>Will help residents along shoreline area of the Village and within the Deal Watershed, Deal Lake Commission</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer ( after technical assistance from the State)</i>
<b>Local champion</b>	<i>Deal Lake Commission, Friends of Deal Lake, Residents within Village and within Deal Watershed</i>
<b>Other community objectives</b>	<i>Regional Stormwater Management Plan for Deal Lake Watershed, Municipal Stormwater Management Regulation Program, Flood Damage Prevention Ordinance.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Flood Damage Prevention Ordinance</i>
<b>Responsible party</b>	<i>Deal Lake Commission - Engineer</i>
<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
<b>Time line</b>	<i>1 year</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing action from 2009 Plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Village of Loch Arbour</i>
Community action number	<i>Village of Loch Arbour - Action No. 2</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Surge , Hurricane, Tropical Storm, Nor'easter</i>
Risk finding	<i>Sedimentation and debris in Deal Lake and its tributaries impedes flood flows.</i>
<b>Describing the Action</b>	
Action category	<i>Structure/ Infrastructure</i>
Action type	<i>Drainage Improvements - Treatment Devices</i>
Action description	<i>Reduce the possibility of flood damage by conducting regular stream maintenance and clearing sediment from Deal Lake and surrounding streams in the watershed. Deal Lake Commission is actively installing manufactured treatment devices around key outfall locations to aid in the elimination of trash and debris.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Reduces sediment and debris within watershed providing better overall volume/ flow throughout the lake. Will eliminate debris and sediment within the lake and watershed allowing proper flow fro stormwater runoff. Average annual losses estimated in excess of \$125,000; plus unquantifiable life safety benefits associated with maintaining emergency services for residents within the five municipalities surrounding the watershed.</i>
Cost estimate	<i>\$125,000.00 per unit there is currently 167 outfalls within the Deal Watershed. Larger outfalls will be upgraded to address large sediment deposits occuring in the lake.</i>
Cost effectiveness (i.e., benefit/cost)	<i>Will eliminate debris and sediment within the lake and watershed allowing proper flow for stormwater runoff. This project is likely to be cost effective, with benefits that exceed the order of \$125,000</i>
Technical	<i>Technically feasbile. Will help to eliminate debris from blocking and displacement of stormwater runoff</i>
Political	<i>No apparent political issues.</i>
Legal	<i>No apparent legal issues.</i>
Environmental	<i>No adverse environmental effects. Will help improve flood control and pollutants within the watershed.</i>
Social	<i>Will help residents along shoreline area of the Village, Deal Lake Commission</i>
Administrative capability	<i>Need at least 3 people to administer ( after technical assistance from the State)</i>
Local champion	<i>Deal Lake Commission, Friends of Deal Lake, Residents within Village and along shoreline</i>
Other community objectives	<i>Regional Stormwter Management Plan for Deal Lake Watershed, Municipal Stormwater Management Regulation Program.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Municipal Stormwater Management Regulation Program</i>
Responsible party	<i>Deal Lake Commission - Engineer</i>
Potential funding sources	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
Time line	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Ongoing action from 2009 Plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Village of Loch Arbour</i>
<b>Community action number</b>	<i>Village of Loch Arbour - Action No. 3</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood Hazards</i>
<b>Risk finding</b>	<i>Presently there are no storm water retention basins with the ability to correctly control the rate, amount or quality of runoff generated from any of the State of NJ Highways that transverse the Deal Lake watershed. As a result, waterfront properties within watershed flood regularly. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Drainage Improvements - Regional Basin</i>
<b>Action description</b>	<i>Lake Commission is proposing: (a) a study to research the possibility of building several stormwater basins on DOT land; and (b) construction of stormwater basins.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces flooding for residents with waterfront properties within the watershed and provides for more efficient stormwater runoff/ control. Provides better overall storage volume for the watershed. Average annual losses estimated in excess of \$1.25 million; plus unquantifiable life safety benefits associated with maintaining emergency services for the residents within the five municipalities surrounding the watershed.</i>
<b>Cost estimate</b>	<i>\$1,250,000 (\$50,000 for the study and roughly \$1,200,000 for the basins themselves)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Benefits estimated in excess of \$1,250,000, plus unquantifiable life safety benefits associated with maintaining emergency services for the residents within the five municipalities surrounding the watershed.</i>
<b>Technical</b>	<i>Technically feasible. Will help control flooding and stormwater runoff.</i>
<b>Political</b>	<i>Mutliple municipal agencies involved with Deal Lake Commission. Municipalities include Allenhurst, City of Asbury Park, Borough of Deal, Borough of Interlaken, Neptune Township, Ocean Township and Village of Loch Arbour</i>
<b>Legal</b>	<i>Obtain land grants and approval from NJDOT to properly construct basin.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve flood control and pollutants within the watershed.</i>
<b>Social</b>	<i>Does not adversely affect any particular social group.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer ( after technical assistance from the State)</i>
<b>Local champion</b>	<i>Deal Lake Commission, Friends of Deal Lake, Residents within Deal Watershed</i>
<b>Other community objectives</b>	<i>Regional Stormwater Management Plan for Deal Lake Watershed, Municipal Stormwater Management Regulation Program.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Flood Damage Prevention Ordinance</i>
<b>Responsible party</b>	<i>Deal Lake Commission - Engineer, Environmental Consultant and Attorney</i>
<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
<b>Time line</b>	<i>2 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing action from 2009 Plan.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Village of Loch Arbour</i>
<b>Community action number</b>	<i>Village of Loch Arbour - Action No. 2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood Hazards (Flooding, Storm Surge, Hurricane, Nor'easter, Tropical Storms)</i>
<b>Risk finding</b>	<i>During Super Storm Sandy the beachfront was eroded away into the surf. The Shoreline was left exposed causing extensive property and roadway infrastructure damage limiting the Village's ability to provide critical emergency services. Ocean Avenue was undermined in the vicinity of an ocean front tract at its border with Asbury Park. A private beach club on this tract was heavily damaged. The tract is bounded on one side by a Village-owned beach club, and on the south by a parcel that is being considered for open space acquisition. The Village views this property as an ideal location for a shore protection project; it is where the worst flooding of Superstorm Sandy occurred. The ocean came over land into Deal Lake and undermined Ocean Avenue in the vicinity of this property.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Acquisition of at-risk properties and Shoreline Protection</i>
<b>Action description</b>	<i>The scope of the project is to carry out property acquisition and construct a sand dune along the entire beach frontage.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces flooding along shoreline and will provide protection for residential structure along beach front. Will provide protection for residents and approximately 29 beach front properties. The average single family house price within the Village is approximately \$959,000. Losses avoided are estimated to be in excess of \$3,000,000</i>
<b>Cost estimate</b>	<i>\$3,000,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost-effective, with benefits that exceed the order of \$3,000,000.</i>
<b>Technical</b>	<i>Technically feasible. Will help to eliminate coastal flooding.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>Property Acquisition: Block 8 Lot 1; Block 7 Lots 1 &amp; 2</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve flood control and flooding within Coastal Area</i>
<b>Social</b>	<i>Will help residents along shoreline area of the Village</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer ( after technical assistance from the State)</i>
<b>Local champion</b>	<i>Deal Lake Commission, Friends of Deal Lake, Residents within Village</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Village of Loch Arbour</i>
<b>Community action number</b>	<i>Village of Loch Arbour - Action No. 5</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood Hazards (Flooding, Storm Surge, Hurricane, Nor'easter, Tropical Storms)</i>
<b>Risk finding</b>	<i>Over 50% of the Village of Loch Arbour is within mapped storm surge hazard areas. Deal Lake continues to be a major source of flooding in the Village. During severe storms, water surges into the Lake but outfall design constraints prevent the water from making its way into the ocean before water overflows the banks and floods back into surrounding areas. In order to respond quicker to significant tidal events and prevent flooding, a tidal flood gate with the ability to open and close with automation mechanism should be developed. During significant storm events when tidal surges occur, it becomes necessary to close the gates quickly to minimize ocean water infiltrating into the lake. The normal level of Deal Lake is only 3.2 feet above mean high tide.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Drainage Improvements - Automated Tide Gate</i>
<b>Action description</b>	<i>Deal Lake Commission is actively in the process of design for the development of automatic <b>Tide Gate</b>. The tide gate will be inserted within the 5' x 10' flume.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing outfall structure and future development surrounding Deal Lake</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduces tidal storm surge and provides protection to waterfront homes within watershed area. The average single family house price within the Village is approximately \$959,000. Losses avoided are estimated to be in excess of \$500,000.</i>
<b>Cost estimate</b>	<i>\$500,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost-effective, with benefits that exceed the order of \$500,000.</i>
<b>Technical</b>	<i>Technically feasible. Will help to control flooding</i>
<b>Political</b>	<i>Multiple municipal agencies involved with Deal Lake Commission. Municipalities include Allenhurst, City of Asbury Park, Borough of Deal, Borough of Interlaken, Neptune Township, Ocean Township and Village of Loch Arbour.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve flood control.</i>
<b>Social</b>	<i>Will help residents along shoreline area of the Village and within the Deal Watershed; Deal Lake Commission</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer ( after technical assistance from the State)</i>
<b>Local champion</b>	<i>Deal Lake Commission, Friends of Deal Lake, Residents within Village and within Deal Watershed</i>
<b>Other community objectives</b>	<i>Regional Stormwater Management Plan for Deal Lake Watershed, Municipal Stormwater Management Regulation Program, Flood Damage Prevention Ordinance.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Flood Damage Prevention Ordinance</i>
<b>Responsible party</b>	<i>Deal Lake Commission - Engineer</i>
<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
<b>Time line</b>	<i>1 year</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action proposed in 2014</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>City of Long Branch</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, storm surge, hurricanes, tropical storms, nor'easters, severe storms, erosion, wave action</i>
Risk finding	<i>Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Local Planning and Regulations</i>
Action type	<i>Update of Hazard Zoning Ordinances</i>
Action description	<i>Updating of local ordinance's to comply with FEMA A's new Preliminaries and possibly acquire reductions for residents in flood insurance premiums.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Extremely Effective; benefits are estimated to be relatively high as compared to costs as buildings are raised up above the base flood elevation, with cost savings during each future flood events as well as cost savings in terms of flood insurance premiums paid.</i>
Cost estimate	<i>Unknown; costs are estimated to be relatively low in terms of staff time and associated budget needed to revise the ordinance</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost-effective, with relatively low costs and potentially very high benefits.</i>
Technical	<i>Yes</i>
Political	<i>Yes</i>
Legal	<i>Yes</i>
Environmental	<i>Yes</i>

Time line	<i>3-5 Years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Action has been carried forward and the City has updated several ordinances in response to recent events. Further updates will be needed in the future.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>City of Long Branch</i>
Community action number	2
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, storm surge during hurricanes, tropical storms, nor'easters, severe storms</i>
Risk finding	<i>Various locations throughout the City flood when local drainage cannot exit the system due to submerged outfalls and associated backflow. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Structural Protection</i>
Action type	<i>Improve stormwater drainage system</i>
Action description	<i>Installation of improved drainage and storm water pipe to control flood waters and increase strategic locations to control flow</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Extremely Effective; we estimate that losses avoided as a result of this project could be about \$ 3,000,000.00 per year.</i>
Cost estimate	<i>Planning - \$400,000 Materials - \$3,000,000.00 Maintenance - \$5,000.00 Given the estimated useful life of 30 years, this represents an annual cost of about \$ 113,500.00 per year.</i>
Cost effectiveness (i.e., benefit/cost)	<i>Unknown. We estimate that this project would be cost effective, with annual benefits of \$3,000,000.00 per year and annual costs of only \$113,500.00 per year.</i>
Technical	<i>Yes</i>
Political	<i>Yes</i>
Legal	<i>Yes</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>City of Long Branch</i>
Community action number	6
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>- Flooding, storm surge during hurricanes, tropical storms, nor'easters, severe storms</i>
Risk finding	<i>The northern and western areas of the city are susceptible to flood/surge. Most of North Long Branch was flooded during Hurricane Sandy, from both coastal flooding and backwater flooding from the Shrewsbury River and its tributaries. There was significant damage to public and private property and infrastructure. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Structural Protection</i>
Action type	<i>Improve stormwater drainage system</i>
Action description	<i>Installation of duckbill check valves to control flood waters and increase strategic locations to control flow.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Extremely Effective; we estimate that losses avoided as a result of this project could be about \$500,000.00 per year.</i>
Cost estimate	<i>Planning - \$50,000 Materials - \$200,000.00 Maintenance - \$5,00.00 Given the estimated useful life of 35years, this represents an annual cost of about \$7,300.00 per year.</i>
Cost effectiveness (i.e., benefit/cost)	<i>Unknown. We estimate that this project would be cost effective, with annual benefits of \$500,000.00 per year and annual costs of only \$7,300.00 per year.</i>
Technical	<i>Yes</i>
Political	<i>Yes</i>
Legal	<i>Yes</i>
Environmental	<i>Yes</i>
Social	<i>Unaffected</i>
Administrative capability	<i>Yes</i>
Local champion	<i>Public Works Director</i>
Other community objectives	<i>Yes</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Codes</i>
Responsible party	<i>Mayor and Council</i>
Potential funding sources	<i>Local Budget</i>
Time line	<i>3-5 Years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This is a new action that has been created by a change in conditions from Hurricane Sandy. This project was also submitted as a 2014 HMGP Project.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>City of Long Branch</i>
<b>Community action number</b>	7
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, storm surge during hurricanes, tropical storms, nor'easters, severe storms</i>
<b>Risk finding</b>	<i>Areas in and around Ms nahassett Creek Park Complex are susceptible to flood/surge. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Protection &amp; Natural Resources Protection</i>
<b>Action type</b>	<i>Bulkheads</i>
<b>Action description</b>	<i>Improvements to existing Bay Avenue bulkhead that has proven to be inadequate after the changes in conditions following Hurricane Sandy.</i>
<b>Existing, future &amp;/or NA</b>	<i>Both</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Extremely Effective; we estimate that losses avoided as a result of this project could be about \$250,000.00 per year.</i>
<b>Cost estimate</b>	<i>Planning - \$20,000 Materials - \$50,000.00 Maintenance - \$5,00.00 Given the estimated useful life of 50 years, this represents an annual cost of about \$ 1,500.00 per year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Unknown. We estimate that this project would be cost effective, with annual benefits of \$ 250,000.00 per year and annual costs of only \$ 1,500.00 per year.</i>
<b>Technical</b>	<i>Yes</i>
<b>Political</b>	<i>Yes</i>
<b>Legal</b>	<i>Yes</i>
<b>Environmental</b>	<i>Yes</i>
<b>Social</b>	<i>Unaffected</i>
<b>Administrative capability</b>	<i>Yes</i>
<b>Local champion</b>	<i>Public Works Director</i>
<b>Other community objectives</b>	<i>Yes</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>

<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is a new action that has been created by a change in conditions from Hurricane Sandy. This project was also submitted as a 2014 HMGP Project.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>City of Long Branch</i>
<b>Community action number</b>	8
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Storm Surge, flooding, hurricanes, tropical storms and nor'easters</i>
<b>Risk finding</b>	<i>Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Project Structures</i>
<b>Action description</b>	<i>Project will consist of the elevation of floodprone Residential Structures that are below the approved base flood elevations approximately 150 homes.</i>
<b>Existing, future &amp;/or NA</b>	<i>Addresses existing structures</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided by this project are estimated to be \$250,000 per property that is elevated.</i>
<b>Cost estimate</b>	<i>The cost of the project is estimated to be \$75,000 to \$125,000 depending on size and current foundation of home.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Average cost of residential homes in this area are in the \$1-3 million range. Previous flooding has caused millions in damages. This project is likely to be cost effective, with benefits estimated to be about \$250,000 per property and costs of only \$75k-\$125k per property.</i>
<b>Technical</b>	<i>Elevation of homes is Technically feasible.</i>
<b>Political</b>	<i>All residents realize the need to prevent flooding in this area. No group is opposed to this action. Our political leadership supports this type project.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No environmental impacts are anticipated as a result of elevating the homes.</i>
<b>Social</b>	<i>Does not adversely affect any particular social group.</i>
<b>Administrative capability</b>	<i>City of Long Branch Office of Emergency Management will manage this project.</i>
<b>Local champion</b>	<i>Charles F. Shirley Jr. , Deputy Coordinator</i>
<b>Other community objectives</b>	<i>None</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>None required.</i>
<b>Responsible party</b>	<i>City of Long Branch Emergency Management</i>
<b>Potential funding sources</b>	<i>FEMA hazard mitigation grant funding streams (i.e., HMGP)</i>
<b>Time line</b>	<i>ASAP</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New project</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Long Branch</i>
<b>Community action number</b>	<i>9</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Administration
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

## Action Worksheet

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manalapan</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, hurricane &amp; tropical storm, nor'easter</i>
Risk finding	<i>Residential structures along Birmingham Drive are located in floodplain of the Pine Brook. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Property Acquisition - Remove existing structures from flood hazard areas</i>
Action description	<i>Purchase properties along the Birmingham Drive for the purposes of removing the dwelling structures which are located in floodplain of the Pine Brook.</i>
Existing, future &/or NA	<i>existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The project will be effective in eliminating damage to flood prone dwelling structures. While the exact losses to each property after each flood event is unknown at this time, we expect that losses avoided would exceed \$3,000 per year.</i>
Cost estimate	<i>\$3,000,000 or \$300,000 per property (assuming a 100 year useful life for acquisition and return of the sites to open space, this is about \$3,000 per year per structure)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits most likely equal to or in excess of \$3,000 per property per year and costs of only \$3,000 per property per year.</i>
Technical	<i>The project is technically feasible.</i>
Political	<i>The residents and governing body are supportive of the project.</i>
Legal	<i>The community can conduct the project provided there is endorsement from the residents whose properties are to be acquired</i>
Environmental	<i>The project would have a positive environmental impact in that it will eliminate obstructions in a flood hazard area.</i>
Social	<i>The project will improve the quality of life of a specific group of residents along Birmingham Drive whose properties repeatedly flood.</i>
Administrative capability	<i>Township Administration and Engineering are the lead agencies</i>
Local champion	<i>The residents of Birmingham Drive are leading the call for action.</i>
Other community objectives	<i>Open Space Preservation</i>
<b>Implementing the Action</b>	
Priority	<i>High Priority</i>
Local planning mechanism	<i>Open Space and Flood Plain Management</i>
Responsible party	<i>Township Administrator and Engineer</i>
Potential funding sources	<i>HMGP, FEMA Flood Mitigation Grants</i>
Time line	<i>The project will be completed as soon as funding exists</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This is a new action that would be implemented as soon as funding exists</i>

<b>Action Worksheet 1: Risk Assessment Study</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Drought, Earthquakes, Coastal Erosion, Floods, Lightning, Sea Level Rise, Severe Wind, Storm Surge, Tornado, Wildfire, Wave Action</i>
Risk finding	<i>Specific structures, facilities &amp; equipment that are vulnerable to the above hazards have not been identified/quantified.</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Risk Assessment</i>
Action description	<i>Conduct a hazard-specific community-wide risk assessment of all structures, facilities &amp; equipment and identify, map, quantify, and rank vulnerable structures for each of the above hazards. This will include identifying and mapping high hazard areas for each hazard addressed. This will also include inventorying and evaluating existing at-risk housing stock, commercial buildings as well as public facilities &amp; equipment and assessing each structure for vulnerabilities to each of the hazards addressed. This action will be a more detailed presentation and assessment of data from what is in the hazard mitigation plan.</i>
Existing, future &/or NA	<i>Addresses both existing and new structures</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Problem identification is key to implementation of our mitigation actions. This action will enable the Borough to identify most at-risk structures and implement mitigation actions efficiently &amp; effectively. Benefits are difficult to quantify, but expected to be quite high in relation to estimated project costs.</i>
Cost estimate	<i>150000 (low, in relation to benefits).</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is expected to be cost-effective, with benefits outweighing costs. Mitigation actions cannot be implemented without first identifying what structures are vulnerable. Having a risk-based ranking will enable the most efficient use of mitigation funds. This is a low-cost action that can be easily implemented and will save money in the long term through efficient use of mitigation funding.</i>
Technical	<i>Technically feasible, easily implemented.</i>
Political	<i>There is current community support for hazard mitigation planning, however there is community resistance to increased local property taxes.</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>The Borough has the administrative capacity to implement this action, however outside funding is required.</i>
Local champion	<i>Office of Emergency Management will advocate for the project</i>
Other community objectives	<i>This action supports the entire hazard mitigation effort within the municipality</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Hazard Mitigation Plan</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Hazard Mitigation Planning Grants, Community Resiliency Grants, HMGP funding</i>
Time line	<i>1 year</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

## Action Worksheet 2: Establish Local Funding Mechanism

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 4</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>(ALL) Drought, Earthquakes, Extreme Temperatures, Extreme Wind, Coastal Erosion, Floods, Lightning, Sea Level Rise, Severe Winter Storms, Storm Surge, Tornado, Wildfire</i>
Risk finding	<i>Limited local funding available for hazard mitigation activities</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Establish funding mechanism</i>
Action description	<i>Establish a permanent funding mechanism and budget for hazard mitigation planning and mitigation actions</i>
Existing, future &/or NA	<i>N/A</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Having a permanent local funding mechanism will enable the Borough to fully develop, update and monitor implementation of the hazard mitigation plan and certain hazard mitigation actions contained therein. Unquantifiable but presumed high.</i>
Cost estimate	<i>50000 (low, as compared to potential benefits of implemented projects)</i>
Cost effectiveness (i.e., benefit/cost)	<i>Mitigation actions cannot be undertaken without planning and coordination at the local level. Local funding for Hazard Mitigation is essential for the execution of a long-term hazard mitigation strategy. This project is expected to be cost-effective, with its benefits outweighing its costs.</i>
Technical	<i>Technically feasible, easily implemented.</i>
Political	<i>There is current community support for hazard mitigation planning, however there is community resistance to increased local property taxes.</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>The community has the personnel available but has not secured a permanent annual funding mechanism</i>
Local champion	<i>Office of Emergency Management will advocate for the project</i>
Other community objectives	<i>This action supports the entire hazard mitigation effort within the municipality</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Hazard Mitigation Plan</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>unknown</i>
Time line	<i>1 year</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

## Action Worksheet 3: Monitor Plan Implementation

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 3</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>(ALL) Drought, Earthquakes, Extreme Temperatures, Extreme Wind, Coastal Erosion, Floods, Lightning, Sea Level Rise, Severe Winter Storms, Storm Surge, Tornado, Wildfire</i>
Risk finding	<i>Hazard mitigation plan must be monitored in order to gauge success and accomplish updates as required</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Monitor Mitigation Plan Implementaion</i>
Action description	<i>Monitor the implementation of the hazard mitigation plan and make updates to the plan as required. This includes forming a plan implementation steering committee to monitor progress on local mitigation actions as well as implementation monitoring schedule and outlining responsibilities.</i>
Existing, future &/or NA	<i>N/A</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Monitoring plan implementation is key to the success of the overall hazard mitigation plan. This action will enable the Borough to ensure that the hazard mitigation plan becomes a living document that is used to steer future mitigation efforts within the municipality. Benefits unquantifiable but presumed high.</i>
Cost estimate	<i>5000 (low cost)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This is a low-cost action that can be easily implemented and will save money in the long term through sustained hazard mitigation efforts. The action is presumed to be cost effective.</i>
Technical	<i>Technically feasible, easily implemented.</i>
Political	<i>There is current community support for hazard mitigation planning, however there is community resistance to increased local property taxes.</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>Monitoring and administering the Hazard Mitigation plan costs are considered low, however, administrative capacity of the Borough is exhausted and outside assistance may be required or the work load of administrative staff reduced in order to absorb the additional requirements of this action.</i>
Local champion	<i>Office of Emergency Management will advocate for the project</i>
Other community objectives	<i>This action supports the entire hazard mitigation effort within the municipality</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Hazard Mitigation Plan</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Local Hazard Mitigation Program, Hazard Mitigation Planning Grants, Community Resiliency Grants, HMGP funding</i>
Time line	<i>1 year</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

## Action Worksheet 4: Program for Public Information

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 4</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>(ALL) Drought, Earthquakes, Extreme Temperatures, Extreme Wind, Coastal Erosion, Floods, Lightning, Sea Level Rise, Severe Winter Storms, Storm Surge, Tornado, Wildfire</i>
Risk finding	<i>The Borough is lacking a comprehensive all-hazards public information program</i>
<b>Describing the Action</b>	
Action category	<i>Public Education</i>
Action type	<i>Implement a Program for Public Information on hazard awareness &amp; mitigation</i>
Action description	<i>Implement a comprehensive program for public information that systematically distributes hazard awareness information as well as actions that citizens can take to mitigate those hazards. The program will also promote household disaster preparedness as well as private mitigation efforts. This program will include the formation of a public information steering committee and will include specific public outreach goals, responsibilities and monitoring.</i>
Existing, future &/or NA	<i>N/A</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Hazard awareness and public education on mitigation actions directly results in lives saved and property damage reduction during natural disasters. Losses avoided are potentially very high.</i>
Cost estimate	<i>5000 (low)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This is a low-cost action that can be easily implemented and will save money in the long term through preparation and mitigation activities undertaken by the community. This project is likely to be cost effective, with benefits in excess of costs.</i>
Technical	<i>Technically feasible, easily implemented.</i>
Political	<i>There is current community support for hazard mitigation planning and public outreach</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>The Borough has the administrative capability to implement this action</i>
Local champion	<i>Office of Emergency Management will advocate for the project</i>
Other community objectives	<i>Some of these public education activities may be eligible for credit under the Community Rating System and may lead to lower flood insurance premiums.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Hazard Mitigation Plan, floodplain management plan</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Local Hazard Mitigation Program, Hazard Mitigation Planning Grants, Community Resiliency Grants, HMGP funding</i>
Time line	<i>1 year</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This action has been carried forward from last plan. Since the last plan update, the Borough has created specific web pages that outline hazard specific threats and mitigation actions. However, only some threats are addressed. The development of the program for public information will address all hazards and will focus on mitigation actions. This program will have multiple modes of communications, roles and responsibilities defined and will include an annual monitoring checklist. This is expected to take 1 year to complete.</i>

## Action Worksheet 5: Increase Public Warning Capabilities

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 5</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>(ALL) Drought, Earthquakes, Extreme Temperatures, Extreme Wind, Coastal Erosion, Floods, Lightning, Sea Level Rise, Severe Winter Storms, Storm Surge, Tornado, Wildfire</i>
Risk finding	<i>The Borough is lacking critical public warning capabilities</i>
<b>Describing the Action</b>	
Action category	<i>Public Education (Warning)</i>
Action type	<i>Increase public warning capabilities</i>
Action description	<i>Increase public warning capabilities through the implementation of FEMA developed IPAWS alerting, upgrade warning siren coverage, implement a Reverse911 system, upgrade electronic warning sign system coverage, and improve use of web-based programs and social media for public warning.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Timely and accurate public warnings directly result in lives saved and property damage reduction during natural disasters. (Losses avoided unquantifiable, but likely to be very high)</i>
Cost estimate	<i>150000 (These costs are high dollars, but relatively low as compared to expected benefits)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This is critical action that can be directly attributed to lives saved and property damage reduction. Life saving activities strongly outweigh initial costs. The action is likely to be cost effective, with benefits in excess of its costs)</i>
Technical	<i>Technically feasible, easily implemented.</i>
Political	<i>There is current community support for increased public warning capabilities, however there is community resistance to increased local property taxes.</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>Office of Emergency Management will advocate for the project</i>
Other community objectives	<i>All of these public warning actions are eligible for credit under the Community Rating System and may lead to lower flood insurance premiums.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Emergency Operations Plan</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Emergency Management Performance Grants, Community Resiliency Grants, HMGP funding</i>
Time line	<i>5-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This action has been carried forward from last plan. Since the last hazard mitigation plan update, the Borough has added three remote-activated flashing signs used for emergency notifications, added a third outdoor warning siren with voice capability, added a second, back-up public warning activation station, implemented social media (facebook &amp; twitter) that automatically and instantly relays warnings issued from the National Weather Service, and has upgraded the am radio station. Lack of an updated state plan on the emergency alert system has hindered local implementation of IPAWS alerts. Funding has also been an issue for completing the remaining public warning upgrades. It is estimated to take 5-years to complete all upgrades.</i>

<b>Action Worksheet 6: Develop a Drought Emergency Plan</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 6</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Drought</i>
Risk finding	<i>The Borough has no plan for dealing with drought emergencies</i>
<b>Describing the Action</b>	
Action category	<i>Planning mechanism</i>
Action type	<i>Develop a drought emergency plan</i>
Action description	<i>Develop a drought emergency plan which includes criteria for drought-related actions, identifying local drought indicators, such as precipitation, temperature, guidance from NJDEP, and institute voluntary and mandatory water conservation measures during drought conditions &amp; emergencies. This includes developing a drought communication plan and early warning system to facilitate timely communication of relevant information to officials, decision makers, emergency managers, and the general public.</i>
Existing, future &/or NA	<i>N/A</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The benefits of having a drought emergency plan will result in avoiding water emergencies through consistent water conservation measures triggered by different levels of drought conditions. While unquantifiable, these benefits are potentially quite high.</i>
Cost estimate	<i>5000 (low)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This action is likely to be cost effective, with its benefits outweighing its costs. This is a low cost action that can be easily implemented and the economic benefits of avoiding true drought emergencies outweigh the cost.</i>
Technical	<i>Technically feasible, easily implemented.</i>
Political	<i>There is current community support for hazard mitigation planning, however there is community resistance to increased local property taxes</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>Possibly environmental commission</i>
Other community objectives	<i>This action supports the objectives of emergency preparedness and environmental conservation</i>
<b>Implementing the Action</b>	
Priority	<i>Low</i>
Local planning mechanism	<i>Emergency Operations Plan -Hazardous Weather Annex</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Hazard Mitigation Planning Grants, Community Resiliency Grants, HMGP funding</i>
Time line	<i>1-year</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet 7: Retrofit Structures for Earthquakes</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 7</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Earthquakes</i>
Risk finding	<i>The Borough has structures, including critical facilities and equipment, vulnerable to earthquakes</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Retrofit existing structures, facilities &amp; equipment to make resistant to seismic loading</i>
Action description	<i>An inventory of public and commercial buildings that are vulnerable to earthquake damage will be identified under Community Action Number 1 - Risk Assessment &amp; Mapping. This action item will include conducting seismic retrofitting of these structures based upon rank (most vulnerable) and importance (most critical). Such mitigation actions may include, but are not limited to bracing of generators, elevators, and other vital equipment, strengthening and retrofitting non-reinforced masonry buildings and non-ductile concrete facilities that are particularly vulnerable to ground shaking, retrofitting building veneers to prevent failure, anchoring rooftop-mounted equipment, and otherwise retrofitting structures and equipment to make earthquake resistant. This will also include reviewing building codes and structural policies to ensure they are adequate to protect older structures from seismic damage. This item will also include requiring or encouraging seismic engineering measures and construction techniques that may include the mitigation actions listed above.</i>
Existing, future &/or NA	<i>Both, new &amp; existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Based upon current available data, the return on investment of earthquake hardening is 6 to 1. This would yield a benefit of \$150,000,000 saved in the event of an earthquake.</i>
Cost estimate	<i>25,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The cost of implementing this action will be far outweighed by the rebuilding costs if this action is not implemented and the Borough is struck with an earthquake. Based upon current available data, the return on investment of earthquake hardening is 6 to 1.</i>
Technical	<i>Technically feasible, difficult implementation. Seismic vulnerabilities solved for long term.</i>
Political	<i>There is community resistance to increased local property taxes</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>Possibly chamber of commerce and home/business owners</i>
Other community objectives	<i>This action supports the objectives of emergency preparedness and community resiliency</i>
<b>Implementing the Action</b>	
Priority	<i>Low</i>
Local planning mechanism	<i>none</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding</i>
Time line	<i>10-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

## Action Worksheet 8: Back-up Power for Critical Facilities

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 8</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>(ALL) Drought, Earthquakes, Extreme Temperatures, Extreme Wind, Coastal Erosion, Floods, Lightning, Sea Level Rise, Severe Winter Storms, Storm Surge, Tornado, Wildfire</i>
Risk finding	<i>The Borough has critical facilities and equipment that are vulnerable to power failure</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Provide back-up power generation for critical facilities and equipment</i>
Action description	<i>An inventory of all critical facilities and equipment shall be made and ranked in order of importance. Emergency back-up generators will be provided and maintained at each of the facilities.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>FEMA has adopted a disaster-specific methodology for generator projects at critical facilities. The Benefit-Cost Analysis "BCA" – Generator Sensitivity Matrix provides a conservative estimate of "benefits" or losses avoided by the presence and operation of a generator at certain types of critical facilities, including Water [Supply] Plant or Station, Wastewater [Treatment] Plant or Station, Fire Station, Police Station, Hospital &amp; Shelters. Benefits were pre-determined based on actual data and are depicted in relation to the population served by the facility.</i>
Cost estimate	<i>200,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Based upon the FEMA Benefit-Cost Analysis "BCA" – Generator Sensitivity Matrix, the benefit to having an emergency generator that serves a population of 5,000 in each case is much greater than the cost of the generator itself.</i>
Technical	<i>Technically feasible, easily implemented.</i>
Political	<i>There is community resistance to increased local property taxes</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>The Borough has the administrative capacity to implement this action, however outside funding is required to implement this action.</i>
Local champion	<i>Possibly owners/operators of the critical facilities, OEM and Public Works</i>
Other community objectives	<i>This action supports the objectives of emergency preparedness and community resiliency</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Emergency Operations Plan</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding</i>
Time line	<i>10-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

## Action Worksheet 9: Lightning Protection for Critical Facilities

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 9</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Lightning</i>
Risk finding	<i>The Borough has critical facilities and equipment that are vulnerable to damage from lightning strikes.</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Provide lightning protection for critical facilities and equipment</i>
Action description	<i>An inventory of critical facilities and equipment that are vulnerable to earthquake damage will be identified under Community Action Number 1 - Risk Assessment &amp; Mapping. This action item will include conducting lightning protection of these structures based upon rank (most vulnerable) and importance (most critical). This will include installing lightning protection devices and methods, such as lightning rods and grounding, on communications infrastructure and other critical facilities, as well as installing and maintaining surge protection on critical electronic equipment.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Damages resulting from lightning strikes can be extremely expensive. In the last 5 years, Manasquan has had 3 lightning strikes that damaged or destroyed critical equipment, rendering such equipment unusable for extended periods. Losses avoided by the projects are expected to be high, and in excess of estimated costs.</i>
Cost estimate	<i>100000 (low, relative to estimated benefits)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is expected to be cost-effective; the cost to repair the equipment protected by lightning strike far outweighs the cost of installing the lightning protection.</i>
Technical	<i>Technically feasible, easily implemented.</i>
Political	<i>There is community resistance to increased local property taxes</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>Possibly owners/operators of the critical facilities. OEM and Public Works</i>
Other community objectives	<i>This action supports the objectives of emergency preparedness and community resiliency</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>none</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding</i>
Time line	<i>5-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet 10: Protect Against Coastal Erosion</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 10</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Coastal Erosion and Wave Action</i>
Risk finding	<i>The Borough has a 1-mile long unprotected coastline exposed to the ocean and storms</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Provide erosion and wave protection along the oceanfront</i>
Action description	<i>Fortify a 1-mile portion of coastline with and engineered dune and wall system consisting of high-strength steel wall covered by dune system and vegetation.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Coastal erosion and direct wave attack from Hurricane Sandy caused significant damage to over 25% of the structures on the oceanfront. Implementation of this action is estimated to protect 278 residences (est. avg. loss \$100,000) and 10 businesses (est. avg. loss \$200,000) totaling over \$29,800,000 in damages avoided.</i>
Cost estimate	<i>10,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Based upon the above analysis, the benefit cost ratio is 3:1.</i>
Technical	<i>Technically feasible</i>
Political	<i>There is community resistance to increased local property taxes as well as resistance to a permanent dune system</i>
Legal	<i>There may be issues with easements and/or impacts to residents views</i>
Environmental	<i>There is significant environmental issues with installing a hardened structure in the coastal zone</i>
Social	<i>There is significant resistance among oceanfront homeowners that would have their views negatively impacted.</i>
Administrative capability	<i>The Borough has the administrative capacity to implement this action, however outside funding is required.</i>
Local champion	<i>none identified</i>
Other community objectives	<i>This action supports the objectives of community resiliency</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>none</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding</i>
Time line	<i>10-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet 11: Restore Natural Resource Protection</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 11</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, Wave Action, Storm Surge &amp; Sea Level Rise</i>
Risk finding	<i>The Borough has a significant number of natural buffers including dunes, salt marshes, coastal wetlands, maritime forests, stream corridors and natural floodplains that are in a deteriorated state that can provide significant natural buffers and flood mitigation.</i>
<b>Describing the Action</b>	
Action category	<i>Natural Resource Protection</i>
Action type	<i>Natural Resource Restoration</i>
Action description	<i>Provide natural resource restoration to existing dunes, salt marshes, coastal wetlands, maritime forests, stream corridors and natural floodplains in order to enhance natural buffers and flood mitigation. This will include developing a comprehensive approach that combines dune, maritime forest, coastal wetlands, salt marsh and stream corridor restoration with a potential flood mitigation opportunities and integrated high water controls in order to reduce both riverine and tidal flooding and protects against sea level rise. The project will restore over 60-acres of coastal wetlands and maritime forest and 6-miles of stream corridors.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Coastal flooding and direct wave attack from Hurricane Sandy caused significant damage to approximately 50% of the commercial and residential housing stock. Implementation of this action is estimated to reduce damages to the nearly 2000 residences (est. avg. flood loss \$50,000) and 30 businesses (est. avg. flood loss \$100,000) damaged during Hurricane Sandy. Even if flood losses were reduced by 20%, this would equate to a savings of \$26,000,000 in flood damages.</i>
Cost estimate	<i>7,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Based upon the above analysis, the benefit cost ratio is almost 4:1.</i>
Technical	<i>Technically feasible</i>
Political	<i>There is community resistance to increased local property taxes</i>
Legal	<i>There may be issues with easements and/or other impacts to residents</i>
Environmental	<i>This is an environmental restoration project and although it has environmental impacts, they should be all positive</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>possibly environmental commission and the Monmouth County Park System</i>
Other community objectives	<i>This action supports the objectives of community resiliency &amp; environmental quality</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>none</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding</i>
Time line	<i>5-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

## Action Worksheet 12: Increase NFIP/CRS Participation

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 12</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, Wave Action, Storm Surge &amp; Sea Level Rise</i>
Risk finding	<i>The Borough needs to increase participation in the National Flood Insurance Program's (NFIP) Community Rating System (CRS)</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Increased Compliance with NFIP/CRS Program</i>
Action description	<i>Manasquan participates in the National Flood Insurance Program (NFIP) Community Rating System (CRS). This project will include increased regulatory standards both in and out of the floodplain, including enacting and enforcing regulations that exceed NFIP minimum standards so that more flood protection is provided for any development. Existing ordinances will be reviewed and made more stringent, including requiring buildings to be constructed above the minimum elevation required by NFIP, requiring foundation protection on new buildings, requiring any new critical facilities to be build outside of the flood zone, requiring new development to provide positive drainage away from the structure, updating the definition of substantial improvement to include accumulation of improvements counted over 10-years, as well as formally adopting the preliminary Flood Insurance Rate Maps (FIRMS). This will also include advising the public about the local flood hazard, flood insurance, and flood protection measures as part of an organized Program for Public Information (Action Item #4) and increasing our flood warning dissemination and response capabilities (Action Item # 5). This item also includes work included in Action items 13-17, including implementing damage reduction measures for existing buildings such as elevation, acquisition, relocation, retrofitting, and maintenance of drainageways and retention basins.</i>
Existing, future &/or NA	<i>Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>All of the above actions, including higher regulatory standards, increasing public outreach, enhancing hazard warning dissemination and implementing damage reduction measures, all leads to reduction in property damage in the event of a flood. Losses avoided are likely to be high, and well in excess of estimated costs.</i>
Cost estimate	<i>5000 (low, in relation to estimated benefits)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits well in excess of costs. In addition to the reduction in property damage, the economic benefits of increased CRS compliance and having higher regulatory standards makes the benefits of this action significantly outweigh the other minor costs. This is a low-cost option that can easily be implemented. An increase in the CRS ranking from 7 (current) to 6 will save residents and additional \$118,000 annually on flood insurance premiums.</i>
Technical	<i>Technically feasible</i>
Political	<i>There is community resistance to increased regulatory standards</i>
Legal	<i>There are no legal issues</i>
Environmental	<i>There are no environmental impacts</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>The Borough has the administrative capacity to implement this action</i>
Local champion	<i>Office of Emergency Management will advocate for the project</i>
Other community objectives	<i>These activities may be eligible for credit under the Community Rating System and may lead to lower flood insurance premiums.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Hazard Mitigation Plan, Floodplain Management Plan</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Local Hazard Mitigation Program</i>
Time line	<i>1 year</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

## Action Worksheet 13: Floodproof Structures

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 13</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, storm surge &amp; sea level rise</i>
Risk finding	<i>The Borough has residential, commercial and public structures and equipment vulnerable to flooding, storm surge &amp; sea level rise</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Provide floodproofing for residential and non-residential structures &amp; equipment</i>
Action description	<i>An inventory of public and commercial buildings that are vulnerable to flooding, storm surge and sea level rise will be identified under Community Action Number 1 - Risk Assessment &amp; Mapping. This action item will include conducting floodproofing of these structures based upon rank (most vulnerable) and importance (most critical). These structures will be protected from flooding by a combination of methods, including, but not limited to wet floodproofing in a basement, wet floodproofing of areas above base flood elevation, using water resistant paints or other materials to allow for easy cleanup after floodwater exposure, and by dry floodproofing non-residential structures by strengthening walls, sealing openings, or using waterproof compounds or plastic sheeting on walls to keep water out.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Damage resulting from flooding can be extremely expensive. In the last 3 years, Manasquan has had two Federal declarations that resulted in an estimated \$400,000,000 in flood damages. Even if these claims were reduced by 10%, this would result in 40,000,000 of losses avoided.</i>
Cost estimate	<i>10,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The cost of implementing this action will be far outweighed by the rebuilding costs if this action is not implemented and the Borough is struck with another flood or storm surge. Based upon recent data, the return on investment of floodproofing is 4 to 1.</i>
Technical	<i>Technically feasible, implementation difficult due to varied structure types &amp; ownership.</i>
Political	<i>There is community resistance to increased local property taxes</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>possibly homeowners in flood zone, owners/operators of critical facilities</i>
Other community objectives	<i>This action supports the objectives of community resiliency</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>Hazard Mitigation Plan</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding</i>
Time line	<i>10-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

## Action Worksheet 14: Elevate Structures

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 14</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, wave action, storm surge &amp; sea level rise</i>
Risk finding	<i>The Borough has residential, commercial and public structures and critical facilities and equipment vulnerable to flooding, storm surge &amp; sea level rise</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Elevate residential and non-residential structures &amp; equipment</i>
Action description	<i>An inventory of public and commercial buildings that are vulnerable to flooding, storm surge and sea level rise will be identified under Community Action Number 1 - Risk Assessment &amp; Mapping. This action item will include elevating these structures based upon rank (most vulnerable) and importance (most critical). These structures and facilities and equipment will be elevated at least 1-foot above minimum NFIP base flood elevation requirements to protect from flooding, storm surge &amp; sea level rise.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Damage resulting from flooding can be extremely expensive. In the last 3 years, Manasquan has had two Federal declarations that resulted in an estimated \$400,000,000 in damages.</i>
Cost estimate	<i>200,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The cost of implementing this action will be far outweighed by the rebuilding costs if this action is not implemented and the Borough is struck with another flood or storm surge. Based upon recent data, the return on investment of elevating is 2 to 1.</i>
Technical	<i>Technically feasible, implementation difficult due to varied structure types &amp; ownership.</i>
Political	<i>There is community resistance to increased local property taxes</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact, as most neighborhoods have already undertaken home elevations of some kind</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>possibly homeowners in flood zone, owners/operators of critical facilities</i>
Other community objectives	<i>This action supports the objectives of community resiliency and these actions are eligible for credit under the Community Rating System and may lead to lower flood insurance premiums.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Hazard Mitigation Plan, NFIP/CRS Program</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding</i>
Time line	<i>10-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This action has been carried forward from last plan. Since the last plan update, the Borough has applied for 186,000,000 from the Post-Sandy Hazard Mitigation funds. \$100,000,000 has been allocated state-wide for home elevations, however money has yet to be allocated. Even if Manasquan were to receive 10% of the total allocation to NJ, this would only fund \$10,000,000 or 5% of the Borough's need. This is expected to take 10-years to complete.</i>

## Action Worksheet 15: Re-locate Structures

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 15</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, wave action, storm surge &amp; sea level rise</i>
Risk finding	<i>The Borough has residential, commercial and public structures and critical facilities and equipment located in high-hazard areas vulnerable to flooding, wave action, storm surge &amp; sea level rise</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Re-locate residential and non-residential structures &amp; critical facilities and equipment out of high-hazard areas vulnerable to flooding, wave action, storm surge &amp; sea level rise</i>
Action description	<i>An inventory of public and commercial buildings that are vulnerable to flooding, storm surge and sea level rise will be identified under Community Action Number 1 - Risk Assessment &amp; Mapping. This action item will include relocating of these structures based upon rank (most vulnerable) and importance (most critical). These structures and facilities and equipment will be relocated to low-hazard areas to protect from flooding, wave action, storm surge &amp; sea level rise. This may include compensating an owner for partial rights, such as easement or development rights, to prevent a property from being developed.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Damage resulting from flooding can be extremely expensive. In the last 3 years, Manasquan has had two Federal declarations that resulted in an estimated \$400,000,000 in damages.</i>
Cost estimate	<i>500,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is expected to be cost effective, with annual benefits far exceeding annual costs. The cost of implementing this action is very high, however, in the long run, money is saved through the elimination of repetitive losses.</i>
Technical	<i>Technically feasible, implementation difficult due to varied structure types &amp; ownership issues.</i>
Political	<i>There is community resistance to increased local property taxes and to retreating from coastal areas</i>
Legal	<i>There will be legal issues if property owners are unwilling to relocate</i>
Environmental	<i>There is a positive environmental impact for restoring previously developed areas to natural buffers</i>
Social	<i>There is a huge social impact in retreating from the coastal zone</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>none</i>
Other community objectives	<i>This action supports the objectives community resiliency and these actions are eligible for credit under the Community Rating System and may lead to lower flood insurance premiums.</i>
<b>Implementing the Action</b>	
Priority	<i>Medium</i>
Local planning mechanism	<i>Hazard mitigation plan, NFIP/CRS Program, Green Acres Fund, Blue Acres Program</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding</i>
Time line	<i>50-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>This action has been carried forward from last plan. Since the last plan update, the Borough has made no progress on this front. Limited funding has been made available through the blue-acres program, however, there has been little support for retreating from the coastal zone. Once high-hazard areas are accurately defined, we can begin to identify potential areas to restore to open space. This is expected to take at least 50-years to complete.</i>

## Action Worksheet 16: Protect Infrastructure

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 16</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, storm surge &amp; sea level rise</i>
Risk finding	<i>The Borough has roads and infrastructure located in high-hazard areas vulnerable to flooding, storm surge &amp; sea level rise</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Protect roads and infrastructure located in high-hazard areas vulnerable to flooding, storm surge &amp; sea level rise</i>
Action description	<i>An inventory of public access roads and infrastructure that are in high-hazard areas vulnerable to flood damage will be identified under Community Action Number 1 - Risk Assessment &amp; Mapping. Critical access roads in these areas will be elevated to protect from flooding and storm surge. Roadway drainage will be improved, one-way tide-flex type valves installed, and vulnerable shoulders will be stabilized using bioengineered bank stabilization techniques. Seawalls or other structures will be constructed to protect critical facilities located on the shoreline. Water and wastewater treatment facilities located in high-hazard areas will be flood-protected. This will include retrofitting structures to elevate them above forecasted sea level rise levels, retrofitting critical facilities to be 1 foot above the 500-year flood elevation (considering wave action) or the predicted sea level rise level, whichever is higher and replacing exterior building components with more hazard resistant materials.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Damage resulting from flooding can be extremely expensive. In the last 3 years, Manasquan has had two Federal declarations that resulted in an estimated \$400,000,000 in damages. Loss of access for emergency services to flooded or damaged roadways cuts off access to a year-round population of over 2,000 and seasonal population of over 20,000.</i>
Cost estimate	<i>10,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The cost of implementing this action will be outweighed by the loss of emergency services and the potential threat to public safety if critical access roads are flooded or damaged and emergency response personnel cannot access beach areas. This project also protects critical infrastructure from flood damages far outweighing the cost of implementation.</i>
Technical	<i>Technically feasible, easily implemented</i>
Political	<i>There is community resistance to increased local property taxes, however there is community support for flood protection</i>
Legal	<i>There are no legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>Emergency Response Agencies, MBIA, OEM, homeowners in affected areas</i>
Other community objectives	<i>This action supports the objectives community resiliency and emergency response</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Hazard Mitigation Plan</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding, Transportation funds</i>
Time line	<i>10-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

## Action Worksheet 17: Structural Flood Control

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 17</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, storm surge &amp; sea level rise</i>
Risk finding	<i>The Borough has roads and infrastructure located in high-hazard areas vulnerable to flooding, storm surge &amp; sea level rise</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Construct a seawall and flood gate to protect against flooding, storm surge &amp; sea level rise</i>
Action description	<i>This action item includes the construction of a steel seawall along the Atlantic ocean and a flood gate across the Manasquan Inlet. This project would protect all communities in the Manasquan River floodplain from coastal flooding, storm surge and sea level rise. The steel seawall would be covered in a man-made, vegetated dune and would be tied into high ground on the Sea Girt border to the north and a flood gate across Manasquan Inlet to the south. The same seawall would run the length of Point Pleasant Beach.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This project would eliminate all flood damages resulting from coastal storms, nor'easters, tropical storms and hurricanes for the communities of Manasquan, Brielle, Wall Township, Brick Township, Point Pleasant, and Point Pleasant Beach. This project will likely provide over 1 billion dollars of flood damage avoidance in the event of another Hurricane Sandy. The project would also provide damage reduction in all storm surge events, including 5, 10, and 20-year storm events. This project also prevents loss of life and the threat to public safety that these storms pose.</i>
Cost estimate	<i>150,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The cost of implementing this action, will be far outweighed by the elimination of flood damages, as well as eliminating the threat to life and property that coastal storms pose.. This project also protects critical infrastructure from flood damages far outweighing the cost of implementation.</i>
Technical	<i>Installing this flood gate would be both technically challenging and technically feasible</i>
Political	<i>There is community resistance to increased local property taxes, however there is community support for flood protection especially a large-scale project such as this.</i>
Legal	<i>There may be significant legal issues regarding easements and homeowners views being blocked by dunes</i>
Environmental	<i>There is significant environmental issues with installing a hardened structure in the coastal zone</i>
Social	<i>There is significant resistance among oceanfront homeowners that would have their views negatively impacted by a seawall/dune system</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required. This would have to be a joint project undertaken by multiple municipalities, and administered at the State and/or Federal level.</i>
Local champion	<i>Emergency Response Agencies, MBIA, OEM, homeowners in affected areas</i>
Other community objectives	<i>This action supports the objectives community resiliency and emergency response</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>none</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding, Federal USACE funds</i>
Time line	<i>50-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

## DI atEi WE AurHnna 18: dnaE 1ta SaAM aMhr 1EAO tf H Wti s r

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Manasquan Borough</i>
Community action number	<i>Manasquan Borough # 18</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Severe Winds</i>
Risk finding	<i>The Borough has structures, including critical facilities and equipment, vulnerable to high winds</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Retrofit existing structures, facilities &amp; equipment to make resistant to high wind loading</i>
Action description	<i>An inventory of public and commercial buildings that are vulnerable to high winds will be identified under Community Action Number 1 - Risk Assessment &amp; Mapping. This action item will include conducting retrofitting of these structures based upon rank (most vulnerable) and importance (most critical). Such mitigation actions may include, but are not limited to, installing hurricane shutters or other protective measures, retrofitting gable end walls to eliminate wall failures in high winds, replacing existing non-ductile infrastructure with ductile infrastructure to reduce their exposure to hazardous events, retrofitting buildings with load-path connectors to strengthen the structural frames, reinforcing garage doors, anchoring roof-mounted heating, ventilation, and air conditioning units, retrofitting the emergency operations center to FEMA 361 standards, upgrading of reused buildings that will house critical facilities, and otherwise retrofitting structures and equipment to make wind resistant. This will also include reviewing building codes and structural policies to ensure they are adequate to protect older structures from wind damage. This item will also include requiring or encouraging wind engineering measures and construction techniques that may include structural bracing, straps and clips, anchor bolts, laminated or impact-resistant glass, reinforced pedestrian and garage doors, window shutters, waterproof adhesive sealing strips, or interlocking roof shingles.</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Based upon current available data from FEMA, the return on investment of wind protection measures is 3 to 1. This would yield a benefit of \$6,000,000 saved.</i>
Cost estimate	<i>2,000,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The cost of implementing this action will be far outweighed by the rebuilding costs if this action is not implemented and the Borough is struck with an hurricane or other high wind event. Based upon current available data, the return on investment of installing wind protection is 3 to 1.</i>
Technical	<i>Technically feasible, difficult implementation. Wind vulnerabilities solved for long term.</i>
Political	<i>There is community resistance to increased local property taxes. There may be some resistance to increased building code regulations</i>
Legal	<i>There are no apparent legal issues</i>
Environmental	<i>There is no environmental impact</i>
Social	<i>There is no social impact</i>
Administrative capability	<i>Currently the Borough does not have the administrative capacity to implement this action and outside assistance and/or funding is required.</i>
Local champion	<i>Possibly chamber of commerce</i>
Other community objectives	<i>This action supports the objectives of emergency preparedness and community resiliency</i>
<b>Implementing the Action</b>	
Priority	<i>Low</i>
Local planning mechanism	<i>none</i>
Responsible party	<i>Office of Emergency Management</i>
Potential funding sources	<i>Community Resiliency Grants, HMGP funding</i>
Time line	<i>10-years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Township of Marlboro</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Extreme Temperatures; Extreme Wind; Hurricane &amp; Tropical Storm; Lightning; Nor'easter; Tornado; Winter Storm; Drought; Flood; Earthquake; Wildfire</i>
<b>Risk finding</b>	<i>Improve residents awareness of local hazards of all types; preparedness to respond to events of all types; resilience to return to normalcy after an event. The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Education and Outreach</i>
<b>Action type</b>	<i>Provide awareness and readiness information</i>
<b>Action description</b>	<i>Distribute timely awareness and readiness information regarding seasonal atmospheric hazards and personal preparedness and readiness guidelines.</i>
<b>Existing, future &amp;/or NA</b>	<i>Action protects existing and future stakeholders.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Educated citizenry can make accurate and intelligent choices regarding their own safety and well being and reduce the burden on emergency service personnel. Losses avoided are difficult to quantify, but are likely to be more than the project costs of \$15,000.</i>
<b>Cost estimate</b>	<i>\$15,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Potential community loss due to lack of public knowledge and readiness is extremely high. This is a low-cost action that is easily managed and fast to implement. This project is likely to be cost effective</i>
<b>Technical</b>	<i>Technically feasible.</i>
<b>Political</b>	<i>No apparent political issues</i>
<b>Legal</b>	<i>Action is legal and information has been provided in this way many times.</i>
<b>Environmental</b>	<i>No environmental impacts</i>
<b>Social</b>	<i>Provides information to all socio-economic groups.</i>
<b>Administrative capability</b>	<i>Administrative cost is low and requires minimal management.</i>
<b>Local champion</b>	<i>Police Department; Emergency Management</i>
<b>Other community objectives</b>	<i>Builds public trust and confidence in Township administration</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>N/A</i>
<b>Responsible party</b>	<i>Administration and Office of Emergency Management</i>
<b>Potential funding sources</b>	<i>Local budget and staffing</i>
<b>Time line</b>	<i>Commence within 3 months &amp; action will be ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Township of Marlboro</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Extreme Temperatures; Hgrricane &amp; Tropical Storm; Nor'easter; Winter Storm; Drougdt; Wilhfire</i>
<b>Risk finding</b>	<i>Tdere is a neeh for improving the timeliness and accuracy of information being provided to resident to allow them to ensure preparedness and allow them to make educated decisions regarding their own health and safety and property protection/mitigation measures</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Planning Mechanism</i>
<b>Action type</b>	<i>Public awareness and outreach</i>
<b>Action description</b>	<i>Use all forms of print and social media to provide advanced warning and notification of impending severe weather events and all incidents jeopardizing public safety. (including, but not limited to: reverse 9-1-1, "Twitter," and Facebook accounts to provide alerts and update information regarding hurricanes and severe weather events.)</i>
<b>Existing, future &amp;/or NA</b>	<i>Both</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Advanced warning will allow the residents to ensure their preparedness, harden and prepare their properties if needed, and/or relocate or self evacuate if needed. Improved preparedness will reduce the burden on first responders. Losses avoided are difficult to quantify, but are likely to be more than estimated costs of \$10,000.</i>
<b>Cost estimate</b>	<i>\$10,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Potential for loss due to lack of preparation is greater than the cost projected to provide this function.</i>
<b>Technical</b>	<i>Technically feasible</i>
<b>Political</b>	<i>No Political issues</i>
<b>Legal</b>	<i>No apparent legal issues</i>
<b>Environmental</b>	<i>No environmental impacts</i>
<b>Social</b>	<i>Actions implemented will reachout to allembers of the community</i>
<b>Administrative capability</b>	<i>Township staff can manage activities; outside resources may be developed to provide information</i>
<b>Local champion</b>	<i>Administration</i>
<b>Other community objectives</b>	<i>Builds public trust and confidence in the local administration.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans and procedures will be developed outlining means and methodes of providing information</i>
<b>Responsible party</b>	<i>Administration and Office of Emergency Management</i>
<b>Potential funding sources</b>	<i>Local Staff Time and operating budgets</i>
<b>Time line</b>	<i>Ongoing Project</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Township of Marlboro</i>
Community action number	3
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Hurricane &amp; Tropical Storm; Nor'easter; Winter Storm</i>
Risk finding	<i>Maintaining the operation of critical infrastructure during storm events is critical; however, some systems lack backup sources of power that would ensure their operability during a power outage (i.e., Tennent Road Water Treatment Plant and Pump Station)</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Hardening critical infrastructure</i>
Action description	<i>Installation of a stand-by generator at the Tennent Road Water Treatment Plant and Pump Station</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Will allow the Township to provide potable water to the stakeholders in the event of a power outage. Loss of power at this facility will result in the loss of all water service to the community. Potable water will need to be trucked in at a cost of \$30,000 per day. fire protection services will be severely hampered as well.</i>
Cost estimate	<i>\$500,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Critical facility provides for water treatment and supply of potable water and fire protection to the Township. Back-up power is essential to keep the facility in operation. This project is likely to be cost effective, with benefits being realized by the ability to provide uninterrupted fire protection service as well as a reliable supply of potable water, at an initial cost of \$500,000 for design and installation.</i>
Technical	<i>Technically feasible</i>
Political	<i>No political issues</i>
Legal	<i>No legal issues</i>
Environmental	<i>No environmental issues</i>
Social	<i>No social impacts</i>
Administrative capability	<i>Project will need to be professionally designed and installed by a contractor</i>
Local champion	<i>Public Works</i>
Other community objectives	<i>Will support overall capital improvement plan and maintain quality of life for the stakeholders.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Capital Improvement Plan</i>
Responsible party	<i>Engineering</i>
Potential funding sources	<i>Capital Funds; Grants; Loans</i>
Time line	<i>Urgent Need</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Township of Marlboro</i>
<b>Community action number</b>	4
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane &amp; Tropical Storm; Nor'easter; Winter Storm</i>
<b>Risk finding</b>	<i>Maintaining the operation of critical infrastructure during storm events is critical; however, some systems lack backup sources of power that would ensure their operability during a power outage (i.e., Water Utility wells 3 and 4 at the Harbor Road Water Treatment Plant</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Project</i>
<b>Action type</b>	<i>Hardening critical infrastructure</i>
<b>Action description</b>	<i>Installation of a stand-by generator for Water Utility wells 3 and 4 at the Harbor Road Water Treatment Plant</i>
<b>Existing, future &amp;/or NA</b>	<i>Both</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Will allow the Township to provide potable water to the stakeholders in the event of a power outage. Loss of both wells will cost \$9,114 per day to purchase water to replace that lost, if water is available from other sources.</i>
<b>Cost estimate</b>	<i>\$300,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Critical facility supplies 50% of the water to the Township for fire protection and residential use. Back-up power is essential to keep the facility in operation. Cost effectiveness will be realized through the ability to operate the wells during an emergency event, allowing the wells to be productive and not necessitating the purchase of potable water.</i>
<b>Technical</b>	<i>Technically feasible</i>
<b>Political</b>	<i>No political issues</i>
<b>Legal</b>	<i>No legal issues</i>
<b>Environmental</b>	<i>No environmental issues</i>
<b>Social</b>	<i>No social impacts</i>
<b>Administrative capability</b>	<i>Project will need to be professionally designed and installed by a contractor</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Township of Marlboro</i>
Community action number	5
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Hurricane &amp; Tropical Storm; Nor'easter; Winter Storm; Extreme Temperatures</i>
Risk finding	<i>Maintaining the operation of critical infrastructure during storm events is critical; however, some systems lack backup sources of power that would ensure their operability during a power outage (i.e., the Recreation Center (shelter))</i>
<b>Describing the Action</b>	
Action category	<i>Structural Project</i>
Action type	<i>Hardening critical infrastructure</i>
Action description	<i>Installation of a stand-by generator at the Recreation Center (shelter)</i>
Existing, future &/or NA	<i>Both</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Will allow the Township to provide shelter and care for stakeholders during catastrophic events. Potential losses are difficult to quantify monetarily as compared to stakeholder health and safety.</i>
Cost estimate	<i>\$300,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The potential cost of failing to provide adequate sheltering for our stakeholders outweighs the physical cost of completing the project. Provision of emergency power to the shelter is critical to the function of sheltering and caring for the residents of the Township.</i>
Technical	<i>Technically feasible</i>
Political	<i>No political issues</i>
Legal	<i>No legal issues</i>
Environmental	<i>No environmental issues</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Marlboro</i>
<b>Community action number</b>	<i>6</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Construction Official
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Matawan Borough</i>
<b>Community action number</b>	<i>Matawan #1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Dam failure / flood/ erosion / hurricanes / tropical storms / nor'easters</i>
<b>Risk finding</b>	<i>The Lake Lefferts Dam is a high hazard dams noted by the municipality as in need of replacement. Potential for extensive damage downstream from Lake Lefferts to include the NJ Transit North Jersey Coast Railroad bridge over Matawan Creek. Slope failure and erosion to numerous lakefront homes. Environmental and wildlife issues associated with the draining of the lake. Flooding occurs due to severe storms such as nor'easters and/or hurricanes. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Infrastructure Project</i>
<b>Action type</b>	<i>Dam replacement</i>
<b>Action description</b>	<i>Replace existing Lake Lefferts dam to include re-aligning of Ravine Dr. to comply with current DOT standards.</i>
<b>Existing, future &amp;/or NA</b>	<i>Project will protect both existing and future developments.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Potential avoided losses include significant damage to the RR bridge over Matawan Creek, damage to property of lakefront homes, damage to or destruction of the Matawan Creek Bridge on Aberdeen Rd. Economic and social losses to the community associated with the loss of the lake and lakefront activities such as canoeing and fishing. While difficult to quantify, losses avoided could be in the range of roughly \$10 million to \$ 15 million.</i>
<b>Cost estimate</b>	<i>\$8 million</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project will be cost effective compared to the potential for loss as indicated above, with benefits on the order of \$10million to \$15million and costs of only \$8 million.</i>
<b>Technical</b>	<i>This mitigation action is technically feasible. Any threat of dam failure and the associated losses will be solved.</i>
<b>Political</b>	<i>This project is being strongly advised by the Department of Environmental Protection. Some political issues may arise over ownership and responsibility of funding between the Borough of Matawan and the County of Monmouth.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>Project would require permitting by the DEP.</i>
<b>Social</b>	<i>Project does not negatively impact any particular group as currently proposed. Project could negatively impact motorist if the roadway is impassable for any considerable duration.</i>
<b>Administrative capability</b>	<i>Borough Administrator, Borough and County Engineers would be responsible for administration of project.</i>
<b>Local champion</b>	<i>NJ DEP, Monmouth County Department of Public Works &amp; Engineering, Matawan Borough Council</i>
<b>Other community objectives</b>	<i>Project would support the adjacent Lake Lefferts recreation facility (Green Acres park and recreation area).</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Borough &amp; County Engineering, Planning and Bond Ordinances</i>
<b>Responsible party</b>	<i>Borough and County Engineers</i>
<b>Potential funding sources</b>	<i>State, County and Federal Grants, Bonded funds</i>
<b>Time line</b>	<i>2-3 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward from the last version of the plan. Project is currently in design phase. Projected start of project is 2015 with a 15-18 month time frame to completion.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Matawan Borough</i>
<b>Community action number</b>	<i>Matawan #2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Dam failure / flood/ erosion/ hurricanes / tropical storms / nor'easters</i>
<b>Risk finding</b>	<i>The Lake Matawan Dam is a high hazard dams noted by the municipality as in need of replacement. Potential for extensive damage to the surrounding properties of Lake Matawan to include Main Street (County Route 516). Slope failure and erosion to numerous lakefront homes. Environmental and wildlife issues associated with the draining of the lake. Flooding occurs due to severe storms such as nor'easters and/or hurricanes. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Infrastructure Project</i>
<b>Action type</b>	<i>Dam replacement</i>
<b>Action description</b>	<i>Replace existing Lake Matawan dam to include replacement of the Main Street Lake Matawan/Matawan Creek Bridge and adjoining roadway.</i>
<b>Existing, future &amp;/or NA</b>	<i>Project will protect both existing and future developments, including the anticipated redevelopment of the NJ Transit Village area.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Potential avoided losses include significant damage to the bridge over Matawan Creek, damage to property of lakefront homes, damage to or destruction of the Lake matawan/Matawan Creek on Main Street. Economic losses to the community associated with the damage to or destruction of the bridge and roadway. While difficult to quantify, losses avoided could be in the range of roughly \$10 million to \$12 million.</i>
<b>Cost estimate</b>	<i>\$8 million</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project will be cost effective compared to the potential for loss as indicated above. This project will be cost effective compared to the potential for loss as indicated above, with benefits on the order of \$10 million to \$12 million and costs of only \$8 million.</i>
<b>Technical</b>	<i>This mitigation action is technically feasible. Any threat of dam failure and the associated losses will be solved.</i>
<b>Political</b>	<i>This project is being strongly advised by the Department of Environmental Protection. Some political issues may arise over ownership and responsibility of funding between the Borough of Matawan and the County of Monmouth.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>Project would require permitting by the DEP.</i>
<b>Social</b>	<i>Project does not negatively impact any particular group as currently proposed. Project could negatively impact motorists if the roadway is impassable for any considerable duration. Main Street is a direct thoroughfare to the Aberdeen-Matawan Train Station on NJ Transit's North Jersey Coast RR line.</i>
<b>Administrative capability</b>	<i>Borough Administrator, Borough and County Engineers would be responsible for administration of project.</i>
<b>Local champion</b>	<i>NJ DEP, Monmouth County Department of Public Works &amp; Engineering, Matawan Borough Council</i>
<b>Other community objectives</b>	<i>Project would support the near-by Aberdeen-Matawan Train Station (and the proposed redevelopment of the area) and the Main Street Business District.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Borough &amp; County Engineering, Planning and Bond Ordinances</i>
<b>Responsible party</b>	<i>Borough and County Engineers</i>
<b>Potential funding sources</b>	<i>State, County and Federal Grants, Bonded funds</i>
<b>Time line</b>	<i>4-5 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward from the last version of the plan. The Engineering Firm for this project is expected to be selected in the near future. RFP's for engineering have been issued.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Matawan Borough</i>
<b>Community action number</b>	<i>Matawan #3</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooded, inaccessible roadway (tidal flooding, storm surge, hurricanes, tropical storms, nor'easters)</i>
<b>Risk finding</b>	<i>Aberdeen Road - downstream from Lake Lefferts - is subject to recurrent flooding. Aberdeen Road becomes impassable due to tidal flooding at virtually every high tide creating a delay in emergency response for both Matawan and Aberdeen Emergency Services.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Infrastructure improvement project</i>
<b>Action type</b>	<i>Roadway Elevation</i>
<b>Action description</b>	<i>Re-engineering of the roadway to include elevation above the level of the adjacent Matawan Creek.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Elevation of this roadway would provide uninterrupted emergency response and would allow access to the northwestern quadrant of the Borough without utilizing alternate routes. This would also provide a much needed detour route during the construction of the Lake Lefferts Dam on Ravine Drive (Community Action Matawan #1).. Elevation of this roadway would eliminate insurance claims for damage to vehicles. It would further eliminate the need for emergency response to rescue stranded or disabled motorists. This project would also allow this roadway to serve as a much needed detour route for the Lake Lefferts dam replacement project rather than spending funds for a temporary roadway which will be demolished upon completion of the new dam.(Community Action number Matawan #1). Potential losses avoided by the project are estimated to be in the range of roughly \$6million to \$10million.</i>
<b>Cost estimate</b>	<i>\$5 million</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits in the range of \$6million to \$10million and costs of \$5million.</i>
<b>Technical</b>	<i>Technically feasible. Flooding of roadway solved for the longterm; Community's problem of interrupted transportation and emergency response solved. Adequate detour route for Ravine Dr. during Lake Lefferts dam project.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>Project would need County approval/contribution as Matawan Creek Bridge on Aberdeen Rd. is county owned and maintained. No other foreseen legal issues.</i>
<b>Environmental</b>	<i>Due to the proximity to Matawan Creek. DEP permits would be needed. No other environmental issues are foreseen.</i>
<b>Social</b>	<i>The proposed project will provide uninterrupted transportation at high tides for those residing in the northwestern portion of the Borough and those travelling to neighboring Aberdeen and Old Bridge Townships to access State Highway 35 and the Garden State Parkway.</i>
<b>Administrative capability</b>	<i>Administrative function will be handled by the Borough Administrator and Engineer</i>
<b>Local champion</b>	<i>Borough Department of Public Works, Emergency Services, OEM</i>
<b>Other community objectives</b>	<i>This project would further the Borough's proposed NJ Transit Village Redevelopment plan as Aberdeen Rd./High St.intersect with Main Street in the proposed redevelopment zone.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium priority as compared to the previous projects</i>
<b>Local planning mechanism</b>	<i>State DOT, Local Ordinances governing traffic and roadway construction.</i>
<b>Responsible party</b>	<i>Matawan Borough &amp; Monmouth County Engineers in conjunction with DPW and OEM</i>
<b>Potential funding sources</b>	<i>County, State or federal grant</i>
<b>Time line</b>	<i>As soon as funding is available, granted and received.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward from the last version of the plan. Previously applied for HMGP funding.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Matawan Borough</i>
<b>Community action number</b>	<i>Matawan #4</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, surge, extreme wind, hurricane and tropical storm, nor'easter, extreme temperatures, lightning</i>
<b>Risk finding</b>	<i>A need has been identified for auxiliary power to the Matawan Municipal Community Center/Borough Hall Complex as a result of Hurricane Sandy. Loss of power, continuity of government, community access to government and municipal complex during power loss.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure</i>
<b>Action type</b>	<i>Protect Critical Facilities</i>
<b>Action description</b>	<i>Provide auxiliary power to the Matawan Municipal Community Center-Borough Hall (201 Broad Street) to allow for continuity of government operations and public access to the Municipal Complex during a sustained loss of power. Having auxiliary power would also facilitate the use of the complex as a temporary shelter or warming/charging station during a declared state of emergency.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future assesty relying on power</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Government operations will no longer shut down upon a loss of power. Residents will have a location to go to (reception center) before transportation to a larger county shelter is completed. Residents will be afforded a warming/cooling and charging station during a large scale power outage. Losses avoided are estimated to be between \$500,000 and \$1 million per year.</i>
<b>Cost estimate</b>	<i>\$150,000 total (or, based on a useful life of 20 years for the generator, the annual costs would be about \$5,000 per year)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Upon completion of this project, government operations woul remain intact during a power loss allowing residents access to essential government functions. This will also provide residents with the ability to vote (during an election), pay their taxes or utility bill or seek other muncpal services. Benefits are estimated to be between \$500,000 to 1 million per year and costs are estimated to be \$5,000.00 per year.</i>
<b>Technical</b>	<i>Technically feasible. Power loss at the Matawan Muncpal Communtiy Center (Borough Hall) would be solved upon completion of this project.</i>
<b>Political</b>	<i>This project is supported by the Matawan Borough Mayor and Council and both the Monmouth County and Matawan Offices of Emergency Management.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No apparent environmental issues.</i>
<b>Social</b>	<i>Project would not negatively impact any particular social group but would positively impact all residents of the Borough.</i>
<b>Administrative capability</b>	<i>The Borough Administrator, Borough Engineer and OEM Coordinator would administer this project collectively.</i>
<b>Local champion</b>	<i>Monmouth County and Matawan Offices of Emergency Management</i>
<b>Other community objectives</b>	<i>Provide a higher level of uninterrupted government services to the residents of Matawan during a large scale, long term power outage.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Ordinances and Codes governing electrical improvements</i>
<b>Responsible party</b>	<i>Borough Engineer, Office of Emergency Management</i>
<b>Potential funding sources</b>	<i>Bonded funding, State, County, federal grant</i>
<b>Time line</b>	<i>As soon as funding is available, project would be put out to bid.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This project is a new action from the last version of the Plan. Funding was applied for under HMGP after Super Storm Sandy.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Middletown Township</i>
<b>Community action number</b>	<i>1 - Middletown Elevations</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Flooding, storm surge, wave action, hurricanes and tropical storms, nor'easters
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. A substantial portion of Middletown lies within mapped storm surge hazard areas, including locations well inland of the Sandy Hook Bay shore, as well as areas along the Navesink River and its tributaries. During Hurricane Sandy, Middletown's Sandy Hook Bay communities of Port Monmouth, Belford, and Leonardo experienced storm surge flooding over a very large area generally north of Route 36 (though tidal flooding along Pews Creek and Compton Creek did extend south of Route 36). Communities in these areas were severely impacted. Along the Navesink and its tributaries, flooding tended to be more constrained to undeveloped floodplains and marina areas; however, along the meandering Swimming River, overbank flooding did affect some homes and businesses. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevate 248 structures determined to be substantially damaged
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are estimated to be \$83 million based on information gathered from Sandy. FEMA BCA Tool, v 4.8 shows an annual benefit of \$967,903 per year.
<b>Cost estimate</b>	The cost of this project is estimated to be \$13,500,000. This is based upon an estimated cost of \$90,000 per elevation project.
<b>Cost effectiveness (i.e., benefit/cost)</b>	Benefit Cost Analysis using FEMA BCA Tool, v 4.8: The result for the while project is a positive benefit-cost ration of 2.77.
<b>Technical</b>	Elevation is technically feasible
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated as a result of elevating the homes
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation project
<b>Local champion</b>	Affected homeowners and businesses
<b>Other community objectives</b>	Elevating homes in flood hazard areas will represent a benefit to the community as a whole by reducing the emergency response, cleanup, and social costs inflicted by future flood events.
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Funding. LOIs for HMPG programs have been submitted. The township has not received funding to date. Elevation continues to be a mitigation strategy.
<b>Responsible party</b>	State of New Jersey, Monmouth County, Township of Middletown
<b>Potential funding sources</b>	FEMA hazard mitigation grant fundings, Disaster Recovery Funding
<b>Time line</b>	5 years. Residents are applying direct to state for Disaster Recover Funding
<b>Reporting on Progress</b>	
<b>Action progress status</b>	Carried Over

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Middletown Township</i>
<b>Community action number</b>	<i>2 - Middletown Stream and Ditch Desilting, Dredging and Desnagging</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Flooding, hurricane and tropical storm, nor'easter, & fire hazards
<b>Risk finding</b>	Streams and ditches in flood hazard areas do not convey storm flows as efficiently as they should; this results in flooding in several areas. In addition to a flood hazard, accumulated dead vegetation poses a fire hazard. Invasive plant species are becoming prominent in wetland areas, thus decreasing storage capacities.
<b>Describing the Action</b>	
<b>Action category</b>	Natural systems protection
<b>Action type</b>	Protect and restore natural flood mitigation features
<b>Action description</b>	<p>Management of riparian buffers along rivers and streams and channel desnagging to preserve the function of natural drainage channels and floodplains. Wetlands maintenance &amp; removal of invasive plant species. Desilting and dredging of streams and ditches.</p> <p>Desilt and Desnag streams                      Waackaack Creek/ L.F. 12,500  Pew's Creek/ L.F. 10,500  Compton's Creek/L.F. 39,300  Ware Creek/L.F. 10,800  Wagner's Creek/L.F. 12,000  Claypit Creek/L.F. 14,400  Creek L.F. 19,200  of Stream Cleaning: 118,700 Linear Feet  removal rate 0.75 cu. vd. per linear foot of stream = 118,700 x 0.75 c.v./L.F. = 89,025 cu</p> <p style="text-align: right;">McClees Total Length Assumed silt</p>
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are estimated to be \$20 million based on information gathered after Superstorm Sandy
<b>Cost estimate</b>	The cost of this project is estimated to be \$3,294,900.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This projects is likely to be cost effective, with benefits of \$20 million and costs of \$3.2 million.
<b>Technical</b>	Excavation is technically feasible
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	This proposal is consistent FEMA program eligibility guidance, and local mitigation plans.
<b>Environmental</b>	Permit required for dredging.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an excavation project in conjunction with Monmouth County
<b>Local champion</b>	Residents in affected areas in Middletown support the township in moving forward
<b>Other community objectives</b>	To prevent blockages in our waterways. Mosquito control.
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	In the post Sandy environment more than stream and ditch maintenance. We need a high priority with other agencies including County Public Works to desilt & dredge streams & ditches.
<b>Responsible party</b>	Middletown Township (in conjunction with Monmouth County)
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP,PDM)
<b>Time line</b>	Management of riparian buffers along rivers and streams and channel desnagging, wetlands maintenance & removal of invasive plant species is an ongoing activity The larger desiltation portion of the project is contingent upon securing funding
<b>Reporting on Progress</b>	
<b>Action progress status</b>	Carried Over

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Middletown Township</i>
<b>Community action number</b>	<i>3-Middletown Slide Gate Port Monmouth</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Flooding, storm surge, hurricanes, tropical storms, & nor'easters
<b>Risk finding</b>	During extreme lunar tides, the flood protection provided by the newly constructed Wilson Ave slide gate is compromised and there is a tidal flow of water from Compton's Creek across Main Street into the residential properties between Main St. and Brainard Ave. The drainage system is then quickly inundated and the streets become flooded, negating the intended positive effects of the Wilson Ave flood gate.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Upgrade of stormwater management and flood control structures
<b>Action description</b>	Construct and install an additional automatic tide-activated electrically-actuated slide gate device at the Main Street drainage outfall to Compton's Creek.
<b>Existing, future &amp;/or NA</b>	Existing and future development
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project are estimated to be \$6.7 million based on information gathered after Superstorm Sandy.
<b>Cost estimate</b>	The cost of this project is estimated to be \$170,000.00
<b>Cost effectiveness (i.e., benefit/cost)</b>	This projects is likely to be cost effective, with benefits of \$6.7 million and costs of \$170,000.
<b>Technical</b>	Construction is technically feasible
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	No apparent legal issues.
<b>Environmental</b>	No environmental impacts are anticipated as a result of construction and installation
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage a construction and installation project
<b>Local champion</b>	affected homeowners, and businesses support the construction and installation of the gate
<b>Other community objectives</b>	We are continuing to review shoreline protection in the post Sandy environment regarding maintenance and upgrades.
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	We continue to monitor and maintain flood gates during normal tidal conditions.
<b>Responsible party</b>	Mayor and Township Committee
<b>Potential funding sources</b>	FEMA hazard mitigation grant funds
<b>Time line</b>	5 years
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Middletown Township</i>
<b>Community action number</b>	<i>4- Stormwater Pumps</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Flooding, hurricanes and tropical storms, nor'easters
<b>Risk finding</b>	Stormwater management infrastructure does not convey storm flows as efficiently as it should (including areas such as the Port Monmouth, Leonardo, and Belford sections)
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Upgrade of stormwater management structures and facilities
<b>Action description</b>	-Installing temporary/portable pumps in certain areas will allow stormwater from major nuisance flooding events in the Port Monmouth subject area and other areas within the Township where flooding is common such as the Leonardo and Belford sections. The goal is to pump stormwater from the system, discharging into Pew's Creek. Once the water level in the system reaches a certain elevation below existing street elevations, pumps would be activated and system water would be discharged into the creek. Slide gates would be closed during the pumping to prevent stormwater from re-entering the drainage systems.
<b>Existing, future &amp;/or NA</b>	Existing and future
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided by this project can be as high as \$10 million based on damages in these areas after Superstorm Sandy
<b>Cost estimate</b>	The cost of this project is estimated to be \$110,000
<b>Cost effectiveness (i.e., benefit/cost)</b>	This projects is likely to be cost effective, with benefits of \$10 million and costs of \$110,000.
<b>Technical</b>	The project is technically feasible with existing staff and vehicles capable of moving the pumps. The goal is to pump stormwater from the system, discharging into Pew's Creek. Once the water level in the system reaches a certain elevation below existing street elevations, pumps would be activated and system water would be discharged into the creek. Slide gates would be closed during the pumping to prevent stormwater from re-entering the drainage systems.
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	No apparent legal issues.
<b>Environmental</b>	No environmental impacts are anticipated as a result of temporary usage and installation
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage the 2 portable pumps
<b>Local champion</b>	affected homeowners, and businesses
<b>Other community objectives</b>	Prototecting lives and property from
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	To eliminate tidal and nuisance flooding
<b>Responsible party</b>	Mayor and Township Committee
<b>Potential funding sources</b>	FEMA HMPG, Township, County of Monmouth, State of New Jersey
<b>Time line</b>	5 years
<b>Reporting on Progress</b>	
<b>Action progress status</b>	Carried forward

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Middletown Township</i>
<b>Community action number</b>	<i>5-Generator for Fire Companies &amp; First Aid Squads</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	All
<b>Risk finding</b>	Our Fire Companies & First Aid Squads have identified the need to install standby generators at their buildings to remain operational during emergencies.
<b>Describing the Action</b>	
<b>Action category</b>	Protect Structure and Infrastructure Projects
<b>Action type</b>	Protect critical facilities
<b>Action description</b>	Install generators for fire companies & first aid squad buildings. Reduce or eliminate loss of service at 3 critical facilities. Installation of standby generators will improve reponse time to service calls during emergencies and improve safety conditions for the responders utilizing the buildings. (For example, crucial time was often lost while responders were working in the dark manually opening bay doors.)
<b>Existing, future &amp;/or NA</b>	NA
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Reduce or eliminate loss or reduction of service at critical facilities. Potential losses include property and life. By maintaining continuity of operations at critical facilities during power failures, public health and safety benefits will be recognized. While these benefits are hard to quantify, we feel that if an exact dollar amount could be assigned, it would certainly be at least equal to the project's annual cost of \$2,500.
<b>Cost estimate</b>	<b>First cost = \$800,000. Useful life = # 15 years. Annual cost = \$2,500.</b>
<b>Cost effectiveness (i.e., benefit/cost)</b>	The benefit of this project is to provide consistent emergency services to homeowners and businesses despite loss of power and other emergencies.
<b>Technical</b>	Technically feasible
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	No legal issues anticipated
<b>Environmental</b>	No environmental impacts are anticipated
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage this project
<b>Local champion</b>	affected homeowners and businesses
<b>Other community objectives</b>	Fire Stations & First Aid Squads that remain fully operational during emergencies can also be of greater assistance to the community by serving as short-term shelters, warming and charging stations, and points of distribution for emergency supplies.
<b>Implementing the Action</b>	
<b>Priority</b>	Medium
<b>Local planning mechanism</b>	The project is designed to provide the labor and materials necessary for the upgrade of the delivery of emergency power to the facility through the purchase and installation of an emergency generator unit.
<b>Responsible party</b>	HMPG Energy Allocation - no match required.
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding
<b>Time line</b>	5 years
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New

<b>Action Worksheet Relocation</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-Jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Township of Middletown</i>
<b>Community action number</b>	<i>6 - Relcating Fire Companies in Flood Plain</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Flooding, storm surge, wave action, hurricanes and tropical storms, nor'easters
<b>Risk finding</b>	Critical facilities located in the communiu are prone to flooding, with their main floor elevations below current BFEs. This includes two fire houses A substantial portion of Middletown lies within mapped storm surge hazard areas, including locations well inland of the Sandy Hook Bay shore, as well as areas along the Navesink River and its tributaries. During Hurricane Sandy, Middletown's Sandy Hook Bay communities of Port Monmouth, Belford, and Leonardo experienced storm surge flooding over a very large area generally north of Route 36 (though tidal flooding along Pews Creek and Compton Creek did extend south of Route 36). Communities in these areas were severely impacted. Along the Navesink and its tributaries, flooding tended to be more constrained to undeveloped floodplains and marina areas; however, along the meandering Swimming River, overbank flooding did affect some homes and businesses. Sea level rise and climate change will contribute to more frequent and
<b>Describing the Action</b>	
<b>Action category</b>	Structure/infrastructure projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Relocate Critical Facilities - Fire Companies to locations out of floodplain
<b>Existing, future &amp;/or NA</b>	Addresses existing structures
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Fire companies's costs to repair flooded properties would be reduced if not eliminated. Damages from Superstorm Sandy is estimated to be 90,000 per Fire Company
<b>Cost estimate</b>	To be determined. Cost would include purchase land outside the flood plan that is still within the reponse area and construction of a new building
<b>Cost effectiveness (i.e., benefit/cost)</b>	Fire houses would be able to operate during flood events, which will improve response time to service calls.
<b>Technical</b>	Technically feasible. Suitable land would be to be acquired.
<b>Political</b>	Fire Company membership and community could be oppose relocation of Fire House. Reduction of the total number of fire houses within the township would be considered further. Several stations in this area are fairly close to each other. Adjusting response area of remaining 9 firehouses would be considered. Impact on township insurability to be considered.
<b>Legal</b>	No apparent legal issues.
<b>Environmental</b>	No appraent environmental issues
<b>Social</b>	No appraent affect on any social group
<b>Administrative capability</b>	It is unlikely the Fire Companies have sufficient in-house administrative capabilities. Assistance from contracted services.
<b>Local champion</b>	Possibly the Fire Department
<b>Other community objectives</b>	Fire stations that remain fully functional can also be of greater assistance to the community by serving as short-term shelters, warming and charging stations and points of distribution for emergency supplies
<b>Implementing the Action</b>	
<b>Priority</b>	Low
<b>Local planning mechanism</b>	Emergency Planning
<b>Responsible party</b>	Each Fire Company
<b>Potential funding sources</b>	HMGP, RFC, SRL and FMA. For 25% local match, in-kind services.
<b>Time line</b>	5 years

<b>Action progress status</b>	New action proposed

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Township of Millstone</i>
<b>Community action number</b>	<i>Township of Millstone - Action No. 1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hydrologic Hazards - Flood</i>
<b>Risk finding</b>	<i>Streams and ditches, and stormwater management infrastructure, do not convey stormwater runoff as efficiently as they should; this results in flooding in several areas.</i>
<b>Evaluating the Action</b>	
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Drainage Improvements</i>
<b>Action description</b>	<i>The Township improves their stormwater system every year with their yearly roadway program. Develop mitigation steps to reduce damage and losses due to flooding through control of stormwater runoff and more efficient drainage and discharge to five major streams. Provides larger piping capacity and reduces sediment/ debris within watershed providing better overall volume/ flow throughout the stream</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future development</i>
<b>Losses avoided (i.e., benefits)</b>	<i>Annual flood losses in Millstone are typically on the order of \$100,000 to \$250,000. We estimate the proposed project could save about \$250,000 per year in flood losses.</i>
<b>Cost estimate</b>	<i>\$80,000 per year for annual road program</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Increasing piping will help eliminate stormwater flooding and debris/sediment within streams allowing proper flow of stormwater runoff. We expect that this will be cost effective because losses avoided are estimated to be roughly \$250,000 while the costs are less (\$80,000 per year)</i>
<b>Technical</b>	<i>Technically feasible. Will help remove stormwater runoff more effectively and Eco grates will eliminate debris from enter into the watershed.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve flood control and debris within watershed.</i>
<b>Social</b>	<i>Township of Millstone residents.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer (After technical assistance from the State)</i>
<b>Local champion</b>	<i>Residents of Millstone, Township Environmental Commission</i>
<b>Other community objectives</b>	<i>Municipal Stormwater Management Regulation Program</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Municipal Stormwater Management Regulation Program</i>
<b>Responsible party</b>	<i>Township - Engineer</i>
<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
<b>Time line</b>	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing action from 2009 Plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Township of Millstone</i>
<b>Community action number</b>	<i>Township of Millstone - Action No. 2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Natural Hazards - Wildfire and Extreme Wind (periods of high wind and during storm events such as hurricanes, tropical storms, thunderstorms, and nor'easters)</i>
<b>Risk findings</b>	<i>Much of Millstone Township is located in mapped moderate to extreme wildfire risk areas. Dead and hazardous trees exist at various locations throughout the town presenting fuel sources for wildfire. In addition to the inherent risks associated with dead and hazardous trees in moderate and extreme wildfire risk areas, dead and hazardous trees are more likely to fall as a result of wind during various types of storms. Downed trees block roadways and take down powerlines as they fall. Blocked roadways hamper transportation of all types; most importantly, emergency services. Power outages hamper communications (particularly emergency services type); and, because the Township still operates on private wells and septic systems, it is totally dependent on electric power for running water and other basic toileting and bathing needs. Finding workable solutions to these problems continue to be Millstone's biggest challenges.</i>
<b>Action category</b>	<i>Natural Systems Protection</i>
<b>Action type</b>	<i>Fuel management (right-of-way clearing)</i>
<b>Action description</b>	<i>Removal of dead and hazardous trees along Township roads</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future development</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Removes dead trees from right-of-way, prevents fires from jumping roads and into adjacent subdivisions. From 2010 census average home value was \$549,700. Also reduces the likelihood of power outages from downed trees falling on powerlines. Average annual losses estimated in excess of \$5,000; plus unquantifiable life safety benefits associated with maintaining emergency services communications and transportation.</i>
<b>Cost estimate</b>	<i>\$5,000 per year for annual removal program</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Likely to be cost effective. Benefits estimated in excess of \$5,000 plus unquantifiable life safety benefits associated with maintaining emergency services communications and transportation. Costs estimated at only about \$5,000 per year.</i>
<b>Technical</b>	<i>Technically feasible. Will help remove dead trees from the roadway, additionally providing a safe roadway access for emergency vehicles.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve right-of-way access without any environmental impact.</i>
<b>Social</b>	<i>Township of Millstone residents.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer (After technical assistance from the State)</i>
<b>Local champion</b>	<i>Residents of Millstone, Millstone Shade Tree &amp; Fire Commissions</i>
<b>Other community objectives</b>	<i>Shade Tree Commission safety program</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Shade Tree Commission safety program</i>
<b>Responsible party</b>	<i>Township - Engineer</i>
<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
<b>Time line</b>	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Ongoing action from 2009 Plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Monmouth Beach</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>The elevation of the existing retaining wall at Shorelands Park is not high enough, and when it is overtopped, residential structures incur significant damage, and flooding at the park results in erosion, litter and debris, and changes to the park's topography. Monmouth Beach is located on a narrow strip of land just south of Sea Bright. All of Monmouth Beach is in an area mapped as potentially susceptible to storm surge. Most of Monmouth Beach was inundated during Hurricane Sandy; a great deal of this was back bay flooding which this retaining wall protects.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Elevate existing sunken retaining wall</i>
<b>Action description</b>	<i>The existing retaining wall will be elevated to a height of fifteen (15) feet to protect the park and its existing amenities from flood related damage</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed elevation of the retaining wall will mitigate damages associated with storm surge overtopping the existing wall and destroying homes. It will also protect existing public infrastructure, mitigate flooding at the park, reduce changes to the park's topography related to erosion and reduce litter and debris left by tidal flooding and storm surges. Losses avoided could range in the hundreds of millions of dollars</i>
<b>Cost estimate</b>	<i>\$150,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is expected to be cost effective, with potential benefits in the hundreds of millions of dollars and cost of only \$150,000.</i>
<b>Technical</b>	<i>This mitigation project is technically feasible</i>
<b>Political</b>	<i>This project was advised by commissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability to implement this action as well as maintain it. Borough would have to bid the project and construction</i>
<b>Local champion</b>	<i>Commissioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
<b>Responsible party</b>	<i>Borough Administrator</i>

<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>'Monmouth Beach is located on a narrow strip of land just south of Sea Bright. All of Monmouth Beach is in an areas mapped as potentially susceptible to storm surge. Most of Monmouth Beach was inundated during Hurricane Sandy; a great deal of this was back bay flooding. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Structure Elevation</i>
Action description	<i>Elevating of six municipal structures)Police building, Borough Hall, Cultural Center, Library, First Aid, and Fire House) to new FEMA FIRh maps</i>
Existing, future &/or NA	<i>Protecting existing structures</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed mitigation will result in reduced future storm damages to municipal structures. These municipal structures are crucial to the protection of the health and safety of the residents. Losses avoided could range in the hundreds of thousands or more every year.</i>
Cost estimate	<i>\$1,500,000 )\$250,000 per structure)</i>
Cost effectiveness (i.e., benefit/cost)	<i>Tdis project is likely to be cost effective, with benefits of elevating estimated to be in excess of project costs.</i>
Technical	<i>This mitigation project is technically feasible</i>
Political	<i>This project was advised by comissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>Municipality workers may need to relocate while the structural elevation is implemented</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
Local champion	<i>Commisioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>Higd</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents, additionally current code requires substantially damaged to elevate home</i>
Responsible party	<i>Homeowners and/or Borough Administrator</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Dependent upon municipality securing funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Monmouth Beach</i>
<b>Community action number</b>	5
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>The massive storm surges from Hurricane Sandy carried water over the existing Sea Wall and caused severe flooding and significant damages to both private residences and commercial business throughout the Borough. Monmouth Beach is located on a narrow strip of land just south of Sea Bright. All of Monmouth Beach is in an area mapped as potentially susceptible to storm surge. Most of Monmouth Beach was inundated during Hurricane Sandy; a great deal of this was back bay flooding.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Raising and Re-Grouting of Seawall</i>
<b>Action description</b>	<i>The Borough is proposing raising the existing Sea Wall three (3) feet and carrying out re-grouting where necessary</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided could range in the magnitude of millions to tens of millions of dollars per year</i>
<b>Cost estimate</b>	<i>\$2,625,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be well in excess of project costs.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by commissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>Environmental concerns such as disrupting the natural shoreline processes will be considered in the design and all federal, state, and local regulations will be followed</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability to implement this action as well as maintain it. Borough would have to bid the project and construction</i>
<b>Local champion</b>	<i>Commissioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>

<b>Action progress status</b>	<i>New action added since the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Neptune City</i>
<b>Community action number</b>	<i>Borough of Neptune City - Action No. 1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, storm surge, hurricane &amp; tropical storm, nor'easter</i>
<b>Risk finding</b>	<i>Piped streams and storm water management infrastructure, do not convey stormwater runoff as efficiently as they should; this results in flooding in several areas. Most of the Borough is in areas mapped as potentially susceptible to storm surge. Thankfully, during Hurricane Sandy, the inundation area was limited fairly close to the Shark River. Some areas inundated during Sandy included: East End Ave., Windsor Ct., Route 35, and Steiner Ave. between Route 35 and 3rd Ave. Drainage system does not efficiently convey stormwater runoff; this results in flooding in several areas. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.</i>
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Drainage Improvements</i>
<b>Action description</b>	<i>The Borough improves their stormwater system every year with their yearly roadway program. Develop mitigation steps to reduce damage and losses due to flooding through control of stormwater runoff and more efficient drainage and discharge to Shark River. Provides larger piping capacity and reduces sediment/ debris within watershed providing better overall volume/ flow throughout the system. The Borough has identified the following key areas; Evergreen, East End Ave, Boston Rd, Rt35/3rd Ave and Windsor Ct.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future development</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Annual flood losses in Neptune City are typically on the order of \$100,000 to \$250,000. We estimate the proposed project could save about \$250,000 per year in flood losses.</i>
<b>Cost estimate</b>	<i>\$80,000 per year for annually road program per each location</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Increasing piping will help eliminate stormwater flooding and debris/sediment within system allowing proper flow of stormwater runoff. We expect that this will be cost effective because losses avoided are estimated to be roughly \$250,000 per year while the costs are less (\$80,000 per year)</i>
<b>Technical</b>	<i>Technically feasible. Will help remove stormwater runoff more effectively and Eco grates will eliminate debris from enter into the watershed.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve flood control and debris within watershed.</i>
<b>Social</b>	<i>Borough of Neptune City residents.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer (After technical assistance from the State)</i>
<b>Local champion</b>	<i>Residents of Neptune City, Shark River Environmental Commission</i>
<b>Other community objectives</b>	<i>Municipal Stormwater Management Regulation Program</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Municipal Stormwater Management Regulation Program</i>
<b>Responsible party</b>	<i>Borough - Engineer</i>
<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 25% local match, in-kind services</i>
<b>Time line</b>	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Neptune City</i>
<b>Community action number</b>	<i>Borough of Neptune City - Action No. 2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, storm surge, hurricane &amp; tropical storm, nor'easter</i>
<b>Risk finding</b>	<i>Power outages have been frequent occurrences in the Borough. During severe storms, this impacts public buildings and disrupts local government operations and does not allow the Borough to shelter its emergency personnel. During storm events it is critical to maintain emergency services throughout the Borough. To maintain these services emergency power is needed until primary power source is restored.</i>
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Emergency Generators</i>
<b>Action description</b>	<i>To maintain police, fire and medical service throughout the municipality, the Borough seeks to provide temporary power for Borough Hall, the Fire Station, and the School. The Office of Emergency Management and a Central Command is within Borough Hall. Likewise, the Fire House is utilized by the EMS employees, where as the school is utilized as a evacuation center for residents in need of safety.</i>
<b>Existing, future &amp;/or NA</b>	<i>n/a</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Loss of critical services and possible potential loss of life if services can not function properly to aid residents. Providing temporary power to critical services will avoid potential loss of life to those residents in need. Losses avoided over the life of each generator are unquantifiable, but are estimated to be well in excess of total project costs.</i>
<b>Cost estimate</b>	<i>\$253,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits well in excess of project costs.</i>
<b>Technical</b>	<i>Technically feasible. Will provide critical power until primary power is restored.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects.</i>
<b>Social</b>	<i>Borough of Neptune City residents.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer (After technical assistance from the State)</i>

<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Neptune City</i>
Community action number	<i>Borough of Neptune City - Action No. 3</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, storm surge, hurricane &amp; tropical storm, nor'easter</i>
Risk finding	<i>During storm events it is critical to maintain sanitary services throughout the Borough. The pump station,s continuous operation during storm events is paramount to the communities, health and welfare. The ability to provide continuous sanitation service during a storm event is critical to maintaining the communities, health and limiting the potential viral ougbreaks associated with poor sanitation conditions.</i>
Action category	<i>Structure/ Infrastructure</i>
Action type	<i>storm surge mitigation/flood proofing</i>
Action description	<i>The conditions affecting the Sanitary Pump Station can be described as extreme wind, flooding, and storm surge. These conditions are associated with conditions that occur during a hurricane storm event along a coast. Non-sanitary conditions pose a critical health hazerd. While no one has been killed or become deathly ill from the sanitary pump station being offline, the fact remains that non-sanitary conditions pose a direct health concern for the immediate municipality and surrounding hospitals/ residents within the adjoining area. The Borough proposes to raise the sewer pumps within the building and to water proof the building to mitigate any future damage.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Loss of critical services and possible potential loss of life if services can not function propoerly to aid residents.Providing flooding proofing and elavation of equipment is critical to maintaining essential services. Losses avoided are unquantifiable, but are anticipated to be well in excess of total project costs.</i>
Cost estimate	<i>\$47,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with unquantifiable benefits expected to be well in excess of project costs of \$47,000.</i>
Technical	<i>Technically feasbile. Will provide critical services during storm events</i>
Political	<i>No apparent political issues.</i>
Legal	<i>No apparent legal issues.</i>
Environmental	<i>No adverse environmental effects.</i>
Social	<i>Borough of Neptune City residents.</i>
Administrative capability	<i>Need at least 3 people to administer (After technical assistance from the State(</i>
Local champion	<i>Residents of Neptune City</i>

<b>Reporting on Progress</b>	
Action progress status	<i>New action.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Neptune City</i>
Community action number	<i>Borough of Neptune City - Action No. 2</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, storm surge, hurricane &amp; tropical storm, nor'easter</i>
Risk finding	<i>During storm events it is critical to maintain emergency equipment throughout the Borough. The OEM operation during storm events is paramount to the communities' health and welfare. The ability to provide emergency services during a storm event is critical to maintaining the communities' health and safety.</i>
Action category	<i>Structure/ Infrastructure</i>
Action type	<i>Building Structure for OEM Equipment</i>
Action description	<i>To maintain police, fire and medical EMS services throughout the municipality, the Borough seeks to provide a centralizu building "AKA Safe House" for critical OEM equipment. Currently this equipment is stored outside and subject to the daily elements which damages the effectiveness equipment in emergency events.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Loss of critical services and possible potential loss of life if services can not function propoerly to aid residents. Providing OEM Equipment building is essential for equipment maintenance and keep a 'Steady State of Readiness'. Losses avoided are unquantifiable but are expected to be in excess of annual project costs.</i>
Cost estimate	<i>\$200,000 (based on a useful life of 50 years for the buidling, this is equal to \$18,000 per year of annual costs).</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective with unquantifiable annual benefits expected to be in excess of \$18,000 per year of costs.</i>
Technical	<i>Technically feasbile. Will provide centralizu staging area for critical services during storm events</i>
Political	<i>No apparent political issues.</i>
Legal	<i>No apparent legal issues.</i>
Environmental	<i>No adverse environmental effects.</i>
Social	<i>Borough of Neptune City residents.</i>
Administrative capability	<i>Need at least 3 people to administer (After technical assistance from the State)</i>
Local champion	<i>Residents of Neptune City</i>
Other community objectives	<i>Will provide services in accordance with the Office of Emergency Management duties.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>

<b>Reporting on Progress</b>	
Action progress status	<i>New action.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Neptune City</i>
<b>Community action number</b>	<i>Borough of Neptune City - Action No. 5</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, storm surge, hurricane &amp; tropical storm, nor'easter</i>
<b>Risk finding</b>	<i>During storm events it is critical to provide showers and temporary sleeping facilities for emergency personnel and evacuated residents. The OEM operation during storm events is paramount to the communities' health and welfare. The ability to provide emergency services during a storm event is critical to maintaining the communities, health and safety.</i>
<b>Action category</b>	<i>Structure/ Infrastructure</i>
<b>Action type</b>	<i>Building Improvements to Key Critical Buildings</i>
<b>Action description</b>	<i>To maintain police, fire and medical EMS services throughout the municipality, the Borough seeks to provide key sleeping and shower facilities to emergency personnel and evacuated residents. The Borough seeks to provide the proper facilities to address these needs and provide the ability during a storm event. Three key buildings within the Borough have been identified within the action plan: Borough Hall, Fire Station and the Elementary School. Equipment and building upgrades are needed to ensure these facilities can meet emergency needs.</i>
<b>Existing, future &amp;/or NA</b>	<i>n/a</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Loss of critical services and evacuation facilities are needed to avoid possible potential loss of life of residents. Providing OEM facilities in key buildings is essential for a 'Steady State of Readiness'. Losses avoided are unquantifiable; however, annual losses avoided are estimated to be in excess of annual project costs.</i>
<b>Cost estimate</b>	<i>\$700,000 (based on a useful life of 50 years, this is \$14,000 per year in annual costs)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with unquantifiable annual benefits expected to be in excess of annual project costs of \$14,000 per year.</i>
<b>Technical</b>	<i>Technically feasible. Will provide critical services during storm events</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects.</i>
<b>Social</b>	<i>Borough of Neptune City residents.</i>
<b>Administrative capability</b>	<i>Need at least 3 people to administer (After technical assistance from the State)</i>
<b>Local champion</b>	<i>Residents of Neptune City</i>
<b>Other community objectives</b>	<i>Will provide services in accordance with the Office of Emergency Management duties.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Office of Emergency Management Program</i>

<b>Time line</b>	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Neptune City</i>
<b>Community action number</b>	<i>Borough of Neptune City - Action No. 6</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, storm surge, hurricane &amp; tropical storm, nor'easter</i>
<b>Risk finding</b>	<i>Piped streams and storm water management infrastructure, do not convey stormwater runoff as efficiently as they should; this results in flooding in several areas. Most of the Borough is in areas mapped as potentially susceptible to storm surge. Thankfully, during Hurricane Sandy, the inundation area was limited fairly close to the Shark River. Some areas inundated during Sandy included: East End Ave., Windsor Ct., Route 35, and Steiner Ave. between Route 35 and 3rd Ave. Drainage system does not efficiently convey stormwater runoff; this results in flooding in several areas. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.</i>
<b>Action category</b>	<i>Planning Study</i>
<b>Action type</b>	<i>Drainage Study</i>
<b>Action description</b>	<i>The Borough improves their stormwater system every year with their yearly roadway program. The Borough would like to develop a comprehensive mitigation study to reduce damage and losses due to flooding. The study will provide the necessary data to determine the larger piping needed to provide a better overall volume/ flow throughout the system. The Borough flood hazard areas have not been studied or updated since 1276.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future development</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Annual flood losses in Neptune City are typically on the order of \$100,000 to \$950,000. We estimate the proposed study could save about \$950,000 per year in flood losses.</i>
<b>Cost estimate</b>	<i>\$150,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Increasing knowledge of the current piping system will help eliminate stormwater flooding and identify key areas for upgrade. We expect that this will be cost effective because losses avoided are estimated to be roughly \$950,000 per year while the costs are less )\$80,000 per year(</i>
<b>Technical</b>	<i>Technically feasible.</i>
<b>Political</b>	<i>No apparent political issues.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No adverse environmental effects. Will help improve flood control and debris within watershed.</i>
<b>Social</b>	<i>Borough of Neptune City residents.</i>

<b>Potential funding sources</b>	<i>HMGP, RFC, SRL and FMA. For 95% local match, in-kind services</i>
<b>Time line</b>	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune City</i>
<b>Community action number</b>	7
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probable that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Mayor and Council
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -1-Living Shoreline</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood/Storm Surge/Nor'easter/Hurricane</i>
<b>Risk finding</b>	<i>Neptune Township is a coastal community with a substantial amount of land in Neptune Township lies within mapped flood and storm surge hazard areas. During Hurricane Sandy significant storm surge flooded areas near the Shark River, Fletcher Lake, Wesley Lake, and Atlantic Ocean. Both private homes and public infrastructure were impacted. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Critical Resource Protection with natural shoreline</i>
<b>Action type</b>	<i>Living Shoreline</i>
<b>Action description</b>	<i>Construct a living shore line along the Shark River, located in the Shark River Hills neighborhood of the Township connecting into the bordering town of Neptune City.</i>
<b>Existing, future &amp;/or NA</b>	<i>Action protects existing infrastructure and development any future.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Avoided costs as related to OEM/Evacuations and Policing. In addition, for every dollar spent to construct vegetative shoreline stabilization, as much as 175 percent is returned to the economy in the form of improvements to resources, including submerged aquatic vegetation, fish, shellfish, wetlands habitats, etc. In addition, flood insurance premiums may be reduced through an improved CRS rating. (175% of estimated costs below of \$4,198,000 = \$7,346,500)</i>
<b>Cost estimate</b>	<i>Costs to design, permit, and construct living shoreline = \$4,198,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits of as much as \$7,346,500 and costs of about \$4,198,000.</i>
<b>Technical</b>	<i>Technically feasible. Conceptual plan completed for grants, properties owned by the Township and bordering municipalities.</i>
<b>Political</b>	<i>Neptune Township, Neptune City and Belmar support the living shorelines along portions of their boundaries</i>
<b>Legal</b>	<i>Properties for where the living shoreline are proposed are owned by the subject municipality</i>
<b>Environmental</b>	<i>May require NJDEP permitting</i>
<b>Social</b>	<i>This action does not adversely affect any particular neighborhood, social group or organization. The project would be wholly on publicly owned property. It would serve to further protect property and infrastructure</i>
<b>Administrative capability</b>	<i>Township can administer action with help from consultants</i>
<b>Local champion</b>	<i>Planning, Emergency Management, Harbor Commission, Governing Bodies, Neighborhood groups in favor of project</i>
<b>Other community objectives</b>	<i>this action furthers environmental quality, furthers the use of open space preservation, helps support fish habitat</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans and Specifications</i>
<b>Responsible party</b>	<i>Neptune Township Engineering Department</i>
<b>Potential funding sources</b>	<i>Sandy Resiliency Grant; NJDEP 319h grant; HMGP Grant</i>
<b>Time line</b>	<i>within 2 -5 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action proposed in 2013</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -2-Floodproof hoors for Pump Stations</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood/Storm Surge/Nor'easter/Hurricane</i>
<b>Risk finding</b>	<i>Hurricane Sandy highlighted pump stations that are in need of water tight doors. When water enters the pump station, the controls and the pumps themselves get damaged/destroyed and service is interrupted.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure Infrastructure Projects</i>
<b>Action type</b>	<i>Floodproofing</i>
<b>Action description</b>	<i>Retrofit existing pump stations in flood zones with watertight doors and/or windows</i>
<b>Existing, future &amp;/or NA</b>	<i>Action protects existing infrastructure and potential failure and damage to pump station and controls</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>township cost to repair/replace controls; failure or pump station pumps. Improvements will protect pump station facility and equipment from future flooding. Damages to the facilities after Super Storm Sandy totaled approximately \$149,300.00, therefore the improvements pay for themselves in the event of a major storm or flooding. Additionally the improvements will help to ensure uninterrupted service to the residents during times of flooding. This benefit is not inclusive of the benefits associated with continuity of operations.</i>
<b>Cost estimate</b>	<i>Cost to upgrade existing facilities with floodproof doors and/or windows = \$18,500/facility x 8 facilities = \$148,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits of up to about \$149,300.00 per occurrence, and costs of only \$148,000.00 in total.</i>
<b>Technical</b>	<i>Technically feasible. Need plans and local building permit</i>
<b>Political</b>	<i>Neptune Township Sewer Department and Township Committee in support of project</i>
<b>Legal</b>	<i>Properties where pump stations are located are owned by the Township of Neptune, no Legal issue</i>
<b>Environmental</b>	<i>No NJDEP permitting required</i>
<b>Social</b>	<i>This action does not adversely affect any particular neighborhood, social group or organization. It would serve to further protect property and infrastructure</i>
<b>Administrative capability</b>	<i>Township can administer action.</i>
<b>Local champion</b>	<i>Neptune Township, Neptune Township Sewer Department</i>
<b>Other community objectives</b>	<i>Project furthers the protection of critical infrastructure and local neighborhood by alleviate failure and sewer back ups</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Local Building code</i>
<b>Responsible party</b>	<i>Neptune Township Engineering Department/Neptune Sewer Department</i>
<b>Potential funding sources</b>	<i>Sewer Capital</i>
<b>Time line</b>	<i>within 1-2 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action proposed in 2014</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -3-Bulkheading of S. Riverside Drive</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood/Storm Surge/Nor'easter/Hurricane</i>
<b>Risk finding</b>	<i>During Hurricane Sandy significant storm surge flooded areas near the Shark River. Hurricane Sandy highlighted gaps in the existing bulkhead system and associated flood impacts. Some areas are void of bulkheading; others have bulkhead elevations that are too low. Backflow of tidewaters into the drainage system at the outfalls creates flooding when the system is full of tidewater instead of runoff.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure Infrastructure Projects,flood Mitigation</i>
<b>Action type</b>	<i>Bulkheading and Drainage Improvements</i>
<b>Action description</b>	<i>Reconstruct deteriorate bulkheading, extend drainage pipes, retrofit storm drains with Tideflex valves</i>
<b>Existing, future &amp;/or NA</b>	<i>Action protects existing infrastructure and development both public and private. Also protects future development.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided include damages to public Infrastructure, water, sewer gas in roadway, loss of roadways, flooding and evacuation costs, displacement of residents, and damage to private property. Improvements would minimize detours, evacuations, damage to infrastructure, property, and repair and replacement of same including critical facilities. Improvements not only reduce flood damage caused by major storms but also during high tides (2-3 times per month). Additionally the improvements will also minimize the need for detours and evacuations during major storm events allowing more impacted areas to receive necessary help. Losses avoided are expected to be \$1,326,478.00.</i>
<b>Cost estimate</b>	<i>Cost to design, permit, and construct bulkheading along S. Riverside Dr. = \$1,291,605.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The project is likely to be cost effective, with a Benefit to Cost Ratio of 1.027.</i>
<b>Technical</b>	<i>Technically feasible. Need plans and permitting</i>
<b>Political</b>	<i>Neptune Township Committee, Shark River Hills Homeowners Association, OEM</i>
<b>Legal</b>	<i>No apparent legal issues; Township owns property</i>
<b>Environmental</b>	<i>NJDEP permitting required</i>
<b>Social</b>	<i>This action would serve to protect a neighborhood that was severely damaged by Sandy. It would not adversely affect them, it would further protect them.</i>
<b>Administrative capability</b>	<i>Township can administer action.</i>
<b>Local champion</b>	<i>Neptune Township, Neptune Township Sewer Department</i>
<b>Other community objectives</b>	<i>Project furthers the protection of critical infrastructure and local neighborhood by alleviate failure and sewer back ups</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans and specification for bid required</i>
<b>Responsible party</b>	<i>Neptune Township Engineering Department, Neptune Township Committee</i>
<b>Potential funding sources</b>	<i>FEMA-HMGP</i>
<b>Time line</b>	<i>2-5years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Continued Action from Worksheet #5 Action has been proposed since 2010</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -4-Bulkheading Berm around local Lake Alberta, Fletcher Lake and Wesley Lake</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood/Storm Surge/Nor'easter/Hurricane</i>
<b>Risk finding</b>	<i>During Hurricane Sandy significant storm surge flooded areas near Fletcher Lake, Wesley Lake, and Lake A lberta. Both private homes and public infrastructure were impacted. Hurricane Sandy highlighted gaps in the existing bulkead system and associated flood impacts. Some areas are void of bulkheading; others have bulkhead elevations that are too low.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure Infrastructure Projects,flood Mitigation</i>
<b>Action type</b>	<i>Bulkhead, Drainage Improvements and property protection</i>
<b>Action description</b>	<i>Construct/elevate bulkhead around lakes to provide additional protection. To be constructed out of structural or earth berm.</i>
<b>Existing, future &amp;/or NA</b>	<i>Action protects existing infrastructure and development both public and private. Also protects future development.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Public Infrastructure, TNHA housing residents, flooding and evacuation costs, displacement of residents, damage to private property. Improvements would minimize detours, evacuations, damage to infrastructure, property, and repair and replacement of same including critical facilities. After Super Storm Sandy, damages to township facilities in the area of the proposed improvements totaled approximately \$1,766,000. Additionally, 15 private properties, within the area of the proposed improvements, suffered damages assessed at approximately \$550,800. (total: \$2,316,800). Additionally the improvements will also minimize the need for detours and evacuations allowing more impacted areas to receive necessary help.</i>
<b>Cost estimate</b>	<i>Lake Alberta: 1,400LF @ \$450/LF = \$630,000 Fletcher Lake: 1,200LF @ \$1,050/LF = \$1,260,000 Wesley Lake: 1,900LF @ \$1,050/LF = \$1,995,000 1,100LF @ \$2,500/LF = \$2,750,000                      <u>Total: \$6,635,000</u></i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The improvements are expected to be cost effective and pay for themselves in the event of at least three (3)major storms. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.</i>
<b>Technical</b>	<i>Technically feasible. Need plans and permitting</i>
<b>Political</b>	<i>Neptune Township Committee, TNHA, OEM, Ocean Grove Homeowners Association</i>
<b>Legal</b>	<i>No apparent legal issues; Township owns property</i>
<b>Environmental</b>	<i>NJDEP permitting required</i>
<b>Social</b>	<i>This action would serve to protect a neighborhood that was severely damaged by Sandy. It would not adversely affect them, it would further protect them.</i>
<b>Administrative capability</b>	<i>Township can administer action but will need consultants for permitting and plans</i>
<b>Local champion</b>	<i>Neptune Township, Neptune Township Sewer Department</i>
<b>Other community objectives</b>	<i>Project furthers the protection of critical infrastructure and local neighborhood by alleviate flooding and evacuations</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans and specification for bid required</i>
<b>Responsible party</b>	<i>Neptune Township Engineering Department; Neptune Township Committee;</i>
<b>Potential funding sources</b>	<i>FEMA-HMGP;NRCS</i>
<b>Time line</b>	<i>2-5years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -5-Acquisition of Flood Prone Properties</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood/Storm Surge/Nor'easter/Hurricane</i>
<b>Risk finding</b>	<i>During Hurricane Sandy significant storm surge flooded areas near the Shark River, Fletcher Lake, Wesley Lake, Lake Alberta, and Atlantic Ocean. Both private homes and public infrastructure were impacted. Some structures need to be elevated; others in more low-lying areas would seem to be good candidates for acquisition (particularly: Shark River Hills, South Riverside Drive, and Shark River Memorial Park). Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Acquisition</i>
<b>Action type</b>	<i>Acquisition of Private Properties</i>
<b>Action description</b>	<i>Identify and target properties of willing sellers in special hazard or flood prone areas and obtain appraisals and funding for acquisition. Upon acquisition, maintain as dedicated open space.</i>
<b>Existing, future &amp;/or NA</b>	<i>Action protects existing properties and deters future development in subject areas prone to flooding</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Private property damage, evacuations, property damage, infrastructure damage. The acquisition of the frequently flooded properties in question would minimize further damage to the area and surrounding areas as well as repetitive loss due to storms and high tide flooding. By stopping private development within the flood zones the natural land serves as a buffer to protect surrounding properties and infrastructure, and adds space to develop natural means to do same. Losses avoided are estimated to be about \$64,000.00/year.</i>
<b>Cost estimate</b>	<i>Shark River Hills Property Acquisition = \$4,502,750.00 Shark River Memorial Park = \$92,500.00 Total = \$4,595,250.00 With a useful life of approximately 75 years, this equals \$61,270.00/year</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is expected to be cost effective, with benefits on the order of \$64,000.00/year and costs of about \$61,270.00/year.</i>
<b>Technical</b>	<i>Technically feasible. Need appraisals and funding</i>
<b>Political</b>	<i>Neptune Township Committee, Willing property owners</i>
<b>Legal</b>	<i>Appraisals have to be obtained and negotiations are needed with property owners</i>
<b>Environmental</b>	<i>Depending on prior use, may have some environmental issues to remediate</i>
<b>Social</b>	<i>This action would serve to protect a neighborhood that was severely damaged by Sandy. It would serve to have properties preserved and not be developed in the future as some parcels have approved subdivisions on them.</i>
<b>Administrative capability</b>	<i>Township can administer action but will need appraisals for properties</i>
<b>Local champion</b>	<i>Neptune Township, Willing Property Owners</i>
<b>Other community objectives</b>	<i>Project furthers the protection of critical infrastructure and local neighborhood by alleviate flooding and evacuations</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Appraisals and Attorneys</i>
<b>Responsible party</b>	<i>Neptune Township Administration</i>
<b>Potential funding sources</b>	<i>Blue Acres, Green Acres, FEMA</i>
<b>Time line</b>	<i>Now-2 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>A new action proposed in 2013</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -6-Creation of a Permanent Confined Disposal Facilities (CDF)</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood/Storm Surge/Nor'easter/Hurricane</i>
<b>Risk finding</b>	<i>Neptune Township is a coastal community with a substantial amount of land lying within mapped flood and storm surge hazard areas. Debris and siltation in Shark River obstructs flood flows. Limited capacity causes evacuations, road closures, property damage. During Hurricane Sandy areas near the Shark River were flooded. Both private homes and public infrastructure were severely impacted.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Construction of Structural Earthen Berm</i>
<b>Action description</b>	<i>I identify and target properties that have the characteristics that can be used for a CDF. Earthen Berms to be constructed. Berm to be constructed out of material and to form a stable slope. Berm to be stabilized with seed.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>OEM personal, evacuations, road closures, public infrastructure, public and private property loss. The CDF provides an area for storage of dredge materials, allowing storage space for flood mitigation projects that involve dredging, therefore allowing those projects to progress. Improvements will increase the volume of the Shark River Basin allowing for more storage of stormwater runoff from the surrounding area, therefore helping alleviate flooding within the entire watershed during high tides (2-3 times a month) and major storm events. It would also restrict development of properties in flood prone areas. Additionally the improvements will also provide a recreational benefit to residents of the Township and bordering municipalities who use the river for bathing, boating, and general recreation. Losses avoided for this project are estimated to be \$21,349.83/year.</i>
<b>Cost estimate</b>	<i>Hauling of materials and construction of raised area = 19,500 CY @ \$20/CY is approximately \$390,000.00. Installation of landscaping along berm = 5,025 SY @ \$25.00/SY is approximately \$125,625.00. Total = \$495,420.00 with a useful life of approximately 30 years, this equals \$17,187.50/year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is expected to be cost effective, with benefits of about \$21,349.83/year and costs of only about \$17,187.50/year.</i>
<b>Technical</b>	<i>Technically feasible. Township has property that could be utilized needs preliminary design</i>
<b>Political</b>	<i>Neptune Township Committee, adjacent homeowners associations</i>
<b>Legal</b>	<i>Township owned property, CDF can be built</i>
<b>Environmental</b>	<i>NJDEP permitting will be required.</i>
<b>Social</b>	<i>This action would serve to protect a neighborhood that was severely damaged by Sandy. It would serve to have properties preserved and not be developed in the future as some parcels have approved subdivisions on them.</i>
<b>Administrative capability</b>	<i>Township can administer and prepare CDF plan with consultant permitting help</i>
<b>Local champion</b>	<i>Neptune Township, Homeowners Association</i>
<b>Other community objectives</b>	<i>Project furthers the protection of critical infrastructure and local neighborhood by alleviate flooding and evacuations</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans and specifications;</i>
<b>Responsible party</b>	<i>Engineering and Planning</i>
<b>Potential funding sources</b>	<i>NJDEP; FEMA</i>
<b>Time line</b>	<i>Now-2 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -7-AM/FM Radio Station/Flood Warning</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane/Tropical Storm/Flooding/Storm Surge</i>
<b>Risk finding</b>	<i>Persons living and working in flood hazard areas do not always have enough time to prepare and evacuate floodprone areas. Neptune Township is a coastal community with a substantial amount of land lying within mapped flood and storm surge hazard areas. By the year 2040, it is projected to have a population increase of 11.6% over 2010 values. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Awareness program</i>
<b>Action type</b>	<i>Establish AM Radio station; install warning system and flood gauges</i>
<b>Action description</b>	<i>Install flood gauges with warning lights in rivers and lakes in or near flood prone areas. Specifically along Shark River, in Alberta and Fletcher Lake. Have the flood gauges tie to an AM radio station to put out warnings</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects both existing and future development; existing and future infrastructure; minimizes personal for evacuations</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>OEM personal, evacuations, road closures, public infrastructure, public and private property loss. As water levels rise during storm events, the flood warning system would provide advanced warning to affected residents within that area, allowing residents time to prepare their property and/or evacuate. After Super Storm Sandy, damages to township facilities and private property totaled approximately \$13,300,000.00. If by providing advanced warning residents could protect or save just a fraction of their property, the system would more than pay for itself. It would also provide cost savings by reducing the need for detours and evacuations during major storm events allowing more impacted areas to receive other necessary help. Losses avoided are expected to be \$19,950.00/year.</i>
<b>Cost estimate</b>	<i>Construction and Implementation of Radio Station/Flood Warning is approximately \$100,000.00, with a useful life of approximately 10 years, this equals \$10,000.00/year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is expected to be cost effective, with benefits of \$19,950.00/year and costs of only \$10,000.00/year.</i>
<b>Technical</b>	<i>Technically feasible. Township would have to locate lake or tide gauges on Township owned property.</i>
<b>Political</b>	<i>Neptune Township Committee Adjacent property owners</i>
<b>Legal</b>	<i>All work would have to be located on Township owned property. AM station would have to be obtained</i>
<b>Environmental</b>	<i>Local permitting required for post with warning light</i>
<b>Social</b>	<i>Proposed action will help to warn certain flood prone neighborhoods. These would be strategically be located in 4 separate sectors of the Township</i>
<b>Administrative capability</b>	<i>Township can administer would have to prepare bids and specs for radio station and proposed gauges with lights and warning system tied to radio station</i>
<b>Local champion</b>	<i>Neptune Township, Homeowners Associations, TNHA, OEM</i>
<b>Other community objectives</b>	<i>Provides advanced warning for people and business to prepare or evacuate to higher ground prior to an event. Minimizes use of Police and OEM personal for detours and evacuations</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Plans and specifications;</i>
<b>Responsible party</b>	<i>Engineering and Planning/OEM</i>
<b>Potential funding sources</b>	<i>FEMA</i>
<b>Time line</b>	<i>Now-2 years</i>
<b>Reporting on Progress</b>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -8-Desiltation of Shark River Basin</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane/Tropical Storm/Flooding/Storm Surge</i>
<b>Risk finding</b>	<i>Neptune Township is a coastal community with a substantial amount of land lying within mapped flood and storm surge hazard areas. Debris and siltation in Shark River obstructs flood flows. limited capacity causes evacuations, road closures, property damage. During Hurricane Sandy areas near the Shark River were flooded. Both private homes and public infrastructure were severely impacted.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Nonstructural project; flood control</i>
<b>Action type</b>	<i>Removal of silt and sediment from the Shark River Basin</i>
<b>Action description</b>	<i>Dredge or pump siltation from entire Shark River Basin to Confined Disposal Facility (CDF)</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects both existing and future development; existing and future infrastructure; provides additional capacity in the Shark River Basin.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>OEM personnel, evacuations, road closures, public infrastructure, public and private property loss. Improvements will increase the volume of the Shark River Basin allowing for more storage of stormwater runoff from the surrounding area, therefore helping alleviate flooding within the entire watershed during high tides (2-3 times a month) and major storm events. Additionally the improvements will also provide a recreational benefit to residents of the Township and bordering municipalities who use the river for bathing, boating, and general recreation. Losses avoided for this project are estimated to be \$128,099.00/year.</i>
<b>Cost estimate</b>	<i>Removal of silt and sediment = 1,000,000 CY @ \$30/CY is approximately \$30,000,000.00, with a useful life of approximately 50 years, this equals \$600,000.00/year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is not likely to be cost effective, with estimated benefits of \$128,099.00/year and costs of \$600,000.00/year.</i>
<b>Technical</b>	<i>Technically feasible. Cooperation needed from NJDEP, ACOE and adjoining municipalities</i>
<b>Political</b>	<i>Neptune Township Committee would have to jointly work on this project with Neptune City, Belmar and NJDEP and NJDOT</i>
<b>Legal</b>	<i>Legal issue is the ownership of the Shark River Basin</i>
<b>Environmental</b>	<i>NJDEP, ACOE permitting required</i>
<b>Social</b>	<i>Proposed action will help to protect flood prone neighborhoods.</i>
<b>Administrative capability</b>	<i>State would have to administer in conjunction with Township . Would have to be a joint effort between Neptune, Neptune City, Belmar, Wall, NJDEP and NJDOT.</i>
<b>Local champion</b>	<i>Neptune Township, Neptune City, NJDOT, Belmar, Friends of Belmar Harbor, Shark River Yacht Club, Homeowners Associations</i>
<b>Other community objectives</b>	<i>Provides not only additional capacity and flood protection but helps to reestablish the marine environment through better cleansing of the river and improved Tidal flow. Also alleviates safety issues associated with the siltation of the river with regards to the boating and recreational communities (i.e. paddleboarders, jet skiers, etc who are at risk with no water and siltation of the river).</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans and specifications;</i>
<b>Responsible party</b>	<i>Neptune Township, Neptune City, NJDEP, Wall, Belmar, NJDOT</i>
<b>Potential funding sources</b>	<i>FEMA, NJDOT, NJDEP</i>
<b>Time line</b>	<i>Immediate</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Has been an initiative since 1998, action from Worksheet 5</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -2-Desnagging/Desilting of Shark River Tributary, Jumping Brook, and Musquash Brook</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane/Tropical Storm/Flooding/Storm Surge</i>
<b>Risk finding</b>	<i>Neptune Township is a coastal community with a substantial amount of land lying within mapped flood and storm surge hazard areas. Debris and siltation in Shark River Tributary, Jumping Brook, and Musquash Brook obstructs flood flows. Limited capacity causes evacuations, road closures, property damage. During Hurricane Sandy areas near the Shark River were flooded. Both private homes and public infrastructure were severely impacted.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Resources Protection - Nonstructural project; flood control</i>
<b>Action type</b>	<i>Desnagging and desilting of tributaries to the Shark River</i>
<b>Action description</b>	<i>Removal of dense overgrown vegetation, dead/fallen trees, silt and sediment from the Shark River Tributary, Jumping Brook, and Musquash Brook</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects both existing and future development; existing and future infrastructure; provides additional capacity in the Tributaries of the Shark River.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>OEM personal, evacuations, road closures, public infrastructure, public and private property loss. Risk of damage to existing and proposed development and to properties both public and private along floodprone areas. Limited capacity of the tributaries to maintain stormwater runoff flow furthers the flooding risks for the watershed encompassing Neptune Township, Neptune City, Wall and Belmar causing evacuations, road closures, and property damage. Improvements will increase the volume and flow of the tributaries to the Shark River allowing for more storage of stormwater runoff from the surrounding area therefore helping to alleviate flooding within the entire watershed during high tides (2-3 times a month) and major storm events. The improvements will also aid in cleaning stormwater runoff prior to it entering the Shark River, while enhancing the natural habitat and its inhabitants. Losses avoided as a direct result of this project are estimated to be about \$32,024.50/year.</i>
<b>Cost estimate</b>	<i>Removal of vegetation, silt and sediment = 9,000 LF @ \$65/LF will cost approximately \$585,000.00 with a useful life of approximately 25 years, this equals \$23,400.00/year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is expected to be cost effective, with benefits of \$32,024.50/year and costs of \$23,400.00/year.</i>
<b>Technical</b>	<i>Technically feasible. Cooperation needed from NJDEP, adjacent property owners and adjoining municipalities.</i>
<b>Political</b>	<i>Neptune Township Committee would have to jointly work on this project with Neptune City, Wall, Belmar and NJDEP.</i>
<b>Legal</b>	<i>Legal issue is the ownership of the sections of the Shark River tributaries</i>
<b>Environmental</b>	<i>No adverse environmental effects because project involves no structural changes and should clean and repair the watershed</i>
<b>Social</b>	<i>Proposed action will help to protect flood prone neighborhoods in Neptune Township, Neptune City, Wall, and Belmar</i>
<b>Administrative capability</b>	<i>Township can administer with an outside consulting preparing plans and specifications for public bid of the improvements by a contractor.</i>
<b>Local champion</b>	<i>Neptune Township, Neptune City, Wall, Belmar, Friends of Belmar Harbor, Shark River Yacht Club, Homeowners Associations</i>
<b>Other community objectives</b>	<i>Provides not only additional capacity and flood protection but helps to reestablish the existing waterways, their natural habitat and its wildlife. Provide better cleansing of the river and improved stormwater management.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Plans and specifications;</i>
<b>Responsible party</b>	<i>Neptune Township, Neptune City, Wall, Belmar, and NJDEP</i>
<b>Potential funding sources</b>	<i>FEMA and NJDEP, neighboring municipalities</i>
<b>Time line</b>	<i>2-5 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune -10-Elevation of Floodprone Properties</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood/Storm Surge/Nor'easter/Hurricane</i>
<b>Risk finding</b>	<i>Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure Infrastructure Projects</i>
<b>Action type</b>	<i>Floodproofing/Elevation of Floodprone Properties</i>
<b>Action description</b>	<i>Elevation of 23 Floodprone Residential Structures</i>
<b>Existing, future &amp;/or NA</b>	<i>Action protects existing properties and infrastructure in flood prone areas</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided include repetitive flooding and evacuation costs, displacement of residents, and damage to private property. Improvements would minimize evacuations, damage to property, and repair and replacement of same. Improvements not only reduce flood damage caused by major storms but also during high tides (2-3 times per month). Additionally the improvements will also minimize the need for evacuations during major storm events allowing more impacted areas to receive necessary help. Losses avoided are expected to be \$92,000.00/year.</i>
<b>Cost estimate</b>	<i>Cost to design, permit, and elevate 23 floodprone homes @ \$250,000.00/home = \$5,750,000.00, with a useful life of approximately 100 years, this equals \$57,500.00/year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is expected to be cost effective, with benefits on the order of \$92,000.00/year and costs of about \$57,500.00/year.</i>
<b>Technical</b>	<i>Technically feasible. Need plans and permitting</i>
<b>Political</b>	<i>Neptune Township Committee, Shark River Hills Homeowners Association, OEM</i>
<b>Legal</b>	<i>While the municipality does not own the structures in questions, we fully support the homeowners in moving forward</i>
<b>Environmental</b>	<i>No environmental impacts are anticipated as a result of elevating the homes</i>
<b>Social</b>	<i>No particular social group in our community is likely to be disproportionately impacted by this project. This action would serve to protect a neighborhood that was severely damaged by Sandy. It would not adversely affect them, it would further protect them.</i>
<b>Administrative capability</b>	<i>Township can administer action but will need cooperation from affected homeowners</i>
<b>Local champion</b>	<i>Affected homeowners and Neptune Township</i>
<b>Other community objectives</b>	<i>Project furthers the protection of critical infrastructure and local neighborhood by alleviate failure and sewer back ups</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Local building code and permits</i>
<b>Responsible party</b>	<i>Homeowners, Neptune Township Engineering Department, Neptune Township Administration</i>
<b>Potential funding sources</b>	<i>FEMA-HMGP, Capital Appropriations</i>
<b>Time line</b>	<i>2-5years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>A new action proposed in 2014</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune11-Generator at North Island Pump Station</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood/Storm Surge/Nor'easter/Hurricane</i>
<b>Risk finding</b>	<i>Hurricane Sandy highlighted pump stations that are in need of power back up at an elevation that will not avoid flooding. The existing at-grade emergency generator was flooded beyond repair as a result of storm surge during Hurricane Sandy</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure Infrastructure Projects</i>
<b>Action type</b>	<i>Emergency Power</i>
<b>Action description</b>	<i>Create elevated platform for new emergency generator to service pump station.</i>
<b>Existing, future &amp;/or NA</b>	<i>Action protects existing infrastructure and potential failure and damage to emergency generator and associated fuel system.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Township cost to replace and elevate 35kW emergency generator and associated diesel fuel system above the 500-year flood elevation. Improvements will protect the North Island Pump Station Facility's emergency generator and fuel system from future flooding. Additionally the improvements will help to ensure uninterrupted service to the residents during times of flooding. Damages to the facility after Super Storm Sandy totaled approximately \$46,587.65; \$26,000.00 of which was to the generator and fuel system. Additional costs were also incurred for necessary bypass equipment and personnel to provide uninterrupted service.</i>
<b>Cost estimate</b>	<i>Cost to install concrete pad to elevate 35kW Emergency Generator at the North Island Pump Station Facility = \$18,500.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective as the improvements protect the emergency generator system from the 500-year storm event and eliminate the need for bypass equipment and personnel in the event of a smaller storm event. The project has benefits greater than \$26,000.00 per occurrence, and costs of only \$18,500.00 in total.</i>
<b>Technical</b>	<i>Technically feasible. Need plans and local building permit</i>
<b>Political</b>	<i>Neptune Township Sewer Department and Township Committee in support of project</i>
<b>Legal</b>	<i>No apparent legal issues; Township owns property</i>
<b>Environmental</b>	<i>No NJDEP permitting required</i>
<b>Social</b>	<i>This action does not adversely affect any particular neighborhood, social group or organization. It would serve to further protect property and infrastructure</i>
<b>Administrative capability</b>	<i>Township can administer action.</i>
<b>Local champion</b>	<i>Neptune Township, Neptune Township Sewer Department</i>
<b>Other community objectives</b>	<i>Project furthers the protection of critical infrastructure and local neighborhood by alleviating failure and sewer back-ups due to flooding.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Local Building code</i>
<b>Responsible party</b>	<i>Neptune Township Engineering Department/Neptune Sewer Department</i>
<b>Potential funding sources</b>	<i>Sewer Capital</i>
<b>Time line</b>	<i>within 1-2 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action proposed in 2014</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Neptune Township</i>
<b>Community action number</b>	<i>Neptune-12-Preparation of Hazard Overlay Zones</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood/Storm Surge/Nor'easter/Hurricane</i>
<b>Risk finding</b>	<i>Property owners are not aware of the zones that they live in and how they will be impacted. The residents are also not always aware of the evacuation route</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Educational Public Outreach</i>
<b>Action type</b>	<i>Updated GIS mapping; Updated handouts</i>
<b>Action description</b>	<i>Work with GIS Consultant and in house staff to overlay Special Flood Hazard Zones on Township Maps. Also update GIS data base to add to website. Provide as handouts at Neptune Day and at counter to residents. Provide to Homeowners Associations in Special Flood Hazard Zones.</i>
<b>Existing, future &amp;/or NA</b>	<i>Action further educates residents regarding risks in Special Flood Hazard Zones; Helps to identify evacuation routes and flooding risks; minimize personal costs and detours</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Township OEM personal, evacuations, and private property loss. The mapping will educate the public of potential flood zones and in effect, homes can be elevated in these zones to mitigate damage and further reduce future loses. Additionally, public buildings can be floodproofed or elevated in these zones to mitigate future damage, costs. After Super Storm Sandy, damages to Township facilities and private property totaled approximately \$13,300,000.00. If educated residents could protect or flood proof just a fraction of their property, the mapping would more than pay for itself. It would also provide cost savings by reducing the need for evacuations during major storm events allowing more impacted areas to receive other necessary help. Losses avoided are expected to be \$6,650.00/year.</i>
<b>Cost estimate</b>	<i>Preparation and publication of Hazard Overlay Zone mapping is approximately \$10,000.00, with a useful life of approximately 5 years, this equals \$2,000.00/year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is expected to be cost effective, with benefits of \$6,650.00/year and costs of only \$2,000.00/year.</i>
<b>Technical</b>	<i>Technically feasible. Need coordination with in house staff and GIS consultant.</i>
<b>Political</b>	<i>Neptune Township Committee</i>
<b>Legal</b>	<i>No apparent legal issues; Township owns property</i>
<b>Environmental</b>	<i>No NJDEP permitting required</i>
<b>Social</b>	<i>This action does not adversely affect any particular neighborhood, social group or organization. It would serve to further protect property and infrastructure</i>
<b>Administrative capability</b>	<i>Township can administer action.</i>
<b>Local champion</b>	<i>Neptune Township Committee, Neptune Township OEM, Neptune Township Department of Engineering</i>
<b>Other community objectives</b>	<i>Project furthers the protection of critical infrastructure and local neighborhood by further education public, property owners as to risks associated with Special Flood Hazard Area.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	
<b>Responsible party</b>	<i>Neptune Township Engineering Department/GIS Consultant</i>
<b>Potential funding sources</b>	<i>General Capital</i>
<b>Time line</b>	<i>within 1-2 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action proposed in 2014</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Neptune Township</i>
Community action number	<i>Neptune-13-Implement GIS based Hazard data on Website</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding; Storm Surge; Hurricane</i>
Risk finding	<i>Property owners are not aware of the zones that they live in and how they will be impacted. The residents are also not always aware of the evacuation route nor of the potential hazards of the area in or near where they live</i>
<b>Describing the Action</b>	
Action category	<i>Education and Awareness</i>
Action type	<i>Public Awareness and Education</i>
Action description	<i>Updating online GIS on the website to include multiple</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Public and Private Property Damage and losses throughout the municipality exceeded 13 million. Neptune Township is 8 square miles and has 29,000 residents and over 11000 parcels, both commercial and residential. Any information the Township can provide to help heighten awareness for Hazards and provide safe evacuation routes will be positive. This awareness campaign will help avoid unnecessary rescues from people being stranded, provide awareness of hazards so that buildings are properly constructed in their respective zones.</i>
Cost estimate	<i>\$10,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>The potential benefits of the public education and outreach with this information logically will outweigh the minimal cost associated with the task. This task can be completed in house for minimal cost and the public and private potential losses that may be reduced will certainly be more than \$10000.00</i>
Technical	<i>Technically feasible with in house engineering department</i>
Political	<i>The project should have the support of the Governing body as it's implementation would serve to aide the residents.</i>
Legal	<i>No apparent legal issues;</i>
Environmental	<i>No NJDEP permitting required</i>
Social	<i>This action does not adversely affect any particular neighborhood, social group or organization. It would serve to further protect property and infrastructure</i>
Administrative capability	<i>Township can administer action.</i>
Local champion	<i>Neptune Township Committee; Neighborhood Groups, Neptune Township Engineering Department and Department of Public Works</i>
Other community objectives	<i>Project also serves to help us satisfy some of our annual NJDEP Stormwater Permitting requirements.</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Neptune Township Committee, Neptune Township Engineering Department</i>
Responsible party	<i>Neptune Township Engineering Department</i>
Potential funding sources	<i>Capital</i>
Time line	<i>within 1-2 years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Action from Worksheet #5</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Ocean Township</i>
<b>Community action number</b>	<i>Project #1 - Acquisition of Brookside Ave Properties</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
<b>Risk finding</b>	<i>Flooding to building and property during Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami. Dozens of homes in the 10 year flood zone on Brookside Avenue are susceptible to flooding during storms, high ties, and combinations thereof.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Acquisition</i>
<b>Action type</b>	<i>Property Acquisition</i>
<b>Action description</b>	<i>Presently looking at up to 28 properties to purchase/demolition and to maintain as open space.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>prevent a loss of property and life by purchasing and having the families relocate to a house outside of the flood plain</i>
<b>Cost estimate</b>	<i>up to \$12,600,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>These homes are located within the 10 year flood zone and are susceptible to flooding. The flooding is due either to a storm event, high tide or combination of both. Since the existing outfall of the brook is only into the Atlantic Ocean, as high tides comes in, the water elevation continuously backs up into the system seeking it's own level, thereby flooding streets, low lying areas, into the living areas of several homes on Brookside Ave.</i>
<b>Technical</b>	<i>Technically feasible; Yes</i>
<b>Political</b>	<i>Political actions present in support of effort</i>
<b>Legal</b>	<i>No legal issues</i>
<b>Environmental</b>	<i>none anticipated; generators would be natural gas units; locations of generators has already been established and the size will be upgraded.</i>
<b>Social</b>	<i>no social impact; locations of generators would not impact area</i>
<b>Administrative capability</b>	<i>Engineering</i>
<b>Local champion</b>	<i>Township Manager, OEM, DPW, Police, elected officials</i>
<b>Other community objectives</b>	<i>Out of the homes that will be acquired and demolished, 1 is on the Severe Repetitive List (SRL), 3 are on the Repetitive Flood Claims (RFC) and most of the others have submitted at least two insurance claims to their insurance companies, NFIP or FEMA.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Township Manager, DPW, Engineer and OEM</i>
<b>Responsible party</b>	<i>Township Manager, Police, DPW, Green Acres, County Open Space office and Engineer</i>
<b>Potential funding sources</b>	<i>Federal, state, county grants with some local funds</i>
<b>Time line</b>	<i>2016</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Ocean Township</i>
<b>Community action number</b>	<i>Project #2 - Dredging and Debris Removal</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
<b>Risk finding</b>	<i>Obstructions along the length of Poplar Brook and Whalepond Brook (silt, snags, debris) cause flooding of properties and roadways.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Resource protection; Property Protection and flooding</i>
<b>Action type</b>	<i>Stream Cleaning and some silt removal</i>
<b>Action description</b>	<i>Dredging the length of both Poplar Brook and Whalepond Brook and removing all obstructions from them. Remove snagging and debris from floodway and dredging up to 2 feet of silt</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action will prevent future loss of property from flooding and keep roadways clear of flood waters</i>
<b>Cost estimate</b>	<i>Under \$1 million</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Yes, if this is jointly done with County DPW/Mosquito Commission under a program and permits presently being operated</i>
<b>Technical</b>	<i>Technically feasible; Yes</i>
<b>Political</b>	<i>Political actions present in support of effort</i>
<b>Legal</b>	<i>No legal issues; since stream is a natural border with adjoining town, might have to discuss impacts</i>
<b>Environmental</b>	<i>there are areas that will need to be examined along the stream, but no major issues to be dealt with</i>
<b>Social</b>	<i>no social impact, most of this area is surrounded by commercial property and a few homes. A lot of vacant land borders the stream.</i>
<b>Administrative capability</b>	<i>Township agencies can oversee the removal and maintenance</i>
<b>Local champion</b>	<i>Township Manager, Engineer, OEM and DPW</i>
<b>Other community objectives</b>	<i>storm drain improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Local officials and County agencies; adjoining town on border with stream and where the outfall is</i>
<b>Responsible party</b>	<i>Township Manager, DPW, County Mosquito Commission and Engineer</i>
<b>Potential funding sources</b>	<i>Federal, state, county grants with some local funds</i>
<b>Time line</b>	<i>2016</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried Forward - Some debris that obstructed some of the water was removed but anything that was imbedded is still remaining.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Ocean Township</i>
Community action number	<i>Project #3 - Rehabilitation of Dam</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
Risk finding	<i>Water exiting the dam adjacent to Roseld Avenue contains sediment that enters Deal Lake, which contributes to associated flooding. In addition, water exiting the dam can erode the roadway.</i>
<b>Describing the Action</b>	
Action category	<i>Natural Resource protection; Property Protection and flooding</i>
Action type	<i>Rehabilitation of Dam</i>
Action description	<i>Roseld Avenue, rehabilitation of dam adjacent to Roseld Avenue to alleviate flooding and prevent erosion of roadway. The Roseld Avenue project will provide a water quality structure to remove sediment from water prior to entering Deal Lake</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Roseld Avenue rehabilitation of dam adjacent to Roseld Avenue to alleviate flooding and prevent erosion of roadway.</i>
Cost estimate	<i>Under \$1 million</i>
Cost effectiveness (i.e., benefit/cost)	<i>In order to keep Deal Lake clean and free from debris and sediment and to prevent a collapse of a major roadway.</i>
Technical	<i>Technically feasible; Yes</i>
Political	<i>Political actions present in support of effort</i>
Legal	<i>No legal issues</i>
Environmental	<i>there are areas that will needed to be examined along the stream, but no major issues to be dealt with</i>
Social	<i>no social impact, most of this area is surrounded by commercial property and a few homes. A lot of vacant land borders the stream.</i>
Administrative capability	<i>Township agencies can over see the removal and maintenance</i>
Local champion	<i>Township Manager, Engineer, OEM, Deal Lake Commission and DPW</i>
Other community objectives	<i>N/A</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Local officials, County and State agencies</i>
Responsible party	<i>Township Manager, DPW, NJDEP, Deal Lake Commission and Engineer</i>
Potential funding sources	<i>Federal, state, county grants with some local funds</i>
Time line	<i>2016</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Ocean Township</i>
<b>Community action number</b>	<i>Project #4 - Generator for 9-1-1 Center/Police HQS</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Loss of electric power at critical facilities due to Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
<b>Risk finding</b>	<i>locations used in major storm events for police operations, emergency management, COOP/COG, public works and/or sheltering do not have an adequate emergency generators for power</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>emergency generators</i>
<b>Action type</b>	<i>acquisition of emergency generators for critical facilities</i>
<b>Action description</b>	<i>Upgrade the current and outdated generator at the town hall which houses the Emergency Operations Center for OEM, Police Dept and Public Works offices which is also used as a reception center for shelters.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>prevent injury and loss of life by providing a location that first responders and public can go to for shelter during severe weather events</i>
<b>Cost estimate</b>	<i>500,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Based on the age and the admitted needed upgrades by JCP&amp;L of the electrical grids within Ocean Twp, the possibly is there that the hub of all emergency communications including the 9-1-1 system could be out of power and not be able to function.</i>
<b>Technical</b>	<i>Technically feasible; Yes</i>
<b>Political</b>	<i>Political actions present in support of effort</i>
<b>Legal</b>	<i>No legal issues</i>
<b>Environmental</b>	<i>none anticipated; generators would be natural gas units; locations of generators has already been established and the size will be upgraded.</i>
<b>Social</b>	<i>no social impact; locations of generators would not impact area</i>
<b>Administrative capability</b>	<i>Engineering</i>
<b>Local champion</b>	<i>Township Manager, OEM, DPW, Police, elected officials</i>
<b>Other community objectives</b>	<i>No other objectives with this project</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Township Manager, DPW, Engineer, Police and OEM</i>
<b>Responsible party</b>	<i>Township Manager, Police, DPW and Engineer</i>
<b>Potential funding sources</b>	<i>Federal, state, county grants with some local funds</i>
<b>Time line</b>	<i>2017</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-Jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Ocean Township</i>
<b>Community action number</b>	<i>Project #5 - Detention Pond Whalepond Brook</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
<b>Risk finding</b>	<i>Above normal rainfall causes flooding on roadways and onto private property partially due to restrictions with the drainage pipes at the NJ Transit train tracks that lead into Deal Borough and insufficient size of culverts under roadways.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>create an detention pond for Whalepond Brook</i>
<b>Action description</b>	<i>An area needs to be created large enough to hold flood waters during and after a storm and to be release at a pace where it will not effect anything.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Prevention of injuries. Flooding presents a hazard for the public and to emergency responders who have to enter to render aid. Protection of Property: Reduce water damage to public and private lands as well as vehicles.</i>
<b>Cost estimate</b>	<i>3,000,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Property and infrastructure damage reductions as well as lowing traffic and public safety hazards would serve as long term benefit to the community.</i>
<b>Technical</b>	<i>Based on feasibility studies done on other waterways in the township, this is technically feasible.</i>
<b>Political</b>	<i>Support has been dedicated by Congressman, Senates along with local government</i>
<b>Legal</b>	<i>Where the detention pond would be created is county owned property</i>
<b>Environmental</b>	<i>The detention pond would create an environment that would benefit wildlife, plants and the natural resources and promote growth.</i>
<b>Social</b>	<i>No negative social impact. Will improve the neighborhood without relocating anyone and will improve traffic flow in the area and will benefit the park landscaping.</i>
<b>Administrative capability</b>	<i>The county will maintain this area</i>
<b>Local champion</b>	<i>The residents that live along the length of Whalepond Brook including the residents of Branch Rd where there are some tributaries, three boarding towns are strong supporters as well as the governing body and motorists. Another big supporter is the Emergency Services who are the ones that come out to evacuate the residents from their homes to a shelter due to the rising waters.</i>
<b>Other community objectives</b>	<i>No other objectives with this project</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Town officials from Ocean, West Long Branch and Eatontown, OT Township Manager, DPW, Engineer, county officials, State DEP, NOAA, Whalepond Watershed Association and OEM</i>
<b>Responsible party</b>	<i>county officials, OT Township Manager, DPW and Engineer</i>
<b>Potential funding sources</b>	<i>Federal, state, county grants with some local funds</i>
<b>Time line</b>	<i>2016</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried over - Several meetings were already done and all parties concerned are in favor of doing something to help the different communities involved. A feasiblilty study with a design concept would be the next step</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Ocean Township</i>
<b>Community action number</b>	<i>Project #6 - Generators for Critical Facilities</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
<b>Risk finding</b>	<i>locations used in major storm events for sheltering and reception centers do not have emergency generators for power</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>emergency generators</i>
<b>Action type</b>	<i>acquisition of emergency generators for critical facilities</i>
<b>Action description</b>	<i>placement of two emergency generators; one at the Ocean Twp High School and the other at the Ocean Twp Recreation/Senior Center which are used as emergency shelters during severe weather events.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>prevent injury and loss of life by providing a location that first responders and public can go to for shelter during severe weather events</i>
<b>Cost estimate</b>	<i>150,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Based on the age and the admitted needed upgrades by JCP&amp;L of the electrical grids within Ocean Twp and the amount of trees near the power lines, the chance during severe weather events have increased and the chance of opening a shelter is now greater.</i>
<b>Technical</b>	<i>Technically feasible; Yes</i>
<b>Political</b>	<i>Political actions present in support of effort</i>
<b>Legal</b>	<i>No legal issues; agreements in place for building use.</i>
<b>Environmental</b>	<i>none anticipated; generators would be natural gas units; locations of generators would not impact area</i>
<b>Social</b>	<i>no social impact; locations of generators would not impact area</i>
<b>Administrative capability</b>	<i>Engineering</i>
<b>Local champion</b>	<i>Township Manager, OEM, School administrators, Board of Education and staff</i>
<b>Other community objectives</b>	<i>No other objectives with this project</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>

<b>Community action number</b>	<i>Project #8 - Colonial Terrace Regional Basin Project</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, sedimentation, nutrient loading, Hurricane, tropical storm, nor'easter, winter storm, storm surge, tsunami</i>
<b>Risk finding</b>	<i>Flooding, culvert sedimentation and lake infilling reduce the storm attenuation capacity of the Colonial Terrace Arm of Deal Lake (west of Wickapecko Ave)</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Resource Protection and Structural Project</i>
<b>Action type</b>	<i>Engineering design and implementation of plan</i>
<b>Action description</b>	<i>Redesign and construction of existing weir to increase storm attenuation capacity of the Colonial Terrace Arm of Deal Lake (west of Wickapecko Ave)</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This project's primary benefit is to prevent flood related damages to properties and infrastructure and decrease pollutant load to Deal Lake. Very effective</i>
<b>Cost estimate</b>	<i>\$220,000 inclusive of design, permitting, and site restoration</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Cost of project is far out-weighed by cost of repetitive incurred damages and future impacts</i>
<b>Technical</b>	<i>Mitigation action highly technically feasible</i>
<b>Political</b>	<i>There is both political support and political will to support project</i>
<b>Legal</b>	<i>Yes but will require NJDEP permits to implement</i>
<b>Environmental</b>	<i>The project will benefit the environment. Permits will be needed from the NJDEP and Freehold District SCD</i>
<b>Social</b>	<i>The project has no negative social consequences</i>
<b>Administrative capability</b>	<i>Outside help will be needed to implement the project. Maintenance could be conducted by the Township or by others under contract to the Township</i>
<b>Local champion</b>	<i>Deal Lake Commission</i>
<b>Other community objectives</b>	<i>Consistent with past efforts of the Township and Deal Lake Commission to restore the lake and improve conditions of this section of the lake and the Sunset Landing section of the lake</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Local officials, County and State agencies</i>
<b>Responsible party</b>	<i>Township Manager, DPW, NJDEP, Deal Lake Commission and Engineer</i>
<b>Potential funding sources</b>	<i>NFWF grant application for planning/design submitted by DLC, may be possible to secure 319 grant for implementation. DLC has paid for past maintenance of existing area with NJDEP 319 grant money and local funds</i>
<b>Time line</b>	<i>Fall 2015</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action although Ocean Township and DLC have conducted maintenance dredging of this arm and has attempted to obtain funding in past to implement proposed action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Ocean Township</i>
Community action number	<i>Project #9 - Harvey Brook Project</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
Risk finding	<i>Flood related damages to properties and infrastructure (including Monmouth Road) that abut Harvey Brook (flooding, stream bank erosion and infilling, culvert sedimentation and lake infilling)</i>
<b>Describing the Action</b>	
Action category	<i>Natural Resource Protection and Structural Project</i>
Action type	<i>Engineering design and implementation of plan</i>
Action description	<i>Multi-phase project involving the construction of a regional wetland, flood attenuation basins and stabilization of stream bank</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This project's primary benefit is to prevent flood related damages to properties and infrastructure (including Monmouth Road) that abut Harvey Brook. Very effective</i>
Cost estimate	<i>\$1,500,000 to \$2,250,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Chronic documented losses and impacts. Proposed action with correct these problems. Cost of project is far out-weighted by cost of repetitive incurred damages and future impacts</i>
Technical	<i>Mitigation action highly technically feasible</i>
Political	<i>There is both political support and political will to support project</i>
Legal	<i>Yes but will require NJDEP permits to implement</i>
Environmental	<i>The project will benefit the environment. Permits will be needed form the NJDEP and Freehold District SCD</i>
Social	<i>The project has no negative social consequences</i>
Administrative capability	<i>Outside help will be needed to implement the project. Maintenance of the wetland basis could be conducted by the Township or by others under contract to the Township</i>
Local champion	<i>Deal Lake Commission</i>
Other community objectives	<i>Consistent with past efforts of the Township and Deal Lake Commission to restore the lake and Harvey Brook as well as past flood control efforts of Deal Lake Golf Club</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Local officials, County and State agencies</i>
Responsible party	<i>Township Manager, DPW, NJDEP, Deal Lake Commission and Engineer</i>
Potential funding sources	<i>NFWF grant application for planning/design submitted by DLC, may be possible to secure 319 grant for implementation</i>
Time line	<i>Summer 2016</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action although DLC has attempted to obtain funding in past to implement</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Ocean Township</i>
<b>Community action number</b>	<i>Project #10 - Fireman Pond Project</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
<b>Risk finding</b>	<i>Flood attenuation is need to reduce flood related damages to properties and infrastructure adjacent to Grassmere Ave and Monmouth Road (flooding, stream bank erosion and infilling, culvert sedimentation and lake infilling)</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Resource Protection and Structural Project</i>
<b>Action type</b>	<i>Engineering design and implementation of plan</i>
<b>Action description</b>	<i>Retrofit of existing weir so pond can function as a regional flood attenuation basin. Install MTD in road to control pollutant loading to lake</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This project's primary benefit is to prevent flood related damages to properties and infrastructure adjacent to Grassmere Ave and Monmouth Road. Very effective</i>
<b>Cost estimate</b>	<i>\$270,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Chronic documented losses and impacts. Proposed action with correct these problems. Cost of project is far out-weighed by cost of repetitive incurred damages and future impacts</i>
<b>Technical</b>	<i>Mitigation action highly technically feasible</i>
<b>Political</b>	<i>There is both political support and political will to support project</i>
<b>Legal</b>	<i>Yes but will require NJDEP permits to implement</i>
<b>Environmental</b>	<i>The project will benefit the environment. Permits will be needed from the NJDEP and Freehold District SCD</i>
<b>Social</b>	<i>The project has no negative social consequences</i>
<b>Administrative capability</b>	<i>Outside help will be needed to implement the project. Maintenance of the retrofitted Fireman Pond could be conducted by the Township or by others under contract to the Township</i>
<b>Local champion</b>	<i>Deal Lake Commission</i>
<b>Other community objectives</b>	<i>Consistent with past efforts of the Township and Deal Lake Commission</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Local officials, County and State agencies</i>
<b>Responsible party</b>	<i>Township Manager, DPW, NJDEP, Deal Lake Commission and Engineer</i>
<b>Potential funding sources</b>	<i>NFWF grant application for planning/design submitted by DLC, may be possible to secure 319 grant for implementation</i>
<b>Time line</b>	<i>Summer 2016</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action although DLC has attempted to obtain funding in past to implement</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Ocean Township</i>
Community action number	<i>Project #11 - Lollipop Pond Project</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
Risk finding	<i>Flood attenuation is needed to reduce related damages to properties and infrastructure located between Chestnut Ave and Wickapecko Ave. Sediment and particulate pollutant loading to Deal Lake. Flooding, culvert sedimentation, pollutant load reduction and lake</i>
<b>Describing the Action</b>	
Action category	<i>Natural Resource Protection and Structural Project</i>
Action type	<i>Engineering design and implementation of plan</i>
Action description	<i>Replace existing weir, dredge and reconfigure existing impoundment west of Chestnut Ave, construct regional, created wetland, flood attenuation basin</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Prevent flood related damages to properties and infrastructure located between Chestnut Ave and Wickapecko Ave. Decrease sediment and particulate pollutant loading to Deal Lake. Very effective</i>
Cost estimate	<i>\$400,000 inclusive of engineering, final design, permitting and construction</i>
Cost effectiveness (i.e., benefit/cost)	<i>Provide actual flood control for this central arm of the lake, further facilitate sediment retention thereby preventing blockage of downstream infrastructure and infilling of lake</i>
Technical	<i>Mitigation action highly technically feasible</i>
Political	<i>Political support and political exists for project. DLC and Ocean Township has already conducted organic debris removal from impoundment to improve retention capacity of impoundment and Ocean has repaired faulty, leaking weir</i>
Legal	<i>Yes but will require NJDEP permits to implement</i>
Environmental	<i>Benefits environment/lake. NJDEP and Freehold District SCD permits needed</i>
Social	<i>The project has no negative social consequences</i>
Administrative capability	<i>Outside help needed to implement project. Maintenance of the wetland basin could be conducted by Township or contractors working for Township</i>
Local champion	<i>Deal Lake Commission</i>
Other community objectives	<i>Consistent with past efforts of the Township and DLC to improve conditions of Lollipop Arm of lake arm which receives majority of inflow from highly developed properties located along Rte 35, most without adequate on-site stormwater management</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Local officials, County and State agencies</i>
Responsible party	<i>Township Manager, DPW, NJDEP, Deal Lake Commission and Engineer</i>
Potential funding sources	<i>NFWF grant application for planning/design submitted by DLC, may be possible to secure 319 grant for implementation</i>
Time line	<i>Summer 2015</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action although DLC has attempted to obtain funding in past to implement</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Ocean Township</i>
<b>Community action number</b>	<i>Project #12 - Enlarge Culverts Poplar Brook</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
<b>Risk finding</b>	<i>Above normal rainfall causes flooding on roadways and onto private property partially due to restrictions with the culverts under the two roadways and 1 rain crossing that lead into Deal Borough.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Infrastructure Improvements</i>
<b>Action type</b>	<i>Enlarge Culverts under roadways and train crossing - Poplar Brook</i>
<b>Action description</b>	<i>An area needs to be created large enough to hold flood waters during and after a storm and to be release at a pace where it will not effect anything.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Prevention of injuries. Flooding presents a hazard for the public and to emergency responders who have to enter to render aid. Protection of Property: Reduce water damage to public and private lands as well as vehicles.</i>
<b>Cost estimate</b>	<i>\$2-4 million</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Property and infrastructure damage reductions as well as lowering traffic and public safety hazards would serve as long term benefit to the community.</i>
<b>Technical</b>	<i>Technically feasible; Yes</i>
<b>Political</b>	<i>Support has been dedicated by Congressman, Senates along with local government</i>
<b>Legal</b>	<i>locations under consideration will not present legal issues</i>
<b>Environmental</b>	<i>locations under consideration will not present environmental issues</i>
<b>Social</b>	<i>No negative social impact. Will improve the neighborhood without relocating anyone and will improve traffic flow in the area landscaping.</i>
<b>Administrative capability</b>	<i>The township will maintain this area</i>
<b>Local champion</b>	<i>The residents that live along the length of Poplar Brook are strong supporters as well as the governing body and motorists. Another big supporter is the Emergency Services who are the ones that come out to evacuate the residents from their homes to a shelter due to the rising waters.</i>
<b>Other community objectives</b>	<i>No other objectives with this project</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Medium</i>
<b>Local planning mechanism</b>	<i>Township Manager, DPW, Engineer, State DEP, NJ Transit, County Roads/Bridge Depts. and OEM</i>
<b>Responsible party</b>	<i>Township Manager, DPW, County Roads/Bridge Depts. and Engineer</i>
<b>Potential funding sources</b>	<i>Federal, state, county grants with some local funds</i>
<b>Time line</b>	<i>2018</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward from the last version of the plan. Barriers due to funding. Township has held meeting to explore potential grant options. Study monies may be needed as well.</i>

## Action Worksheet

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Ocean Township</i>
Community action number	<i>Project #13 - Detention Pong Poplar Brook</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge, tsunami</i>
Risk finding	<i>Above normal rainfall causes flooding on roadways and onto private property partially due to restrictions with the drainage pipes at the NJ Transit train tracks that lead into Deal Borough and insufficient size of culverts under roadways.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>create an detention pond</i>
Action description	<i>An area needs to be created large enough to hold flood waters during and after a storm and to be release at a pace where it will not effect anything.</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Prevention of injuries. Flooding presents a hazard for the public and to emergency responders who have to enter to render aid. Protection of Property: Reduce water damage to public and private lands as well as vehicles.</i>
Cost estimate	<i>5,000,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>Property and infrastructure damage reductions as well as lowing traffic and public safety hazards would serve as long term benefit to the community.</i>
Technical	<i>Feasibility studies and plans were already created by the Army Corp of Engineers stating that this is a technically feasible</i>
Political	<i>Support has been dedicated by Congressman, Senates along with local government</i>
Legal	<i>Where the detention pond would be created is township owned property</i>
Environmental	<i>The detention pond would create an environment that would benefit wildlife, plants and the natural resources and promote growth.</i>
Social	<i>No negative social impact. Will improve the neighborhood without relocating anyone and will improve traffic flow in the area and will benefit the park landscaping.</i>
Administrative capability	<i>The township will maintain this area</i>
Local champion	<i>The residents that live along the length of Poplar Brook are strong supporters as well as the governing body and motorists. Another big supporter is the Emergency Services who are the ones that come out to evacuate the residents from their homes to a shelter due to the rising waters</i>
Other community objectives	<i>No other objectives with this project</i>
<b>Implementing the Action</b>	
Priority	<i>Low</i>
Local planning mechanism	<i>Township Manager, DPW, Engineer, State DEP and OEM</i>
Responsible party	<i>Township Manager, DPW and Engineer</i>
Potential funding sources	<i>Federal, state, county grants with some local funds</i>
Time line	<i>2018</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward from the last version of the plan. Barriers are due to funding and permitting issues to perform studies. Looking for funding and assistance to perform studies</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Ocean Township</i>
<b>Community action number</b>	<i>Project #14 - Flooh Wall along Brooksihe Ave Properties</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Hurricane, tropical storm, nor'easter, winter storm, flood, storm surge</i>
<b>Risk finding</b>	<i>Poplar Brook floods up to 43 homes along Brookside Ave and the road itself (an evacuation route), located within the 10 year flood zone and are susceptible to flooding. The flooding is due either to a storm event, high tide or combination of both. Since the existing outfall of the brook is only into the Atlantic Ocean, as high tides comes in, the water elevation continuously backs up into the system seeking it's own level, thereby flooding streets, low lying areas, into the living areas of several homes on Brookside Ave. The floodprone homes include 1 on the Severe Repetitive List (SRL), 3 on the Repetitive Flood Claims (RFC) list, and most of the others have submitted at least two insurance claims to their insurance companies, NFIP or FEMA. We would also be protecting the evacuation route (county road) for the coastal communities driving through Ocean.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Construct a flood wall</i>
<b>Action description</b>	<i>Presently looking to build a flood wall along the rear properties of the houses on Brookside Ave in the banks of Poplar Brook</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>prevent a loss of property and life by the wall and having the families relocate to a house outside of the flood plain and to maintain the evacuation route for Ocean and coastal communities. Losses avoided are estimated to be on the order of \$2,153,951.</i>
<b>Cost estimate</b>	<i>up to \$1,882,772</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits on the order of \$2,153,95 as compared to costs of only \$1,882,772. Out of the homes that will be saved from flooding, 1 is on the Severe Repetitive List (SRL), 3 are on the Repetitive Flood Claims (RFC) and most of the others have submitted at least two insurance claims to their insurance companies, NFIP or FEMA. We would also be protecting the evacuation route (county road) for the coastal communities driving through Ocean.</i>
<b>Technical</b>	<i>Technically feasible; Yes</i>
<b>Political</b>	<i>Political actions present in support of effort</i>
<b>Legal</b>	<i>No legal issues</i>
<b>Environmental</b>	<i>none anticipated; generators would be natural gas units; locations of generators has already been established and the size will be uparaded.</i>
<b>Social</b>	<i>no social impact; locations of generators would not impact area</i>
<b>Administrative capability</b>	<i>Engineering</i>
<b>Local champion</b>	<i>Township Manager, OEM, DPW, Police, elected officials</i>
<b>Other community objectives</b>	<i>Out of the homes that will be saved from flooding, 1 is on the Severe Repetitive List (SRL), 3 are on the Repetitive Flood Claims (RFC) and most of the others have submitted at least two insurance claims to their insurance companies, NFIP or FEMA. We would also be protecting the evacuation route (county road) for the coastal communities driving through Ocean.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Township Manager, DPW, Engineer and OEM</i>
<b>Responsible party</b>	<i>Township Manager, Police, DPW, Green Acres, County Open Space office and Engineer</i>
<b>Potential funding sources</b>	<i>Federal, state, county grants with some local funds</i>
<b>Time line</b>	<i>2016</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action - Meetings already took place with county and state agencies to discuss the issue and possible outcome. Also funding is being attempted through PDM Mitigation grants.</i>

<b>Action Worksheet</b>

## Action Worksheet

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Oceanport</i>
Community action number	<i>#1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>durricane and tropical storm, nor'easters, flooding, storm surge, wave action</i>
Risk finding	<i>Due to its location on a peninsula Oceanport is highly susceptible to storm surge. Oceanport was severely impacted during Hurricanes Irene and Sandy. Most of Oceanport lies within mapped storm surge hazard areas. Flooding is primarily from Parkers Creek, Oceanport Creek, Blackberry Creek, and Branchport Creek (Shrewsbury River tributaries). Most of the Borough was flooded during Hurricane Sandy. More than half (1,200) of the borough's 2,100 households had some sort of damage; about 800 of those homes were damaged due to flooding. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Structural project</i>
Action type	<i>elevations</i>
Action description	<i>elevations of 188 residential homes that had been flooded or are in danger of being flooded</i>
Existing, future &/or NA	<i>Protection of existing homes</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action will prevent future loss of residential property during flooding events . Losses avoided per property are expected to be at least equal to per property elevation costs.</i>
Cost estimate	<i>Under \$49 million</i>
Cost effectiveness (i.e., benefit/cost)	<i>Based on future predictions of water rise, severe weather events, the savings over time will be substantial and we estimate that home elevations will be cost effective, with per property benefits at least equal to per property costs.</i>
Technical	<i>Technically feasible; Yes</i>
Political	<i>Political actions present in support of effort</i>
Legal	<i>legal issues may be present for individuals homes, which should be addressed prior to start</i>
Environmental	<i>issues would be addressed in plan review prior to approval</i>
Social	<i>social impact would be a better or improved living condition</i>
Administrative capability	<i>Project management would be needed</i>
Local champion	<i>Council and OEM</i>
Other community objectives	<i>Flood plain management</i>
<b>Implementing the Action</b>	
Priority	<i>Priority 1 High</i>
Local planning mechanism	<i>Committee consisting of FEMA, State, Local officials</i>
Responsible party	<i>Council</i>
Potential funding sources	<i>FEMA funding, Grants, bond, mitigation funds</i>
Time line	<i>witin the year of 2016(Letter of Intent submitted in 2/2013, marked Eligible, but not funded, actively being worked on by private cictizens to rise own homes, should be in place within the year or early next year 2015)</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Oceanport</i>
Community action number	<i>#2 (#2 is phase 1; #3 is phase 2)</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>hurricane and tropical storm, nor'easters, flooding, storm surge, wave action</i>
Risk finding	<i>Borough Hall is in an area susceptible to storm surge and was wiped out during Hurricane Sandy. Meetings of the Mayor and Council and Planning Board are still being held at an alternate location. Due to its location on a peninsula Oceanport is highly susceptible to storm surge. Oceanport was severely impacted during Hurricanes Irene and Sandy. Most of Oceanport lies within mapped storm surge hazard areas. Flooding is primarily from Parkers Creek, Oceanport Creek, Blackberry Creek, and Branchport Creek (Shrewsbury River tributaries). Most of the Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure Projects</i>
Action type	<i>Removal of critical facilities from flood hazard areas.</i>
Action description	<i><b>RELOCATE BOROUGH HALL PHASE 1 - ACQUIRE LAND FOR THE NEW BUILDING.</b> Boro Hall (consisting of staff offices, library, PD. Council hall) is located in a flood hazard area and was wiped out by Hurricane Sandy. This project will be to construct a new boro hall building on a site located outside of the floodplain, demolish the existing now-abandoned building, and return the lands to open space. Phase 1 of the project is to acquire the land for the new building. Phase 2 of the project is to construct the new building. The Borough is presently looking at 5 property locations for potential new site of building</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action will prevent future loss of property and allow for continued government operations without having to relocate to another location during flooding events. Present Boro Hall is being abandoned due to Sandy damage. Cost estimates place it over the 50% figure for repair/renovation. Future loss of a structure would be avoided which would be estimated on the order of \$4-5 Plus Mil.</i>
Cost estimate	<i>Costs are estimated to be on the order of under \$1 Mil or less, depending on the location selected (i.e., very low costs if land swap).</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of \$4-5 Plus Mil and costs on the order of under \$1 Mil or less</i>
Technical	<i>Technically feasible</i>
Political	<i>Political actions present in support of effort and actively looking for property; public support is not an issue at this time, building soon to be condemned.</i>
Legal	<i>No legal issues</i>
Environmental	<i>locations under consideration will not present environmental issues</i>
Social	<i>no social impact; 4 properties under consideration are vacant land. One property a shopping plaza that would be converted. New shopping plaza being constructed next door.</i>
Administrative capability	<i>Yes, present staff could handle acquisition</i>
Local champion	<i>Council and OEM</i>
Other community objectives	<i>support a Capital Improvement #2, possible economic development if plaza obtained</i>
<b>Implementing the Action</b>	
Priority	<i>Priority 2 High Phase 1</i>
Local planning mechanism	<i>Committee consisting of FEMA, State, Local officials</i>
Responsible party	<i>Council</i>
Potential funding sources	<i>FEMA, Grants, bond, mitigation funds</i>
Time line	<i>within the year of 2014</i>
<b>Reporting on Progress</b>	
Action progress status	<i>carried from last version (Priority 1 High-Phase 1), actively being worked on, should be in place within the year or sooner</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Oceanport</i>
Community action number	<i>#3 (#2 is phase 1; #3 is phase 2)</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>hurricane and tropical storm, nor'easters, flooding, storm surge, wave action</i>
Risk finding	<i>Borough Hall is in an area susceptible to storm surge and was wiped out during Hurricane Sandy. Meetings of the Mayor and Council and Planning Board are still being held at an alternate location. Due to its location on a peninsula Oceanport is highly susceptible to storm surge. Oceanport was severely impacted during Hurricanes Irene and Sandy. Most of Oceanport lies within mapped storm surge hazard areas. Flooding is primarily from Parkers Creek, Oceanport Creek, Blackberry Creek, and Branchport Creek (Shrewsbury River tributaries). Most of the Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure Projects</i>
Action type	<i>Removal of critical facilities from flood hazard areas</i>
Action description	<i><b>RELOCATE BOROUGH HALL PHASE 2 - CONSTRUCT THE NEW BUILDING.</b> Boro Hall (consisting of staff offices, library, PD, Council hall) is located in a flood hazard area and was wiped out by Hurricane Sandy. This project will be to construct a new boro hall building on a site located outside of the floodplain, demolish the existing now-abandoned building, and return the lands to open space or sell the property to cover expense with the new building. Phase 1 of the project is to acquire the land for the new building. Phase 2 of the project is to construct the new building.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action will prevent future loss of property and allow for continued government operations without having to relocate to another location during flooding events. Present Boro Hall is being abandoned due to Sandy damage. Cost estimates place it over the 50% figure for repair/renovation. Losses avoided are estimated to be on the order of \$5 Plus Mil. There are also unquantifiable benefits associated with continuity of operations and associated life safety benefits. Continuity of government operations will be uninterrupted and employees will not encounter hazardous work conditions in a new location.</i>
Cost estimate	<i>Under \$5-6million, depending on all factors</i>
Cost effectiveness (i.e., benefit/cost)	<i>Quantifiable benefits are expected to be roughly equal to - though potentially, slightly less than - project costs (quantifiable benefits on the order of more than \$5 million and cost estimates on the order of under \$5 to \$6 million, depending on all factors). This project is still estimated to be cost effective, however, because actual benefits will consist of more than \$5 million quantifiable benefits plus some unquantifiable amount associated with continuity of operations and associated life safety benefits.</i>
Technical	<i>Technically feasible; Yes</i>
Political	<i>Political actions present in support of effort and actively looking for property; public support is not an issue at this time, building soon to be condemned.</i>
Legal	<i>No legal issues</i>
Environmental	<i>locations under consideration will not present environmental issues; building would meet present standards</i>
Social	<i>no social impact; 4 properties under consideration are vacant land. One property a shopping plaza that would be converted. New shopping plaza being constructed next door.</i>
Administrative capability	<i>Project management would be needed</i>
Local champion	<i>Council and OEM</i>
Other community objectives	<i>support of land acquisition Project #1, possible economic development if plaza obtained</i>
<b>Implementing the Action</b>	
Priority	<i>Priority 2 High Phase 2</i>
Local planning mechanism	<i>Committee consisting of FEMA, State, Local officials</i>
Responsible party	<i>Council</i>
Potential funding sources	<i>FEMA funding, Grants, bond, mitigation funds</i>
Time line	<i>within the year of 2016</i>
<b>Reporting on Progress</b>	
Action progress status	<i>carried from last version (Priority 1 High-Phase 2), actively being worked on, should be in place within the year or early next year 2015</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Oceanport</i>
<b>Community action number</b>	<i>#4</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All</i>
<b>Risk finding</b>	<i>Locations used in major storm events for police operations, public works and/or sheltering do not have emergency generators for power. By the year 2040, it is projected to have a population increase of 35.9% over 2010 values -one of the highest rates in the county. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Protect critical facilities</i>
<b>Action type</b>	<i>aquisition of emergency genartors for critcical facilities</i>
<b>Action description</b>	<i>placement of two emergency generators at both schools in Borough used to supported emergency operations during severe weather events</i>
<b>Existing, future &amp;/or NA</b>	<i>NA</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>prevent injuries and loss of life by providing a location that first repsonders and public can go to for shelter during severe weather events. Based on future projections of increased water levels, increase in severe storm events, the preserving of life is priceless</i>
<b>Cost estimate</b>	<i>\$450,000 for both units (assuming a 20 year useful life, this is about \$22,500 per year)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be well in excess of project costs.</i>
<b>Technical</b>	<i>Technically feasible; Yes</i>
<b>Political</b>	<i>Political actions present in support of effort</i>
<b>Legal</b>	<i>No legal issues; agreements in place for building use.</i>
<b>Environmental</b>	<i>none anticipated; generators would be natural gas units;locations of generators and schools would not impact area</i>
<b>Social</b>	<i>no social impact; locations of generators and schools would not impact area</i>
<b>Administrative capability</b>	<i>Engineering</i>
<b>Local champion</b>	<i>Council and OEM; School Board</i>
<b>Other community objectives</b>	<i>Emergency operations plan; shelter</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Priority 2 Medium</i>
<b>Local planning mechanism</b>	<i>Local officials</i>
<b>Responsible party</b>	<i>Council, BOE and Enginnering</i>
<b>Potential funding sources</b>	<i>FEMA funding, Grants, bond, mitigation funds</i>
<b>Time line</b>	<i>witin the year of 2016</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action added since the last version of the plan. This was two Letters of Intent submitted in Feb 2013, marked as eligible, not funded; if funding in place within the year or early next year 2015</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Oceanport</i>
Community action number	<i>#5 (#5 is phase 1; #6 is phase 2)</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding from various weather events(Hurricane and tropical storms, nor'easter, storm surge, flood)</i>
Risk finding	<i>Stormwater infrastructure (particularly in the Port-au-Peck section) does not allow for efficient and effective drainage and flooding occurs.</i>
<b>Describing the Action</b>	
Action category	<i>Structure and Infrastructure Projects</i>
Action type	<i>Stormwater Drainage System Improvements</i>
Action description	<i><b>PHASE 1 of 2.</b> Phase 1 = Examination of present system to determine improvements needed. Video and actual physical examination of system to seek out problems and needed improvements. Phase 2= repairs and improvements to storm drain system to include backflow preventers on 44 outfalls .</i>
Existing, future &/or NA	<i>existing and future development</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Improvement to system will reduce roadway repairs and potential damage to property. Losses avoided are estimated to be roughly on the order of \$2 Mil per year. There are unquantifiable benefits associated with reduced emergency traffic control measurers, Police OT cost related to traffic control, normal traffic routes uninterrupted, reduced motor vehicle losses from water damage and associated life safety benefits.</i>
Cost estimate	<i>Phase 1 = \$150,000; Phase 2 = TBD based in examination in phase 1; back flow</i>
Cost effectiveness (i.e., benefit/cost)	<i>improvement to system will reduce roadway repairs and potential damage to propertyThis project is likely to be cost effective, with benefits of roughly \$2 Mil and costs of only \$1.1 Mi. Additional unqualifiable benefits as previously mentioned above.</i>
Technical	<i>Technically feasible; Yes</i>
Political	<i>Political actions presently in support of effort</i>
Legal	<i>No legal issues</i>
Environmental	<i>locations under consideration will not present environmental issues</i>
Social	<i>no social impact, would actually improve the community.</i>

Your community name	<i>Borough of Oceanport</i>
Community action number	<i>#7</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding from various weather events(Hurricane and tropical storms, nor'easter, storm surge, flood)</i>
Risk finding	<i>Debris/sediment accumulation on Turtle Mill Brook is believed to be impeding flood flows and causing flooding of roadways and adjacent properties</i>
<b>Describing the Action</b>	
Action category	<i>Natural Systems Protection</i>
Action type	<i>Protect and restore natural flood mitigation features</i>
Action description	<i>remove snagging and debris from floodway of Turtle Mill Brook</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>This action will prevent future loss of property from flooding and keep roadways clear of flood waters. Losses avoided by the project are estimated to be \$2.5 Mil</i>
Cost estimate	<i>Under \$1 million</i>
Cost effectiveness (i.e., benefit/cost)	<i>Yes, this project is likely to be cost effective with estimated benefits of\$2.5 Mil as compared to costs of under \$1 million( if this is jointly done with County DPW under a program presently being operated)</i>
Technical	<i>Technically feasible; Yes</i>
Political	<i>Political actions present in support of effort</i>
Legal	<i>No legal issues; since stream is a natural border with adjoining town, might have to discuss impacts</i>
Environmental	<i>there are areas that will needed to be examined along the stream, but no major issues to be dealt with</i>
Social	<i>no social impact, most of this area is surrounded by commercial property and a few homes. A lot of vacant land borders the stream.</i>
Administrative capability	<i>Project management would be needed</i>
Local champion	<i>Engineering</i>
Other community objectives	<i>storm drain improvements</i>
<b>Implementing the Action</b>	
Priority	<i>Priority 4 Medium</i>
Local planning mechanism	<i>Local officials and County DPW; adjoining town on border with stream</i>
Responsible party	<i>Engineering</i>
Potential funding sources	<i>FEMA funding, Grants, bond, mitigation funds</i>
Time line	<i>witin the year of 2016</i>
<b>Reporting on Progress</b>	
Action progress status	<i>carried from last verison, discussions needed to be started with County</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Oceanport</i>
Community action number	<i>#8</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding from various weather events(Hurricane and tropical storms, nor'easter, storm surge, flood)</i>
Risk finding	<i>Roadway flooding occurs in certain areas due to issues with grading, roadway elevations themselves, and lack of backflow prevention .</i>
<b>Describing the Action</b>	
Action category	<i>Structure and infrastructure projects</i>
Action type	<i>Protect infrastructure</i>
Action description	<i>elevation of roadways, grading/curbing of flood prone streets</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Improvement to system will reduce roadway repairs and potential damage to property. Losses avoided are estimated to be roughly on the order of \$3 million per year. Plus unquantifiable benefits associated traffic control and life safety benefits. Benefits found in Traffic rerouting measures ended, Police OT for traffic control, vehicle losses associated to water damage and safer access to area.</i>
Cost estimate	<i>Costs are estimated to be on the order of between \$1 million and \$3 million</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of \$3 Mil per year (plus unquantifiable benefits associated traffic control and life safetyas previously mentioned aboveand) and costs only on the order of between \$1 Mil and \$3 Mil.</i>
Technical	<i>Technically feasible; Yes</i>
Political	<i>Political actions presently in support of effort</i>
Legal	<i>No legal issues</i>
Environmental	<i>locations under consideration will not present environmental issues</i>
Social	<i>no social impact, would actually improve the community.</i>
Administrative capability	<i>Project management would be needed</i>
Local champion	<i>Council and Engineering</i>
Other community objectives	<i>floodplain management</i>
<b>Implementing the Action</b>	
Priority	<i>Priority 5 Low</i>
Local planning mechanism	<i>Committee consisting Local officials and engineering</i>
Responsible party	<i>Engineering</i>
Potential funding sources	<i>FEMA funding, Grants, bond, mitigation funds, State transportation fund</i>
Time line	<i>witin the year of 2016</i>
<b>Reporting on Progress</b>	
Action progress status	<i>carried over from last verison, improvements to infrastructure still needed.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Oceanport</i>
Community action number	<i>#2</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Tidal Flooding from various weather events(Hurricane and tropical storms, nor'easter, storm surge, flood)</i>
Risk finding	<i>Flooding occurs during extreme high tides; storm surge, covering property and roadways</i>
<b>Describing the Action</b>	
Action category	<i>Structure/ infrastructure projects</i>
Action type	<i>Protection of residential property and infrastructure</i>
Action description	<i>Physical barrier with a movable flood gate</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>placement of a physical barrier with a moveable flood gate at the mouth of the Shrewsbury River would benefit 10 municipalities that border the river, saving \$1.8 billion dollars of flood impacted property in residential, commercial and governmental facilities; this figure does not include vehicles and boats; numerous lives. These ten towns reflect 4.69% of the total flood insurance coverage in NJ.</i>
Cost estimate	<i>\$500 million</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective or break even based on the value of property in 10 towns to the one time cost to develop a barrier.</i>
Technical	<i>Technically feasible; Yes</i>
Political	<i>Political actions would need to be brought into play from several fronts</i>
Legal	<i>legal issues could be present as to jurisdictional oversight</i>
Environmental	<i>locations under consideration will need environmental review</i>
Social	<i>no social impact, would actually improve the community.</i>
Administrative capability	<i>Project management would be needed</i>
Local champion	<i>Council/Public and Engineering</i>
Other community objectives	<i>floodplain management with the towns of Sea Brigdt, Monmouth Beach, Long Branch, Little Silver, Fair Haven, Rumson, Red Bank, Highlands, Middletown, all in Monmouth County</i>
<b>Implementing the Action</b>	
Priority	<i>Priority 3</i>
Local planning mechanism	<i>Committee consisting Federal/ State/ County/Local officials and engineering</i>
Responsible party	<i>Engineering</i>
Potential funding sources	<i>FEMA funding, Grants, bond, mitigation funds, State transportation fund</i>
Time line	<i>within the year of 2020</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New proposal</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Oceanport</i>
Community action number	<i>#10</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Improved access to Shrewsbury River at Blackberry Bay Park Boat ramp for emergency rescue craft from various agencies</i>
Risk finding	<i>Reduced access to Shrewsbury River from ramp at Blackberry Bay Park due to repetitive storm damage over years; condition is causing damage to watercraft</i>
<b>Describing the Action</b>	
Action category	<i>Critical Facility-Structure/ infrastructure projects</i>
Action type	<i>Access to river for lifesaving operations</i>
Action description	<i>Launching of watercraft from ramp providing access to river</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The ramp would provide improved lifesaving operations by various agencies to include Coast Guard, NJ State Police and local first responders year around. At present, there are deficiencies with the ramp and bulkhead construction is presently causing damage to the watercraft. This area is also access for ice boat rescue in winter months</i>
Cost estimate	<i>\$525,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project has a large life safety component as well as the high value of boats using the river during the summer season. Estimate breakeven or high return.</i>
Technical	<i>Technically feasible; Yes</i>
Political	<i>Town is behind project</i>
Legal	<i>No Legal issues</i>
Environmental	<i>This is a replacement of a present structure; no issues</i>
Social	<i>no social impact, would actually improve the community.</i>
Administrative capability	<i>Project management would be needed</i>
Local champion	<i>Council/Public and Engineering; First Response Agencies</i>
Other community objectives	<i>While improving emergency access for first responders, it will also improve recreational boating access to river</i>
<b>Implementing the Action</b>	
Priority	<i>Priority 2</i>
Local planning mechanism	<i>Committee consisting Local officials and engineering</i>
Responsible party	<i>Engineering</i>
Potential funding sources	<i>FEMA funding, Grants, bond, mitigation funds, State transportation fund</i>
Time line	<i>within the year of 2017</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New proposal</i>

<b>Action Worksheet</b>	
Your plan name	Monmouth County Multi-jurisdictional Hazard Mitigation Plan
Your community name	Borough of Red Bank
Community action number	#1
<b>Assessing the Risk</b>	
Hazard(s) addressed	Flooding, storm surge, hurricanes, tropical storms, nor'easters
Risk finding	Several commercial properties, Primary School, residential units including a 90 bed convalescent center, and a Hotel all within the flood zone. Substantial surge will cause imminent damage to all structures in the flood zone unless structures are raised mitigated. During Hurricane Sandy, storm surge flooding was observed along the immediate shoreline of the Navesink and Swimming Rivers. The marina area was heavily impacted. The Red Bank Primary School located on the banks of the Swimming River, was flooded. The flooring was damaged significantly. Students of the primary school were transferred to the middle school, where split sessions were held for middle and primary school students while repairs were being made. The Chapin Hill nursing home and rehabilitation facility is located within the Swimming River floodplain. During Hurricane Sandy, storm surge entered the first floor of the building. The facility was also impacted during Hurricane Irene, when 80 residents were moved to the Salvation Army at Red Bank for temporary shelter. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.
<b>Describing the Action</b>	
Action category	Structure and Infrastructure Projects
Action type	At the discretion of facility owners, mitigation activities that will be explored for at-risk properties include: (a) removal of existing structures from flood hazard areas; (b) elevate or retrofit structures and utilities; and (c) floodproofing (wet floodproofing, dry floodproofing, ringwalls, etc.).
Action description	<b>The Borough does not own these properties or have jurisdiction over them. Our action will be to initiate contact with facility owners and work to educate them on various grant programs that can be used for mitigation, types of mitigation activities that could be applicable for their structures, determine their level of interest, and submit grant applications to FEMA on their behalf as funding streams become available.</b> Hotel, convalescent home, school and office building would be potential candidates for floodproofing (wet or dry floodproofing, ringwalls); elevation or retrofit of utilities; or relocation. Small commercial properties and the apartment complex could also be potential candidates for structure elevation.
Existing, future &/or NA	Existing (No future development planned for flood area. Existing is mostly commercial.)
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	Unable to determine benefits at this time, until owners select measures. Losses avoided as a result of the proposed measures will be highly dependent upon the particular building and the specific measure and level of protection being proposed. Overall, the benefits of protecting these properties are estimated to be very high. Red Bank has a total of 82 policies in force, insuring \$23,764,300 in property. FEMA's NFIP reports a total of \$4,977,758 in paid losses since Red Bank entered the NFIP. About 25% of this is attributable to the Borough's three nonresidential repetitive loss properties (\$1,317,438 in losses; building value of \$7,307,457).
Cost estimate	Unable to determine costs at this time, until owners select measures
Cost effectiveness (i.e., benefit/cost)	In general, losses avoided by projects of this nature are likely to outweigh costs if care is taken to optimize benefits and costs for various measures and levels of protection at each particular facility. It is likely that most floodprone properties could realize benefits in excess of costs for at least some form of mitigation activity.
Technical	Structure elevation not feasible for Hotel, Convalescent home, school, and Office building but is likely to be feasible for small commercial properties and Apartment complex. Wet/dry floodproofing, ringwalls, relocation, and utility elevation/retrofits should also be considered for floodprone properties that are not feasible for elevation depending on the as-to-be-determined preferences of owners and weighing of benefits versus costs. Relocation would be the ideal measure for facilities housing vulnerable populations.
Political	Political attentiveness for residential property. School board is handling their issues with the Primary School and has not partnered with the town. Public Works maintaining drainage and improvements for the same.
Legal	No legal authority.
Environmental	None anticipated.
Social	Would not cause relocation of lower income people in residential area affected
Administrative capability	Outside help would be needed.
Local champion	Commercial property owners.
Other community objectives	Further goals of participating in the National Flood Insurance Program
<b>Implementing the Action</b>	
Priority	High
Local planning mechanism	Mayor and Council
Responsible party	The borough needs to identify the position title of a party responsible for moving forward with this activity
Potential funding sources	Grants
Time line	Indefinite
<b>Reporting on Progress</b>	
Action progress status	New action

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Red Bank</i>
<b>Community action number</b>	<i>#2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All hazards</i>
<b>Risk finding</b>	<i>The Borough lacks a means of notifying residents of impending severe weather in cases where methods of Media broadcasting or other conventional means of warning have been compromised. Red Bank's population is projected to increase by 10.1% by 2040</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Education/Awareness</i>
<b>Action type</b>	<i>communication tower</i>
<b>Action description</b>	<i>New communication tower replacing damaged one located at the Towerhill water plant on Towerhill Dr. Possibility of adding Radio frequency for use with battery transistors.</i>
<b>Existing, future &amp;/or NA</b>	<i>N/A</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The action will be successful in saving lives due to early warning of pending events that may require evacuation or other instructions that may need to be taken. Unable to quantify losses avoided over time as a result of improved alerting/warning, but we expect that through the years, individual protective activities and improved life/safety would account for a benefit at least equal to the estimated project costs of \$350,000</i>
<b>Cost estimate</b>	<i>350,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Yes. This project is likely to be Cost effective, with estimated benefits at least equal to project costs over the life the system.</i>
<b>Technical</b>	<i>Yes Technically Feasible</i>
<b>Political</b>	<i>Yes supported by both political and publicly</i>
<b>Legal</b>	<i>Borough has the authority to Implement.</i>
<b>Environmental</b>	<i>Complies with environmental regulations.</i>
<b>Social</b>	<i>Will not disrupt or negatively impact any segment of the population.</i>
<b>Administrative capability</b>	<i>Borough can regulate and operateservices.</i>
<b>Local champion</b>	<i>Local Police, Fire , and OEM</i>
<b>Other community</b>	<i>Will be maintained on current location. No impact on new development.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Construction regulated under current codes and regulations.</i>
<b>Responsible party</b>	<i>Stanley Sickels, Construction Official</i>
<b>Potential funding sources</b>	<i>Grants, Insurance, local budget.</i>
<b>Time line</b>	<i>18 months to 24 months.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward - Tower is currently being constructed at the location.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Red Bank</i>
<b>Community action number</b>	<i>#3</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, storm surge, hurricane, tropical storm, nor'easter, wave action</i>
<b>Risk finding</b>	<i>Flooding and wave action are a significant issue in the Marine Park area. Damages occurways. The existing bulkhead has been unable to prevent storm surges from damaging infrastructure, but has prevent wave induced erosion to the park.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Project.</i>
<b>Action type</b>	<i>flood control measures</i>
<b>Action description</b>	<i>Drainage improvements, actions to maintain integrity of existing bulkhead. Bulkhead has been replaced and although structurally withheld the last 3 storm surges flooding still occurred. Also, electrical equipment needs to be relocated. Pump lift station operation for sewage was inoperative as a result of lost power and the fact that generators would be ineffective at grade due to the rise of water over the station itself. A "All Clay" public Tennis court approximately 30 yards from the bulkhead has been destroyed by the rising water from Sandy and has not yet been restored.</i>
<b>Existing, future &amp;/or NA</b>	<i>N/A</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided by the project are estimated to be \$5,000,000</i>
<b>Cost estimate</b>	<i>4,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits of 4,000,000 exceeding costs of \$5,000,000</i>
<b>Technical</b>	<i>Yes technically feasible</i>
<b>Political</b>	<i>Supported politically and publicly.</i>
<b>Legal</b>	<i>Borough of Red Bank</i>
<b>Environmental</b>	<i>Does and will comply with environmental standards.</i>
<b>Social</b>	<i>No disruption</i>
<b>Administrative capability</b>	<i>Outside help</i>
<b>Local champion</b>	<i>Environmental and Borough</i>
<b>Other community objectives</b>	<i>Open space preservation.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>

<b>Your community name</b>	<i>Roosevelt</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Wildfires</i>
<b>Risk finding</b>	<i>Wildfires are of particular concern to Roosevelt because of wildfire risk areas both within and surrounding the Borough, given the relatively few number of roads in and out of town for egress.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>- Preparedness/Response</i>
<b>Action type</b>	<i>Expansion of fire house</i>
<b>Action description</b>	<i>Fire house, which is located on the borough hall property, would be expanded to accommodate a larger truck that could better deal with brush fires.</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects existing development. Little or no future development is anticipated.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Having a fire truck available that could bring more water to a brush fire would facilitate its being extinguished sooner rather than later.</i>
<b>Cost estimate</b>	<i>Not yet determined. Grant applications will be filed.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>If the risk of destruction of woodlands and homes is reduced, the community will benefit accordingly. Roosevelt feels that this preparedness/response activity is likely to be cost effective.</i>
<b>Technical</b>	<i>Extending the fire house is technically feasible.</i>
<b>Political</b>	<i>There would be overall community support for this action.</i>
<b>Legal</b>	<i>The borough has authority to extend the firehouse, which is on property that it already owns.</i>
<b>Environmental</b>	<i>More effective control of any wildfires would better protect the woodlands in the community.</i>
<b>Social</b>	<i>There would be no adverse impact on any segment of the population.</i>
<b>Administrative capability</b>	<i>The borough has the necessary administrative capacity to have this construction done.</i>
<b>Local champion</b>	<i>The Roosevelt Volunteer Fire Company strongly advocates that this construction be done.</i>
<b>Other community objectives</b>	<i>This construction would further both environmental protection and public safety.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>high</i>
<b>Local planning mechanism</b>	<i>The Council and Planning Board will review the plans, as will the municipal engineer.</i>
<b>Responsible party</b>	<i>Carmela Roberts, Municipal Engineer</i>
<b>Potential funding sources</b>	<i>Grant funds, if they can be obtained</i>
<b>Time line</b>	<i>As soon as possible after funding is obtained</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New - Roosevelt did not participate in the last version of the plan.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-Jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Roosevelt</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Wildfires (secondary: extreme wind, hurricanes and tropical storms, nor'easters, winter storms)</i>
<b>Risk finding</b>	<i>Property owners dispose of brush infrequently and tend to leave it in the woods adjoining their properties</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Natural Systems Protection</i>
<b>Action type</b>	<i>- Fuels Management</i>
<b>Action description</b>	<i>Systematic removal of brush and dead trees. Collect brush more frequently and better enlist property owner cooperation. Improve collection services and public participation in disposal of brush. Have brush collection more frequently than once or twice a year and encourage property owners to clear brush from their properties and public lands adjoining their properties so that it can be collected. Incorporate inspection and management of hazardous trees near powerlines to realize secondary benefit for high wind events.</i>
<b>Existing, future &amp;/or NA</b>	<i>Protects existing development. Little or no future development is anticipated.</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduced risk of wildfire . Losses avoided are unquantifiable.</i>
<b>Cost estimate</b>	<i>Not yet determined. Grant applications will be filed. The cost of more frequent brush collection and disposal, and enlisting homeowner participation in more frequent brush removal will depend on how frequently it is done.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>If the risk of destruction of woodlands and homes is reduced, the community will benefit accordingly.Roosevelt feels that this action is likely to be cost effective.</i>
<b>Technical</b>	<i>Collecting brush more frequently and better enlisting property owner cooperation is technically feasible.</i>
<b>Political</b>	<i>There would be overall community support for this action.</i>
<b>Legal</b>	<i>The borough has the necessary legal authority to have this work done and to provide information to the public.</i>
<b>Environmental</b>	<i>More effective control of any wildfires would better protect the woodlands in the community.</i>
<b>Social</b>	<i>There would be no adverse impact on any segment of the population. No one would have to be relocated.</i>
<b>Administrative capability</b>	<i>The borough has the necessary administrative ability to have more frequent collections and to provide public information.</i>
<b>Local champion</b>	<i>The Roosevelt Volunteer Fire Company strongly supports anything that can be done to reduce the risk of fire.</i>
<b>Other community objectives</b>	<i>This brush collection and public information program would enhance public safety and better protect the environment.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>high</i>
<b>Local planning mechanism</b>	<i>Mayor and Council</i>
<b>Responsible party</b>	<i>Kelly Mitchell, Public Works Employee</i>
<b>Potential funding sources</b>	<i>Grant funds, if obtainable. Otherwise such other municipal revenue as may be available.</i>
<b>Time line</b>	<i>As soon as possible after funding is obtained</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New - Roosevelt did not participate in the last version of the plan.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-Jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Roosevelt</i>
Community action number	3
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Wildfires</i>
Risk finding	<i>Brush and dead trees accumi late in woodlands owned by the borough, the Monmouth County Park System, NJDEP, as well as in privately-owned woodlands.</i>
<b>Describing the Action</b>	
Action category	<i>Natural Systems Protection</i>
Action type	<i>-Fuels management</i>
Action description	<i>Participation in an anticipated program of the New Jersey Forest Fire Service for systematic removal of accumulated brush and dead trees from woodlands owned by the borough, the County Park Service, and NJDEP. Incorporate inspection and management of hazardous trees near powerlines to realize secondary benefit for high wind events.</i>
Existing, future &/or NA	<i>Protects existing development. Little or no future development is anticipated.</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Loss of woodlands and homes to wildfire. Losses avoided are unquantifiable.</i>
Cost estimate	<i>Not yet determined. The cost of more frequent brush collection and disposal, and enlisting homeowner participation in more frequent brush removal, would depend upon the frequency of collections.</i>
Cost effectiveness (i.e., benefit/cost)	<i>If the risk of destruction of woodlands and homes is reduced, the community will benefit accordingly. Roosevelt feels that this action is likely to be cost effective.</i>
Technical	<i>Systematic removal of accumulated brush and dead trees is technically feasible</i>
Political	<i>There would be overall community support for this action.</i>
Legal	<i>The borough has legal authority to cooperate with the NJ Forest Fire Service in a project of this nature.</i>
Environmental	<i>More effective control of any wildfires would better protect the woodlands in the community.</i>
Social	<i>There would be no adverse impact on any segment of the population. No one would have to be relocated.</i>
Administrative capability	<i>The borough has the necessary administrative capacity to cooperate with the NJ Forest Fire Service on this project.</i>
Local champion	<i>The Roosevelt Volunteer Fire Company strongly supports cooperation with the NJ Forest Fire Service on this project. They were the ones who brought it to the attention of the Mayor and Council</i>
Other community objectives	<i>This project would better protect both public safety and the environment.</i>
<b>Implementing the Action</b>	
Priority	<i>high</i>
Local planning mechanism	<i>Mayor and Council</i>
Responsible party	<i>Roosevelt Fire Department/Volunteer Fire Company</i>
Potential funding sources	<i>Grant funds, if they can be obtained</i>
Time line	<i>As soon as possible after funding is obtained. Borough awaits more information from the NJ Forest Fire Service.</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New - Roosevelt did not participate in the last version of the plan.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Rumson</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. By far, the larger areas inundated were on the south side of the Borough along the Shrewsbury.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Home Elevation</i>
<b>Action description</b>	<i>Elevating of 32 homes to new FEMA FIRM maps</i>
<b>Existing, future &amp;/or NA</b>	<i>Protecting existing structures</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed mitigation will result in reduced future storm damages to residential structures, personal property and protect public health and safety during future events. The total value of these properties is \$13,294,993.00</i>
<b>Cost estimate</b>	<i>\$5,340,000 for the elevation of 32 homes.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits on the order of \$13 million and costs on the order of \$5,340,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>Property owners may need to relocate while the home raising is implemented</i>
<b>Administrative capability</b>	<i>The community does have the personnel and homeowners will maintain projects</i>
<b>Local champion</b>	<i>Commisioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents, additionally current code requires substantially damaged to elevate home</i>
<b>Responsible party</b>	<i>Homeowners and/or Borough Administrator</i>
<b>Potential funding sources</b>	<i>Private, ICC or FEMA SRL</i>
<b>Time line</b>	<i>Dependent upon municipality securing residential funding and code compliance, a start date has not been identified</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Rumson</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. It is crucial to keep these roads accessible during storm events for possible evacuation and emergency services</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Construct a series of flood mitigation infrastructure improvements</i>
<b>Action description</b>	<i>Installation of new elevated bulkhead and a new tide valve at the western terminus of Washington Avenue; the installation of new tide valves at the eastern and western terminus of Grant Ave, the terminus of Waterman Ave, the midblock of Warren St, and the midblock of Waterman Ave; and construction of an earthen berm and associated grading above the existing bulkhead at the western and eastern terminus of Grant Ave., and western terminus of Waterman Ave.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Periodic flooding of the neighborhood due to high tides causes damage to private property and makes roads impassable, thereby prohibiting adequate access to the neighborhood for the public and emergency vehicles. The proposed infrastructure improvements will result in a significant decrease or elimination of tidal nuisance flooding in the neighborhood and provide significant public benefit, as it will protect private property and public health and safety. Losses avoided are estimated to be in the millions of dollars.</i>
<b>Cost estimate</b>	<i>\$135,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The proposed infrastructure improvements will result in a significant decrease or elimination of tidal nuisance flooding in the neighborhood and provide significant public benefit, as it will protect private property and public health and safety This project is likely to be cost effective, with potential benefits in the millions of dollars and costs on the order of \$135,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply</i>
<b>Social</b>	<i>There are no negative social impacts from this project</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>

<b>Local champion</b>	<i>Commisioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
<b>Responsible party</b>	<i>Borough Administrator</i>
<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding, FEMA post disaster</i>
<b>Time line</b>	<i>Dependent upon municipality securing grant funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Rumson</i>
<b>Community action number</b>	3
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. By far, the larger areas inundated were on the south side of the Borough along the Shrewsbury.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Construct or install improvements to eight (8) sanitary sewer pump stations within the Borough</i>
<b>Action description</b>	<i>Install emergency backup generators(Riverside, Club Way, Thorton Way, Navesink Ave.), Raise access, lids, covers, and vault chambers (Riverside, Club Way, Thorton Way, Navesink Ave., Buna Vista, Shrewsbury Drive), Install reinforced steel, rubber gasket lined storm doors(Marina, Grant Ave.)</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed improvements will protect against pump station failure in the event of power loss and/or flooding and will ensure continued operation of the Borough's sanitary sewer system. Losses avoided could be as much as \$13,294,993.00 (number of homes damaged by flood waters times the average market value of homes in rumson). 'The proposed pump station improvements and backup generator installations will protect public health and safety and result in a significant cost savings to the Borough and homeowners.</i>
<b>Cost estimate</b>	<i>\$187,500.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likley to be cost effective, with benefits on the order of \$13 million and costs on the order of \$187,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
<b>Local champion</b>	<i>Commisioners and the mayor</i>
<b>Other community obiectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Rumson</i>
<b>Community action number</b>	4
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. The DPW is crucial for emergency repairs during storm events and ensuring this building is accessible for emergency workers</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Install reinforced steel, rubber gasket-lined storm doors</i>
<b>Action description</b>	<i>The storm doors will be installed to the building's service bays to provide greater protection from wave action and flooding to the building's structure and contents</i>
<b>Existing, future &amp;/or NA</b>	<i>Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The improvements will reduce the vulnerability of the Department of Public Works garage to flood damage and will protect the equipment within the building from being damaged or destroyed. The storm door installation will result in significant cost savings to the Borough and will protect the health and safety of its residents as well as protect crucial equipment and vehicles for emergency repairs, assist borough emergency personnel and roadway debris removal. Losses avoided are estimated to be \$150,000 to \$250,000.</i>
<b>Cost estimate</b>	<i>\$75,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The storm door installation will result in significant cost savings to the Borough and will protect the health and safety of its residents as well as protect crucial equipment and vehicles for emergency repairs, assist borough emergency personnel and roadway debris removal. This project is likely to be cost-effective, with benefits on the order of \$150,000 to \$250,000 and costs of only \$75,000</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by commissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>

<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
<b>Time line</b>	<i>Dependent upon municipality securing grant funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	5
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. By far, the larger areas inundated were on the south side of the Borough along Shrewsbury.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Construct a series of flood mitigation infrastructure improvements</i>
Action description	<i>Installation of 150 linear feet of new elevated bulkhead, the rehabilitation and replacement of existing drainage pipes, and the installation of a new tide valve at the intersection of Shrewsbury Drive and Avenue of Two Rivers</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Experiences regular nuisance flooding due to high tides, and full moon tide. During these periods the intersection becomes impassable requiring detours to access areas east and west of the intersection. Losses avoided could range in the tens of thousands to hundreds of thousands of dollars per year</i>
Cost estimate	<i>\$382,500.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>Reducing or eliminating the times during which the intersection is impassable due to flooding will provide a significant public benefit, as it will protect public health and safety by providing uninterrupted access to neighborhoods in the vicinity of the intersection. This project is likely to be cost effective, with benefits in the tens of thousands to hundreds of thousands of dollars per year, and total project costs of only \$382,500.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by comissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>During road construction the intersection may be inaccessible</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
Local champion	<i>Commisioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>Moderate</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Borough Administrator</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding, NJDOT</i>
Time line	<i>Dependent upon municipality securing grant funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Region II Mitigation Planning – Draft Handout 06 as of 02/22/13</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	6
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge.</i>
<b>Describing the Action</b>	
Action category	<i>Natural Resource Protection</i>
Action type	<i>Remove and replace existing underground diesel fuel storage tanks</i>
Action description	<i>Removal of two (2) existing underground diesel fuel storage tanks and install two (2) new above-ground diesel fuel storage tanks at the Borough's Department of Public Works Yard</i>
Existing, future &/or NA	<i>Future, Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Flooding has rendered the existing underground storage tanks inaccessible, and, in certain instances, has contaminated the diesel fuel stored in these tanks with flood waters, rendering the fuel unusable. This project will prevent this from happening.'The Borough has had to find alternative sources of diesel fuel after past storms because its underground storage tanks were inaccessible or fuel was contaminated which is very costly to the borough. This project will prevent these unnecessary costs for fuel and prevent environmental contamination. Losses avoided are estimated to be on the order of \$250,000 to \$500,000 in fuel losses, fuel shipping costs and contamination remediation.</i>
Cost estimate	<i>\$150,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of \$250,000 to \$500,000 and costs of only \$150,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by comissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Rumson</i>
<b>Community action number</b>	<i>7</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature</i>
<b>Risk finding</b>	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. These areas were left without power including the shelter facility at Rumson Fair Haven Regional High School</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency Power</i>
<b>Action type</b>	<i>Install emergency power</i>
<b>Action description</b>	<i>Upgrade shelter facility located at Rumson Fair Haven Regional High School, including emergency power facility</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed improvements will ensure backup power in the event of primary power loss. This action is necessary to protect health and safety of individuals in Rumson Fair Haven Regional High School and those seeking shelter during natural disasters. Losses avoided could range from \$100,000 to \$150,000 per year.</i>
<b>Cost estimate</b>	<i>\$500,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The proposed backup generator installations will protect public health and safety during natural disasters and prevent future losses. This project is likely to be cost effective, with benefits ranging from \$100,000 to \$150,000 each year, and total project costs of only \$500,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by commissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
<b>Local champion</b>	<i>Commissioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
<b>Responsible party</b>	<i>Borough Administrator</i>
<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	8
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Cleaning and maintenance of streams and ponds. These are priority for the Borough in order to ensure property drainage of flood waters and to reduce flooding events in the Borough.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Maintenance</i>
Action description	<i>Removal of debris and sediment accumulation in receiving waterways and creeks which impedes flood flows.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Maintenance of these waterways is important to ensure proper drainage and protect health and safety of the borough residents. Losses avoided could be in the tens of thousands of dollars.</i>
Cost estimate	<i>\$5,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>The proposed maintenance is important to ensure proper drainage and protect the health and safety of borough residents. This project is likely to be cost effective, with benefits in the tens of thousands of dollars and costs of only \$5,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by council and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no negative social effects going forward with this project</i>
Administrative capability	<i>The community does have the personnel and administrative capability to maintain it.</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>Moderate</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Public Works, County Mosquito Commission</i>
Potential funding sources	<i>NRCS</i>
Time line	<i>The Borough continues to maintain these features through their existing capital budget</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	9
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Wind, Ice, Lightning, Hurricane and Tropical Storm, Nor'easter</i>
Risk finding	<i>'Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.</i>
<b>Describing the Action</b>	
Action category	<i>Maintenance</i>
Action type	<i>Tree trimming/pruning</i>
Action description	<i>Tree trimming and pruning to prevent downed power lines.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Downed trees on power lines contribute to power outages during severe storms. The loss of power can be devastating to the community as was observed during Hurricane Sandy. The losses avoided due to loss of power can be in the hundreds of thousands to millions of dollars per year.</i>
Cost estimate	<i>\$135,000.00 / year</i>
Cost effectiveness (i.e., benefit/cost)	<i>Keeping the wildlife around power line structures properly maintained is very important in preventing the loss of power to the community as well as preventing injury to people as a result of downed power lines. This project is likely to be cost effective, with benefits on the order of hundreds of thousands to millions of dollars per year, and costs of only \$135,00 per year.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by comissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are potential environmental impacts caused by this project, these will be considered and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no social impacts from this project on the community</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
Local champion	<i>Commisioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>Moderate</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Borough Administrator</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	<i>10</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature, Extreme Wind, Tornado</i>
Risk finding	<i>Potential storm events pose a threat to borough residents and ensuring that they are properly notified of incoming threats is important in protecting their health and safety</i>
<b>Describing the Action</b>	
Action category	<i>Education/Awareness</i>
Action type	<i>Maintain warning systems</i>
Action description	<i>Continue to maintain current warning systems that are already operational including website. AM radio, Reverse911 calling system and emergency siren alerting system.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Warning systems are crucial in alerting the public of storm events, this project is proposed to protect the health and safety of the borough residents and ensure they are properly notified of incoming threats. Losses avoided could range from \$25,000 to \$50,000 per year</i>
Cost estimate	<i>\$5,000 per year</i>
Cost effectiveness (i.e., benefit/cost)	<i>Ensuring the safety of the borough inhabitants is of utmost importance, and by having an effective warning system in place and properly maintained we can help prevent injury and loss of life during these storm events. This project is likely to be cost effective, with benefits on the order of \$25,000 to \$50,000 per year and costs of only \$5,000 per year.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by commissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no potential environmental impacts caused by this project, these will be considered and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no social impacts from this project on the community</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
Local champion	<i>Commissioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Borough Administrator</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	<i>11</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. By far, the larger areas inundated were on the south side of the Borough along the Shrewsbury River.</i>
<b>Describing the Action</b>	
Action category	<i>New Ordinance</i>
Action type	<i>Enact new FEMA flood maps as part of planning and zoning regulations</i>
Action description	<i>Enact new ordinance to adopt new FEMA flood maps</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed mitigation will result in reduced future storm damages to residential structures, personal property and protect public health and safety during future storm events. This could potentially result in the reduction of Hundreds of thousands of dollars to millions of dollars to the borough in cleanup costs and millions to tens of millions of dollars in damages to private property</i>
Cost estimate	<i>\$5,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of tens of millions of dollars and costs of \$5,000</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by the council and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>Property owners may need to relocate while the home raising is implemented</i>
Administrative capability	<i>The community does have the personnel and homeowners will maintain projects</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Mayor and Council, Planning Board, Zoning Board</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Ongoing, Preliminary maps adopted</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	12
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature</i>
Risk finding	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. Many of these areas were left without power including Borough Hall.</i>
<b>Describing the Action</b>	
Action category	<i>Emergency Power</i>
Action type	<i>Install quick connection for portable generator</i>
Action description	<i>Setup quick connection system for portable generator with a manual switch gear.</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed improvements will ensure backup power in the event of primary and secondary power loss. This action is necessary in order to protect health and safety of employees of the Borough of Rumson and continue coordinating relief efforts and maintain critical system functionality.</i>
Cost estimate	<i>\$10,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>The proposed quick connection system installation will protect health and safety during natural disasters and keep Borough Hall fully functional and able to coordinate relief efforts.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by commissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no social impacts from this project on the community</i>

<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature</i>
<b>Risk finding</b>	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. These areas were left without power for multiple days</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency Power, Comfort Enhancement</i>
<b>Action type</b>	<i>Install Improvements to Enhance Bingham Hall Comfort Station</i>
<b>Action description</b>	<i>Upgrade Bingham Hall in Rumson to enhance comfort and provide an area of refuge. Install permanent generator, obtain comcast or Verizon FIOS Internet/TV service, Build Wifi network within building, equipment for portable device charging stations, purchase flat panel TV on mobile cart for news broadcasts.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed improvements will ensure backup power in the event of primary power loss. This action is necessary to provide Borough residents with a safe and comfortable environment to seek temporary shelter during a storm event</i>
<b>Cost estimate</b>	<i>\$95,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The proposed backup generator installations will protect public health and safety during natural disasters and prevent future losses.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
<b>Local champion</b>	<i>Commisioners and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Moderate</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Rumson</i>
<b>Community action number</b>	14
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature, Extreme Wind, Tornado</i>
<b>Risk finding</b>	<i>Potential storm events pose a threat to borough residents and ensuring all public facilities such as buildings, pump stations and other critical facilities are functioning effectively is pivotal in mitigating flood related damages.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Remote Infrastructure Monitoring/Control</i>
<b>Action type</b>	<i>Upgrade Borough Wide SCADA system</i>
<b>Action description</b>	<i>Upgrade SCADA system to more efficiently and effectively control and monitor critical facilities such as pump stations, buildings, and other critical facilities and ensure proper functionality and quickly identify potential risks or problems.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>SCADA monitoring systems are extremely effective in remotely monitoring and collecting data from critical infrastructure and facilities. The upgrades to this system will allow for reduced response times for repair efforts, increased efficiency, and data gathering for future planning efforts. Losses avoided could be in the hundreds of thousands of dollars per year in damages from storm events.</i>
<b>Cost estimate</b>	<i>\$150,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Ensuring the safety of the borough inhabitants is of utmost importance. By having a SCADA system in place the Borough's critical infrastructure and facilities can be monitored and controlled from a safe location. This project is likely to be cost effective, with benefits on the order of hundreds of thousands of dollars per year and an initial cost of only \$150,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by commissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no potential environmental impacts caused by this project, these will be considered and it will comply with all federal, state, and local regulations</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Rumson</i>
<b>Community action number</b>	<i>15</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature</i>
<b>Risk finding</b>	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson and heavy wind and rainfall caused power loss throughout the Borough including Oceanic Hook &amp; Ladder Fire House</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency Power</i>
<b>Action type</b>	<i>Install emergency power</i>
<b>Action description</b>	<i>Install an emergency generator at Oceanic Hook &amp; Ladder Fire House</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed improvements will ensure backup power in the event of primary power loss. This action is necessary to ensure that the Oceanic Hook &amp; Ladder Fire House stays operational in the event of a major disaster like Hurricane Sandy. Loss of power can delay first responders and in term lead to loss of life or additional damages.</i>
<b>Cost estimate</b>	<i>\$65,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The proposed backup generator installations will protect public health and safety during natural disasters and prevent future losses. This project is likely to be cost effective, with a minimal total project cost of only \$65,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by comissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>

<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	16
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Construct a series of flood mitigation infrastructure improvements</i>
Action description	<i>Rehabilitate and upgrade the existing drainage system to increase capacity and decrease flooding at the South end of Club Way and at the intersection of Holly Tree Lane and Evergreen Drive</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Experiences regular nuisance flooding due to heavy rainfall and high tides. During these periods the areas become impassable and delay emergency response times. Losses avoided could range in the tens of thousands to hundreds of thousands of dollars per year in vehicle, infrastructure damage, debris removal, and maintenace costs.</i>
Cost estimate	<i>\$205,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>Reducing or eliminating the times during which the areas are impassable due to flooding will provide a significant public benefit, as it will protect public health and safety by providing uninterrupted access to neighborhoods in the vicinity of the areas. This project is likely to be cost effective, with benefits in the tens of thousands to hundreds of thousands of dollars per year, and total project costs of only \$205,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by comissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>During road construction the roadway may be inaccessible</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
Local champion	<i>Commisioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>Low</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Borough Administrator</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Dependent upon municipality securing grant funding, a start date has not been identified</i>
<b>Reporting on Progress</b>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	17
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson including the Rumson boat Launch, nearby DPW Yard, Police Station and Borough Hall. The shore along the boat launch endured significant erosion during Hurricane Sandy and is now causing drainage issues on site.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Construct Bulkheading</i>
Action description	<i>Installation of 225 linear feet of new bulkhead at the Rumson Boat Launch.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Installation of bulkhead will reduce flooding in the area, prevent further erosion of the shoreline soils and prevent future roadway deterioration. Due to the close proximity of critical facilities such as the DPW yard, Borough Hall and Police Station, it is imperative that these facilities stay operational during a storm event.</i>
Cost estimate	<i>\$450,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>Installing a bulkhead at this location will prevent future flood loss and prevent erosion of soils into the Navesink River. This project is likely to be cost effective with a total project cost of \$450,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by commissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no social impacts from this project on the community</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
Local champion	<i>Commissioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>Low</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Borough Administrator</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Dependent upon municipality securing grant funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	<i>18</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature, Extreme Wind, Tornado</i>
Risk finding	<i>After Hurricane Sandy the Borough received a large influx of development permits for home and business repairs. The Borough was not adequately equipped to handle such an influx which in term delayed repair efforts.</i>
<b>Describing the Action</b>	
Action category	<i>Planning</i>
Action type	<i>Zoning and Construction Permit Automation</i>
Action description	<i>Provide the Borough with an automated and expedited system for zoning and construction permit administration.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Providing the Borough with an automated permit administration system will speed up the process for issuing a zoning or construction permit. This addition will allow for a faster start to recovery efforts and reduce the amount of time home owners or business owners are out of their homes or out of work.</i>
Cost estimate	<i>\$50,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>There was a significant lag time after Hurricane Sandy for issuing zoning and construction permits in the Borough due to high volume of permit applications. The addition of this system will reduce this lag time and allow residents and business owners to start repair efforts as soon as possible. Residents will be able to move back into their houses sooner and avoid costly temporary relocation expenses.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by comissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no potential environmental impacts caused by this project, these will be considered and it will comply with all federal, state, and local regulations</i>

<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	19
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature, Extreme Wind, Tornado</i>
Risk finding	<i>Hurricane Sandy was a storm far more devastating than ever previously planned for withing the Borough. Revisions to the current plan are necessary to incorporate updated emergency response planning.</i>
<b>Describing the Action</b>	
Action category	<i>Planning</i>
Action type	<i>Revision and Updates to Rumson Emergency Operations Plan</i>
Action description	<i>Prepare an update to the Emergency Operations Plan (EOP) for the Borough of Rumson.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Updates and revisions will identify flood hazard-specific risk areas and evacuation routes, specify provisions and protocols for warning the public and disseminating emergency public information, and specify the types of protective equipment and detection devices for responders.</i>
Cost estimate	<i>\$26,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>Ensuring the Borough has the proper protocols in place for an emergency situation such as Hurricane Sandy could prevent future damages, injury or loss of life.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by comissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no potential environmental impacts caused by this project, these will be considered and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no social impacts from this project on the community</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
Local champion	<i>Commisioners and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>

<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Rumson</i>
<b>Community action number</b>	20
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
<b>Risk finding</b>	<i>Hurricane Sandy devastated shore towns in New Jersey sparking the need for flood insurance across the state, however, flood insurance is extremely costly.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Planning</i>
<b>Action type</b>	<i>Enter FEMA CRS Program</i>
<b>Action description</b>	<i>Provide planning services to enter the Borough of Rumson into the FEMA Community Rating System for reduced flood insurance rates.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Besides the benefit of reduced insurance rates, CRS floodplain management activities enhance public safety, reduce damages to property and public infrastructure, avoid economic disruption and losses, reduce human suffering, and protect the environment.</i>
<b>Cost estimate</b>	<i>\$50,000.00</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>With benefits as high as a 45% reduction to insurance rates on top of the enhancement to public safety and potential reduction in future damages and losses, the \$50,000.00 cost is very minor.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by commissioners and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no potential environmental impacts caused by this project, these will be considered and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>

<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Rumson</i>
Community action number	21
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature, Extreme Wind, Tornado</i>
Risk finding	<i>The Borough of Rumson has a large network of utilities and infrastructure which has been installed and repaired over the past century. Currently there is no comprehensive inventory of said infrastructure and utilities which is readily available to the Borough. In order for the Borough to properly prepare for future weather events it is imperative we know where these systems are, what condition they are in and what they service.</i>
<b>Describing the Action</b>	
Action category	<i>Planning</i>
Action type	<i>Develop GIS Database/Inventory</i>
Action description	<i>Develop GIS Database/Inventory of Borough owned infrastructure.</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>By preparing a GIS database the Borough can effectively plan for future infrastructure improvements and repairs by having an intelligent basemap which includes data from various existing infrastructure and utilities. The ability to plan improvement programs around the data which is obtained and mapped on GIS can prevent hundreds of thousands to millions of dollars in potential future damages from weather events.</i>
Cost estimate	<i>\$100,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is cost effective, with benefits in the hundreds of thousands to millions of dollars in potential future damages and a cost of only \$100,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by commissioners and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Sea Bright</i>
<b>Community action number</b>	<i>Sea Bright 1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Storm Surge, Wave Action, Hurricane, Nor'easter</i>
<b>Risk finding</b>	<i>Virtually all of Sea Bright lies within mapped storm surge hazard areas. The Borough of Sea Bright was almost entirely inundated during Hurricane Sandy. A large number of homes were flooded during Hurricane Sandy where their first floors were below the base flood elevation. Some also incurred wave damage. Those that were substantially damaged or destroyed must be rebuilt to code, effectively elevating them, but those that were not substantially damaged that did not face the elevation requirement as a condition of rebuilding would be good candidates for an elevation project if they have not already opted to do so. A large number of homes were flooded during Hurricane Sandy where their first floors were below the base flood elevation. Some also incurred wave damage. Those that were substantially damaged or destroyed must be rebuilt to code, effectively elevating them, but those that were not substantially damaged that did not face the elevation requirement as a condition of rebuilding would be good candidates for an elevation project if they have not already opted to do so. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Project</i>
<b>Action type</b>	<i>Home Elevation</i>
<b>Action description</b>	<i>Elevation of approximately 700 homes, 114 homes are on the Repetitive Loss List. The Borough has identified these homes as severely damaged after Hurricane Sandy. A majority of the homes on the repetitive loss list are located west of NJSH Route 36, on the river side, between Osborne Place and Peninsula Avenue. The Borough is seeking funding to provide financial assistance to Borough residents seeking to elevate their homes. The elevations of these homes are currently below the new Advisory Base Flood elevations (ABFEs) established by FEMA and adopted by the State of New Jersey after Hurricane Sandy.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed mitigation activities will result in the reduction in damages to residential structures and personal property and will protect public health and safety. The median home value for homes in the Borough of Sea Bright is \$547,100, based on the 2010 Census data; therefore raising the homes is the most viable option for residents. For the cost of purchasing one home, about three will be able to be elevated. Losses avoided are estimated to be roughly \$382,970,000.</i>
<b>Cost estimate</b>	<i>\$105,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits of roughly \$382,970,000 and costs of only \$105,000,000.</i>
<b>Technical</b>	<i>Technically feasible. Flooding problem in downtown and repetitive loss would be eliminated.</i>
<b>Political</b>	<i>The Borough Council is committed to supporting the implementation of this project and has already included the newly adopted ABFE as a requirement for new construction elevations to prevent flooding in the future. The community also supports this.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>The project will comply with environmental regulations.</i>
<b>Social</b>	<i>Does not adversely affect any particular social group.</i>
<b>Administrative capability</b>	<i>Will utilize Borough staff, but outside help would be necessary for volume of work.</i>
<b>Local champion</b>	<i>Yes. Borough Council.</i>
<b>Other community objectives</b>	<i>No.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Land use administration, planning boards, zoning officer, flood plain manager</i>
<b>Responsible party</b>	<i>C. Read Murphy, OEM Coordinator</i>
<b>Potential funding sources</b>	<i>local staff time, CBDG, Federal funding, all available grants will be pursued.</i>
<b>Time line</b>	<i>31-Dec-16</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried over. Zoning and planning initiatives and technical support are moving forward. Lack of funding limits actions able to be taken.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Sea Bright</i>
<b>Community action number</b>	<i>Sea Bright 2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Winh, Flooh, Storm surge, wave action, Hurricane, Nor'easter, environmental</i>
<b>Risk finding</b>	<i>Gaps in the bulkheads (physical gaps, differences in the level of protection, and sections of deteriorated condition) along the Shrewsbury River result in an inconsistent line of protection and subsequent flooding. The bulkhead along the Shrewsbury River is privately owned and varies in height. The subject properties regularly become inundated with water due to flooding, which creates public health hazards, causes loss of use and income, property damage, emergency response and unnecessary burden.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Project</i>
<b>Action type</b>	<i>Flood proofing/ Bulkhead</i>
<b>Action description</b>	<i>The scope of this project is completing the bulkhead by raising 2600 feet from the south side of the Rumson Road Bridge to Osborne Place, along both private and public property, and installing additional four (4) Storm water pump stations at each street end, adding tide flex valves to all the outfalls within the project area. The Borough is seeking to raise the bulkhead elevation to 7.0ft NAVD 88, to protect these properties from the 25 year storm event.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The bulkhead along the Shrewsbury River is privately owned and varies in height. The subject properties regularly become inundated with water due to flooding, which creates public health hazards, causes loss of use and income, property damage, emergency response and unnecessary burden. The goal of the project is to create a continuous barrier that will reduce the areas vulnerable to flooding. This project would complete the bulkhead raising along the Shrewsbury River and installation of Storm water pump stations in accordance with the "Shrewsbury River: Sea Bright, NJ Flood Risk Management Study" completed by the Army Corps of Engineers. This area is prone to tidal flooding during less severe storms, increasing the bulkhead height will reduce the repetitiveness of flooding that occurs regularly for a large portion of the community; thereby reduce claims under the National Flood Insurance Program. Losses avoided as a result of this project could be roughly \$20,000,000.</i>
<b>Cost estimate</b>	<i>\$10,286,600 [ \$7,571,600 (plus easements to raise the bulkhead on the private and public properties) and \$2,715,000 for four (4) additional storm water pump stations. Additionally, there will be a cost to acquire the easements on private property ]</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits of roughly \$20,000,000 and costs of roughly \$10,286,600.</i>
<b>Technical</b>	<i>Technically feasible. Flooding problem solved long term; community's problem of business interruption solved.</i>
<b>Political</b>	<i>The Borough has participated in this program before and the Council continues to support it.</i>
<b>Legal</b>	<i>Easements needed.</i>
<b>Environmental</b>	<i>There are no environmental issues in town.</i>
<b>Social</b>	<i>Does not adversely affect any particular social group.</i>
<b>Administrative capability</b>	<i>Would use Borough resources and technical assistance from State to manage.</i>
<b>Local champion</b>	<i>Borough Council</i>
<b>Other community objectives</b>	<i>Economical Development Protect</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Borough Engineer, Borough Council, OEM</i>
<b>Responsible party</b>	<i>C. Read Murphy, OEM Coordinator</i>
<b>Potential funding sources</b>	<i>This project does not qualify for CDBG, HMP is prominent funding source for project.</i>
<b>Time line</b>	<i>Funding Dependent</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried over from past year. Updates to plans - see LOI submitted to County.</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Sea Bright</i>
<b>Community action number</b>	<i>Sea Bright 3</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Storm Surge, wave action, Hurricane, Nor'easter, environmental</i>
<b>Risk finding</b>	<i>The Sea Wall extends along most of the eastern portion of the community, there are missing segments and discontinuity along the length of the wall. As a result, areas of the Borough are vulnerable and exposed to water damage and flooding during storm surges. Route 36 is an evacuation route and must be protected from flooding surge and erosion. It is of particular importance in Sea Bright because of its location on the very narrow spit of land between the Shrewsbury River and the Atlantic Ocean.</i>
<b>Action category</b>	
<b>Action category</b>	<i>Structural Project, Infrastructure project, Natural Resource Protection</i>
<b>Action type</b>	<i>Structural Project</i>
<b>Action description</b>	<i>To rehabilitate and complete the Sea Wall</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Losses avoided (i.e., benefits)</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>By providing a continuous barrier along the waterfront it will strengthen the protection from storm surges for the entire community and limit the access points of the storm water into the Borough. Losses avoided by this project are estimated to be roughly \$35,000,000.</i>
<b>Cost estimate</b>	<i>\$15,366,500</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits of roughly \$35,000,000 and costs of roughly \$15,366,500.</i>
<b>Technical</b>	<i>Technically feasible. Flooding problem throughout town would be addressed and mitigated to a degree.</i>
<b>Political</b>	<i>The Borough Council and community support protecting the residents by pursuing this project.</i>
<b>Legal</b>	<i>No apparent legal issues</i>
<b>Environmental</b>	<i>No adverse environmental effects.</i>
<b>Social</b>	<i>Does not adversely affect any particular social group.</i>
<b>Administrative capability</b>	<i>Will need multiple people to administer (after technical assistance from State and Professionals)</i>
<b>Local champion</b>	<i>Borough Council</i>
<b>Other community objectives</b>	<i>Business district protection</i>
<b>Priority</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mayor and Council, with State and Federal Authorities</i>
<b>Responsible party</b>	<i>C. Read Murphy, OEM Coordinator</i>

<b>Time line</b>	<i>30-May-16</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New. State as lead agency preparing to interact and engage federal agencies.</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Sea Bright</i>
<b>Community action number</b>	<i>Sea Bright 4</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, winh, storm surge, wave action, hurricane, nor'easter, environmental</i>
<b>Risk finding</b>	<i>Virtually all of Sea Bright lies within mapped storm surge hazard areas. Homes are repetitively damaged due to flooding and storm surge, as is the Downtown District. The Borough of Sea Bright was almost entirely inundated during Hurricane Sandy. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Action category</b>	
<b>Action category</b>	<i>Structure/ Infrastructure/Economic Development Project</i>
<b>Action type</b>	<i>Flood Proofing</i>
<b>Action description</b>	<i>Flood proofing to a minimum of 35 buildings in the Downtown District. These businesses have been identified by the Borough as severely damaged after Hurricane Sandy. Many of the buildings (18) are also listed on the 2011 Repetitive Loss List. The Downtown District is located along Ocean Avenue (US Highway 36) between Peninsula Avenue and Osborne Place. The Borough is seeking funding to provide financial assistance to businesses in order to provide flood proofing to their buildings.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Losses avoided (i.e., benefits)</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The goal of this flood proofing project is to protect the properties from flood inundation and flood hazards of the Shrewsbury River and Atlantic Ocean, to reduce the need for emergency services during flood events, and to reduce or eliminate repetitive flooding of these buildings, thereby reducing claims under the National Flood Insurance Program. Losses avoided by this project are estimated to be roughly \$11,000,000.</i>
<b>Cost estimate</b>	<i>\$5,250,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>In an effort to prevent future damage to the commercial district of the Borough and keep businesses open, the Borough is pursuing flood proofing for businesses. This is the most viable option to provide protection from future flooding because elevating buildings will cause the businesses to close while the building is raised and result in limited accessibility once it is completed. Providing flood proofing to these buildings will maintain these businesses and reduce any future closings due to repetitive flooding issues. The project is likely to be cost effective, with benefits on the order of \$11,000,000 and costs only on the order of \$5,250,000.</i>
<b>Technical</b>	<i>Technically feasible. Flooding problem in downtown area solved for the long-term; community's problem of business interruption solved.</i>
<b>Political</b>	<i>The Borough Council, business owners and residents support this project.</i>
<b>Legal</b>	<i>No apparent legal issues</i>
<b>Environmental</b>	<i>No adverse environmental effects</i>
<b>Social</b>	<i>Does not adversely affect any particular social group.</i>
<b>Administrative capability</b>	<i>Borough resources would be used with technical assistance from the State</i>
<b>Local champion</b>	<i>Borough Council, Businesses of Sea Bright</i>
<b>Other community objectives</b>	<i>Supports Borough's economic development plan</i>
<b>Priority</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Flood plain Manager, Zoning Officer, Borough Council, Planning Board</i>
<b>Responsible party</b>	<i>C. read Murphy, OEM Coordinator</i>

<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried over. Work is almost completed.</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Sea Bright</i>
<b>Community action number</b>	<i>Sea Bright 6</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Storm Surge, wave action, Hurricane, Nor'easter, Tropical Storm, Winter Storm, Lightning, tornado, environmental</i>
<b>Risk finding</b>	<i>The effects of digid winhs and flooding have taken their toll on the above-ground power utilities, and outages during severe storms are fairly common. Power outages affect residents, businesses, and the ability of the Borough to provide critical services and perform emergency functions. Above ground transmission systems undergo repeated cycles of damage, repair and reconstruction. Due to the constant exposure to storms, Sea Bright has had extensive damage to the utility service by falling poles and the loss of power from downed transmission lines. Underground utility service can be more reliable than overhead service. The transmission poles throughout the Borough are part of a larger grid system serving much of coastal Monmouth County and Sandy Hook. By increasing resiliency, there will be fewer outages.</i>
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Protect Electrical Infrastructure</i>
<b>Action description</b>	<i>Underground Electrical Infrastructure</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Losses avoided (i.e., benefits)</b>	<i>Due to the location and the exposure to storms, the utilities in Sea Bright will be more reliable and will reduce interruptions to service. This will also eliminate some of the repairs preformed. Losses avoided as a result of the project are estimated to be on the order of \$200,000 per year. (The damage to utilities sustained durring Sandy were significantly higher. While the town has frequent outages, they do not require costly repairs - it is more of an interruption of business and operational capacity)</i>
<b>Cost estimate</b>	<i>Preliminary estimates provided to the Borough were: \$100/foot for single-phase residential service; \$200/foot for three-phase commercial service; and \$300/foot for the transmission service that extends the length of Ocean Avenue and beyond. This represents total costs on the order of about \$10,000,000. Divided by a # 50 year expected useful life, this represents an annual cost of roughly \$200,000 per year.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits at least equal to project costs.</i>
<b>Technical</b>	<i>Discussing with utility companies if this is feasible. Discussions are ongoing.</i>
<b>Political</b>	<i>The Borough Council and community support protecting the residents by pursuing this project.</i>
<b>Legal</b>	<i>No apparent legal issues</i>
<b>Environmental</b>	<i>No adverse environmental effects.</i>
<b>Social</b>	<i>Does not adversely affect any particular social group.</i>
<b>Administrative capability</b>	<i>Will need multiple people to administer (after technical assistance from State and Professionals)</i>
<b>Local champion</b>	<i>Sea Bright 2020, Mayor and Council</i>
<b>Other community objectives</b>	
<b>Priority</b>	<i>medium</i>
<b>Local planning mechanism</b>	<i>Mayor and Council, Sea Bright 2020</i>
<b>Responsible party</b>	<i>C. Read Murphy, OEM Coordinator</i>
<b>Potential funding sources</b>	<i>CDBG, Federal and State grants</i>
<b>Time line</b>	<i>30-May-16</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried over. Working with Sea Bright 2020 to develop plan to present to JCP&amp;L. Looking for funding sources.</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Sea Girt Borough</i>
Community action number	<i>1 - Baltimore Boulevard Outflow Pipe Extension</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, Storm Surge, Hurricanes, Tropical Storms, Nor'easters</i>
Risk finding	<i>The Baltimore Blvd outflow pipe gets clogged with sand and debris due to its location and therefore backs up catch basin drainage for the middle easterly portion of town</i>
<b>Describing the Action</b>	
Action category	<i>Infrastructure projects</i>
Action type	<i>Flood Control</i>
Action description	<i>Extend the outflow pipe past the mean high tide mark well into the tidal ocean and raised to a point it will not clog with sand.</i>
Existing, future &/or NA	<i>existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Flooded roadways and personal property of the homeowner would be avoided. 'There are at least 20 homes in this areas which have had flooding in the past that are directly effected and man hours needed to close streets due to flooding would be a cost savings. At an average in the last flooding - which was major of 30,000 per home in damage x 15 homes = 450k. (annual)</i>
Cost estimate	<i>1.3 million to extend the outflow pipe</i>
Cost effectiveness (i.e., benefit/cost)	<i>The savings would pay for themselves in three years and improve public safety of the roadways. We believe this would be a cost effective project, with benefits of \$450,000 per year and costs of \$1.3 million total.</i>
Technical	<i>technically feasible</i>
Political	<i>no apparent issues</i>
Legal	<i>no apparent issues</i>
Environmental	<i>no adverse issues</i>
Social	<i>does not adversely effect any social group</i>
Administrative capability	<i>with the state dep, army corps of engineers and borough engineers that will be tasked with the work, two administrative people will be necessary to administer from the borough end</i>
Local champion	<i>homeowners happy to have flooding reduced</i>
Other community objectives	<i>mitigates the problem and increases value of the properties with decreased flooding</i>
<b>Implementing the Action</b>	
Priority	<i>high</i>
Local planning mechanism	<i>borough ordinance related to beachfront and CaFra permitting</i>
Responsible party	<i>Borough and Army Corps of Engineers</i>
Potential funding sources	<i>HMGP grant and 25% borough match</i>
Time line	<i>one year (proposed for 2015 - post beach replenishment)</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward (2009 plan's action 2)</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	Monmouth County Multi-jurisdictional Hazard Mitigation Plan
<b>Your community name</b>	Sea Girt Borough
<b>Community action number</b>	2 - Elevation of homes
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Flooding, storm surge, wave action, hurricane and tropical storms, nor'easter
<b>Risk finding</b>	The Borough of Sea Girt would like to apply for funding on behalf of the residents of the Borough of Sea Girt that are located within a flood zone. Currently we have two residents that have requested assistance through the Borough for means of applying for HMGP grant monies of elevating their homes damaged by Hurricane Sandy and its storm surge. We believe that many homeowners suffered great damage within the Borough by flood waters and the need to raise and elevate these homes in flood zones is critical to the protection and safety of the Borough homeowners. Approximately 15% of our 1263 homeowners within the Borough are located in flood zones as established by the FEMA flood mapping system. Our Borough suffered greatly along the beachfront and the south end of town from flooding of storm surge, tidal flooding and encroachment of water from neighboring Sea Girt National Guard Training Center property which abuts the Stockton Lake tidal body of water. We believe that great damage done to and hazardous situations that exist with homes on standard foundations in these effected areas could be greatly reduced. These homes if elevated and built to current codes and standards within the flood zones and in accordance with flood management programs and protection guidelines would have suffered less damage. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	We are currently working with the Borough Engineering staff on identifying these homes and educating the residents on flood control and elevation of such property. We believe that due to our coastal location, our low lying areas within the Borough and our neighboring areas that border the low lying National Guard Training Center - we are a perfect candidate to be considered for the elevation request within this grant program.
<b>Action description</b>	Raising of 189 homes above BFE to coincide with the FEMA Flood Mapping and directives. Variances will be allowed on height of homes in flood areas to place foundations above floodplain.
<b>Existing, future &amp;/or NA</b>	existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Personal property of the homeowner would be avoided. Raising of the homes in the areas designated would prevent future loss of property. There are 189 homes located in these areas. During Hurricane Sandy there were not 189 homes damaged to this extensive level within the Borough. The amount of damage while unknown to the Borough can be fairly certain that it did not exceed anywhere near the 20 million dollars it will take to raise the homes. Losses avoided cannot be quantified at this time.
<b>Cost estimate</b>	There are 189 homes located in these areas. The average home in this area has a 2000 square foot footprint and is 5000 to 10,000 square foot home overall. The cost per house to raise and elevate in accordance with the standards set forth by FEMA and the flood management guidelines is approximately \$110,000.00. This amount times the homes in the areas that total 189 equals a cost to raise and elevate the homes at \$ 20,790,000. Thus our request for funding of this project on behalf of the residents of the Borough is \$20,790,000.00
<b>Cost effectiveness (i.e., benefit/cost)</b>	Benefit/cost is not able to be concluded at this time and at this time there was only interest from one resident to raise his home. Elevation is likely to be cost effective, however, for the subset of most at-risk structures. Two properties in Sea Girt were on the NFIP Repetitive Loss list as of March 2014.
<b>Technical</b>	technically feasible
<b>Political</b>	no apparent issues
<b>Legal</b>	variances will be allowed on height of homes in flood areas to place foundations above floodplain.
<b>Environmental</b>	No adverse issues
<b>Social</b>	does affect the quality of life of neighbors and residents in these areas. Construction and pile driving will effect quality of life however hopefully increase property values.
<b>Administrative capability</b>	borough enginners, code enforcement, building department and outside contractors that will be tasked with the work, four adminsitrative persons will be necessary to administer from the borough end
<b>Local champion</b>	homeowners happy to have flooding reduced as well as a great savings and protection for the homeowner to mitigate future flooding and damage.
<b>Other community objectives</b>	mitigates the problem and increases value of the properties with decreased flooding
<b>Implementing the Action</b>	
<b>Priority</b>	high
<b>Local planning mechanism</b>	borough ordinance related to beachfront and CaFra permitting as well as compliance with local building codes and state directives
<b>Responsible party</b>	Homeowners
<b>Potential funding sources</b>	HMGP grant and 25% homeowner match
<b>Time line</b>	mutiple years
<b>Reporting on Progress</b>	
<b>Action progress status</b>	Carried forward (2009 plan's action 1)

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Sea Girt Borough</i>
<b>Community action number</b>	<i>3 - Generators - CIS need</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All hazards</i>
<b>Risk finding</b>	<i>There are critical infrastructure buildings within the Borough that are not able to be used during a disaster or a loss of power. Sea Girt would like to add a <b>generator</b> to its <b>Department of Public Works</b> buildings and upgrade generators at the Water Treatment Plant and Municipal Building that also serves as headquarters for the Borough's Police and Fire Departments. These buildings are critical to the operation of our DPW, water treatment plant and Police and Fire emergency services provided to Borough residents. The DPW facility houses the mechanic shop, fueling station for the natural gas vehicles, six garage bays for vehicles that are housed and charged inside the building. We had numerous needs over the course of the two week period as we had no power within the Borough during Hurricane Sandy. Vehicles that needed mechanic work and or needed to enter and exit the garages with equipment were unable to do so or have work done to them. The loss of equipment use and or ability to operate out of the DPW yard was critical to the life and safety during the storm. Every vehicle was put into service and the DPW yard without power was a significant loss to our efforts to protect the citizens within the Borough. It is critical to the health and welfare of Borough residents to have access to potable water that is provided by the Water Treatment Plant. Fire Headquarters housed in the Municipal Building provided food and shelter for Borough residents during Superstorm Sandy and Police services were also coordinated from this location</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Infrastructure projects</i>
<b>Action type</b>	<i>Generators - CIS need</i>
<b>Action description</b>	<i>Install generators at the Borough CIS buildings that need to operate during disasters and loss of power.</i>
<b>Existing, future &amp;/or NA</b>	<i>existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Critical borough operations are not halted during emergency situations. Power to necessary buildings maintains order within the Borough. Losses avoided are difficult to quantify but are estimated to be well in excess of project costs of 45,000.</i>
<b>Cost estimate</b>	<i>45,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The Cost effectiveness would come from the smooth operation of the Borough during emergencies and not having to contract out for help, repairs(whatever can not be done in house) and the need for the Borough to have its CIS buildings work during storms. Benefits are estimated to be well in excess of project costs.</i>
<b>Technical</b>	<i>technically feasible</i>
<b>Political</b>	<i>no apparent issues</i>
<b>Legal</b>	<i>no apparent issues</i>
<b>Environmental</b>	<i>No adverse issues</i>
<b>Social</b>	<i>Affects the well being of the Borough and its residents</i>
<b>Administrative capability</b>	<i>Assessing the Risk</i>
<b>Local champion</b>	<i>Borough Council, School, Police and Fire Officials</i>
<b>Other community objectives</b>	<i>mitigates the problem and keeps the Borough operating</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>high</i>
<b>Local planning mechanism</b>	<i>Resolution for contractors and permitting where applicable</i>
<b>Responsible party</b>	<i>Borough and contracted parties</i>
<b>Potential funding sources</b>	<i>HMGP grant and 25% borough match</i>
<b>Time line</b>	<i>one year (proposed for 2014)</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward (2009 plan's action 5)</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Sea Girt Borough</i>
<b>Community action number</b>	<i>2 - New Alert Horn and Siren System</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All Hazards</i>
<b>Risk finding</b>	<i>The Borough sustained almost 14 days with out power and getting messages to the Borough residents and persons of interest was crucial to the life and safety well being of our residents. We believe we have some of the necessary infrastructure such as antenna mounting and generator power to house such means of communication. We are currently working with the Borough Engineering staff on proper placement and locations of such. The Borough has and had no means of contacting residents as well as persons driving through the town during this Hurricane of any impending danger or hazardous situation.</i>
<b>Action category</b>	<i>Emergency Public Awareness</i>
<b>Action type</b>	<i>Alert Horn and Siren</i>
<b>Action description</b>	<i>The Borough of Sea Girt would like to improve the notification to residents by the addition of and installation in key areas of town of a new generation electronic horn and public address system. Our neighboring town Manasquan Borough has this system stationed throughout its town and is able to not only alert the town of impending danger and hazard by means of an electronic horn and tones BUT also by means of voice messages rebroadcast back over the electronic horn. This proved very effective during the Hurricane to notify residents by mass messaging over the public address system. We believe this would be a perfect fit for a town our size both in the beachfront, low lying areas and areas west of the railroad tracks in and around the school. Similar size towns like ours – one square mile – have multiple posted horn locations to maximize coverage and so the residents can hear the voice message. We are currently working with the Borough Engineering staff on proper placement and locations of such. The Borough has and had no means of contacting residents as well as persons driving through the town during this Hurricane of any impending danger or hazardous situation. It is a weakness we hope to correct by means of funding through the Grant Program. These Siren Horn units would serve as a main means of communicating the needed information during power outages and prolonged periods of danger and hazard. In addition to the town and residents – our messages would also serve the National Guard Training Center which is housed in Sea Girt Borough and is in a flood zone and low lying area of the Borough.</i>
<b>Existing, future &amp;/or NA</b>	<i>existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The cost savings would come from the door to door alert means we do now during outages and emergencies. Hundreds of volunteer hours were spent in dangerous life threatening conditions warning and following up with residents before, during and after the hurricane. This could all have been aided and in many cases alleviated by a system of this nature. Losses avoided are estimated to be roughly on the order of \$15,000 per year.</i>
<b>Cost estimate</b>	<i>\$200,000 (useful life = 15 years; annual cost = \$13,300 per year)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits on the order of \$15,000 per year and costs of \$13,300 per year.</i>
<b>Technical</b>	<i>technically feasible</i>
<b>Political</b>	<i>no apparent issues</i>
<b>Legal</b>	<i>no apparent issues</i>
<b>Environmental</b>	<i>No adverse issues</i>
<b>Social</b>	<i>Effects the well being of the Borough and its residents</i>
<b>Administrative capability</b>	<i>with outside contractors and borough engineers that will be tasked with the work, one administrative person will be necessary to administer from the borough end</i>
<b>Local champion</b>	<i>Borough Council, School, Police and Fire Officials</i>
<b>Other community objectives</b>	<i>mitigates the problem and keeps the public and residents immediately informed</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>high</i>
<b>Local planning mechanism</b>	<i>Resolution for contractors and permitting where applicable</i>
<b>Responsible party</b>	<i>Borough and contracted parties</i>
<b>Potential funding sources</b>	<i>HMGP grant and 25% borough match</i>
<b>Time line</b>	<i>one year (proposed for 2014)</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward (2009 plan's action 5)</i>

Action Worksheet	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Sea Girt Borough</i>
Community action number	<i>5 - New Emergency signage: (1) portable and (2) permanent</i>
Assessing the Risk	
Hazard(s) addressed	<i>All Hazards</i>
Risk finding	<i>The Borough sustained almost 14 days with out power and getting messages to the Borough residents and persons of interest was crucial to the life and safety well being of our residents. We believe we have some of the necessary infrastructure such as antenna mounting and generator power to house such means of communication. We are currently working with the Borough Engineering staff on proper placement and locations of such. The Borough has and had no means of contacting residents as well as persons living through the town during this Hurricane of any impending danger or hazardous situation.</i>
Describing the Action	
Action category	<i>Infrastructure</i>
Action type	<i>Alert of residents</i>
Action description	<i>The Borough of Sea Girt wishes to improve the notification to residents and persons traveling through the Borough roadways by two different means of information: (1) portable, and (2) permanent. (1) PORTABLE - A Portable Sign Trailer that has a message board on it to notify persons of hazardous conditions and unsafe situations. This portable message board would be used by Sea Girt Borough Emergency Management to warn residents of impending life threatening conditions, flooding, hazardous conditions and with the mobility of such be able to 'notify residents of impending danger, hazardous conditions and that the area they are in will flood. The Borough has and had no means of contacting residents as well as persons driving through the town during this Hurricane of any impending danger or hazardous situation. It is a weakness we hope to correct by means of funding through the Grant Program. These signs would serve as a main means of communicating the needed information during power outages and prolonged periods of danger and hazard. In addition to the town and residents – our messages would also serve the National Guard Training Center which is housed in Sea Girt Borough and is in a flood zone and low lying area of the Borough. We tried to use one of these during the Hurricane and were unable to secure one from a neighboring town as everyone's were in use.</i>
	<i>(2) PERMANENT. The Borough also has certain areas that during Hurricane Sandy flooded and are considered Flood Zones. We wish to install permanent signs powered by solar energy to notify residents of impending danger, hazardous conditions and that the area they are in will flood. We are currently working with the Borough Engineering staff on proper placement and locations of such permanent signage. The Borough has and had no means of contacting residents as well as persons driving through the town during this Hurricane of any impending danger or hazardous situation. It is a weakness we hope to correct by means of funding through the Grant Program. These signs would serve as a main means of communicating the needed information during power outages and prolonged periods of danger and hazard. In addition to the town and residents, our messages would also serve the National Guard Training Center which is housed in Sea Girt and is in a flood zone and low lying area of the Borough.</i>
Existing, future &/or NA	<i>existing and future</i>
Evaluating the Action	
Losses avoided (i.e., benefits)	<i>Residents are warned of anything during power outages and emergencies related to storms. Residents would be warned and informed during heightened states of emergency and power outages. Cost savings would come from the door to door alert means we do now. We expect this would be greater than project costs (\$70,000).</i>
Cost estimate	<i>70,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Likely to be cost effective, with benefits in excess of project costs.</i>
Technical	<i>technically feasible</i>
Political	<i>no apparent issues</i>
Legal	<i>no apparent issues</i>
Environmental	<i>No adverse issues</i>
Social	<i>Affects the well being of the Borough and its residents</i>
Administrative capability	<i>with outside contractors and borough engineers that will be tasked with the work, one administrative person will be necessary to administer from the borough end</i>
Local champion	<i>Borough Council, School, Police and Fire Officials</i>
Other community objectives	<i>mitigates the problem and keeps the public and residents immediately informed</i>
Implementing the Action	
Priority	<i>high</i>
Local planning mechanism	<i>Resolution for contractors and permitting where applicable</i>
Responsible party	<i>Borough and contracted parties</i>
Potential funding sources	<i>HMGF grant and 25% borough match</i>
Time line	<i>one year - proposed for 2014</i>
Reporting on Progress	
Action progress status	<i>Carried forward (2009 plan's action 5)</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Sea Girt Borough</i>
<b>Community action number</b>	<i>6 - AM Radio Station</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All hazards</i>
<b>Risk finding</b>	<i>We would like to douse and operate our own Borough AM radio station. We would like to house this in the Boro Hall/Police HQ building which is run by generator. During Hurricane Sandy we were fortunate to be able to piggy back messages on the back end of The Borough of Manasquan's AM station. This proved only minimally effective. Their message took up the bulk of the time on the air. Our Borough and their Borough have and had many different messages to go out and we were 100% relying on them to get our updates out. Their station was not easy to get to and our messages were not put out in a manner we had hoped. The Borough sustained almost 14 days with out power and getting messages to the Borough residents and persons of interest was crucial to the life and safety well being of our residents. We believe we have some of the necessary infrastructure such as antenna mounting and generator power to house such means of communication. We are currently working with the Borough Engineering staff on proper placement and locations of such. The Borough has and had no means of contacting residents as well as persons driving through the town during this Hurricane of any impending danger or hazardous situation. It is a weakness we hope to correct by means of funding through the Grant Program. This AM radio station would serve as a main means of communicating the needed information during power outages and prolonged periods of danger and hazard. In addition to the town and residents – our messages would also serve the National Guard Training Center which is housed in Sea Girt Borough and is in a flood zone and low lying area of the Borough.</i>
<b>Action category</b>	<i>Education and awareness</i>
<b>Action type</b>	<i>Emergency Public Awareness - Communications / notifications</i>
<b>Action description</b>	<i>AM Radio Station for communication of vital information to residents</i>
<b>Existing, future &amp;/or NA</b>	<i>N/A</i>
<b>Losses avoided (i.e., benefits)</b>	<i>Residents are warned of anything during power outages and emergencies related to storms. The Residents would be warned and informed during heightned states of emergency and power outages. While a cost can not be put on immediate notification, the cost savings would come from the door to door alert means we do now during outages and emergencies We found the AM radio during Sandy was beneficial. losses avoided is not quantifiable, but with an expected useful life of 25 years, the value of a well-informed public and Borough officials would exceed the annual projected cost of \$2,000.</i>
<b>Cost estimate</b>	<i>\$50,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The Residents would be warned and informed during heightned states of emergency and power outages.. While a cost can not be put on immediate notification, the cost savings would come from the door to door alert means we do now during outages and emergencies We found the AM radio during Sandy was beneficia. Losses avoided is not quantifiable, but with an expected useful life of 25 years, the value of a well-informed public and Borough officials would exceed the annual projected cost of \$2,000.</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Sea Girt</i>
<b>Community action number</b>	<i>7</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding in the low-lying areas surrounding Wreck Pond</i>
<b>Risk finding</b>	<i>Wreck Pond , located at the north terminus of Sea Girt between the Borough and Spring Lake, was originally open to the Atlantic Ocean, allowing for drainage during periods of peak rainfall. Just after the 1997 beach replenishment project, the east end of the Pond was closed off.As a result, the properties adjacent to the Pond are at a greater risk of flooding.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Infrastructure project</i>
<b>Action type</b>	<i>Reopen the east end of the Pond to allow for flow between the Pond and the Ocean</i>
<b>Action description</b>	<i>Spring Lake has obtained funds to reopen the Pond to allow for flow between the Pond and the Ocean.The Borough of Sea Girt role will be to provide in-kind assistance during the implementation phase of the project.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduce flooding in the northeast section of the Borough, minimizing damage to existing homes.</i>
<b>Cost estimate</b>	<i>\$2,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Preventing flooding in the four communities adjacent to the Pond (Spring Lake, Spring Lake Heights, Wall Twp. And the Borough of Sea Girt where property losses in Spring Lake alone have cost in excess of \$20,000,000 in flood claims over the last 10 to 15 years.</i>
<b>Technical</b>	<i>Technically feasible - the plans have been drafted and the project has started.</i>
<b>Political</b>	<i>No apparent issues</i>
<b>Legal</b>	<i>No apparent issues</i>
<b>Environmental</b>	<i>Improve the water quality of the Pond along with reducing flooding of adjacent properties.</i>
<b>Social</b>	<i>Affects the quality of life of residents in the four communities adjacent to the Pond</i>
<b>Administrative capability</b>	<i>Administrative oversight</i>
<b>Local champion</b>	<i>Governing bodies of Sea Girt, Spring Lake, Spring Lake Heights and Wall Twp.</i>
<b>Other community objectives</b>	<i>Mitigate an on-going problem during times of peak rainfall</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High - currently in process</i>
<b>Local planning mechanism</b>	<i>Plans to reopen the east end have already been drafted and are being implemented</i>
<b>Responsible party</b>	<i>Borough of Spring Lake, with cooperation and support from the Boroughs of Sea Girt, Spring Lake Heights and the Twp. Of Wall</i>
<b>Potential funding sources</b>	<i>Sources of funding have already been identified and 75% of the funding is approved</i>
<b>Time line</b>	<i>Within one year to completion</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Sea Girt</i>
Community action number	<i>8 - Wreck Pond Dredging</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, Hurricanes, Tropical Storms, Nor'easters</i>
Risk finding	<i>Sediment loading into the eastern end of the Pond has reduced the impoundment capacity of the Pond.</i>
<b>Describing the Action</b>	
Action category	<i>Infrastructure</i>
Action type	<i>Flood Control</i>
Action description	<i>Continue to work with DEP, Spring Lake, Spring Lake Heights and Wall Township and Monmouth County to bring the project to completion</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Minimize flooding in Spring Lake and Sea Girt at the eastern end of the Pond</i>
Cost estimate	<i>Unknown</i>
Cost effectiveness (i.e., benefit/cost)	<i>Dredging sediment from the eastern end will create greater impoundment area and prevent repetitive flooding in this area</i>
Technical	<i>Technically feasible</i>
Political	<i>No apparent issues</i>
Legal	<i>No apparent issues</i>
Environmental	<i>Finding a suitable disposal site for dredged material could be an issue</i>
Social	<i>Reduced risk benefits the community</i>
Administrative capability	<i>Participation with other stakeholders to ensure project is completed</i>
Local champion	<i>Governing bodies of Spring Lake, Sea Girt, Spring Lake Heights and Wall Twp., DEP, Monmouth County</i>
Other community objectives	<i>Mitigate problem</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Continue to work with DEP, Spring Lake, Spring Lake Heights and Wall Township to bring the project to completion</i>
Responsible party	<i>Shared responsibility with all stakeholders</i>
Potential funding sources	<i>Army Corps of Engineers, DEP, Monmouth County, HMGP and adjacent communities</i>
Time line	<i>Two years</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Shrewsbury Borough</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All hazards</i>
<b>Risk finding</b>	<i>Police department, dispatch center, evacuation shelter and OEM EOC are on limited back up power in the event of power outage</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Infrastructure project</i>
<b>Action type</b>	<i>Obtain an emergency generator</i>
<b>Action description</b>	<i>Obtain a 350 kW emergency generator for the municipal building housing essential services.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Power outages lasting up to 10 days are frquent especially during severe storms. Extension cords are typically run to portions of the building without power. Emergency Operations Center has limited capability and efectiveness. 163 maximum occupancy room can be used as a shelter. OEM EOC can be effectively operated. Current generator will be relocated to department of public works where there is no backup power at all.Losses avoided are estimated to be \$45,000 for initial DPW generator and between \$2,000-\$3,000 per occurence in shelter costs.</i>
<b>Cost estimate</b>	<i>\$95,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be on the order of \$45,000 for initial DPW generator and between \$2,000-\$3,000 per occurence and one time costs of \$95,000</i>
<b>Technical</b>	<i>Technically feasible.</i>
<b>Political</b>	<i>Entire town council supports the project.</i>
<b>Legal</b>	<i>No legal issues.</i>
<b>Environmental</b>	<i>No environmental issues.</i>
<b>Social</b>	<i>None.</i>
<b>Administrative capability</b>	<i>Oversight by Borough Engineer</i>
<b>Local champion</b>	<i>Police Department, Office of Emergency Management</i>
<b>Other community objectives</b>	<i>NA</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Building construction code approval</i>
<b>Responsible party</b>	<i>Borough Engineer</i>
<b>Potential funding sources</b>	<i>Mitigation Grant with 25% local match</i>
<b>Time line</b>	<i>2-3 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action - Letter of Intent submitted on 2/26/2013 following Superstorm Sandy</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Shrewsbury Borough</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All natural hazards</i>
<b>Risk finding</b>	<i>The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Education and outreach</i>
<b>Action type</b>	<i>Public awareness and education programs</i>
<b>Action description</b>	<i>Work with municipal and community stakeholders to setup a committee to develop all hazard education program including web resources and handouts. Specifically develop checklists and steps that individual residents can use to evaluate their own and immediately surrounding properties for potential impact and damage sources.</i>
<b>Existing, future &amp;/or NA</b>	NA
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Create a better awareness of mitigation practices and reduce potential damage, injuries and resulting emergencies. Losses avoided are estimated to be on the order of \$100,000 per occurrence.</i>
<b>Cost estimate</b>	<i>\$2,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>The economic benefit of education-outreach program makes the benefit of this action a worthy investment. This project is likely to be cost effective, with benefits on the order of \$100,000 and cost of only \$2,000.</i>
<b>Technical</b>	<i>Technically feasible and well proven to work</i>
<b>Political</b>	<i>Entire town council supports the project.</i>
<b>Legal</b>	<i>No legal issues.</i>
<b>Environmental</b>	<i>No environmental issues.</i>
<b>Social</b>	<i>None. Provides education to all social groups.</i>
<b>Administrative capability</b>	<i>Administered by OEM and IT staff.</i>
<b>Local champion</b>	<i>Office of Emergency Management and CERT members.</i>
<b>Other community objectives</b>	NA
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	NA
<b>Responsible party</b>	<i>OEM and LEPC directives and plans.</i>
<b>Potential funding sources</b>	<i>OEM budget</i>
<b>Time line</b>	<i>2 years</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Shrewsbury Borough</i>
<b>Community action number</b>	3
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding of Haddon Ave which is an access road to First Aid Building - (flooding, hurricane and tropical storms, nor'easters)</i>
<b>Risk finding</b>	<i>Address flooding issues and or relocate the First Aid Squad</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Infrastructure project</i>
<b>Action type</b>	<i>Relocation</i>
<b>Action description</b>	<i>The First Aid Squad is located in an area that is prone to flooding. Although the building itself does not flood the access road floods frequently reducing accessibility to the building. The town is considering moving the squad to a more desirable location.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>First Aid Squad provides essential medical service to all residents and there is a need to make sure this service is uninterrupted. Losses avoided are not tangible and a specific cost on pain, suffering and/or loss of life can not be easily assigned.</i>
<b>Cost estimate</b>	<i>10,000 to 50,000 depending on retrofitting needs of new structure</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Uninterrupted emergency medical services will directly save lives. This project is likely to be cost effective, with benefits in hundreds of thousands of dollars and costs of between \$10,000 and \$50,000.</i>
<b>Technical</b>	<i>Technically feasible. Flooding has stranded first responders enroute to the building.</i>
<b>Political</b>	<i>Entire town council supports the project.</i>
<b>Legal</b>	<i>No legal issues.</i>
<b>Environmental</b>	<i>No environmental issues.</i>
<b>Social</b>	<i>Current building is used as a voting location. New voting facility will have to identified.</i>
<b>Administrative capability</b>	<i>First Aid command staff will work with zoning and planning office.</i>
<b>Local champion</b>	<i>Office of Emergency Management and First Aid Squad.</i>
<b>Other community objectives</b>	<i>NA</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>New location may require zoning changes.</i>
<b>Responsible party</b>	<i>First Aid Squad</i>
<b>Potential funding sources</b>	<i>Capital budgeted and First Aid Squad Budget.</i>
<b>Time line</b>	<i>2-4 years</i>
<b>Reporting on Progress</b>

Other community objectives	<i>NA</i>
<b>Implementing the Action</b>	
Priority	<i>Low</i>
Local planning mechanism	<i>Local permitting</i>
Responsible party	<i>Borough Engineer</i>
Potential funding sources	<i>Capital budged and grants.</i>
Time line	<i>Construction commenced in October 2011 and completed December 2011.</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Shrewsbury Borough</i>
Community action number	6
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Frequent power outages in the municipal building limit emergency functions. (flooding, hurricanes and tropical storms, nor'easters, snow storms)</i>
Risk finding	<i>Frequent power outages limit police department and emergency management functions. Current small emergency generator provides limited backup power to a portion of the building.</i>
<b>Describing the Action</b>	
Action category	<i>Infrastructure project</i>
Action type	<i>Installing an emergency generator.</i>
Action description	<i>Providing emergency backup power to police department, emergency management operations center and 167 person meeting room which will serve as a shelter.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Emergency power will provide continuous police department services and emergency management operations center. The building will also provide a shelter with essential services thereby protecting public health and safety. Losses avoided are estimated to be in excess of \$10,000 per occurrence</i>
Cost estimate	<i>\$120,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits of \$10,000 per occurrence and costs of \$120,00.</i>
Technical	<i>Technically feasible.</i>
Political	<i>Entire town council supports the project.</i>
Legal	<i>No legal issues.</i>
Environmental	<i>Environmental regulations fully complied with.</i>
Social	<i>Provides continuous police and emergency management services and an emergency shelter that enhances quality of life.</i>
Administrative capability	<i>Borough Engineer and private contractor.</i>
Local champion	<i>Local homeowners and businesses.</i>
Other community objectives	NA
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Local permitting</i>
Responsible party	<i>Borough Engineer</i>
Potential funding sources	<i>Capital budgeted and grants.</i>
Time line	<i>2014-2015</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Shrewsbury Borough</i>
<b>Community action number</b>	7
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Construction Official
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Shrewsbury Township</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>All, particularly extreme wind</i>
<b>Risk finding</b>	<i>Critical facilities, including the Township EOC and local shelters, experience telecommunications and electrical system failure during severe storms (due to wind related power failures, such as downed trees on power lines). This renders the systems inoperable and the Township is unable to provide critical services. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and infrastructure projects</i>
<b>Action type</b>	<i>Protect critical facilities</i>
<b>Action description</b>	<i>Planning for funding and improvements to telecom and electrical systems at critical facilities including EOC and local shelters: Installation of emergency generator and ATS to power the Municipal Building to provide emergency services and shelter to the Township residents in time of power outages which can occur during all types of natural hazard events but have been most common during high wind events, hurricanes and tropical storms, and nor'easters.</i>
<b>Existing, future &amp;/or NA</b>	<i>N/A</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>This action will be significant to provide shelter, as well as, Emergency Management functions. Benefits also include reduced risks to health, safety and welfare. Property losses avoided are estimate to be over \$1,000,000. There is no estimate to the lives that can be saved during extreme heat and cold when there is no electric utility within the Township.</i>
<b>Cost estimate</b>	<i>\$300,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is cost effective with estimated benefits of over \$1,000,000 over the lifetime of the generator and the one-time cost of \$300,000</i>
<b>Technical</b>	<i>This mitigation action is technically feasible</i>
<b>Political</b>	<i>There is both political and public support for this mitigation action</i>
<b>Legal</b>	<i>The Township can implement this mitigation action with the proper permits</i>
<b>Environmental</b>	<i>There are no environmental impacts associated with this mitigation action</i>
<b>Social</b>	<i>This mitigation action will have no social impacts</i>
<b>Administrative capability</b>	<i>The Township can implement this mitigation action with its personnel</i>
<b>Local champion</b>	<i>The Mayor and Committee and OEM, will advocate for this mitigation action</i>
<b>Other community objectives</b>	<i>This mitigation action improves the quality of life to Township residents in periods of blackouts.</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Bid documents</i>
<b>Responsible party</b>	<i>Thomas J Herits PE PP PLS - Maser Consulting, Township Engineer and Jan Delonardo RMC, Township Clerk</i>
<b>Potential funding sources</b>	<i>Grants, local budget if required</i>
<b>Time line</b>	<i>Summer 2015. The Township will apply for grants.</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>The Township will be implementing a CDBG grant to expand and improve the Municipal Building prior to implementing this mitigation action. Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough Of Spring Lake</i>
<b>Community action number</b>	<i>2014-07 (Elevation of Floodprone Residential Structures)</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Storm Surge, flooding, hurricanes, tropical storms and nor'easters</i>
<b>Risk finding</b>	<i>Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Project Structures</i>
<b>Action description</b>	<i>Project will consist of the elevation of floodprone Residential Structures that are below the approved base flood elevations approximately 100 homes.</i>
<b>Existing, future &amp;/or NA</b>	<i>Addresses existing structures</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided by this project are estimated to be \$100,000 per property that is elevated.</i>
<b>Cost estimate</b>	<i>The cost of the project is estimated to be \$50,000 to \$100,000 depending on size and current foundation of home.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Average cost of residential homes in this area are in the \$1-3 million range. Previous flooding has caused millions in damages. This project is likely to be cost effective, with benefits estimated to be about \$100,000 per property and costs of only \$50k-\$100k per property.</i>
<b>Technical</b>	<i>Elevation of homes is Technically feasible.</i>
<b>Political</b>	<i>All residents realize the need to prevent flooding in this area. No group is opposed to this action. Our political leadership supports this type project.</i>
<b>Legal</b>	<i>No apparent legal issues.</i>
<b>Environmental</b>	<i>No environmental impacts are anticipated as a result of elevating the homes.</i>
<b>Social</b>	<i>Does not adversely affect any particular social group.</i>
<b>Administrative capability</b>	<i>Spring Lake Mayor and Council and Borough Manager will manage this project.</i>
<b>Local champion</b>	<i>W. Bryan Dempsey. Borough Administrator/ Peter Avakian, Engineer</i>
<b>Other community objectives</b>	<i>None</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>None required.</i>
<b>Responsible party</b>	<i>Borough Engineers from Spring Lake</i>
<b>Potential funding sources</b>	<i>FEMA hazard mitigation grant funding streams (i.e., HMGP)</i>
<b>Time line</b>	<i>ASAP</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New project</i>

<b>Action Worksheet #7</b>	
<b>Your plan name</b>	<b>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</b>
<b>Your community name</b>	<b>Borough of Spring Lake Heights</b>
<b>Community action number</b>	<b>1 (Action 1C - Explore the need for hazard zoning and high risk hazard land use ordinances, raising utilities, exceeding height requirements)</b>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, Storm Surge, Nor'easters, Hurricanes &amp; Tropical Storms</i>
<b>Risk finding</b>	<i>– Existing development in floodprone areas and areas susceptible to storm surge has incurred first floor flooding, and damages to utility systems. While not on the immediate coast, much of Spring Lake Heights is in mapped surge hazard areas. However, during Hurricane Sandy, most flooding was observed within the first block of the Wreck Pond tributaries. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events. Spring Lake Heights is essentially built out; the majority of development is residential in nature and occurs as part of home additions and improvements.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Planning Mechanism - revise zoning ordinance to address development in hazardous areas and also implement changes in design requirements to develop structures that are flood resilient</i>
<b>Action type</b>	<i>Review and revise development ordinance to more adequately address the flood hazard areas of the Borough</i>
<b>Action description</b>	<i>Revise zoning ordinance to address development in hazardous areas and also implement changes in design requirements to develop structures that are flood resilient. Introduce and adopt development ordinances which require compliance with new base flood elevation, mandatory flood proofing and other similar measures.</i>
<b>Existing, future &amp;/or NA</b>	<i>The action is designed to protect future development</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>These planning changes will significantly reduce any potential damage to development in the areas prone to flooding in the Borough. With approximately 100 properties located in the 100 year flood areas, the potential property damage which may be realized by future flooding in the flood prone areas significantly outweighs this planning effort's costs of approximately \$50k.</i>
<b>Cost estimate</b>	<i>Approximately \$50k</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits estimated to be well in excess of project costs.</i>
<b>Technical</b>	<i>planning Mechanisms are technically feasible</i>
<b>Political</b>	<i>These proposed planning changes have the support of the Mayor and Council.</i>
<b>Legal</b>	<i>The Borough of Spring Lake Heights has the Authority to make these changes</i>
<b>Environmental</b>	<i>There are no Environmental impacts associated with the proposed Planning changes.</i>
<b>Social</b>	<i>There are no social impacts or does this proposed improvement require the relocation of any resident of the Borough .</i>
<b>Administrative capability</b>	<i>the Borough attorney and planner are required to complete this project.</i>
<b>Local champion</b>	<i>The local Police Fire and Rescue Squad are in support of this implementation as well as the Borough's Environmental Commission.</i>
<b>Other community objectives</b>	<i>this action specifically furthers the Borough's Community Objectives with regard to development</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>medium</i>
<b>Local planning mechanism</b>	<i>The Planning Board, the Zoning Board of Adjustment, the Building Department and the NJ building Code</i>
<b>Responsible party</b>	<i>The Borough Mayor and Council</i>
<b>Potential funding sources</b>	<i>Planning Grants</i>
<b>Time line</b>	<i>Pending grant funding</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This implementation is being carried forward from the last version of the plan</i>

<b>Action Worksheet #7</b>	
<b>Your plan name</b>	<b>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</b>
<b>Your community name</b>	<b>Borough of Spring Lake Heights</b>
<b>Community action number</b>	<b>2 (Action 2B - Create agnigation outreach program to prepare residents for disaster)</b>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	All natural hazards.
<b>Risk finding</b>	The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level of disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
<b>Describing the Action</b>	
<b>Action category</b>	Education and Awareness Programs
<b>Action type</b>	Increase education and risk awareness, and promote private mitigation efforts
<b>Action description</b>	public outreach includes discussion and handouts at Municipal Council meetings or other publically supported events/meetings
<b>Existing, future &amp;/or NA</b>	N/A - The action is designed to provide guidance to residents in the event of future natural disasters
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Public outreach will have a significant effect on protecting the safety and welfare of residents. These efforts will also reduce potential damage to development in the areas prone to flooding in the Borough. Though losses avoided are unquantifiable for an action of this nature, with approximately 100 properties located in the 100 year flood areas, the potential property damage which may be avoided during future flooding in the flood prone areas is likely to be significantly higher than the \$75k costs of this outreach effort.
<b>Cost estimate</b>	Approximately \$75k
<b>Cost effectiveness (i.e., benefit/cost)</b>	This project is likely to be cost effective, with the potential propoerty damage which may be avoided druing future flooding in the flood prone areas likely to be significantly higher than the \$75k costs of this outreach effort.
<b>Technical</b>	Outreach programs are technically feasible
<b>Political</b>	The implementation of flood mitigation practices has the support of the Mayor and Council.
<b>Legal</b>	The Borough of Spring Lake Heights has the authority to conduct public outreach
<b>Environmental</b>	There is not an Environmental impacts associated with outreach measures
<b>Social</b>	There are no social impacts associated with outreach measures
<b>Administrative capability</b>	the Borough has the administrative capability to conduct outreach programs /measures
<b>Local champion</b>	The local Police Fire and Rescue Squad are in support of this implementation of these measures.
<b>Other community objectives</b>	this action specifically furthers the Borough's Community Objectives with regard the safety and welfare of its residents
<b>Implementing the Action</b>	
<b>Priority</b>	high
<b>Local planning mechanism</b>	Literature prepared and discussions presented by Borough Officials will be used to implement these actions
<b>Responsible party</b>	The Borough Mayor and Council
<b>Potential funding sources</b>	Future Municipal Grants
<b>Time line</b>	Pending grant funding
<b>Action progress status</b>	This implementation is being carried forward from the last version of the plan

**Action Worksheet #7**

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Spring Lake Heights</i>
<b>Community action number</b>	<i>3 (Action 4D- Continue to implemi nt ade best mitigation practices for floodplain areas)</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding , storm surge, Nor'easters, Hurricanes &amp; Tropical Storms</i>
<b>Risk finding</b>	<i>Existing development in floodprone areas and areas susceptible to storm surge has incurred first floor flooding, and damages to utility systems.Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>-Local Planning and Regulations</i>
<b>Action type</b>	<i>Improved floodplain management practices</i>
<b>Action description</b>	<i>Continue to implement mitigation practices such as development regulations and enforcement of mitigation practices in flood prone areas. Enforce zoning ordinances which restrict development in hazardous areas and also implement changes in design requirements to develop structures that are flood resilient</i>
<b>Existing, future &amp;/or NA</b>	<i>The action is designed to protect existing and future development</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>These planning changes will significantly reduce any potential damage to development in the areas prone to flooding in the Borough. Losses avoided are difficult to quantify but, with approximately 100 properties located in the 100 year flood areas, the potential losses avoided through implementing best floodplain management practices is expected to be at least equal to (and most likely be well over) the \$75k cost of this this activity.</i>
<b>Cost estimate</b>	<i>Approximately \$75k</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is likely to be cost effective, with benefits over time expected to be well in excess of the \$75k project cost</i>
<b>Technical</b>	<i>planning and enforcement Mechanisms are technically feasible</i>
<b>Political</b>	<i>The implementation of flood mitigation practices has the support of the Mayor and Council.</i>
<b>Legal</b>	<i>The Borough of Spring Lake Heights has the authority to implement these practices</i>
<b>Environmental</b>	<i>There is not an Environmental impacts associated with the implementation of the flood mitigation practices and all practices will comply with NJDEP regulations</i>
<b>Social</b>	<i>There are no social impacts or does this proposed implementation require the relocation of any resident of the Borough .</i>
<b>Administrative capability</b>	<i>the Borough Zoning Officer and Engineer will be required to implement these practices</i>
<b>Local champion</b>	<i>The local Police Fire and Rescue Squad are in support of this implementation as well as the Borough's Environmental Commission.</i>
<b>Other community objectives</b>	<i>this action specifically furthers the Borough's Community Objectives with regard to development</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>high</i>
<b>Local planning mechanism</b>	<i>The Zoning and Code Officer, the Planning Board, the Zoning Board of Adjustment, the Building Department and the NJ building Code</i>
<b>Responsible party</b>	<i>The Borough Mayor and Council</i>
<b>Potential funding sources</b>	<i>Future Municipal Grants</i>
<b>Time line</b>	<i>Pending grant funding</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This implementation has been added since the last version of the plan</i>

BOROUGH OF SPRING LAKE HEIGHTS  
PRIORITY 1

Action Worksheet	
<b>Your plan name</b>	<b>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</b>
<b>Your community name</b>	<b>Borough of Spring Lake Heights</b>
<b>Community action number</b>	<b>4</b> (LOI-1. Elevate the Shore Road And Black Street Pump Stations - including generators to provide power in the event of an emergency)
Assessing the Risk	
<b>Hazard(s) addressed</b>	Flooding due to 'Nor'easters, Hurricanes & Tropical Storms can compromise equipment as well as result in electrical power loss to the station
<b>Risk finding</b>	Flooding due to 'Nor'easters, Hurricanes & Tropical Storms can compromise equipment as well as result in electrical power loss to the station
Describing the Action	
<b>Action category</b>	Structural Project - Elevation of Pump Stations
<b>Action type</b>	Elevation of pump station building including controls, generator and the elevating the sewer manhole/wet well .
<b>Action description</b>	The Black Creek Pump Station is located at the south end of Sixth Avenue along the northern bank of the North Branch of Wreck Pond. The elevation of this pump station does not meet the recommended freeboard. The Shore Road Pump Station is located along the north shore of Wreck Pond. The elevation of this pump station is below the 100 year flood elevation.
<b>Existing, future &amp;/or NA</b>	The elevation of these pump stations ensures that the future hazards listed above will not directly impact existing and proposed development
Evaluating the Action	
<b>Losses avoided (i.e., benefits)</b>	The elevation of the pump stations above the flood elevations for these areas will ensure that there is no interruption of sewer service to the homes connected to this sanitary sewer collection system. (which accounts for well over 50% of the Borough's population)The elevations of these stations also will significantly reduce and virtually eliminate any potential damage to the sanitary sewer infrastructure of the Borough. The potential property damage, Loss of business and ability of other vital buildings such as the school and fire house to function which may be realized by a failure of these pumps stations considerably outweighs the cost to elevate these stations. There are well over 1000 homes, numerous businesses, the Borough's Fire House and the Borough's Elementary School are connected to this system. The environmental impacts and cleanup cost associated with a failure to even one of these pump stations significantly outweighs the cost of these improvements. A failure of these pump stations would also result in beach closures of adjacent communities as any release of sewage will flow in to Wreck Pond and directly impact the Jersey Shore. Losses avoided by this project could be on the order of roughly \$3,000,000.
<b>Cost estimate</b>	Approximately \$650k
<b>Cost effectiveness (i.e., benefit/cost)</b>	This project is likely to be cost effective, with benefits estimated to be well in excess of project costs (benefits of in excess of \$3,000,000 versus costs of \$650k)
<b>Technical</b>	Elevation of the pump station is the most technically feasible option available.
<b>Political</b>	The proposed improvements have the support of the Mayor and Council.
<b>Legal</b>	The Borough of Spring Lake Heights has the Authority to make these improvements.
<b>Environmental</b>	There are all Environmental impacts associated with the proposed improvements. All NJDEP permits will be obtained prior to construction.
<b>Social</b>	There are no social impacts or does this proposed improvement require the relocation of any resident of the Borough .
<b>Administrative capability</b>	No outside help is required to complete this project.
<b>Local champion</b>	The South Monmouth Regional Sewage Authority is in support of this implementation as well as the Borough's Environmental Commission.
<b>Other community objectives</b>	
Implementing the Action	
<b>Priority</b>	High
<b>Local planning mechanism</b>	The Building Department and the NJ building Code
<b>Responsible party</b>	The Borough Engineer
<b>Potential funding sources</b>	HMGP Grant
<b>Time line</b>	Fall of 2016
Reporting on Progress	
<b>Action progress status</b>	This implementation is a new action

Borough of Spring lake Heights  
Priority 2

<b>Action Worksheet #7</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Spring Lake Heights</i>
<b>Community action number</b>	<i>5 (LOI #2 - Property Acquisition)</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, Nor'easters, Hurricanes &amp; Tropical Storms, storm surge</i>
<b>Risk finding</b>	<i>Existing development in floodprone areas and areas susceptible to storm surge has incurred first floor flooding, and damages to utility systems. – Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>- Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>- Remove existing structures from flood hazard areas</i>
<b>Action description</b>	<i>Acquisition of 11 floodprone properties in the Borough previously located indicated as the Coastal A Zone on the ABFE Flood Hazard Maps; 600 Shore Road, 714 Shore Road, 716, Shore Road, 718 Shore Road, 805 Shore Road, 808 Shore Road, 809 Shore Road, 811 Shore Road, 812 Shore Road and 813 Shore Road</i>
<b>Existing, future &amp;/or NA</b>	<i>- Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Acquisition of properties in the areas prone to flooding in the Borough would eliminate risk to these residential properties. Benefits are likely to be on the order of \$6,000,000.</i>
<b>Cost estimate</b>	<i>\$3,933,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits on the order of \$6,000,000 and costs of approximately \$3,933,000.</i>
<b>Technical</b>	<i>Acquisition is technically feasible</i>
<b>Political</b>	<i>Acquisition has the support of the Mayor and Council.</i>
<b>Legal</b>	<i>The properties listed have expressed interest in being acquired</i>
<b>Environmental</b>	<i>Environmental impacts associated with acquisition can only be positive has it removes development from these regulated areas.</i>
<b>Social</b>	<i>There are no social impacts associated with these acquisitions</i>
<b>Administrative capability</b>	<i>the Borough has the administrative capability to acquire property</i>
<b>Local champion</b>	<i>The local residents as well as the Environmental Committee in support of this implementation of these measures.</i>
<b>Other community objectives</b>	<i>this action specifically furthers the Borough's Community Objectives with regard to the safety and welfare of its residents</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>high</i>
<b>Local planning mechanism</b>	<i>Planning</i>
<b>Responsible party</b>	<i>The Borough Mayor and Council</i>
<b>Potential funding sources</b>	<i>Future Municipal Grants</i>
<b>Time line</b>	<i>Pending grant funding</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>This is a new action added sincethe last version of the plan</i>

Borough of Spring Lake Heights  
Priority 3

<b>Action Worksheet #7</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Spring Lake Heights</i>
<b>Community action number</b>	<i>6 (LOI #3 - Property Elevation)</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, surge, Nor'easters, Hurricanes &amp; Tropical Storms</i>
<b>Risk finding</b>	<i>Existing development in floodprone areas and areas susceptible to storm surge has incurred first floor flooding, and damages to utility systems. – Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural Project</i>
<b>Action type</b>	<i>Elevation of Existing structures above the base flood elevation</i>
<b>Action description</b>	<i>Elevation of 12 properties in the Borough previously located indicated as the Coastal A Zone on the ABFE Flood Hazard Maps; 3 Sixth Avenue, 600 Shore Road, 606 Shore Road, 608 Shore Road, 714 Shore Road, 716, Shore Road, 718 Shore Road, 805 Shore Road, 808 Shore Road, 809 Shore Road, 811 Shore Road, 812 Shore Road, 813 Shore Road and 817 Shore Road</i>
<b>Existing, future &amp;/or NA</b>	<i>- Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Elevation of properties in the areas prone to flooding in the Borough would eliminate risk to these residential structures. All of the properties listed above have a history of repetitive loss and/or flood claims. Losses avoided by elevating the buildings is estimated to be on the order of \$3,000,000.</i>
<b>Cost estimate</b>	<i>\$600,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with benefits on the order of \$3,000,000 and costs of only \$600,000.</i>
<b>Technical</b>	<i>Elevation is technically feasible</i>
<b>Political</b>	<i>Elevation has the support of the Mayor and Council.</i>
<b>Legal</b>	<i>The properties listed have expressed interest in being elevated</i>
<b>Environmental</b>	<i>Elevation of properties does not have Environmental impacts .</i>
<b>Social</b>	<i>There are no social impacts associated with elevating these properties</i>
<b>Administrative capability</b>	<i>the Borough has the administrative capability to acquire property</i>
<b>Local champion</b>	<i>The local residents as well as the Environmental Committee in support of this implementation of these measures.</i>
<b>Other community objectives</b>	<i>this action specifically furthers the Borough's Community Objectives with regard to the safety and welfare of its residents</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>high</i>
<b>Local planning mechanism</b>	<i>Planning</i>
<b>Responsible party</b>	<i>The Borough Mayor and Council</i>
<b>Potential funding sources</b>	<i>Future Municipal Grants</i>
<b>Time line</b>	<i>Pending grant funding</i>

BOROUGH OF SPRING LAKE HEIGHTS  
PRIORITY #7

<b>Action Worksheet #7</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Spring Lake Heights</i>
<b>Community action number</b>	<i>7 (LOI #4 - Utility Improvements)</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, Storm Surge, Nor'easters, Hurricanes &amp; Tropical Storms</i>
<b>Risk finding</b>	<i>Existing development in floodprone areas and areas susceptible to storm surge has incurred first floor flooding, and damages to utility systems.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure Projects</i>
<b>Action type</b>	<i>Elevation or retrofit of existing utilities above the base flood elevation</i>
<b>Action description</b>	<i>Raise existing utilities above expected flood levels to reduce flood damage. The utility improvements include the elevating of outdoor HVAC equipment, relocation of overhead electrical services to underground conduit and weather proofing of these services as required</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>There are approximately a dozen (12) properties that have a history of repetitive loss and/or flood claims. Elevation and flood proofing of the utilities would eliminate risk to these residential structures and historic claims. Losses avoided are difficult to quantify, but are estimated to be in excess of \$100,000.00</i>
<b>Cost estimate</b>	<i>\$36,000 is cost for approximately a dozen (12) structures receiving treatment</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>the properties referenced above have a history of repetitive loss and/or flood claims This project is likely to be cost effective, with benefits expected to be in excess of \$100,000 and costs on the order of \$36,000</i>
<b>Technical</b>	<i>this is technically feasible</i>
<b>Political</b>	<i>these improvements have the support of the Mayor and Council.</i>
<b>Legal</b>	<i>there are no legal issues</i>
<b>Environmental</b>	<i>no Environmental impacts .</i>
<b>Social</b>	<i>There are no social impacts associated with these improvements</i>
<b>Administrative capability</b>	<i>the Borough has the administrative capability to implement these improvements</i>
<b>Local champion</b>	<i>The local residents are in support of this implementation of these measures.</i>
<b>Other community objectives</b>	<i>this action specifically furthers the Borough's Community Objectives with regard the safety and welfare of its residents</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>medium</i>
<b>Local planning mechanism</b>	<i>planning</i>
<b>Responsible party</b>	<i>The Borough Mayor and Council</i>
<b>Potential funding sources</b>	<i>Future Municipal Grants</i>
<b>Time line</b>	<i>Pending grant funding</i>
<b>Action progress status</b>	<i>This is a new action added since the last version of the plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Tinton Falls</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding, landslides, hurricane and tropical storms, nor'easters</i>
Risk finding	<i>Tinton Falls has a fairly steady flow of new development and its population is increasing, so promoting disaster resistant development will be key to achieving sustainability.</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Develop Ordinance</i>
Action description	<i>Develop a stormwater management plan that includes subdivision regulations to control runoff; both for flood reduction and to minimize saturated soils on steep slopes that can cause landslides</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Promoting disaster resistant development is important to achieve sustainability and protect the health and safety of the borough residents. Losses avoided are estimated to be hundreds of thousands of dollars per year.</i>
Cost estimate	<i>\$10,000/ year</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of hundreds of thousands of dollars per year and costs of roughly \$10,000 per year.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by the mayor and council</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts cause by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no negative social impacts from this project on the community, it is beneficial to the borough and its residents to be conscious of these issues</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Economic development and environmental quality</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing documents</i>
Responsible party	<i>Mayor and Council</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward (Old #1E)</i>

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of Tinton Falls</i>
<b>Community action number</b>	<i>2</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Extreme ten peratures, extreme winh, durricane &amp; tropical storm, lightning, nor'easter, tornado, winter storm, drought, flood, storm surge, earthquake, landslide, wildfire</i>
<b>Risk finding</b>	<i>Residents are unprepared for severe storms and often face hazardous conditions during and after these events. Health and safety effects due to damages for the storm and lack of essential utilities. Tinton Falls' population is projected to grow fairly significantly through 2040. By the year 2040, it is projected to have a population increase of 35.4% over 2010 values.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Planning Mechanism</i>
<b>Action type</b>	<i>Develop Program to Educate Residents</i>
<b>Action description</b>	<i>Create mitigation outreach program to prepare residents for disasters. Support and fund Community Response Team programs that also include mitigation component.</i>
<b>Existing, future &amp;/or NA</b>	<i>Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Educating the public on how to prepare for a storm and setting up support after the storm has passed can help mitigate some of the damages incurred on the borough by severe weather and protect the health and safety of the residents. Recovery will be faster and more effective and help shelter residents who can not return to their homes. Prevent potential injury and loss of life due to severe weather conditions. Minimize damage to borough facilities and resident homes by properly preparing. We estimate that losses avoided by this project could be on the order of hundreds of thousands of dollars per year.</i>
<b>Cost estimate</b>	<i>\$10,000/ year</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Educating the public on how to prepare for a storm and setting up support after the storm has passed can help mitigate some of the damages incurred on the borough by severe weather and protect the health and safety of the residents. Recovery will be faster and more effective and help shelter residents who can not return to their homes. This project is likely to be cost effective, with benefits on the order of hundreds of thousands of dollars per year and costs of only \$10,000 per year.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by the mayor and council</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts cause by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no negative social impacts from this project on the community, it is beneficial to the borough and its residents to be conscios of these issues</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
<b>Local champion</b>	<i>Council and the mayor</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Moderate</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing documents</i>
<b>Responsible party</b>	<i>Council and the mayor</i>
<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
<b>Time line</b>	<i>Ongoing</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward (old #2B and 2E)</i>

## Action Worksheet

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Tinton Falls</i>
Community action number	3
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flooding by hurricanes, severe storm, hurricanes and tropical storms, nor'easters</i>
Risk finding	<i>Areas of heavy sedimentation are noted along some watercourses (Whale Pond Brook; Jumping Brook. Floodprone roadways/intersections under State jurisdiction, including: County Highway 13A, County Highway 16, and Hope Road. Flash flooding conditions in area streams during/after storms. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Develop work plan</i>
Action description	<i>Conduct a routine maintenance program and seek financial assistance to clean out stream segments with heavy sediment deposits. Develop specific mitigation solutions for floodprone roadways and intersections under the leadership of NJDOT. Implement identified stormwater recharge, rate or volume projects identified in Regional Stormwater Plans to decrease flash in streams during/after storms.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Prevent potential injury and loss of life and property due to storm related flooding. Protecting the health and safety of borough residents is of the utmost priority. 'The proposed plan will help mitigate some of the damages incurred by the borough and residents during flooding. Maintaining and cleaning out stream segments will help ensure proper drainage and minimize flooding risks. We estimate that losses avoided could be roughly hundreds of thousands of dollars per year.</i>
Cost estimate	<i>\$50,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits of hundreds of thousands of dollars per year and costs of \$50,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by the mayor and council</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts cause by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no negative social impacts from this project on the community, it is beneficial to the borough and its residents to be conscious of these issues</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Capital improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing documents</i>
Responsible party	<i>Public works, County Mosquito Commission, County Engineering, NJDOT</i>
Potential funding sources	<i>There are no potential environmental impacts caused by this project.</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward (old#4F, 4G, and 4H)</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Tinton Falls</i>
Community action number	4
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Landslides</i>
Risk finding	<i>Areas of the borough are susceptible to slope failure and potential landslides which can lead to severe property damage and loss of life. (including but not limited to: Flows along the Pine Brook repeatedly undercutting portions of Water Street, causing slumping of the street into Pine Brook. Similarly, along Jumping Brook.)</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Develop Ordinance</i>
Action description	<i>Locally identify and map specific areas of potential slope failure and limit future development in these areas; adopt a steep slope ordinance to regulate development in these higher risk areas.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Developing an ordinance to regulate development in high risk areas will help prevent future landslides and protect the health and safety of the borough residents as well as prevent damage to borough facilities and resident properties. Losses avoided are estimated to be on the order of millions of dollars per year.</i>
Cost estimate	<i>\$10,000/ year</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of millions of dollars per year and costs of only \$10,000 per year.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by the mayor and council</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no potential environmental impacts caused by this project.</i>
Social	<i>There are no negative social impacts from this project on the community, it is beneficial to the borough and its residents to be conscious of these issues</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Economic development and environmental quality</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Mayor and council</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward (old #9B and 9D)</i>

## Action Worksheet

Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Tinton Falls</i>
Community action number	5
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Wildfires</i>
Risk finding	<i>-The NJFFS has mapped several areas of very high to extreme wildfire risk; some of these are close to key access roads and developed areas. Eight critical facilities are in mapped wildfire risk areas (4 child care facilities and 3 senior care facilities in low or moderate risk areas and the Tinton Falls Senior Residence in an area of mapped high/extreme risk).</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Develop plan for mapping areas of wildfire risk and setting up emergency alerts and fire rescue.</i>
Action description	<i>Develop mapping of wild and urban interface areas. Review local EOPs for possible wildfire components regarding fire rescue, alert warning and communications. Initiate public outreach program for homeowners to reduce the possibility of damage and losses due to wildfires. Mitigation for streets.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Prevent potential injury and loss of life due to wildfire. Minimize damages through educating homeowners in areas with risk of wildfires. Minimize total losses. Having an emergency plan and routes for evacuation and fire personnel will minimize losses and damage by moving residents away from dangerous areas and control the fire as quickly as possible. Losses avoided are estimated to be on the order of millions of dollars per year.</i>
Cost estimate	<i>\$10,000/year</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of millions of dollars per year and costs of only \$10,000 per year.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by the mayor and council</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts cause by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no negative social impacts from this project on the community, it is beneficial to the borough and its residents to be conscious of these issues</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it.</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Capital improvements</i>
<b>Implementing the Action</b>	
Priority	<i>Moderate</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Council and the mayor, police and fire</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Ongoing</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward - old#10A, 10C, 10E, and 10I</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Tinton Falls</i>
Community action number	6
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All</i>
Risk finding	<i>Various weather events leave the borough vulnerable to potential threats, having adequate warning of incoming events will allow for proper planning in potential hazardous weather situations.</i>
<b>Describing the Action</b>	
Action category	<i>Planning Mechanism</i>
Action type	<i>Purchase or promote NOAA weather radios</i>
Action description	<i>Promote use of or purchase NOAA weather radios for critical borough facilities</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Prevent potential injury and loss of life and property damage to hazardous weather related conditions. Protecting the health and safety of borough residents is of the utmost priority. Having adequate warning of potentially hazardous weather events can save lives and prevent damages to borough facilities by allowing for critical planning and implementation time for emergency repairs prior to such event. Losses avoided are estimated to be on the order of millions of dollars per year.</i>
Cost estimate	<i>20 @ \$80.00 each = \$1,600</i>
Cost effectiveness (i.e., benefit/cost)	<i>his project is likely to be cost effective, with benefits on the order of millions of dollars per year and costs of only \$1,600.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by council and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no potential environmental impacts caused by this project.</i>

Community action number	<i>8</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Winter storms</i>
Risk finding	<i>Downed trees and powerlines are historically an issue during extreme wind events including severe storms such as hurricanes and tropical storm, nor'easters, and winter storms.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Maintenance</i>
Action description	<i>Plant ice and windstorm resistant trees and use landscaping practices to reduce related hazards.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Prevent potential injury and loss of life as well as power outages and property damage due to downed trees and limbs. 'Large trees and limbs that fall during winter storms often cause severe damage to borough facilities and resident property as well as power outages. Reducing the amount of downed trees and limbs can save lives and countless dollars in damage. Losses avoided are estimated to be on the order of hundreds of thousands of dollars per year.</i>
Cost estimate	<i>\$50,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>Large trees and limbs that fall during winter storms often cause severe damage to borough facilities and resident property as well as power outages. Reducing the amount of downed trees and limbs can save lives and countless dollars in damage. This project is likely to be cost effective, with benefits on the order of hundreds of thousands of dollars per year and costs of only \$50,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by the mayor and council</i>
Legal	<i>The community does have the legal authority to implement this project</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Tinton Falls</i>
Community action number	2
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>All</i>
Risk finding	<i>Power outages during storms create dangerous conditions at key intersections (Hope Rd &amp; Sycamore Ave, Sycamore Ave &amp; Shrewsbury Ave, Asbury Ave &amp; Essex Rd, Asbury Ave &amp; Shafto Rd). Sanitary sewer pump stations lose power during severe storms.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Purchase emergency generators to power key facilities during power outages</i>
Action description	<i>Consider the purchase and installation of permanent emergency natural gas fired generators capable of powering sanitary sewer pump stations and emergency generators capable of powering traffic signals at key intersections.</i>
Existing, future &/or NA	<i>Existing and future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed generators will help ensure safe travel on some of the towns key intersections. Sanitary sewer service will also be able to function during times of power outage. The proposed improvements are important to ensure the functioning of essential utilities and safe travels on some of the boroughs key roads as well as protect the health and safety of the borough residents. Losses avoided are estimated to be on the order of millions of dollars per year.</i>
Cost estimate	<i>(4 x \$20,000) + (10 x \$80,000) = \$880,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of millions of dollars per year and costs of only \$880,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by the mayor and council</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts cause by this project and it will comply with all federal, state, and local regulations</i>

<b>Reporting on Progress</b>	
Action progress status	<i>New action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Tinton Falls</i>
<b>Community action number</b>	<i>10</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Mayor and Council
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Union Beach</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Nor'easters, Hurricanes &amp; Tropical Storms, Flood, Storm Surge, Extreme Wind, coastal erosion, and wave action</i>
Risk finding	<i>The Army Corps of Engineers Shore Protection and Flood Control Project for Union Beach should be implemented and maintained to provide shore protection and flood control in the Borough.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Implementation of the Army Corps of Engineers Shore Protection and Flood Control</i>
Action description	<i>Includes installation of earthen levees, concrete flood walls, interior leveels, primary and secondary drainage outlet structures, tide gate structures, road closure gate, road raising, three pump stations, beach fill and dune, two terminal groins, beach and dune re-nourishment every nine years.</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The entirety of Union Beach is within mapped surge hazard areas, and nearly all of the Borough was inundated during Hurricane Sandy. The Borough incurred millions of dollars in losses, and roughly 250 homes were destroyed. These losses totaled \$329,537,508.00. Implementing this project will help to mitigate any future losses.</i>
Cost estimate	<i>\$121,000,000.00 ( 2008 price levels)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is cost effective because it would cost \$121,000,000.00 to save a potential loss of over \$329,537,508.00</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by council and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no negative social effects going forward with this project</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the project and construction</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Mayor and Borough Council, ACOE, NJDEP</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Dependent upon municipality securing grant funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Union Beach</i>
Community action number	2
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Reduce potential damages to residential structures from high flood waters caused by Hurricanes, Tropical Storms and Nor'easters. The entirety of Union Beach is within mapped surge hazard areas, and nearly all of the Borough was inundated during Hurricane Sandy. The Borough incurred millions of dollars in losses, and roughly 250 homes were destroyed.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Home Elevation</i>
Action description	<i>Elevating of approx. 1,222 homes to new FEMA FIRM maps</i>
Existing, future &/or NA	<i>Protecting existing structures</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed mitigation will result in reduced future storm damages to residential structures, personal property and protect public health and safety during future events and could potentially result in a \$329,537,508 reduction in future storm damages to residential structures and personal property</i>
Cost estimate	<i>\$173,610,000</i>
Cost effectiveness (i.e., benefit/cost)	<i>The proposed mitigation activities could potentially result in a \$329,537,508.00 reduction in future storm damages to residential structures and personal property. This project is expected to be cost effective, with benefits estimated at \$329,537,508 and costs of only \$173,610,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by council and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>Property owners may need to relocate while the home raising is implemented</i>
Administrative capability	<i>The community does have the personnel and homeowners will maintain projects</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents, additionally current code requires substantially damaged to elevate home</i>
Responsible party	<i>Homeowners and/or Borough Administrator</i>
Potential funding sources	<i>Private, ICC or FEMA SRL, HUD RREM</i>
Time line	<i>Dependent upon municipality securing residential funding and code compliance, a start date has not been identified</i>
<b>Reporting on Progress</b>	
Action progress status	<i>New Action</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Union Beach</i>
Community action number	3
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>The intersection of Spruce Street , Center Street and fifth street intersection and Pine Street and Third Street intersection is not at a sufficient elevation, and is subject to flooding. These two roadways are located in a residential communisy and provide access to -he park and residential structures.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Rdising roadway to minimum elevation 6.0 MSL (1222 datum)</i>
Action description	<i>Raising the elevation of the roadway to decrease the occurrence and severity of flooding in -he area</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed road raising will prevent recurring damage and excessive maintenance costs caused by the periodic flooding. Currently, the periodic flooding of the roadway affects 50 homes, and causes necessary detours through existing residential neighborhoods, increasing travel times and traffic on residential streets. The proposed roadway elevation would reduce maintenance costs on -he subject roadway and eliminate -he need for detours through residential neighborhoods. Losses avoided as a result of the project are estimated to be \$222,307.25 (1.46*cost =r222,307.25)</i>
Cost estimate	<i>\$684,457.50</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is expected to be cost effective, with benefits of \$222,307.25 and costs of \$684,457.50 and has a benefit-cost ratio of 1.46</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by council and the mayor</i>
Legal	<i>The community does have the legal authorisy to implement -his project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no negative social effects going forward with this project</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement -his action as well as maintain ir. Borough would have to bid the project and construction</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Capital Imvrovemf nts</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Borough Administrator</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding</i>
Time line	<i>Dependent upon municipality securing grant funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Union Beach</i>
Community action number	4
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Reduce the incidence of flooding in the floodprone area of Front Streew Many roads in the Borough of Union Beach are floodprone. Ingress/egress becomes an issue. In addition, drivers who are unfamiliar with the area or who are caught unaware of flood conditions risk damaging personal property and life safety.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Raising roadway elevation</i>
Action description	<i>Raising the elevation of the roadway to decrease the occurrence and severity of flooding in the area</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed road raising will prevent recurring damage and excessive maintenance costs caused by the periodic flooding. The proposed roadway elevation would reduce maintenance costs on the subject roadway and eliminate the need for detours. Losses avoided are estimated to be around \$600,000.</i>
Cost estimate	<i>\$400,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of \$600,000 and costs on the order of \$400,000.</i>
Technical	<i>This mitigation is technically feasible</i>

Action description	<i>Raising the elevation of the roadway to decrease the occurrence and severity of flooding in the area</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed road raising will prevent recurring damage and excessive maintenance costs caused by the periodic flooding. The proposed roadway elevation would reduce maintenance costs on the subject roadway and eliminate the need for detours. Losses avoided could range from in the tens of thousands to hundreds of thousands of dollars per year.</i>
Cost estimate	<i>\$300,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>The proposed project is likely to be cost effective, with benefits in the hundreds of thousands to millions of dollars and costs on the order of \$300,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by council and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no negative social effects going forward with this project</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the engineering and construction</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
Responsible party	<i>Borough Administrator</i>
Potential funding sources	<i>FEMA Hazard Mitigation Grant, Borough funding, County funding</i>
Time line	<i>Dependent upon municipality securing grant funding, a start date has not been identified</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of Union Beach</i>
Community action number	<i>8</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>Many roads in the Borough of Union Beach are floodprone. Ingress/egress becomes an issue. In addition, drivers who are unfamiliar with the area or who are caught unaware of flood conditions risk damaging personal property and life safety.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>installation of flood warning signage</i>
Action description	<i>Installation of flood warning signs in floodprone areas</i>
Existing, future &/or NA	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Having the proper flood warning signage is important to alert the public of floodprone areas and reduce risk to health and safety. The proposed action is important to ensure the health and safety of motorists and pedestrians in floodprone areas to avoid potential incidents related to flooding. Losses avoided are estimated to be in the tens of thousands of dollars per year.</i>
Cost estimate	<i>\$5,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits in the tens of thousands of dollars per year and costs of only \$5,000.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by council and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>

Your community name	<i>Borough of Union Beach</i>
Community action number	<i>11</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge</i>
Risk finding	<i>The existing shore protection features (bulkhead, beach area) are the borough's first line of defense against wave action, storm surge, and flooding during storm events. Gaps in the line of protection, variations in the design level, or unmitigated circumstances that compromise the function of the overall system increase the vulnerability of people and property in the protected area.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Constructing stone reventment wall</i>
Action description	<i>Construct a stone revetment wall along the Raritan Bay Waterfront beginning at the point of juncture of the Raritan Bay and Flat Creek and continuing east along the Borough's bay front for approximately 875 linear feet</i>
Existing, future &/or NA	<i>Future</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>The proposed stone revetment wall will provide slope protection against storm surge, wave action and coastal erosion to residential structures. The Borough estimates that the project will protect 47 homes, at an estimated total value of \$8,030,044.00, these homes were destroyed during the storm, these losses could be mitigated by the installation of this stone reventment wall</i>
Cost estimate	<i>\$1,900,000.00</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of \$8,030,044.00 and costs of roughly \$1,900,000.00.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by council and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are potential environmental impacts caused by this project. It will comply with all federal, state, and local regulations</i>

<b>Action progress status</b>	<i>Carried forward from the last version of the plan</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<b>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</b>
<b>Your community name</b>	<b>UPPER FREEHOLD TOWNSHIP</b>
<b>Community action number</b>	1
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	All
<b>Risk finding</b>	The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
<b>Describing the Action</b>	
<b>Action category</b>	Awareness and education
<b>Action type</b>	Increase hazard education and risk awareness
<b>Action description</b>	On-going development of education materials for distribution on the Township website and the OEM FaceBook portal as well as print materials. Emergency notifications will be made as necessary via the Township's emergency notification system.
<b>Existing, future &amp;/or NA</b>	NA
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided are unquantifiable; however, raising awareness can reduce the number of injuries & fatalities associated with exposure to-hazard events as well as prepare the community and identify vulnerable populations and that benefit is expected to be well over the project costs of about \$5,000 or less. Public education will identify various methods to manage during extreme temperatures as well as assist those in need of assistance.
<b>Cost estimate</b>	Low. Less than \$5,000. The cost of materials for distribution is relatively low due to the large amount of content already available in the public domain
<b>Cost effectiveness (i.e., benefit/cost)</b>	This project is likely to be cost effective, with unquantifiable benefits expected to be well in excess of the project's cost of under \$5,000.
<b>Technical</b>	Highly feasible. The Township maintains a website with content reserved for the Office of Emergency Management. The Office of Emergency Management maintains a FaceBook site with access to more than 700 community members. In addition, the Office of Emergency Management utilizes a Community Notification System with GIS integration to identify & notify property owners and residents in the event of an emergency.
<b>Political</b>	There is continued community & local government support for this mitigation.
<b>Legal</b>	The community is authorized to continue to implement & maintain this action.
<b>Environmental</b>	Not applicable
<b>Social</b>	This mitigation is available to all members of the community.
<b>Administrative capability</b>	The Office of Emergency Management maintains this content
<b>Local champion</b>	Emergency Management Coordinator, The Office of Emergency Management
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	High priority
<b>Local planning mechanism</b>	Upper Freehold Office of Emergency Management and the Upper Freehold Local Emergency Preparedness Council
<b>Responsible party</b>	Emergency Management Coordinator, Office of Emergency Management
<b>Potential funding sources</b>	Local budget and personnel are able to maintain & further develop this mitigation.
<b>Time line</b>	Immediate & on-going
<b>Reporting on Progress</b>	
<b>Action progress status</b>	Carried forward (expanded to include outreach on non-flood hazards as well as flood hazards)

Action Worksheet	
Your plan name	Monmouth County Multi-jurisdictional Hazard Mitigation Plan
Your community name	UPPER FREEHOLD TOWNSHIP
Community action number	2
Assessing the Risk	
Hazard(s) addressed	FLOODING (during high rain events or during severe storms such as hurricanes, tropical storms, and nor'easters)
Risk finding	Upper Freehold Township is located 26 miles from the Atlantic coastline in the Northeastern US. Coastal flooding is not a high threat, however inland, localized flooding is possible in areas within the Township. Past flooding conditions have been the result of severe storms, hurricanes & rapid snowmelt. Local farms can contribute to the hazard as the rapid accumulation of water can become run-off from farms and flood roadways, homes or adjacent property. Accumulation of sediment, debris and fallen trees impedes flood flows. Examples are at Bridges U-15 Breza Road and U-52 Ellisdale Road.
Describing the Action	
Action category	Structure and infrastructure
Action type	Regular maintenance for drainage systems and flood control structures; improve drainage system capacity
Action description	Seasonal cleanup of culverts, roadside water management ditches and drainage basins in flood prone areas.
Existing, future &/or NA	Existing & Future
Evaluating the Action	
Losses avoided (i.e., benefits)	Proactive clean-up can reduce the likelihood flooding may occur possibly eliminating or reducing repair/recovery costs and damage to property & infrastructure. Losses avoided are difficult to quantify but are estimated to be on the order greater than \$100,000 per year.
Cost estimate	Low-moderate \$10,000-25,000 (annually).
Cost effectiveness (i.e., benefit/cost)	Costs associated with proactive clean-up will be much less than responding to damage caused by flooding, closure of roadways and further impact to the community. The project is likely to be cost effective, with benefits exceeding \$50,000 per year and costs on the order of \$10,000 to \$25,000 per year.
Technical	The Township operates a Department of Public Works.
Political	There is continued community & local government support for this mitigation.
Legal	The community is authorized to continue to implement & maintain this action.
Environmental	Not applicable
Social	This mitigation is available to all members of the community.
Administrative capability	The Department of Public Works is the primary group associated with this mitigation
Local champion	Supervisor, Department of Public Works
Other community objectives	
Implementing the Action	
Priority	Seasonal priority
Local planning mechanism	Upper Freehold Department of Public Works, Office of Emergency Management and the Upper Freehold Local Emergency Preparedness Council
Responsible party	Supervisor, Department of Public Works
Potential funding sources	Local budget and personnel are able to maintain & further develop this mitigation.
Time line	Immediate & on-going
Reporting on Progress	
Action progress status	Carried forward (Worksheet #5,4F)

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>UPPER FREEHOLD TOWNSHIP</i>
<b>Community action number</b>	<i>3</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>flooding, hurricanes, tropical storms, and nor'easters</i>
<b>Risk finding</b>	<i>Flooding has significant impacts in Upper Freehold, with repetitive loss areas in need of mitigation.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and infrastructure project</i>
<b>Action type</b>	<i>Mitigate floodprone residential structures</i>
<b>Action description</b>	<i>Phase 1 - Meet with local zoning board to raise awareness of repetitive flood loss and meet with home &amp; property owners with repetitive loss due to flooding to identify mitigation options and seek input to develop a strategy (i.e., elevation, acquisition, floodproofing, etc.). This action is regarding the single property in Upper Freehold on FEMA's repetitive loss list. This property has had 6 losses between 1984 and 2012 totaling \$50,532 in damages (\$43,840 in damages to the building and \$6,692 in contents damages). Phase 2 - Submit a FEMA mitigation project grant application on behalf of the homeowner for the mitigation project of their choice.</i>
<b>Existing, future &amp;/or NA</b>	<i>existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>A single property in Upper Freehold is on FEMA's repetitive loss list. It has had 6 losses between 1984 and 2012 totaling \$50,532 in damages (\$43,840 in damages to the building and \$6,692 in contents damages).</i>
<b>Cost estimate</b>	<i>There is no cost for a Phase 1 meeting, and Phase 2 cost will be determined after the homeowner selects a strategy..</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Based on the NFIP payouts, which are about \$1,800 per year, the ultimate project selected is only likely to be cost effective if it has an annual cost of at or below \$1,800 per year as well.</i>
<b>Technical</b>	<i>Phase 1 - meeting - technically feasible; Phase 2 - Typical flood mitigation project types (acquisition, elevation, floodproofing) are all technically feasible types.</i>
<b>Political</b>	<i>There is continued community &amp; local government support for this mitigation.</i>
<b>Legal</b>	<i>The community is authorized to continue to implement &amp; maintain this action.</i>
<b>Environmental</b>	<i>Not applicable</i>
<b>Social</b>	<i>This mitigation is available to all members of the community.</i>

<b>Local champion</b>	<i>The Office of Emergency Management maintains this content</i>
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High priority</i>
<b>Local planning mechanism</b>	<i>Upper Freehold Office of Emergency Management and the Upper Freehold Local Emergency Preparedness Council</i>
<b>Responsible party</b>	<i>Emergency Management Coordinator, Office of Emergency Management</i>
<b>Potential funding sources</b>	<i>Local budget and personnel are able to maintain &amp; further develop this mitigation.</i>
<b>Time line</b>	<i>Immediate &amp; on-going</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	Monmouth County Multi-jurisdictional Hazard Mitigation Plan
<b>Your community name</b>	UPPER FREEHOLD TOWNSHIP
<b>Community action number</b>	4
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Extreme wind (alone or during severe storms such as hurricanes, tropical storms, nor'easters, and winter storms)
<b>Risk finding</b>	High winds during severe storms causes trees and limbs to fall, damaging property, interrupting electrical service, and blocking roadways.
<b>Describing the Action</b>	
<b>Action category</b>	Natural resource protection
<b>Action type</b>	Reduction of tree & tree limb hazards
<b>Action description</b>	Identify trees and/or tree limbs with the potential to cause loss of life, property damage, utility loss or road closure. Advise property owners of potential hazards and where appropriate, engage community resources and/or utility company resources to mitigate potential hazards.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided are unquantifiable; however, raising awareness can reduce the number of injuries & fatalities associated with exposure to wind hazard events as well as prepare the community and identify vulnerable potential hazards and that benefit is expected to be well over the project costs of about \$5,000 or less. Identifying and mitigating potential hazards in conjunction with public education will identify various methods to manage during extreme temperatures as well as assist those in need of assistance.
<b>Cost estimate</b>	Moderate. Less than \$25,000 per year. The cost of materials for distribution for public education is relatively low due to the large amount of content already available in the public domain. Community resources and project management costs account for the greatest portion of the projected costs. Variables influencing actual costs include the number and impact of hurricanes & tropical storms, severe winter storms (significant snow & ice) & Nor'easters.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This project is likely to be cost effective, with unquantifiable benefits expected to be well in excess of the project's cost of under \$25,000.
<b>Technical</b>	Highly feasible. The Township maintains a website with content reserved for the Office of Emergency Management. The Office of Emergency Management maintains a Facebook site with access to more than 700 community members. In addition, the Office of Emergency Management utilizes a Community Notification System with GIS integration to identify & notify property owners and residents in the event of an emergency.
<b>Political</b>	There is continued community & local government support for this mitigation.

<b>Local champion</b>	The Office of Emergency Management maintains this content
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	High priority
<b>Local planning mechanism</b>	Upper Freehold Office of Emergency Management and the Upper Freehold Local Emergency Preparedness Council, Upper Freehold Department of Public Works and community outreach.
<b>Responsible party</b>	Emergency Management Coordinator, Office of Emergency Management
<b>Potential funding sources</b>	Local budget and personnel are able to maintain & further develop this mitigation.
<b>Time line</b>	Immediate & on-going
<b>Reporting on Progress</b>	
<b>Action progress status</b>	Carried forward. A continued proactive approach to this potential hazard is on-going.

<b>Action Worksheet</b>	
<b>Your plan name</b>	Monmouth County Multi-jurisdictional Hazard Mitigation Plan
<b>Your community name</b>	UPPER FREEHOLD TOWNSHIP
<b>Community action number</b>	5
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Wildfire
<b>Risk finding</b>	Develop an inventory of addresses that could be affected by a wildfire. Use inventory and develop a route alerting system.
<b>Describing the Action</b>	
<b>Action category</b>	Education and Awareness
<b>Action type</b>	Response
<b>Action description</b>	Develop an inventory of addresses that could be affected by a wildfire. Use inventory and develop a route alerting system. Identify property owners for focused outreach, education & awareness of wildfire hazards.
<b>Existing, future &amp;/or NA</b>	NA
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided are unquantifiable; however, raising awareness can reduce the number of injuries & fatalities associated with exposure to wildfire hazard events as well as prepare the community and identify vulnerable potential hazards. That benefit is expected to be well over the project costs of about \$5,000 or less. Identifying and mitigating potential hazards in conjunction with public education will identify various methods to manage during conditions favorable towards the development of wildfires in addition to the development of a management strategy during a wildfire event.
<b>Cost estimate</b>	Costs are estimated to be on the order of \$5,000.
<b>Cost effectiveness (i.e., benefit/cost)</b>	Although the losses avoided may be unquantifiable as compared to costs of only \$5,000. This project is likely to be cost effective as the average home in Upper Freehold Township is valued at approximately \$446,000 and low to moderate damage due to a wildfire could cost 10% to 25% of the home value.
<b>Technical</b>	Highly feasible. The Township maintains a website with content reserved for the Office of Emergency Management. The Office of Emergency Management maintains a FaceBook site with access to more than 700 community members. In addition, the Office of Emergency Management utilizes a Community Notification System with GIS integration to identify & notify property owners and residents in the event of an emergency.
<b>Political</b>	There is continued community & local government support for this mitigation.

<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Flooding, hurricanes, tropical storms, and nor'easters
<b>Risk finding</b>	Scour has become an issue during periods of significant rainfall and runoff at: Bridges U-15 Breza Road and U-52 Ellisdale Road.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure
<b>Action type</b>	Protect infrastructure
<b>Action description</b>	Cleaning of sediment & debris and removal of fallen trees which block waterways at bridges U-15 Breza Road and U-52 Ellisdale Road - Upper Freehold does not have jurisdiction over these county bridges. Our action will be to meet with the County advise them of the issues we have observed.
<b>Existing, future &amp;/or NA</b>	Existing and future
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Losses avoided are unquantifiable
<b>Cost estimate</b>	Costs are estimated to be minimal associated with staff time to meet with the County.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This action is likely to be cost effective, with the staff time costs associated with attendance at a meeting being far less than the damages that can occur by doing nothing. Cost effectiveness of the mitigation solution itself are unable to be determined at this time, as they would ultimately depend on the course of action selected by the County as far as the brick and mortar project itself.
<b>Technical</b>	The Upper Freehold Township Department of Public Works will identify known issues and communicate them with the appropriate Monmouth County agency.
<b>Political</b>	Township doesn't have jurisdiction to fix the problem directly, but is going to team up with the appropriate Monmouth County agency that can fix the problem.
<b>Legal</b>	Upper Freehold Township does not have jurisdiction over these county bridges..
<b>Environmental</b>	Not applicable
<b>Social</b>	This mitigation is available to all members of the community.
<b>Administrative capability</b>	The Department of Public Works is the primary group associated with this mitigation
<b>Local champion</b>	Supervisor, Department of Public Works
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	Seasonal priority
<b>Local planning mechanism</b>	Upper Freehold Department of Public Works, Office of Emergency Management and the Upper Freehold Local Emergency Preparedness Council
<b>Responsible party</b>	Supervisor, Department of Public Works
<b>Potential funding sources</b>	Local budget and personnel are able to maintain & further develop this mitigation.
<b>Time line</b>	Immediate & on-going
<b>Reporting on Progress</b>	
<b>Action progress status</b>	Carried forward

## Action Worksheet

<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>UPPER FREEHOLD TOWNSHIP</i>
<b>Community action number</b>	<i>7</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flooding, hurricanes, tropical storms, and nor'easters</i>
<b>Risk finding</b>	<i>Scour has become an issue during periods of significant rainfall and runoff at: Bridge U-53 Provinceline Road; and Bridges U-47 &amp; U-48 Walnsmill Road.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structure and Infrastructure</i>
<b>Action type</b>	<i>Protect infrastructure</i>
<b>Action description</b>	<i>Roadway bank protection at Bridge U-53 Provinceline Road; and Bridges U-47 &amp; U-48 Walnsmill Road. Since Upper Freehold does not have jurisdiction over these county bridges, our action will be to meet with the County advise them of the issues we have observed.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Losses avoided are unquantifiable</i>
<b>Cost estimate</b>	<i>Costs are estimated to be minimal associated with staff time to meet with the County.</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This action is likely to be cost effective, with the staff time costs associated with attendance at a meeting being far less than the damages that can occur by doing nothing. Cost effectiveness of the mitigation solution itself are unable to be determined at this time, as they would ultimately depend on the course of action selected by the County as far as the brick and mortar project itself.</i>
<b>Technical</b>	<i>The Upper Freehold Township Department of Public Works will identify known issues and communicate them with the appropriate Monmouth County agency.</i>
<b>Political</b>	<i>Township doesn't have jurisdiction to fix the problem directly, but is going to team up with the appropriate Monmouth County agency that can fix the problem.</i>
<b>Legal</b>	<i>Upper Freehold Township does not have jurisdiction over these county bridges..</i>
<b>Environmental</b>	<i>Not applicable</i>
<b>Social</b>	<i>This mitigation is available to all members of the community.</i>
<b>Administrative capability</b>	<i>The Department of Public Works is the primary group associated with this mitigation</i>
<b>Local champion</b>	<i>Supervisor, Department of Public Works</i>
<b>Other community objectives</b>	
<b>Implementing the Action</b>	
<b>Priority</b>	<i>Seasonal priority</i>
<b>Local planning mechanism</b>	<i>Upper Freehold Department of Public Works, Office of Emergency Management and the Upper Freehold Local Emergency Preparedness Council</i>
<b>Responsible party</b>	<i>Supervisor, Department of Public Works</i>
<b>Potential funding sources</b>	<i>Local budget and personnel are able to maintain &amp; further develop this mitigation.</i>
<b>Time line</b>	<i>Immediate &amp; on-going</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Township of Wall</i>
<b>Community action number</b>	<i>1</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm, Storm Surge, Extreme Temperature, Lightning, and Other severe storms</i>
<b>Risk finding</b>	<i>JCP&amp;L's Glendola Substation was flooded during Hurricane Sandy, knocking out power to a large portion of the Township. A large portion of our community was left without power including the Wall Township Police Department, Wall Township Office of Emergency Management Emergency Operation Center, Wall Township Municipal Building, Water Treatment Plants and Wastewater Pump Stations. Wall's population is projected to experience moderate growth through 2040. By the year 2040, it is projected to have a population increase of 17.5% over 2010 values. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area. Climate change will contribute to more frequent and severe weather events.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Emergency Power</i>
<b>Action type</b>	<i>Install emergency power</i>
<b>Action description</b>	<i>Upgrade and install emergency power to the Wall Township Police Department, Wall Township Office of Emergency Management Emergency Operation Center, Wall Township Municipal Building, Water Treatment Plants and Wastewater Pump Stations.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and Future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>The proposed improvements will ensure backup power in the event of primary power loss. This action is necessary to protect the health and safety of individuals in the Township of Wall during natural disasters and prevent future losses. Losses avoided are estimated to be roughly on the order of <u>\$500,000</u>.</i>
<b>Cost estimate</b>	<i>\$1,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is estimated to be cost effective, with benefits of <u>\$500,000</u> and costs of <u>\$1million</u>.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by Township Administrator and members of the Township Committee</i>
<b>Legal</b>	<i>The community does have the legal authority to implement This project</i>
<b>Environmental</b>	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
<b>Social</b>	<i>There are no social impacts from this project on the community</i>
<b>Administrative capability</b>	<i>The community does have the personnel and administrative capability implement This action as well as maintain it. Township would have to bid the project and construction</i>
<b>Local champion</b>	<i>Township Administrator and members of the Township Committee</i>
<b>Other community objectives</b>	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Mitigation activities will be implemented according to all governing regulatory documents</i>
<b>Responsible party</b>	<i>Township Administrator</i>
<b>Potential funding sources</b>	<i>FEMA Hazard Mitigation Grant, Township funding</i>
<b>Time line</b>	<i>Ongoing as funds are available</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>New Action</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	Monmouth County Multi-jurisdictional Hazard Mitigation Plan
<b>Your community name</b>	Township of Wall
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Wildfire and Extreme Wind (periods of high wind and during storm events such as nor'easters, hurricanes, tropical storms, extreme temperature, lightning and other severe storms)
<b>Risk findings</b>	Much of the western portion of Wall Township is located in mapped moderate to extreme wildfire risk areas. Dead and hazardous trees exist at various locations throughout the town presenting fuel sources for wildfire. In addition to the inherent risks associated with dead and hazardous trees in moderate and extreme wildfire risk areas, dead and hazardous trees are more likely to fall as a result of wind during various types of storms. Downed trees block roadways and take down powerlines as they fall. Blocked roadways hamper transportation of all types; most importantly, emergency services. Power outages hamper communications (particularly emergency services type).
<b>Action category</b>	Natural Systems Protection
<b>Action type</b>	Fuel management (right-of-way clearing)
<b>Action description</b>	Removal of dead and hazardous trees along Township roads
<b>Existing, future &amp;/or NA</b>	Existing and future development
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Removes dead trees from right-of-way, prevents fires from jumping roads and into adjacent subdivisions. Also reduces the likelihood of power outages from downed trees falling on powerlines. Average annual losses estimated in excess of \$5,000; plus unquantifiable life safety benefits associated with maintaining emergency services communications and transportation.
<b>Cost estimate</b>	\$5,000 per year for annual removal program
<b>Cost effectiveness (i.e., benefit/cost)</b>	Likely to be cost effective. Benefits estimated in excess of \$5,000 plus unquantifiable life safety benefits associated with maintaining emergency services communications and transportation. Costs estimated at only about \$5,000 per year.
<b>Technical</b>	This mitigation is technically feasible. Will help remove dead trees from the roadway, additionally providing a safe roadway access for emergency vehicles.
<b>Political</b>	No apparent political issues.
<b>Legal</b>	No apparent legal issues.
<b>Environmental</b>	No adverse environmental impacts caused by this project and it will comply with all federal, state, and local regulations.
<b>Social</b>	There are no social impacts from this project on the community.
<b>Administrative capability</b>	The community does have the personnel and administrative capability to implement this action as well as maintain it.
<b>Local champion</b>	Residents of Wall, Monmouth County Shade Tree & Fire Commissions
<b>Other community objectives</b>	Shade Tree Commission safety program
<b>Implementing the Action</b>	
<b>Priority</b>	Medium
<b>Local planning mechanism</b>	Mitigation activities will be implemented according to all governing regulatory documents.
<b>Responsible party</b>	Township Administrator
<b>Potential funding sources</b>	HMGP, RFC, SRL and FMA. For 25% local match, in-kind services
<b>Time line</b>	Ongoing as funds are available
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New Action

<b>Action Worksheet</b>	
<b>Your plan name</b>	Monmouth County Multi-jurisdictional Hazard Mitigation Plan
<b>Your community name</b>	Wall Township
<b>Community action number</b>	Wall -3-Desiltation of Shark River Basin
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Hurricane/Tropical Storm/Flooding/Storm Surge
<b>Risk finding</b>	Wall Township is a coastal community with a substantial amount of land lying within mapped flood and storm surge hazard areas. Debris and siltation in Shark River obstructs flood flows. limited capacity causes evacuations, road closures, property damage. During Hurricane Sandy areas near the Shark River were flooded. Both private homes and public infrastructure were severely impacted.
<b>Describing the Action</b>	
<b>Action category</b>	Nonstructural project; flood control
<b>Action type</b>	Removal of silt and sediment from the Shark River Basin
<b>Action description</b>	Dredge or pump siltation from entire Shark River Basin to Confined Disposal Facility (CDF)
<b>Existing, future &amp;/or NA</b>	Protects both existing and future development; existing and future infrastructure; provides additional capacity in the Shark River Basin.
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	OEM personnel, evacuations, road closures, public infrastructure, public and private property loss. Improvements will increase the volume of the Shark River Basin allowing for more storage of stormwater runoff from the surrounding area, therefore helping alleviate flooding within the entire watershed during high tides (2-3 times a month) and major storm events. Additionally the improvements will also provide a recreational benefit to residents of the Township and bordering municipalities who use the river for bathing, boating, and general recreation. Losses avoided for this project are estimated to be \$128,099.00/year.
<b>Cost estimate</b>	Removal of silt and sediment = 1,000,000 CY @ \$30/CY is approximately \$30,000,000.00, with a useful life of approximately 50 years, this equals \$600,000.00/year.
<b>Cost effectiveness (i.e., benefit/cost)</b>	This project is not likely to be cost effective, with estimated benefits of \$128,099.00/year and costs of \$600,000.00/year.
<b>Technical</b>	Technically feasible. Cooperation needed from NJDEP, ACOE and adjoining municipalities
<b>Political</b>	Wall Township Committee would have to jointly work on this project with Neptune, Neptune City, Belmar and NJDEP and NJDOT
<b>Legal</b>	Legal issue is the ownership of the Shark River Basin
<b>Environmental</b>	NJDEP, ACOE permitting required
<b>Social</b>	Proposed action will help to protect flood prone neighborhoods.
<b>Administrative capability</b>	State would have to administer in conjunction with Township . Would have to be a joint effort between Neptune, Neptune City, Belmar, Wall, NJDEP and NJDOT.
<b>Local champion</b>	Wall Township, Neptune Township, Neptune City, NJDOT, Belmar, Friends of Belmar Harbor, Shark River Yacht Club, Homeowners Associations
<b>Other community objectives</b>	Provides not only additional capacity and flood protection but helps to reestablish the marine environment through better cleansing of the river and improved Tidal flow. Also alleviates safety issues associated with the siltation of the river with regards to the boating and recreational communities (i.e. paddleboarders, jet skiers, etc who are at risk with no water and siltation of the river)
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Plans and specifications;
<b>Responsible party</b>	Wall Township, Neptune City, NJDEP, Neptune, Belmar, NJDOT
<b>Potential funding sources</b>	FEMA, NJDOT, NJDEP
<b>Time line</b>	Immediate
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New initiative

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Wall Township</i>
<b>Community action number</b>	<i>Wall - 4- Wreck Ponh Floohing</i>
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Floohing in the low-lying areas surrounhing Wreck Ponh</i>
<b>Risk finding</b>	<i>Wreck Ponh , located at the north terminus of Sea Girt between the Borough and Spring Lake, was originally open to the Atlantic Ocean, allowing for drainage during periods of peak rainfall. Just after the 1997 beach replenishment project, the east end of the Pond was closed off.As a result, the properties adjacent to the Pond are at a greater risk of flooding.</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Infrastructure project</i>
<b>Action type</b>	<i>Reopen the east end of the Pond to allow for flow between the Pond and the Ocean</i>
<b>Action description</b>	<i>Spring Lake has obtained funds to reopen the Pond to allow for flow between the Pond and the Ocean.The Borough of Sea Girt role will be to provide in-kind assistance during the implementation phase of the project.</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing and future</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Reduce flooding in the Old Mill Estates section of the Township, minimizing damage to existing homes.</i>
<b>Cost estimate</b>	<i>\$2,000,000</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>Preventing flooding in the four communities adjacent to the Pond (Spring Lake, Spring Lake Heights, Wall Twp. And the Borough of Sea Girt where property losses in Spring Lake alone have cost in excess of \$20,000,000 in flood claims over the last 10 to 15 years.</i>
<b>Technical</b>	<i>Technically feasible - the plans have been drafted and the project has started.</i>
<b>Political</b>	<i>No apparent issues</i>
<b>Legal</b>	<i>No apparent issues</i>
<b>Environmental</b>	<i>Improve the water quality of the Pond along with reducing flooding of adjacent properties.</i>
<b>Social</b>	<i>Affects the quality of life of residents in the four communities adjacent to the Pond</i>
<b>Administrative capability</b>	<i>Administrative oversight</i>
<b>Local champion</b>	<i>Governing bodies of Sea Girt, Spring Lake, Spring Lake Heights and Wall Twp.</i>
<b>Other community objectives</b>	<i>Mitigate an on-going problem during times of peak rainfall</i>
<b>Implementing the Action</b>	
<b>Priority</b>	<i>High</i>
<b>Local planning mechanism</b>	<i>Plans to reopen the east end have already been drafted and are being implemented</i>
<b>Responsible party</b>	<i>Township of Wall, with cooperation and support from NJDEP and the Boroughs of Spring Lake, Sea Girt, Spring Lake Heights and the Twp. Of Wall</i>
<b>Potential funding sources</b>	<i>Sources of funding have already been identified and 75% of the funding is approved</i>
<b>Time line</b>	<i>Immediate</i>
<b>Reporting on Progress</b>	
<b>Action progress status</b>	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Wall Township</i>
<b>Community action number</b>	5
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	Storm surge, flooding, hurricanes, tropical storms, nor'easters, wave action, winter storms
<b>Risk finding</b>	Several residential structures throughout the community are prone to flooding, with their main floor elevations below current BFEs. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events.
<b>Describing the Action</b>	
<b>Action category</b>	Structure and Infrastructure Projects
<b>Action type</b>	Protect Structures
<b>Action description</b>	Elevation and/or Acquisition of Floodprone Residential Structures, with particular focus on those in our community that are on FEMA's Repetitive Loss List and Severe Repetitive Loss List. New Jersey is committed to continuing the reduction of RL and SRL properties in the State; in turn, they have assigned a high priority to mitigating SRL and RL properties in the State Hazard Mitigation Plan. We are committed to supporting these projects as interested homeowners come forward and will support such homeowners, despite the loss in tax revenue, because we recognize the importance of making our community more disaster-resistant and reducing the financial burden of repetitive flooding in our community.
<b>Existing, future &amp;/or NA</b>	Existing
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	Properties on FEMA's RL list have already incurred flood-related damage on two occasions, in which the cost of the repair, on average equaled or exceeded 25% of the market value of the structure at the time of each such flood event. Properties on FEMA's SRL list have already incurred flood related damage (i) For which four or more separate claims payments have been made under flood insurance coverage with the amount of each such claim exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000; or (ii) For which at least two separate claims payments have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the insured structure. While losses avoided by elevating or acquiring properties on FEMA's RL and SRL lists are unquantifiable until specific interested homeowners come forward, they would meet these criterion by definition, at a minimum.
<b>Cost estimate</b>	Project costs are unquantifiable at this time. They would depend on the particular home(s) in question, and the nature of the project the homeowner is interested in (acquisition, or elevation).
<b>Cost effectiveness (i.e., benefit/cost)</b>	Because our RL and SRL properties have incurred so much damage historically, it is highly probably that mitigating these properties would be cost effective. Specific determinations of cost-effectiveness would be done in the future on a case by case basis as interested homeowners come forward and project details are specified.
<b>Technical</b>	Elevation and acquisition are both technically feasible project types
<b>Political</b>	Our political leadership supports this type of project
<b>Legal</b>	While the municipality does not own the structures in question, we fully support the homeowners in moving forward
<b>Environmental</b>	No environmental impacts are anticipated at this time; this would be confirmed as specific homeowners come forward and their property details are reviewed. It is likely that environmental impacts would be positive, as household hazardous wastes are no longer introduced into floodwaters.
<b>Social</b>	No particular social group in our community is likely to be disproportionately impacted by this project; this would be re-evaluated as particular interested homeowners come forward.
<b>Administrative capability</b>	Our municipality has the administrative capabilities to manage an elevation and/or acquisition project
<b>Local champion</b>	affected homeowners, elected officials
<b>Other community objectives</b>	Improve and protect lifestyles of residents; reduction of costly property damage; resiliency; floodplain management; capital improvements
<b>Implementing the Action</b>	
<b>Priority</b>	High
<b>Local planning mechanism</b>	Homeowners; Mayor; Council; Administrator; Engineer; local ordinance; Hazard Mitigation Plan
<b>Responsible party</b>	Construction Official
<b>Potential funding sources</b>	FEMA hazard mitigation grant funding streams (i.e., HMGP, FMA, etc)
<b>Time line</b>	This is projected to be an ongoing type of activity, with our municipality supporting interested parties as they come forward.
<b>Reporting on Progress</b>	
<b>Action progress status</b>	New action

<b>Action Worksheet</b>	
Your plan name	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
Your community name	<i>Borough of West Long Branch</i>
Community action number	<i>1</i>
<b>Assessing the Risk</b>	
Hazard(s) addressed	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm</i>
Risk finding	<i>Sedimentation and debris accumulation along Turtle Mill Brook impede stormwater and result in flooding. West Long Branch is not on the immediate coast but is subject to storm surge flooding via Turtle Mill Brook, a tributary to the Shrewsbury River. While a large portion of the northern area of the Borough lies within mapped storm surge hazard areas, flooding during Hurricane Sandy remained largely constrained to the areas immediately adjacent to the Turtle Mill Brook. Some development was impacted. Joline Avenue was flooded in the vicinity of Victor and Oceanport Avenues.</i>
<b>Describing the Action</b>	
Action category	<i>Structural</i>
Action type	<i>Drainage remediation and stream cleaning</i>
Action description	<i>Drainage remediation project servicing Turtle Mill Floodway as well as stream cleaning</i>
Existing, future &/or NA	<i>Existing</i>
<b>Evaluating the Action</b>	
Losses avoided (i.e., benefits)	<i>Debris and sediment accumulation along Turtle Mill Brook impede stormwater flow resulting in flooding. This flooding impacted some development and caused damage to infrastructure. If this problem is not fixed the sediment and debris will only continue to build up in the Turtle Mill Floodway. This project will help to avoid around \$100,000 to \$250,000 per year in damages</i>
Cost estimate	<i>\$1,000,000 (useful life of about 15 years; annual cost of about \$66,667 per year)</i>
Cost effectiveness (i.e., benefit/cost)	<i>This project is likely to be cost effective, with benefits on the order of \$100,000 to \$250,000 per year and costs of \$66,667 per year.</i>
Technical	<i>This mitigation is technically feasible</i>
Political	<i>This project was advised by council and the mayor</i>
Legal	<i>The community does have the legal authority to implement this project</i>
Environmental	<i>There are no negative environmental impacts caused by this project and it will comply with all federal, state, and local regulations</i>
Social	<i>There are no social impacts of this action</i>
Administrative capability	<i>The community does have the personnel and administrative capability implement this action as well as maintain it. Borough would have to bid the engineering and construction</i>
Local champion	<i>Council and the mayor</i>
Other community objectives	<i>Capital Improvements</i>
<b>Implementing the Action</b>	
Priority	<i>High</i>
Local planning mechanism	<i>Mitigation activities will be implemented according to all governing regulatory documents, additionally current code requires substantially damaged to elevate home</i>
Responsible party	<i>Borough Engineer</i>
Potential funding sources	<i>Borough Funding, FEMA grant funding</i>
Time line	<i>Dependent upon municipality securing residential funding and code compliance, a start date has not been identified</i>
<b>Reporting on Progress</b>	
Action progress status	<i>Carried forward</i>

<b>Action Worksheet</b>	
<b>Your plan name</b>	<i>Monmouth County Multi-jurisdictional Hazard Mitigation Plan</i>
<b>Your community name</b>	<i>Borough of West Long Branch</i>
<b>Community action number</b>	2
<b>Assessing the Risk</b>	
<b>Hazard(s) addressed</b>	<i>Flood, Wind, Nor'easter, Hurricane &amp; Tropical Storm</i>
<b>Risk finding</b>	<i>Certain areas of flooding in West Long Branch Borough have been identified by the Borough a result of drainage issues on a multi-jurisdictional level (West Long Branch, Long Branch, Monmouth County, and Monmouth University).</i>
<b>Describing the Action</b>	
<b>Action category</b>	<i>Structural</i>
<b>Action type</b>	<i>Drainage remediation</i>
<b>Action description</b>	<i>Drainage remediation project servicing West Long Branch, Long Branch, Monmouth County property, and Monmouth University property</i>
<b>Existing, future &amp;/or NA</b>	<i>Existing</i>
<b>Evaluating the Action</b>	
<b>Losses avoided (i.e., benefits)</b>	<i>Existing drainage system needs to be increased to accommodate storm water, current system overflows and creates flooding in and around homes, roadways, and parts of Monmouth University. This project will help to avoid around \$250,000 to \$500,000 per year in damages</i>
<b>Cost estimate</b>	<i>\$2,500,000 (based on a useful life of about 20 years, annual cost = \$125,000 per year)</i>
<b>Cost effectiveness (i.e., benefit/cost)</b>	<i>This project is likely to be cost effective, with annual benefits of around \$250,000 to \$500,000 per year and annual costs of about \$125,000.</i>
<b>Technical</b>	<i>This mitigation is technically feasible</i>
<b>Political</b>	<i>This project was advised by council and the mayor</i>
<b>Legal</b>	<i>The community does have the legal authority to implement this project</i>

**APPENDIX 2.1 – HAZARD DESCRIPTIONS**

## APPENDIX 2.1 – HAZARD DESCRIPTIONS

Descriptions of the Full Range of Initially Considered Hazards	
Hazard	Description
<b>ATMOSPHERIC</b>	
<b>Avalanche</b>	A rapid fall or slide of a large mass of snow down a mountainside.
<b>Extreme Temperatures</b>	Extreme heat and extreme cold constitute different conditions in different parts of the country. Extreme cold can range from near freezing temperatures in the southern United States to temperatures well below zero in the northern states. Similarly, extreme heat is typically recognized as the condition where temperatures consistently stay ten degrees or more above a region's average high temperature for an extended period. Fatalities can result from extreme temperatures, as they can push the human body beyond its limits (hyperthermia and hypothermia).
<b>Extreme Wind</b>	Wind is air that is in constant motion relative to the surface of the earth. Extreme wind events can occur suddenly without warning. They can occur at any time of the day or night, in any part of the country. Extreme winds pose a threat to lives, property, and vital utilities primarily due to the effects of flying debris and can down trees and power lines. Extreme winds are most commonly the result of hurricanes, tropical storms, nor'easters, severe thunderstorms and tornadoes, but can also occur in their absence as mere "windstorms." One type of windstorm, the downburst, can cause damage equivalent to a strong tornado.
<b>Hailstorm</b>	Any storm that produces hailstones that fall to the ground; usually used when the amount or size of the hail is considered significant. Hail is formed when updrafts in thunderstorms carry raindrops in to parts of the atmosphere where the temperatures are below freezing.
<b>Hurricane and Tropical Storm</b>	Hurricanes and tropical storms are classified as cyclones and defined as any closed circulation developing around a low-pressure center in which the winds rotate counter-clockwise in the Northern Hemisphere (or clockwise in the Southern Hemisphere) and with a diameter averaging 10 to 30 miles across. When maximum sustained winds reach or exceed 39 miles per hour, the system is designated a tropical storm, given a name, and is closely monitored by the National Hurricane Center. When sustained winds reach or exceed 74 miles per hour the storm is deemed a hurricane. The primary damaging forces associated with these storms are high-level sustained winds, heavy precipitation and tornadoes. Coastal areas are also vulnerable to the additional forces of storm surge, wind-driven waves and tidal flooding which can be more destructive than cyclone wind. The majority of hurricanes and tropical storms form in the Atlantic Ocean, Caribbean Sea and Gulf of Mexico during the official Atlantic hurricane season, which extends from June through November.
<b>Lightning</b>	Lightning is a discharge of electrical energy resulting from the buildup of positive and negative charges within a thunderstorm, creating a "bolt" when the buildup of charges becomes strong enough. This flash of light usually occurs within the clouds or between the clouds and the ground. A bolt of lightning can reach temperatures approaching 50,000 degrees Fahrenheit. Lightning rapidly heats the sky as it flashes, but the surrounding air cools following the bolt. This rapid heating and cooling of the surrounding air causes thunder. On average, 80 people are killed each year by lightning strikes in the United States.
<b>Nor'easter</b>	Similar to hurricanes, nor'easters are ocean storms capable of causing substantial damage to coastal areas in the Eastern United States due to their associated strong winds and heavy surf. Nor'easters are named for the winds that blow in from the northeast and drive the storm up the East Coast along the Gulf Stream, a band of warm water that lies off the Atlantic coast. They are caused by the interaction of the jet stream with horizontal temperature gradients and generally occur during the fall and winter months when moisture and cold air are plentiful. Nor'easters are known for dumping heavy amounts of rain and snow, producing hurricane-force winds, and creating high surf that causes severe beach erosion and coastal flooding.
<b>Tornado</b>	A tornado is a violently rotating column of air that has contact with the ground and is often visible as a funnel cloud. Its vortex rotates cyclonically with wind speeds ranging from as low as 40 mph to as high as 300 mph. Tornadoes are most often generated by thunderstorm activity when cool, dry air intersects and overrides a layer of warm, moist air forcing the warm air to rise rapidly. The destruction caused by tornadoes ranges from light to catastrophic depending on the intensity, size and duration of the storm.
<b>Winter Storm</b>	Winter storms may include snow, sleet, freezing rain, or a mix of these wintry forms of precipitation. Blizzards, the most dangerous of all winter storms, combine low temperatures, heavy snowfall, and winds of at least 35 miles per hour, reducing visibility to only a few yards. Ice storms occur when moisture falls and freezes immediately upon impact on trees, powerlines, communication towers, structures, roads and other hard surfaces. Winter storms and ice storms

## APPENDIX 2.1 – HAZARD DESCRIPTIONS

	can down trees, cause widespread power outages, damage property, and cause fatalities and injuries to human life.
<b>HYDROLOGIC</b>	
<b>Coastal Erosion</b>	Landward displacement of a shoreline caused by the forces of waves and currents. Coastal erosion is measured as the rate of change in the position or horizontal displacement of a shoreline over a period of time. It is generally associated with episodic events such as hurricanes and tropical storms, nor'easters, storm surge and coastal flooding but may also be caused by human activities that alter sediment transport. Construction of shoreline protection structures can mitigate the hazard, but may also exacerbate it under some circumstances.
<b>Dam Failure</b>	Dam failure is the collapse, breach, or other failure of a dam structure resulting in downstream flooding. In the event of a dam failure, the energy of the water stored behind even a small dam is capable of causing loss of life and severe property damage if development exists downstream of the dam. Dam failure can result from natural events, human-induced events, or a combination of the two. The most common cause of dam failure is prolonged rainfall that produces flooding. Failures due to other natural events such as hurricanes, earthquakes or landslides are significant because there is generally little or no advance warning.
<b>Drought</b>	A prolonged period of less than normal precipitation such that the lack of water causes a serious hydrologic imbalance. Common effects of drought include crop failure, water supply shortages, and fish and wildlife mortality. High temperatures, high winds, and low humidity can worsen drought conditions and also make areas more susceptible to wildfire. Human demands and actions have the ability to hasten or mitigate drought-related impacts on local communities.
<b>Flood</b>	The accumulation of water within a water body which results in the overflow of excess water onto adjacent lands, usually floodplains. The floodplain is the land adjoining the channel of a river, stream ocean, lake or other watercourse or water body that is susceptible to flooding. Most floods fall into the following three categories: riverine flooding, coastal flooding, or shallow flooding (where shallow flooding refers to sheet flow, ponding and urban drainage).
<b>Storm Surge</b>	A storm surge is a large dome of water often 50 to 100 miles wide and rising anywhere from four to five feet in a Category 1 hurricane up to more than 30 feet in a Category 5 storm. Storm surge heights and associated waves are also dependent upon the shape of the offshore continental shelf (narrow or wide) and the depth of the ocean bottom (bathymetry). A narrow shelf, or one that drops steeply from the shoreline and subsequently produces deep water close to the shoreline, tends to produce a lower surge but higher and more powerful storm waves. Storm surge arrives ahead of a storm's actual landfall and the more intense the hurricane is, the sooner the surge arrives. Storm surge can be devastating to coastal regions, causing severe beach erosion and property damage along the immediate coast. Further, water rise caused by storm surge can be very rapid, posing a serious threat to those who have not yet evacuated flood-prone areas. Storm surge can be exacerbated if occurring at or near high tide.
<b>Wave Action</b>	The characteristics and effects of waves that move inland from an ocean, bay, or other large body of water. Large, fast moving waves can cause extreme erosion and scour and their impact on buildings can cause severe damage. During hurricanes and other high-wind events, storm surge and wind increase the destructiveness of waves and cause them to reach higher elevations and penetrate further inland.
<b>GEOLOGIC</b>	
<b>Earthquake</b>	A sudden, rapid shaking of the Earth caused by the breaking and shifting of rock beneath the surface. This movement forces the gradual building and accumulation of energy. Eventually, strain becomes so great that the energy is abruptly released, causing the shaking at the earth's surface which we know as an earthquake. Roughly 90 percent of all earthquakes occur at the boundaries where plates meet, although it is possible for earthquakes to occur entirely within plates. Earthquakes can affect hundreds of thousands of square miles; cause damage to property measured in the tens of billions of dollars; result in loss of life and injury to hundreds of thousands of persons; and disrupt the social and economic functioning of the affected area.
<b>Expansive Soils</b>	Soils that will exhibit some degree of volume change with variations in moisture conditions. The most important properties affecting degree of volume change in a soil are clay mineralogy and the aqueous environment. Expansive soils will exhibit expansion caused by the intake of water and, conversely, will exhibit contraction when moisture is removed by drying. Generally speaking, they often appear sticky when wet, and are characterized by surface cracks when dry. Expansive soils become a problem when structures are built upon them without taking proper design precautions into account with regard to soil type. Cracking in walls and floors can be minor, or can be severe enough for the home to be structurally unsafe.

## APPENDIX 2.1 – HAZARD DESCRIPTIONS

<b>Landslide</b>	The movement of a mass of rock, debris, or earth down a slope when the force of gravity pulling down the slope exceeds the strength of the earth materials that comprise to hold it in place. Slopes greater than 10 degrees are more likely to slide, as are slopes where the height from the top of the slope to its toe is greater than 40 feet. Slopes are also more likely to fail if vegetative cover is low and/or soil water content is high.
<b>Land Subsidence</b>	The gradual settling or sudden sinking of the Earth’s surface due to the subsurface movement of earth materials. Causes of land subsidence include groundwater pumpage, aquifer system compaction, drainage of organic soils, underground mining, hydrocompaction, natural compaction, sinkholes, and thawing permafrost.
<b>Tsunami</b>	A series of waves generated by an undersea disturbance such as an earthquake. The speed of a tsunami traveling away from its source can range from up to 500 miles per hour in deep water to approximately 20 to 30 miles per hour in shallower areas near coastlines. Tsunamis differ from regular ocean waves in that their currents travel from the water surface all the way down to the sea floor. Wave amplitudes in deep water are typically less than one meter; they are often barely detectable to the human eye. However, as they approach shore, they slow in shallower water, basically causing the waves from behind to effectively “pile up”, and wave heights to increase dramatically. As opposed to typical waves which crash at the shoreline, tsunamis bring with them a continuously flowing ‘wall of water’ with the potential to cause devastating damage in coastal areas located immediately along the shore.
<b>Volcano</b>	A mountain that opens downward to a reservoir of molten rock below the surface of the earth. While most mountains are created by forces pushing up the earth from below, volcanoes are different in that they are built up over time by an accumulation of their own eruptive products: lava, ash flows, and airborne ash and dust. Volcanoes erupt when pressure from gases and the molten rock beneath becomes strong enough to cause an explosion.
<b>OTHER</b>	
<b>Wildfire</b>	An uncontrolled fire burning in an area of vegetative fuels such as grasslands, brush, or woodlands. Heavier fuels with high continuity, steep slopes, high temperatures, low humidity, low rainfall, and high winds all work to increase risk for people and property located within wildfire hazard areas or along the urban/wildland interface. Wildfires are part of the natural management of forest ecosystems, but most are caused by human factors. Over 80 percent of forest fires are started by negligent human behavior such as smoking in wooded areas or improperly extinguishing campfires. The second most common cause for wildfire is lightning.

**APPENDIX 3A.1 – SEA LEVEL RISE**

# GUIDANCE MEMORANDUM #2

## Climate Change and Sea Level Rise

**The Issue:** Climate change and sea level rise are realities of Monmouth County's future. Long-term data documents a significant increase in average temperature, and a significant rise in sea level that is consistent with observed and predicted global trends. While incremental rises in temperature and sea level over a one-year planning window are virtually undetectable, their cumulative impacts over perhaps several decades are expected to be virtually impossible to ignore.

**Memo Purpose:** Climate change and sea level rise are expected to exhibit their most marked impacts in the long term. However, barely imperceptible annual changes will be cumulative, with markedly different impacts in a 30 year time frame than what is observed today. This longer planning window gives local decision makers time to gradually implement adaption and mitigation strategies. This memorandum has been prepared to provide the Core Planning Group (Monmouth County and its participating jurisdictions) with information regarding climate change, its potential impacts in Monmouth County, particularly with regard to areas that may susceptible to future flooding as a result of a rise in sea level – including key assets that are located in at-risk areas, and potential ways to begin to take action now to mitigate inevitable future impacts, thus enhancing resiliency and sustainability by lessening future economic and environmental impacts.

**State Perspective:** The State of New Jersey presents the following information about climate change and sea level rise on its web site<sup>1</sup>:

### What Does Global Warming Mean to New Jersey?

#### Rising temperatures

Rising ambient temperatures are expected to have direct and indirect impacts on human health and the environment in New Jersey. Direct human health impacts are likely to include increased heat stress, especially for vulnerable urban populations, such as the elderly and urban poor. Climate models predict an increase in the number of days per year with temperatures above 90° F in the New York City metro area, with a potentially significant impact on human health due to heat stress.

Natural ecosystems, water supply and agriculture are also likely to be affected by warmer temperatures and associated changes in the water cycle. Climate-related habitat loss could lead to extinction of some threatened species. Warmer temperatures are expected to lead to more intense rain events, since warm air holds more water vapor. However, warmer temperatures also are likely to lead to greater evaporation and transpiration of moisture, which could cause drier conditions in soils.

<sup>1</sup> <http://nj.gov/globalwarming/about/>

Recent modeling work predicts that temperatures in the Northeast U.S. are likely to rise 2.5 to 4 degrees F in the winter and 1 to 3 degrees F in the summer over the next several decades. These changes will result from GHG emissions that have already occurred, because it will take the climate many years to respond to changes in levels of GHGs in the atmosphere that have already been reached. However, over the longer term, further changes to the climate depend strongly on emissions choices made now and through the end of the century.

Without significant long-term reductions in GHG emissions, the model predicts that the Northeast can expect many more extremely hot days and more events of extreme rainfall, especially in winter. Although there is likely to be more precipitation overall, the likelihood of summer droughts will increase, because the higher temperatures will dry soils faster; one- to three-month droughts could happen almost every year by the end of the century.

However, the model predicts that if measures are instituted that allow the world to follow a path of economic growth based on less fossil fuel-intensive industry and more use of renewable energy that would cause GHG emissions to peak around mid-century and then decline, many of the projected changes in the Northeast will be much less severe, e.g. the likelihood of short-term droughts will be only slightly higher than today.

### **Rising seas**

Sea level rise due to climate change is of major concern to New Jersey. New Jersey is especially vulnerable to significant impacts due to geologic subsidence, the topography of its coastline, current coastal erosion, and a high density of coastal development.

A sea level rise in line with median projections would threaten the majority of New Jersey's coastline. The effects of sea level rise will be exacerbated in New Jersey since relative sea level rise in New Jersey will be greater than the global average due to coastline subsidence. Recent measurements suggest that the rate of melting of the Greenland ice sheet has increased dramatically. If an increased rate of melting is substantiated by further data, and if the melting continues at this rate or accelerates further, the rate of sea level rise throughout the world will increase significantly. Effects of rising sea level are magnified during storm events. Higher sea levels will increase the severity of storm-related flooding in coastal and bay areas. In addition to significant property losses, sea level rise will adversely impact coastal ecosystems and may threaten coastal fresh water supplies due to salt-water intrusion.

Currently, responses to rising sea levels and increasing erosion along the NJ coast have been the construction of sea walls and bulkheads, raising land elevation with beach nourishment projects, and the building of jetties to capture sand. All of these approaches are expensive, and the costs can be expected to increase as sea level rises further. The additional impact of anticipated more intense storms and floods when coupled with higher sea levels will likely compound the growth in costs.

### **What we know:**

Earth's climate is warming as a result of three main factors: (1) increased emissions of greenhouse gases, (2) burning of fossil fuels, and (3) land use change. This warmer climate, in turn, melts ice sheets, ice caps, and glaciers; and warms ocean waters which expand with the elevated temperature thus increasing overall ocean volumes.

"Global sea-level rise" is the average increase in the level of the world's oceans that occurs due to a variety of factors, the most significant being thermal expansion of the oceans and the addition of water by melting of land-based ice

sheets, ice caps, and glaciers. “Relative sea-level rise” refers to the change in sea level relative to the elevation of the adjacent land, which can also subside or rise due to natural and human-induced factors. Relative sea-level changes include both global sea-level rise and changes in the vertical elevation of the land surface. Global sea level is rising, and there is evidence that the rate is accelerating. In fact, the Intergovernmental Panel on Climate Change (IPCC) projects that the average rate of global sea-level rise during the twenty-first century is very likely to exceed the average rate over the last four decades. In the mid-Atlantic region from New York to North Carolina, tide-gauge observations indicate that relative sea-level rise (the combination of global sea-level rise and land subsidence) rates were higher than the global mean.

**Future Projections:**

Future projections of sea-level rise for the twenty-first century vary widely, ranging from several centimeters to more than a meter. NOAA, in partnership with FEMA, USACE, and several other federal agencies created in 2012 SLR mapping to support stakeholders in New Jersey and New York consider risks from future sea level rise in planning for reconstruction following Hurricane Sandy. This SLR mapping integrated FEMA's best available special flood hazard area (SFHA) with four scenarios of sea level rise (referred to as lowest, intermediate-low, intermediate-high, and highest). These scenarios provide estimates of global sea level rise by the year 2050 and 2100 based on the best available science synthesized by a panel of scientists from multiple federal agencies and academic institutions to provide to the U.S. National Climate Assessment. These four scenarios address different factors known to affect future sea level rise risk, including ocean warming and melting of mountain glaciers and ice sheets.

**Appendix 3a.1** shows areas in each community in Monmouth County that could potentially see increases in the footprint of their SFHAs under moderate and high estimates of sea level rise by 2050 (1.5 feet and 2.0 feet, respectively). These figures also highlight key asset categories for planning purposes and to facilitate the identification of hazard mitigation measures. This mapping allows local planners in each community to visualize areas of potential future impact, and to consider mitigation strategies that may be prudent to protect people, property, and key assets located in these areas.

Results of the GIS analysis indicate that 71 critical facilities are located in the present-day SFHA. However, by 2050, an additional 28 to 33 facilities could be vulnerable to flooding at the 100-year level (28 under the more moderate estimate of rate of sea level rise, and 33 under the high estimate). Furthermore, Countywide, HAZUS-estimated building losses for 100-year riverine flooding for the present-day SFHA are approximately \$154 million; while estimated losses for SFHA 2050 under the highest estimates of sea level rise have been estimated to be approximately \$986 million.

**Impacts:**

Impacts of climate change and sea level rise are likely to be varied and widespread. In the years to come, it is anticipated that Monmouth County will observe drastic changes in storm character, intensity, frequency, and storm tracking. Hurricanes are likely to become more intense with rising sea water temperatures. Coastal erosion rates are likely to increase with rising sea-level, to

levels higher than those rates that have been observed over the last century. Storm effects will be more extensive in the future. The following types of impacts can be anticipated in Monmouth County's future as a result of climate change and sea level rise:

- Inundation of low-lying areas
- Increased frequency and extent of storm-related flooding
- Wetland loss
- Saltwater intrusion into estuaries and freshwater aquifers
- Land loss through submergence and erosion of lands in coastal areas
- Migration of coastal landforms and habitats
- Increased salinity in estuaries and coastal fresh
- Impacts to human populations (property losses, more frequent flood damage, more frequent flooding of roadways and urban centers, risks to people as the population of coastal areas increases)
- More buildings and infrastructure exposed
- Currently exposed buildings and infrastructure could be subject to potentially greater losses as water levels increase, and continued rapid coastal development exacerbates the impacts of sea level rise
- Impacts on gravity flow stormwater systems
- Impacts on non-coastal areas

Impacts of climate change and sea level rise can affect all parts of a community, including: transportation infrastructure (ports, marinas, airports, roads, bridges, railways); public infrastructure (stormwater and wastewater management systems, drinking water supply and distribution systems, power utility systems, communications systems); public facilities (i.e., police, fire, ambulance, hospitals, schools, daycare centers, adult living facilities, historic landmarks, government buildings, libraries, parks, etc.); economic viability of a community – particularly for communities where tourism tends to drive local economies, as is the case in many of Monmouth County's coastal communities. Climate change and sea level rise could lead to a potential loss of assets that support tourism (i.e., beaches themselves as well beach access points, lodging, restaurants, marinas, fishing habitats, ecotourism, etc.).

**Adaptation Strategies:** Types of actions to offset impacts come in four basic categories:

- Protection - structurally defensive measures that provide protection by preventing flooding/inundation (i.e., shoreline armoring, beach re-nourishment, streambank stabilization, dunes, dikes, levees)
- Accommodation - strategies that provide protection via altered design measures to accommodate water (i.e., building elevation, bridge elevation, stormwater improvements, floodproofing)
- Adaptation – modifying design standards, building codes
- Retreat - strategies that provide protection via the removal of existing, at-risk development and possible relocation to other areas that are not flood-prone (i.e., acquisition of vulnerable land for public ownership, transfer of development rights, purchase of development rights, rolling easements, conservation easements, zoning laws, disincentives to

building in hazard areas, incentives to building in low risk areas, designating at-risk land as open space, or requiring critical facilities to be located outside of hazard areas.

While climate change and sea level rise are inevitable realities, there are ways that jurisdictions can plan ahead and take action to mitigate impacts.

- Prepare for more severe storms to be the new norm. Take this into account when implementing local ordinances and zoning changes, as well as when planning for emergency management
- Encourage development away from coastal areas that are at the greatest risk for being impacted by sea level rise due to climate change.
- Encourage the implementation of more natural mitigation techniques along the coast such as dune stabilization, while discouraging the use of, or designing ways to phase out the use of hard structures that ultimately increase beach erosion such as jetties, groins, and seawalls
- Encourage the use of permeable ground cover and stormwater management in planning designs
- Require buildings in floodplains to be on higher foundations (freeboard)
- Recognize increased flooding through 2050 by adopting a 'floodplain planning zone'
- Adopt Coastal A Zone requirements in areas where waves may be 1.5 feet or higher
- Redelineate the landward boundary of Conservation Zone to coincide with the 2050 inundation area and reduce the allowed density (retain current zoning for existing villages)
- Recognize that wetlands will migrate inland, groundwater levels will rise, and saltwater intrusion will increase
- Modify on-site septic requirements to anticipate impaired performance as water table levels rise
- Require stream/tributary buffers or conservation easements
- Require planning for certain roads to anticipate more frequent flooding
- Anticipate that some buildings will need to be relocated, elevated on higher foundations, or abandoned

**Re-evaluation:**

Mitigation strategies regarding development and redevelopment (particularly in the post-disaster scenario) presents an opportunity to rebuild in a stronger, more sustainable, and more resilient manner. Climate change adaptation strategies, particularly with regard to sea level rise, should be re-evaluated on a regular basis over the course of the plan maintenance phase - particularly when a community is devastated by a disaster, as strategies which may not have been economically, politically, or socially feasible in the pre-disaster scenario may have markedly different levels of community support.

<b>Other Natural Hazards</b>												
Wildfire	Highly Likely	4	Minor	1	Moderate	3	Less than 6 hours	4	Less than one week	3	2.8	M

**Mitigation Strategy:**  
Mitigate Highest Hazards

**Key Risk Findings:**

- The CRS ranking program, which is run by FEMA through the National Flood Insurance Program (NFIP), scores communities on their effectiveness in dealing with flood plain management and development. Towns that take action steps to increase their resiliency to future storm events can help residents and businesses increase their eligibility for policy holder discounts. The program differentiates amongst ten classes. Communities enter at Class 10, and then as additional activities undertaken, they accumulate points toward moving up into the next higher class and achieving an associated decrease in insurance premiums for policyholders in their jurisdiction. Currently there are only eight Monmouth County towns that are part of the CRS program. Many communities in Monmouth County lack the resources to undertake the more technical aspects of the program in-house. In turn, many communities have either not accessed the program at all, or have entered at only the lowest levels. Many homeowners and businesses in Monmouth County may see an increase in their flood insurance premiums as the new FEMA Flood Maps are adopted.

- All communities in Monmouth County participate in FEMA's National Flood Insurance Program. Many communities and residents suffer from flooding events on a regular basis, and incur significant damages and costs associated with preparation, response, and recovery from these events. There also tends to be a disconnect between local master plans and floodplain management issues.

- Many local officials in Monmouth County lack direct access to mapping services (i.e., GIS). This creates a gap in their full understanding of natural hazards in their communities, significant costs are incurred each year for hazard response, recovery, and damage repair. Lack of access to mapping services such as GIS creates a situation in some communities where mitigation project development is sometimes hindered, and public education/warning programs are not as efficient/targeted as they could be. Having more direct access to mapping services tools could facilitate local communities to guide development away from hazard areas, improve public education/warning for their residents in hazard areas, and enhance their mitigation project development.

- Monmouth County has an active history of hurricanes and tropical storms. Implementation of evacuation orders related to an impending hurricane would have a significant impact on travel patterns and operating conditions on the area's transportation system. For example, prevailing directional patterns would be altered substantially as westbound and coastal residents and visitors traveling away from the coast to higher ground would heavily utilize northbound travel lanes. Congestion levels at locations that already have constrained service rate issues, such as merge junctions, ramps, and signalized major intersections would be exacerbated. The timing of an evacuation order would have a significant effect on traffic flows, the shorter the timeframe, the more intense delays and queuing potential. Operational, physical and long term improvements (either by route or by type) would greatly enhance to capacity of these evacuation routes during an evacuation order.

## MONMOUTH COUNTY, CONTINUED

- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level of disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- A section of the Henry Hudson Trail located in Atlantic Highlands along Sandy Hook Bay was destroyed by Superstorm Sandy. The adjacent coastal bluff experienced erosion at the base of slope from wave action and storm surge. Above the trail, located on the bluff, there are numerous high value residences that have taken advantage of the unique location. The bluff is subject to slump block failure usually associated with a rain event and disruption of the slope.
- Within Hartshorne Woods Park (Middletown) there are two unique sites; Claypit Creek and Portland Place. The sites are protected by coastal river-edge bluffs which were severely eroded during the Superstorm Sandy event. Both sites offer passive recreation activities for County residents and have a south-eastern orientation steep bluff, which received the most direct exposure of winds, flooding and wave action from the storm.
- The County Park System acquires land for open space preservation, public park & recreation purposes and natural resources conservation. Some of the properties that are identified for acquisition are ones that are subject to flooding, winter storms or associated storm surges. These properties may be located in coastal zones or located along stream and river corridors throughout the county. When many properties along a watercourse are acquired, they form a protected greenway along the stream or river. By purchasing these properties, any buildings located in the flood zone are removed and the land is restored to a natural condition. Protected lands adjacent to coastal zones and river courses helps to reduce regional flooding by not increasing impervious cover and also allows natural systems of forests and marshes to mitigate some of the effects of flooding.
- Fisherman's Cove Conservation Area, Seven Presidents Oceanfront Park, Henry Hudson Trail - Popamora Point, Bayshore Waterfront Park have all experience some coastal dunes loss, erosion of coastal zone open space real estate, sedimentation of adjacent channels, loss of protective features for adjacent private properties.
- Pine Brook (Pine Brook Golf Course, Manalapan) and Ramonessin Brook (Holmdel Park, Holmdel) stream bank stabilization, Manasquan River (Turkey Swamp Park, Freehold) floodplain restoration. The Manasquan River has been increasingly more flood prone and suffers potable water quality issues related to increased watershed development and past stream channel straightening impacts. A proposal has been in the planning phase for many years to re-introduce stream form and function in the upper reaches of the watershed where extensive straightening occurred in the past. This will result in more stream stability and improved water quality with improve stream function.
- Certain wild-lands and urban interface areas pose a risk to losses by fire. Fisherman's Cove Conservation Area (Manasquan Boro), Turkey Swamp Park (Freehold Township) and Bayshore Waterfront Park (Middletown Township) are all park areas that have been subject to wildfires which have potential to destroy adjacent residential properties as well as park building infrastructure.
- Lack of fuel supply in a key location of Monmouth County, which is detrimental on operational and emergency services provided during a time of disaster or crisis.
- Telecommunication and electrical systems at key Monmouth County Operational Buildings are negatively impacted during periods of Power Failure (interruption or loss of electrical service caused by disruption of power transmission caused by accident, sabotage, natural hazards, or equipment failure).
- Capacity and integrity issues of NJDEP defined Class 1 dams (those structures which, should they fail, would likely cause loss of life) and Class 2 dams (those structures which, should they fail, would likely cause substantial downstream property damage but are not considered to be a threat to life) as well as the associated bridge and roadways. Locations include, but are not limited to, the following:
  - 1) Lake Lefferts Dam, County Bridge MA-9, Ravine Dr (CR 6A), Matawan; 2) Matawan Lake Dam, County Bridge MA-13, Main St. (CR 516), Matawan; 3) Perrineville Dam, County Bridge MS-48, Perrineville Rd. (CR 1), Millstone; 4) Shadow Lake Dam, County Bridges MT-30 & MT-45, Hubbard Ave. (CR 12), Middletown; 5) Indian Dam, County Bridge U-18, Church St. (CR 526), Allentown; 6) Hurley Pond Dam, County Bridge W-18, Allenwood Rd., Wall
- Roadways and bridges below base elevation incur flooding. Locations include, but are not limited to: County Bridge H-5 & H-5A, Palmer Ave. (CR 7), Holmdel & Middletown; County Bridges ML-17, ML-18, & ML-19, Station Rd., Marlboro; County Bridge R-5, Florence Ave. (CR 39), Union Beach, and Union Ave. (CR 39), Union Beach. Road flooding, resulting in damage to infrastructure, reduced safe passage, and isolation of neighborhoods by flood waters.
- Storm events and subsequent flooding wash substantial amounts of debris and sedimentation in creeks and waterways, compounding the effects of natural situation and build up of debris and fallen trees, which obstruct the natural flow of some surface waters, resulting in increased inland and coastal flooding.
- Structural integrity of bridges that are exposed to wave, tidal, and storm surges. These bridges may carry coastal evacuation routes and any damage to the bridge may impair safe passage, ultimately jeopardizing human life.
- Monmouth County's population is growing modestly; it is projected to have a population increase 10.6% of 2010 values by the year 2040.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Monmouth County has established a large County evacuation center at Brookdale Community College. The building although structurally sound does have some exterior windows and doors that could become compromised during a wind generating event.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- Several roadways in the Township are flood prone. This includes but is not limited to State routes of: State Highway 35 at Long Neck Creek, Lakeshore Drive and Greenwood Avenue, and Amboy Avenue.
- Aberdeen has a fairly steady flow of infill development and redevelopment and its population is increasing, so promoting disaster resistant development will be key to achieving sustainability.
- Aberdeen has several critical facilities in areas of mapped flood, wildfire, and/or storm surge hazard.
- Most of the township north of the Garden State Parkway is potentially susceptible to storm surge.
- The Township has suffered significant beach erosion in the Cliffwood Beach area resulting from hurricanes, tropical storms, and nor'easters.
- The Cliffwood Beach area is home to two marinas, the Townships DPW, and several pump stations.
- Due to the impact of Hurricane Sandy the township is concerned with improving protection of low-lying areas of Cliffwood Beach with engineered dunes and the extension of the existing seawall. Residents have also expressed concern with possible elevation of their homes.
- Aberdeen's population is growing modestly but with that growth, more people will be exposed to natural hazards. By the year 2040, Aberdeen is projected to have a population increase of 10.8% over 2010 values. This is slightly higher than the average rate of the Bay-shore Region as a whole (6.7%) but very close to the County's overall projected increase of 10.6% for that same time period. New development is predominantly infill and redevelopment.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Summary of PRI Results for Allenhurst, Borough of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Two critical facilities are located in areas potentially susceptible to storm surge.
- Allenhurst is a virtually built-out coastal community.
- The intersection of Elberon Avenue and Ocean Avenue is in a Special Flood Hazard Area, as is Corlies Avenue . These areas were flooded during Hurricane Sandy.
- Ocean Place was flooded during Hurricane Sandy, as was the southernmost area of Main Street and the rail lines.
- Allenhurst's population is projected to increase somewhat due to redevelopment and infill development (mixed residential/commercial).
- Most of the Borough's storm damage has historically been experienced along the beach area and the first two blocks inland.
- Municipal beachfront buildings and infrastructure are at risk of storm damage. Some have been elevated.
- Allenhurst is in a reach of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project that has never been constructed. The project area covers the 21 miles of coastline from Sea Bright south to Manasquan, except for three miles of shoreline from Lake Takanassee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall.
- Allenhurst's population is projected to remain virtually static, but with its very limited growth, more people will be exposed to natural hazards. By the year 2040, Allenhurst is projected to have a population increase of just 1.5% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29.0%) and also much lower than the County's overall projected increase of 10.6% for that same time period. Very little development has occurred in the Borough for the last 70 years, and a similar trend is planned in the future, though some redevelopment is expected.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding and wind.

**Key Risk Findings:**

- Public outreach in the 2009-2014 planning cycle has increased the general public's understanding of natural hazards and mitigation possibilities.
- An inventory of addresses that could be affected by a wildfire was prepared, and has been used to develop a route alerting system.
- An existing dam that runs below County Route 539 has been reconstructed. This project protects major private and public property that could have been damaged if the dam had failed, including but not limited to the municipal sewer plant.
- The Borough of Allentown is almost totally developed. The land that is not used for commercial or residential buildings is protected land under "Green Acres".
- Route 524 in the vicinity of Conines Millpond is subject to flooding.
- During periods of heavy rainfall, Doctors Creek and Indian Run have overflowed their banks and backed up the municipality's drainage system, which causes flooding of streets and adjacent properties.
- While Allentown is generally surrounded by areas mapped as low wildfire risk, an area in the town of moderate to high risk poses a concern due to the relatively few roads of ingress/egress in the Borough.
- Allentown's population is projected to be essentially the same by the year 2040 as it is today. Allentown is projected to have a very slight population increase of only 0.7% over 2010 values. This is lower than the average rate of the Panhandle Region as a whole (1.6%) and also much lower than the County's overall projected increase of 10.6% for that same time period. Allentown is almost totally developed, and the land that is not used for commercial or residential buildings is protected land under "Green Acres".
- Climate change will contribute to more frequent and severe weather events.

<b>Other Natural Hazards</b>												
Wildfire	Unlikely	1	Minor	1	Small	2	Less than 6 hours	4	Less than one week	3	1.7	L

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Bottlenecked storm drains cause flooding in locations throughout the city. The city has been addressing the issue little by little as funding becomes available, but there are more locations to be addressed.
- Floodplains generally surround Deal Lake, Sunset Lake, and Wesley Lake. Bulkheads at Sunset Lake and Wesley Lake are in need of mitigation; sediment accumulation limits storage
- Asbury Park is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 21 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +9.3ft NAAVD to prevent frequent overtopping of the berm from wave runoff.
- Asbury Park's beach is subject to erosion and the ongoing renourishment of the USACOE project is of the utmost importance.
- Asbury Park's population is growing fairly rapidly and with that growth, more people will be exposed to natural hazards. By the year 2040, Asbury Park is projected to have a population increase of 29% over 2010 values. This mirrors that of the average rate of the Coastal Region as a whole (29%) and is much higher than the County's overall projected increase of 10.6% for that same time period. Oceanfront redevelopment is occurring, with 4 to 6 story combined commercial/residential, 1 to 2 story commercial, and up to 25 story residential high rise throughout the oceanfront area.
- Deal Lake continues to be a major source of flooding. During severe storms, water drains into the Lake but outfall design constraints prevent the water from making its way into the ocean before water overflows the banks and floods back into surrounding areas.
- Sedimentation and debris in Deal Lake and its tributaries impedes flood flows.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- The erosion and flooding to many parts of the Borough continues to be an issue of great concern.
- The Borough continues to monitor the hillside for erosion and slump blocking
- Since Superstorm Sandy (October 2012) the Borough has been dealing with flooding issues on the west side of town; it appears that the Many Mind Creek floods residential areas more often than not in a rain storm.

Hillside Road and Paper Street have issues with high velocity overland flows (outside of mapped foodplains) that cause slope failure and flooding. If the drainage of water continues to erode Paper Street, the downhill properties will be in danger of failure as will the residents in the dwelling. If the wash out is severe, there is a possibility that the roadway will wash out and landlock over 12 homes. On Hillside Road, municipal and four private properties are at risk.

Flooding is an issue at Fireman's Memorial Field on West Highland Avenue (south of Avenue B). The site is adjacent to the Many Mind Creek. The site is owned by town firemen's association. 3 baseball fields, converted for football in fall, soccer as well. While damages to the fields themselves are an issue, the affected area also includes the following improvements: bleachers, dugouts, electric scoreboards, PA system, night lights, center track at border sand beside Many Mind Creek, tot lot near Leonard Avenue entrance, parking lot, chute, slide, monkey bars, climbing, other devices, field house with restrooms, and concession stand. The creek was dredged in this specific area since the initial version of the plan, but flooding problems continue. In addition, the bridge hasn't changed thus the continuance of problems.

- Slope stabilization is needed on Bayside Drive; this is an area of historic slump blocks particularly where hillsides are disturbed during construction activities, and or times where the soil is saturated and there is increased surface runoff. Roadway will be washed away landlocking 12 single family dwellings
- Atlantic Highlands' population is projected to remain virtually static but with its very limited growth, more people will be exposed to natural hazards. By the year 2040, Atlantic Highlands is projected to increase by just 3.5% over 2010 values. This is somewhat lower than average rate of the Bayshore Region as a whole (6.7%) and is also lower than the County's overall projected increase of 10.6% for that same time period.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- One critical facility is located in a flood hazard area, and four are potentially susceptible to storm surge. These include one child care facility, one school, a police/fire station, and public works facility.
- The floodplain is primarily around Sylvan Lake and the Shark River inlet. Walls around the Lake are in need of mitigation. Sediment is accumulating in the lake.
- Avon By The Sea is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 21 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +9.3ft NAAVD to prevent frequent overtopping of the berm from wave runup.
- Avon By The Sea's coastline is subject to erosion and the ongoing renourishment of the USACE project is of the utmost importance.
- Avon By The Sea's population is projected to be essentially the same by the year 2040 as it is today. Avon By The Sea is only projected to have a very slight population increase of 0.3% over 2010 values. This is much lower than average rate of the Coastal Region as a whole (29%) and is also lower than the County's overall projected increase of 10.6% for that same time period. The Borough is a fully built-out coastal community.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

Wildfire	Unlikely	1	Minor	1	Small	2	Less than 6 hours	4	Less than one week	3	1.7	L

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Flooding is an issue around Silver Lake, Lake Como, and Shark River Inlet. (property damages, road closures, etc)
- Coastal erosion is a significant issue along Belmar's beachfront.
- Belmar experienced serious flooding from Sandy resulting from the storm surge and resultant flooding caused in large part due to the variants in elevations between much of the town and Ocean Avenue. The surge resulted in flooding both from the Ocean and from the Shark River with flood waters meeting at Main Street, extensive damage to the beachfront, marina and residential properties. Belmar is now dealing with serious issues from the 2 lakes in town Lake Como, and Silver Lake. We have also seen a serious impact to our underground infrastructure including the water distribution system and sewer collection systems.
- Belmar is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 21 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +9.3ft NAVD to prevent frequent overtopping of the berm from wave runoff.
- Belmar's coastline is subject to erosion and the ongoing renourishment of the USACE project is of the utmost importance.
- Belmar's population is projected to remain essentially the same by 2040 as it is today. By the year 2040, Belmar is projected to have a very slight population increase of 0.3% over 2010 values. This is much lower than average rate of the Coastal Region as a whole (29%) and is also much lower than the County's overall projected increase of 10.6% for that same time period. Belmar is a one square mile coastal community that is virtually built-out.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Repetitive storm water flooding from the Shark River during storm surges and high volume rain events. Damage to residential property, borough recreational areas and street closures.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Due to Super Storm Sandy, Bradley Beach incurred significant damages along its beach front and dune system. There were also significant damages to the bulkhead system.
- The Borough experiences ocean and lake flooding during hurricanes and large storms. In part due to issues with outfalls, and gaps in the bulkhead system.
- Virtually all of Bradley Beach is in mapped storm surge hazard areas.
- The Borough Sewer Plant is identified as susceptible to storm flooding. SEWER PUMP STATION IS SUSCEPTIBLE TO FLOODING DURING SEVERE COASTAL STORMS
- Lack of available grants and funding have hampered the Boroughs ability to institute mitigation actions
- Bradley Beach is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 2.1 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +9.3ft NAAVD to prevent frequent overtopping of the berm from wave runoff.
- Bradley Beach's coastline is subject to erosion and the ongoing renourishment of the USACOE project is of the utmost importance.
- Bradley Beach's population is projected to remain virtually static, but with its very limited growth, more people will be exposed to natural hazards. By the year 2040, Bradley Beach is projected to have a population increase of just 1.6% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29.0%) and also much lower than the County's overall projected increase of 10.6% for that same time period. The Borough is a built out coastal community.
- Climate change will contribute to more frequent and severe weather events.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- FLETCHER LAKE DEPTH HAS BEEN DRASTICALLY REDUCED BY SANDY THUS CAUSING OVERFLOW DURING STRONG STORMS, HURRICANES AND COASTAL FLOODING. THESE LAKES ALSO ACT AS RETENTION BASINS FOR RUN OFF FROM ADJOINING MUNICIPAL, COUNTY AND STATE ROADWAYS
- SYLVAN LAKE DEPTH HAS BEEN DRASTICALLY REDUCED BY SANDY THUS CAUSING OVERFLOW DURING STRONG STORMS, HURRICANES AND COASTAL FLOODING. THIS LAKE ALSO ACTS AS RETENTION BASIN FOR RUN OFF FROM ADJOINING MUNICIPAL, COUNTY AND STATE ROADWAYS
- DEFICIENCIES WERE IDENTIFIED WITH LOCAL AND INTER AGENCY COMMUNICATION AS WELL AS COMMUNITY NOTIFICATIONS DURING PAST EMERGENCIES

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding and wind.

**Key Risk Findings:**

- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- Tree damage during severe storms such as hurricanes, tropical storms, nor'easters, and winter storms has been known to block roadways, and interrupt power as lines are downed.
- Since the last version of the plan was prepared, the Township has been impacted by two hurricanes. Each event has disrupted major portions of the town with power outages. Because Colts Neck is a well and septic community, no power means no water or sewer either.
- Colts Neck's population is growing fairly rapidly and with that growth, more people will be exposed to natural hazards. By the year 2040, Colts Neck is projected to have a population increase of 21.2% over 2010 values. This is lower than the average rate of the Central Region as a whole (31.1%) but higher than the County's overall projected increase of 10.6% for that same time period. New development is expected to be primarily low-density residential and some commercial.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Flooding has historically been an issue from Poplar Brook at various locations through the years; particularly between Norwood Ave and Ocean Ave. Above normal rainfall causes flooding on roadways and onto private property partially due to drain pipes being of insufficient size under roadways.
- Beachfront areas were significantly damaged during Hurricane Sandy. Including, but not limited to, municipal sewer facility which is located on the oceanfront.
- Several roadways in the town require mitigation of drainage systems to prevent recurrent flooding.
- Undersized culverts under roadways in three different streets along Poplar Brook (Norwood Ave, Alymar Ave, Ocean Ave) result in flooding.
- Deal is in a reach of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project that has never been constructed. The project area covers the 21 miles of coastline from Sea Bright south to Manasquan, except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall.
- Deal's population is projected to remain virtually static through 2040. By the year 2040, Deal is projected to have a population increase of just 0.9% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also much lower than the County's overall projected increase of 10.6% for that same time period. New development is limited to single family residential dwellings, complying with 40 percent impervious restriction, and the borough noted no potential for additional multiple family residential units near the oceanfront.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Summary of PRI Results for Eatontown, Borough of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Husky Brook runs through the borough. Local officials note excess sedimentation impedes the brook's ability to drain water and, in turn, flooding of local areas is a result.
- Flooding is a recurrent issue at the Lewis Street Public Works Yard.
- Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.
- Shelters do not currently have sufficient systems in place to ensure that power can be maintained for telecommunications, etc. during severe storm events.
- Eatontown's population is projected to grow fairly rapidly through 2040. By the year 2040, Eatontown is projected to have a population increase of 21% over 2010 values. This is lower than the average rate of the Coastal Region as a whole (29%) but higher than the County's overall projected increase of 10.6% for that same time period. The Borough's development trends are predominantly high density, high value residential, commercial, and industrial units.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

<b>Other Natural Hazards</b>												
Wildfire	Possible	2	Minor	1	Moderate	3	Less than 6 hours	4	Less than one week	3	2.2	L

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

- Heavy sediment deposits in segments of Weamconk Creek and McGellairds Brook contribute to flooding of properties during heavy rain events, nor'easters and hurricanes, and the spring thaw.
- Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.
- The water treatment plant loses power during flood events.
- Englishtown's population is projected to experience minimal growth through 2040. By the year 2040, Englishtown is projected to have a population increase of 8.2% over 2010 values. This is much lower than the average rate of the Western Region as a whole (31.7%) and somewhat lower than the County's overall projected increase of 10.6% for that same time period. While Englishtown is a half square mile community that is, for the most part, built out, some infill/redevelopment is expected (single family residential with some apartments); however, the new conservation zone is intended to protect open space and prevent construction in hazard areas.
- Climate change will contribute to more frequent and severe weather events.

**Summary of PRI Results for Fair Haven, Borough of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.
- WHENEVER BOROUGH HALL AND DPW BUILDINGS LOSE POWER THESE BUILDINGS CAN NOT OPERATE AND THEREFORE THE BOROUGH CANNOT OPERATE BUSINESS.
- Mapped flood hazard areas are limited very close to the shoreline of the Navesink and its tributaries; though areas mapped as potentially susceptible to storm surge in Fair Haven are fairly extensive. Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Fair Haven's population is projected to remain virtually static through 2040. By the year 2040, Fair Haven is projected to have a population increase of just 2.5% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also lower than the County's overall projected increase of 10.6% for that same time period. New development in Fair Haven is characterized by a lack of developable parcels.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Summary of PRI Results for Farmingdale, Borough of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

Shelters are not necessarily designed to adequately withstand severe storm characteristics (i.e., flood levels, wind loads).

The general public is lacking information to adequately shelter-in-place.

Flooding occurs regularly in the Borough and often impacts both residential and nonresidential structures.

Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.

Power outages have impacted emergency services, water purification systems, and shelters that lack secondary power sources.

- Farmingdale's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of 6.3% over 2010 values. This is much lower than the average rate of the Western Region as a whole (31.7%) and somewhat lower than the County's overall projected increase of 10.6% for that same time period. With an area of only 1.5 square miles, Farmingdale has limited potential for development. Most new development is characterized by spot lot residential and limited commercial construction.

-Climate change will contribute to more frequent and severe weather events.

**Summary of PRI Results for Freehold, Borough of**  
Category/Degree of Risk

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

- Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.
- The Hudson Manor Senior Citizen Building and the Rug Mill Towers Apartment Building have populations that are particularly susceptible to power outages during severe storms. Borough officials have worked with JCP&L to provide additional power paths to these facilities to mitigate this risk
- Critical facilities are particularly susceptible to power outages where backup power does not exist; this is a significant issue at the emergency operations center and at grammar schools that are designated as evacuation centers/shelters.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- Freehold Borough's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of 4.6% over 2010 values. This is much lower than the average rate of the Western Region as a whole (31.7%) and also lower than the County's overall projected increase of 10.6% for that same time period. The Borough of Freehold is virtually built-out, but new residential developments and condominiums, along with multi-story commercial/office spaces, do occur.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

- Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.
- Power outages impact the Township's ability to maintain critical services and public safety. Power failure may result in lack of water and sewer service for township.
- Heavy sediment deposits in certain stream segments contribute to flooding during heavy rain events, nor'easters and hurricanes, etc.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- Freehold Township's population is projected to experience modest growth through 2040. By the year 2040, it is projected to have a population increase of 16.3% over 2010 values. This is lower than the average rate of the Western Region as a whole (31.7%) but somewhat higher than the County's overall projected increase of 10.6% for that same time period. While the Township is 94 percent built out, new development is expected along the Route 9 and Route 537 corridors.
- Climate change will contribute to more frequent and severe weather events.
- Freehold Township has a moderate extent of land in mapped high or extreme wildfire risk areas. Most at-risk areas are in the southern half of the Township.
- Rose Court: Undermining and damage to storm drainage pipe and flared end section at the top of a steep embankment (Rose Court, at the end of the cul-de-sac). Continued exposure to erosion will lead to further destruction to the adjacent storm drainage system as well the cause the flared end section to separate and fall off of the embankment. The continued erosion represent a environmental impact as well as a potential impact to existing structures and development.
- Plymouth Drive: The existing culvert at Plymouth Drive (Structure No. 1316X68) over the Tributary to the Manasquan River is in poor condition and has advanced section loss to the primary structural elements. Continued exposure to average and high frequency storms will further degrade the structure and lead to failure. The structure should rehabilitated.
- Hampton Drive: The existing culvert at Hampton Drive (Structure No. 1316X57) over the Tributary to the Manasquan River is in poor condition and has advanced section loss to the primary structural elements. Continued exposure to average and high frequency storms will further degrade the structure and lead to failure. The structure should rehabilitated.
- Medford Boulevard: Culvert is located on Medford Boulevard in Freehold Township NJ structure number 1316X64. Rehabilitation of the structure will include repairing the existing voids behind the side walls of the culvert with a concrete type material, lining the culvert with a high-density polyethylene elliptical pipe and grouting the annular space between the existing culvert and the lining. In conjunction with repair to the culvert rehabilitation to the adjacent embankments to prevent undermining and reduce or eliminate erosion.

**Summary of PRI Results for HAZLET**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- Sedimentation in local creeks and waterways exacerbates flooding.
- Drainage system features in certain areas are contributing to flooding in the Township.
- Hazlet's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of 5.3% over 2010 values. This is similar to the average rate of the Bayshore Region as a whole (6.7%) but somewhat lower than the County's overall projected increase of 10.6% for that same time period. Hazlet is proactive in that new buildings are not permitted for construction in the 100-year floodplain.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Portions of Hazlet are in mapped storm surge hazard areas. The flood gates on 1st street in the West Keansburg area are closed in the event of any storms, preventing a good portion of the flooding in the area. These gates held all the water back during Hurricane Sandy, eliminating any flooding.

2000

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Most of Highlands (from the Bay up to Shore Drive) is in the mapped special flood hazard area.
- Severe storm events in recent years, particularly Hurricane Sandy, have devastated the Borough. Most Borough facilities were rendered uninhabitable due to storm damage from Superstorm Sandy.
- The existing drainage system does not accommodate stormwater runoff from hill sections; this is exacerbated when coastal waters are high.
- Damages from coastal erosion and wave action in recent storms have been significant.
- The geography of the Borough of Highlands makes it highly susceptible to landslides and slump blocks, which occur regularly in the borough. Conditions are exacerbated on steepest slopes when soil water content is high and particularly when the ground is being disturbed (i.e. during construction).
- Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.
- Telecommunication and electrical systems at critical facilities including facilities used for EOC and as local shelters are negatively impacted during periods when power is out. Various hazards have historically crippled Borough communications and electrical systems for critical facilities including EOC and local shelters.
- Some emergency facilities and shelters built before existing codes were adopted are not designed to accommodate high wind loads that could be experienced during severe storms.
- Ten critical facilities in Highlands are located in one or more mapped hazard areas (flood, surge, erosion, landslide)
- Highlands' population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of 2.2% over 2010 values. This is lower than the average rate of the Bayshore Region as a whole (6.7%) and also lower than the County's overall projected increase of 10.6% for that same time period. Many areas are being redeveloped, particularly near the waterfront, and some open areas are being developed with single and multi-family housing units. Much of the waterfront is business area zones that have already been developed with restaurants or marinas; restaurant/business renovations are typical here (not condo type development).
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

80  
4320

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- Failure of an emergency generator at a sewer pump station during Sandy highlighted that the Township sanitary sewer infrastructure (pump stations, sewer lines) is in need of mitigation at many locations.
- Holmdel's population is projected to grow fairly rapidly through 2040. By the year 2040, it is projected to have a population increase of 20.5% over 2010 values. This is lower than the average rate of the Central Region as a whole (31.1%) but higher than the County's overall projected increase of 10.6% for that same time period. Most of the undeveloped properties in the Township are zoned for single family homes in low-density, clustered developments.
- Holmdel is located inland from the Sandy Hook Bay shore. An extremely small portion of the Township lies within mapped storm surge hazard areas. Holmdel is largely protected from direct storm surge from Sandy Hook Bay by the communities of Keyport, Union Beach, and Keansburg (storm surge hazard areas are generally a result of tidal flooding along various streams that lead to the bay). Of the portion of the Township within mapped surge hazard areas, virtually 100% is either protected wetlands and/or a township park (Allocco Park). It is bordered by a stretch of Palmer Avenue which does suffer from road flooding but Palmer Ave is actually County Route 7 (mitigation of flooding on County Route 7 has already been identified as one of the County's mitigation actions for this plan update).
- As a result of Hurricane Sandy, downed trees and powerlines and associated power outages were widespread with only about 700 customers with service. Town Hall had to be closed, with the exception of limited emergency staffing. The Township did provide generators to some gas stations, but the stations were cut off from suppliers and therefore could only dispense what was already in their pumps. The Township notes that since the mid 1970s all developments and sub-divisions have been installing utilities underground and virtually 100% of the towns critical infrastructure has permanently installed emergency generation and this figure will rise to 100% by 2015 through the capital budget. Since Hurricane Irene, over 400 residential units have installed permanent emergency power and this figure continues to increase at a steady rate. Our Building and Zoning departments continually work with all applicants to ensure that the process is made as easy as possible. We also continue to "encourage" JCP&L to engage in aggressive vegetation trimming along their rights-of-way.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- Significant damage was incurred to structures and infrastructure throughout the Township as a result of Hurricanes Irene and Sandy.
- Existing shelters are not designed to withstand hazards to which they are exposed during severe storm events.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities and were better able to shelter in place.
- Howell has a number of flood-prone properties on the NFIP Repetitive Loss List in need of mitigation.
- Emergency operations center lacks redundant systems (power and communication) to maintain critical functions before, during and after a disaster.
- Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easters hurricanes, and tropical storms, etc.
- Power outages have impacted emergency services, water purification systems, and shelters that lack secondary power sources.
- At the present time, most of the Township of Howell remains undeveloped. A full 58 percent is open space, woodland and brush; while an additional 11 percent is agricultural, orchards, and nurseries. New development tends to be broadly characterized by agricultural parcels being subdivided and developed with low-density, high value, single family homes. Howell's population is projected to experience modest growth through 2040. By the year 2040, it is projected to have a population increase of 12.1% over 2010 values. This is much lower than the average rate of the Western Region as a whole (31.7%) but higher than the County's overall projected increase of 10.6% for that same time period.
- While Howell is not located along the coast, some of its streams are susceptible to storm surge flooding.
- A large portion of Howell lies in areas mapped as posing high or extreme wildfire risk.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Summary of PRI Results for Interlaken, Borough of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- Deal Lake continues to be a major source of flooding in the Village. During severe storms, water drains into the Lake but outfall design constraints prevent the water from making its way into the ocean before water overflows the banks and floods back into surrounding areas.
- Sedimentation and debris in Deal Lake and its tributaries impedes flood flows.
- Damage and losses due to flooding are also incurred in Interlaken as a result of drainage system shortcomings; the Borough's drainage system cannot efficiently accommodate today's stormwater runoff volumes, and discharge this stormwater efficiently to ocean waters. This combined with flooding from Deal Lake which can be exacerbated
- Interlaken's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of only 1.2% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also much lower than the County's overall projected increase of 10.6% for that same time period. This is because the borough is fully built out, with only 395 residential structures. There is no commercial or business district, and the only non-residential uses are borough-owned properties such as Borough Hall, the park, and arboretum. Interlaken has a population of only 820.
- Interlaken lacks direct coastal frontage. It is located off of the immediate coast, protected by portions of Loch Arbour, Asbury Park, and Deal Lake. Interlaken is bounded on three sides by Deal Lake and two of its tributaries, which are susceptible to storm surge flooding.
- One of the biggest problems faced by Interlaken in the aftermath of Hurricane Sandy was the magnitude and duration of power outages.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Substantial damage throughout the Borough was incurred as a result of Superstorm Sandy. Many homes are being elevated as a result to comply with local ordinances.
- Keansburg's level of disaster resistance would benefit from enacting and enforcing flood hazard zoning ordinances.
- Damage and losses due to flooding are incurred in some parts of Keansburg as a result of drainage system shortcomings; the Borough's drainage system cannot efficiently accommodate today's stormwater runoff volumes, and discharge this stormwater efficiently to ocean waters.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities
- Downed trees on power lines contribute to power outages during severe storms with high winds such as nor'easter, hurricanes, and tropical storms, etc.
- Power outages can severely impact critical facilities that lack secondary power sources.
- Use of water for landscaping purposes during periods of drought exacerbates drought impacts by shifting limited water resources away from the most critical needs.
- Keansburg is part of the USACE Raritan Bay and Sandy Hook Bay, New Jersey, Beach Erosion and Hurricane Protection Project. The project was constructed in 1973 provides beach erosion and hurricane protection (through reducing the risk of flooding and damages caused by storm surge and wave action). It includes sacrificial beach berm, groins, levees, floodwall, a storm closure gate, and a pump station. Hurricane Sandy exceeded the design level for this system, but the system did provide some protection nonetheless.
- Keansburg's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of only 2.7% over 2010 values. This is lower than the average rate of the Bayshore Region as a whole (6.7%) and also lower than the County's overall projected increase of 10.6% for that same time period. Limited new development and redevelopment in Keansburg is generally in the waterfront area, where townhouse/condo type residential and retail development tends to be most typical.
- Most of the Borough lies within mapped storm surge hazard areas. Keansburg was devastated by storm surge flooding during Hurricane Sandy.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- As a result of Hurricane Sandy, Police vehicles and equipment in the borough were damaged and response services were hindered because of the flood waters, debris and power outages.
- As a result of the drastic inundation of floodwater caused by Hurricane Sandy and other major storm events, the banks of Waackack Creek have become severely eroded and laden with silt and sand that was washed in from the bayshore beaches. As a result, areas of roadway located along the creek have begun to collapse. In addition the structural integrity of surrounding residential properties has been compromised, posing an imminent threat to life, health, & public safety.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- About half of the Borough of Keyport is susceptible to storm surge, mainly via tidal surges up local streams.
- The existing bulkhead system is comprised of both public and private bulkheads, and there are certain areas with no bulkheads. While the bulkhead system, in combination with some roads which have been raised, have worked to protect certain areas, locations where there are breaks in the line of protection are more vulnerable than other areas. Affected properties are largely commercial.
- Green Grove Avenue, providing access to Route 36 (a coastal evacuation route), floods in the area of the Chingarora Creek culvert crossing.
- Keyport's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of only 3.2% over 2010 values. This is lower than the average rate of the Bayshore Region as a whole (6.7%) and also lower than the County's overall projected increase of 10.6% for that same time period. Waterfront development is characteristic of new development in Keyport, with 10 new homes in the last five years, and plans for multi-family condos, all near the water.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- 95 homes encountered flood damage from storm tides and surges during Sandy, and elevation would mitigate against repeated loss of homes due to flooding.
- Flooding and damage to the sewer system pump stations can result in overflow of untreated sewage into natural waterways (i.e., Cedar Street, Maple Place)
- Insufficient roadway drainage (curbing, culverts, etc) leads to street flooding and flooding of multi-family, residential, and commercial properties. Lack of drainage and subsequent flooding hinder access to the Evacuation Route, and the emergency vehicles access to the roadway.
- Insufficient capacity of the stormwater system results in frequent flooding of residential and commercial areas
- The current Firemen's Park bulkhead height is not sufficient to mitigate against high tide and storm related flooding. This has been a repetitive loss area affecting public property and the safe enjoyment of recreational areas as well as safe passage through roadways and access to commercial properties.
- Blockages and backflow of tidal and stormwaters in drainage systems contributes to flooding of roadways, borOUGH, commercial and residential properties..

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- Lake Como is the primary source of flooding in the Borough. During severe storms, water drains into the Lake but outfall design constraints prevent the water from making its way into the ocean before water overflows the banks and floods back into surrounding areas.
- Lake Como's population is projected to remain essentially the same through 2040. By the year 2040, it is projected to have a population increase of only 0.6% over 2010 values. This is much lower than the average rate of the Central Region as a whole (31.1%) and also much lower than the County's overall projected increase of 10.6% for that same time period. Development is generally characterized by high density residential over commercial projects along Main Street; the remainder of the borough is built out, with limited redevelopment/alterations to existing structures.
- The entirety of Lake Como is in mapped storm surge hazard areas.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Flooding of residential structures around Como Lake is a big issue for the Borough.
- Loss of power is possible during hazard events including flooding, surge, extreme wind, hurricane and tropical storm, nor'easter, extreme temperatures, and lightning. Academy Charter High School is an Emergency Shelter which lacks backup power. Facilities also lacking backup power include: OEM Central Command Center, Public Works Building, and the First Response Emergency Center.
- The Emergency Command Center lacks hurricane windows and roof straps and is susceptible to damage during high wind events.

**Summary of PRI Results for Little Silver, Borough of**  
Category/Degree of Risk

Storm Surge	Likely	3	Catastrophic	4	Large	4	More than 24 hours	1	Less than one week	3	3.3	H
Wave Action	0	#N/A	Catastrophic	4	Negligible	1	More than 24 hours	1	Less than one week	3	#N/A	#N/A
<b>Geologic Hazards</b>												
Earthquake	Unlikely	1	Minor	1	Large	4	Less than 6 hours	4	Less than 6 hours	1	1.9	L
Landslide	Possible	2	Catastrophic	4	Negligible	1	Less than 6 hours	4	Less than 6 hours	1	2.5	M
<b>Other Natural Hazards</b>												
Wildfire	Possible	2	Minor	1	Small	2	Less than 6 hours	4	Less than one week	3	2.0	L

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion.

**Key Risk Findings:**

- Sedimentation and debris accumulation in local streams causes them to overflow their banks during periods of heavy rains and is exacerbated by storm surge during hurricanes and nor'easters (particularly, Town Neck Creek and Parkers Creek).
- Little Silver's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of only 4.6% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also lower than the County's overall projected increase of 10.6% for that same time period. Little Silver is largely residential and continues to develop slowly, generally via renovation of existing homes, though there has been one new age restricted housing development.
- More than 50 percent of Little Silver lies within mapped storm surge hazard areas (tidal waters surging up the Shrewsbury River). New age restricted housing is within the mapped storm surge hazard area.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Approximately, 30 single family homes are within the 100 year flood zone throughout the Borough. During extreme storm events these properties can experience flooding and property damage.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Deal Lake continues to be a major source of flooding in the Village. During severe storms, water drains into the Lake but outfall design constraints prevent the water from making its way into the ocean before water overflows the banks and floods back into surrounding areas. In order to respond quicker to significant rain events and prevent flooding, the open and closing mechanism of the flume gates should be automated. During significant storm events when tidal surges occur, it becomes necessary to close the gates quickly to minimize ocean water infiltrating into the lake. The normal level of Deal Lake is only 3.2 feet above mean high tide.
- Sedimentation and debris in Deal Lake and its tributaries impedes flood flows.
- Loch Arbour is in a reach of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project that has never been constructed. The project area covers the 21 miles of coastline from Sea Bright south to Manasquan, except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall.
- Loch Arbour's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of only 4.5% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also lower than the County's overall projected increase of 10.6% for that same time period. This is because the Village is fully built-out and any development is predominantly in the form of demo-rebuild.
- During Hurricane Sandy, the beachfront was eroded away into the surf. The Shoreline was left exposed causing extensive property and roadway infrastructure damage limiting the Village's ability to provide critical emergency services. Ocean Avenue was undermined in the vicinity of an ocean front tract at its border with Asbury Park. A private beach club on this tract was heavily damaged. The tract is bounded on one side by a Village-owned beach club, and on the south by a parcel that is being considered for open space acquisition. The Village views this property as an ideal location for a shore protection project; it is where the worst flooding of Sandy was. The ocean came over into Deal Lake and undermined Ocean Avenue in the vicinity of this property.
- All of Loch Arbour is within mapped storm surge hazard areas.
- Loch Arbour's capabilities are limited, due in part to its population of only 194 residents (making it the least populated community in Monmouth County). It is an eight block area bounded by Deal Lake on the South, Main Street on the west, the Atlantic Ocean on the east, and Elberon Avenue along most of its northern border. The Village is fully built out.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Presently there are no storm water retention basins with the ability to correctly control the rate, amount or quality of runoff generated from any of the State of NJ Highways that transverse the Deal Lake watershed. As a result, waterfront properties within watershed flood regularly.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- The northern and western areas of the city are susceptible to flood/surge. Most of North Long Branch was flooded during Hurricane Sandy, from both coastal flooding and backwater flooding from the Shrewsbury River and its tributaries. There was significant damage to public and private property and infrastructure.
- Various locations throughout the City flood when local drainage cannot exit the system due to submerged outfalls and associated backflow.
- Areas surrounding City Hall from Broadway to Morris Avenue flood during periods of excess rainfall.
- Flash flooding has been an issue under the NJ Transit Railroad trestle near train station
- The portion of Long Branch from Lake Takanasee to the northern city limit is included in the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 2.1 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee to the northern city limit) it involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +9.3ft NAAVD to prevent frequent overtopping of the berm from wave runoff.
- Long Branch's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of only 3.8% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also lower than the County's overall projected increase of 10.6% for that same time period.
- Long Branch is implementing a development plan, the first phase of which was the recent Pier Village, a high density residential commercial mix on the waterfront. The City will be implementing the next four phases of its plan, two of which include high density residential/commercial beachfront development.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Flooding/surge has historically been an issue in and around Lake Takanasee and Elberon Trestle as well as the Manhasset Creek Park Complex during severe storms

**Summary of PRI Results for Manalapan, Township of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

- Residential structures along Birmingham Drive are located in floodplain of the Pine Brook.
- Manalapan's population is projected to experience modest growth through 2040. By the year 2040, it is projected to have a population increase of only 10% over 2010 values. This is much lower than the average rate of the Western Region as a whole (31.7%) but on par with the County's overall projected increase of 10.6% for that same time period. Development in Manalapan has slowed since the recession of 2008. Township development regulations include a flood hazard area overlay zone which prohibits most types of development in the 100-year floodplain.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action

**Key Risk Findings:**

- Nearly all of Manasquan is within mapped storm surge hazard areas. During Hurricane Sandy, most of the Borough was flooded from storm surge.
- As a result of Hurricane Sandy, Manasquan's critical infrastructure and emergency response systems were severely impacted; the lack of back-up power systems, redundant communication and public warning systems, and fall-back emergency and governmental operations centers had a significant impact on the Borough's ability to maintain critical functions and operations before, during and after the event. Damages were extensive and significant, particularly to those structures closest to the shore.
- Roughly half of the Borough is located in the special flood hazard area. Some of this is coastal, but much is due to backwater effects from the Manasquan River and its tributaries.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- More than half of the Borough is in mapped storm surge inundation zones.
- Manasquan is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 21 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +9.3ft NAVD to prevent frequent overtopping of the berm from wave runoff.
- Manasquan's coastline is subject to erosion and the ongoing renourishment of the USACE project is of the utmost importance.
- Manasquan's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of only 3.2% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and als lower than the County's overall projected increase of 10.6% for that same time period. Manasquan is a built-out, year-round residential community. New development primarily consists of demo-rebuilds, many of which are near the oceanfront.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Limited local funding is available for hazard mitigation activities
- The Borough is lacking an understanding of which specific structures, facilities & equipment are vulnerable to the above hazards
- The hazard mitigation plan must be monitored in order to gauge its success and accomplish updates as required
- The Borough is lacking a comprehensive, all hazards, public information program
- The Borough is lacking critical public warning capabilities
- The Borough has no plan for dealing with drought emergencies
- The Borough has structures, including critical facilities and equipment, vulnerable to earthquakes
- The Borough has critical facilities and equipment that are vulnerable to power failure
- The Borough has critical facilities and equipment that are vulnerable to damage from lightning strikes
- The Borough has a 1-mile long unprotected coastline exposed to the ocean and storms
- The Borough has a significant number of natural buffers including dunes, salt marshes, coastal wetlands, maritime forests, stream corridors and natural floodplains that are in a deteriorated stat that can provide significant natural buffers and flood mitigation
- The Borough would benefit from increasing participation in the National Flood Insurance Program (NFIP) Community Rating System (CRS)
- The Borough has residential, commercial and public structures, critical facilities, and equipment located in high-hazard areas and vulnerable to flooding, wave action, high winds, storm surge, and sea level rise.
- The Borough has roads and infrastructure located in high-hazard areas vulnerable to flooding, storm surge, and sea level rise

**Summary of PRI Results for Marlboro, Township of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- Sedimentation and debris accumulation in local streams causes them to overflow their banks during periods of heavy rains and is exacerbated during severe events such as tropical storms, hurricanes, and nor'easters.
- Marlboro's population is projected to experience modest growth through 2040. By the year 2040, it is projected to have a population increase of 10.8% over 2010 values. This is much lower than the average rate of the Western Region as a whole (31.7%) but on par with the County's overall projected increase of 10.6% for that same time period. Marlboro is seeing a mix of development types; some low-density residential on lots of 1 acre or larger, and some high-density high occupancy residential, and commercial. Development in the 100-year floodplain is precluded.
- Climate change will contribute to more frequent and severe weather events.
- There is a need for improving the timeliness and accuracy of information being provided to allow residents to ensure preparedness and allow them to make educated decisions regarding their own health and safety and property protection/mitigation measures
- Maintaining the operation of critical infrastructure during storm events is critical; however, some systems lack backup sources of power that would ensure their operability during a power outage (i.e., Telement Road Water Treatment Plant and Pump Station; Water Utility wells 3 and 4 at the Harbor Road Water Treatment Plant; and the Recreation Center (shelter))

**Summary of PRI Results for Matawan, Borough of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- A need has been identified for auxiliary power to the Matawan Municipal Community Center/Borough Hall Complex as a result of Hurricane Sandy.
- The Lake Lefferts Dam and the Matawan Lake Dam are both high hazard dams noted by the municipality as in need of replacement. Lake Lefferts: Potential for extensive damage downstream from Lake Lefferts to include the NJ Transit North Jersey Coast Railroad bridge over Matawan Creek. Slope failure and erosion to numerous lakefront homes. Environmental and wildlife issues associated with the draining of the lake. Flooding occurs during severe storms such as due to nor'easters and/or hurricanes. Lake Matawan: Potential for extensive damage to the surrounding properties of Lake Matawan to include Main Street (County Route 516). Slope failure and erosion to numerous lakefront homes. Environmental and wildlife issues associated with the draining of the lake. Flooding occurs due to severe storms such as nor'easters and/or hurricanes.
- Aberdeen Road - downstream from Lake Lefferts - is subject to recurrent flooding. Aberdeen Road becomes impassable due to tidal flooding at virtually every high tide creating a delay in emergency response for both Matawan and Aberdeen Emergency Services.
- Matawan's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of 5.2% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and lower than the County's overall projected increase of 10.6% for that same time period.
- A large portion of Matawan is mapped in storm surge hazard areas. However, during Hurricane Sandy, storm surge on tidally influence waterways remained primarily in undeveloped areas.
- Matawan is almost fully built out. A large scale redevelopment project is in initial stages for the entire area of the Matawan-Aberdeen train station. This area is within flood and storm surge hazard areas, but is regulated in accordance with borough ordinances governing floodplain management.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Hurricane Sandy highlighted shortcomings in the existing shoreline protection system.
- Many homes within mapped flood hazard areas are below the base flood elevation.
- Streams and ditches in flood hazard areas do not convey storm flows as efficiently as they should; this results in flooding in several areas. In addition to a flood hazard, accumulated dead vegetation poses a fire hazard.
- Invasive plant species are becoming prominent in wetland areas, thus decreasing storage capacities.
- Stormwater management infrastructure does not convey storm flows as efficiently as it should.
- The portion of Middletown along the coastline from the Keansburg border to Pews Creek ("East Keansburg") is part of the USACE Raritan Bay and Sandy Hook Bay, New Jersey, Beach Erosion and Hurricane Protection Project. The project was constructed in 1973 provides beach erosion and hurricane protection (through reducing the risk of flooding and damages caused by storm surge and wave action). It includes sacrificial beach berm, groins, levees, floodwall, a storm closure gate, and a pump station. Hurricane Sandy exceeded the design level for this system, but the system did provide some protection nonetheless.
- Middletown's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of 6.2% over 2010 values. This is much lower than the average rate of the Central Region as a whole (31.1%) and lower than the County's overall projected increase of 10.6% for that same time period. Middletown is experiencing new development primarily in the form of subdivisions. The Bayshore area is essentially built out, though some infill development possibilities exist. In addition, some multi-family development is occurring near the waterfront, and an area of 10-15 acres adjacent to the commercial fishing cooperative is slated for redevelopment.
- A substantial portion of Middletown lies within mapped storm surge hazard areas, including locations well inland of the Sandy Hook Bay shore, as well as areas along the Navesink River and its tributaries.
- During Hurricane Sandy, Middletown's Sandy Hook Bay communities of Port Monmouth, Belford, and Leonardo experienced storm surge flooding over a very large area generally north of Route 36 (though tidal flooding along Pews Creek and Compton Creek did extend south of Route 36). Communities in these areas were severely impacted. Along the Navesink and its tributaries, flooding tended to be more constrained to undeveloped floodplains and marina areas; however, along the meandering Swimming River, overbank flooding did affect some homes and businesses.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- During extreme lunar tides, the flood protection provided by the newly constructed Wilson Ave slide gate is compromised and there is a tidal flow of water from Compton's Creek across Main Street into the residential properties between Main St. and Brainard Ave.
- The drainage system is then quickly inundated and the streets become flooded, negating the intended positive effects of the Wilson Ave flood gate.
- Our Fire Companies & First Aid Squads have identified the need to install standby generators at their buildings to remain operational during emergencies.
- The fire companies are located in The flood plain, experienced flooding and sustained water damage as a result of Superstorm Sandy

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

- Streams and ditches, and stormwater management infrastructure, do not convey stormwater runoff as efficiently as they should; this results in flooding in several areas.
- Tree damage during severe storms such as hurricanes, tropical storms, nor'easters, and winter storms has been known to block roadways, and interrupt power as lines are downed.
- Severe storms disrupt major portions of the town with a high degree of long duration power outages, primarily from downed trees and flooding. Because Millstone is a well and septic community, no power means no water or sewer either.
- Much of Millstone Township is located in mapped moderate to extreme wildfire risk areas.
- Millstone's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of 6% over 2010 values. This is higher than the average rate of the Panhandle Region as a whole (1.6%) and lower than the County's overall projected increase of 10.6% for that same time period. Development is currently permitted along stream corridors, though the Township strictly enforces ordinances that protect new development from natural hazards including flooding.
- Climate change will contribute to more frequent and severe weather events.

**Summary of PRI Results for Monmouth Beach, Borough of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Hurricane Sandy highlighted the Borough's susceptibility to erosion during severe storms; significant volumes of sand were lost.
- The elevation of the existing retaining wall at Shorelands Park is not high enough, and when it is overtopped, residential structures incur significant damage, and flooding at the park results in erosion, litter and derisk, and changes to the parks topography.
- Monmouth Beach is located on a narrow strip of land just south of Sea Bright. All of Monmouth Beach is in an areas mapped as potentially susceptible to storm surge. Most of Monmouth Beach was inundated during Hurricane Sandy; a great deal of this was back bay flooding.
- The Borough's drainage system does not currently accommodate typical periods of high runoff; this causes flooding in locations such as Johnson St./Anderson St./Drew Ct./Valentine St.
- Monmouth Beach is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 21 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft. wide from the baseline, was designed at elevation +9.3ft NAAVD to prevent frequent overtopping of the berm from wave runoff.
- Monmouth Beach's population is projected to remain essentially the same through 2040. By the year 2040, it is projected to have a population increase of only 1% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also much lower than the County's overall projected increase of 10.6% for that same time period. Development in Monmouth Beach is predominantly redevelopment of existing property.
- Monmouth Beach drainage system and roadway improvements could mitigate flooding in certain areas. The Borough pursues seawall reconstruction to prevent encroaching ocean tides.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Flooding occurs in the residential area around the pump station at the northern terminus of Monmouth Parkway.
- The massive storm surges from Hurricane Sandy carried water over the existing Sea Wall and caused severe flooding and significant damages to both private residences and commercial business throughout the Borough.

Wildfire	Unlikely	1	Minor	1	Small	2	Less than 6 hours	4	Less than one week	3	1.7	L

**Mitigation Strategy: Mitigate Highest Hazards**

North-easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion.

**Key Risk Findings:**

- Power outages have been frequent occurrences in the Borough. During severe storms, this impacts public buildings and disrupts local government operations and does not allow the Borough to shelter its emergency personnel. During storm events it is critical to maintain emergency services throughout the Borough. To maintain these services emergency power is needed until primary power source is restored.
- Most of the Borough is in areas mapped as potentially susceptible to storm surge. Thankfully, during Hurricane Sandy, the inundation area was limited fairly close to the Shark River.
- Some areas inundated during Sandy included: East End Ave., Windsor Ct., Route 35, and Steiner Ave. between Route 35 and 3rd Ave.
- Drainage system does not efficiently convey stormwater runoff; this results in flooding in several areas.
- Local officials have noted that since Hurricane Sandy the tides of the Shark River are exceptionally low and exceptionally high.
- Neptune City's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of only 3.7% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also much lower than the County's overall projected increase of 10.6% for that same time period. Neptune City is about 96 percent developed.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- During storm events it is critical to provide showers and temporary sleeping facilities for emergency personnel and evacuated residents. The OEM operation during storm events is paramount to the communities' health and welfare. The ability to provide emergency services during a storm event is critical to maintaining the communities' health and safety.
- During storm events it is critical to maintain emergency equipment throughout the Borough. The OEM operation during storm events is paramount to the communities' health and welfare. The ability to provide emergency services during a storm event is critical to maintaining the communities' health and safety.

- During storm events it is critical to maintain sanitary services throughout the Borough. The pump station's continuous operation during storm events is paramount to the communities' health and welfare. The ability to provide continuous sanitation service during a storm event is critical to maintaining the communities' health and limiting the potential viral outbreaks associated with poor sanitation conditions. The conditions affecting the Sanitary Pump Station can be described as extreme wind, flooding, and storm surge. These conditions are associated with conditions that occur during a hurricane storm event along a coast. Non-sanitary conditions pose a critical health hazard. While no one has been killed or become deathly ill from the sanitary pump station being offline the fact remains that non-sanitary conditions pose a direct health concern for the immediate municipality and surrounding hospitals/ residents within the adjoining area.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Neptune Township is a coastal community with a substantial amount of land lying within mapped flood and storm surge hazard areas.
- During Hurricane Sandy significant storm surge flooded areas near the Shark River, Fletcher Lake, Wesley Lake, Lake Alberta, and Atlantic Ocean. Both private homes and public infrastructure were impacted. Some structures need to be elevated; others in more low-lying areas would seem to be good candidates for acquisition (particularly: Shark River Hills, South Riverside Drive, and Shark River Memorial Park).
- Hurricane Sandy highlighted gaps in the existing bulkhead system and associated flood impacts. Some areas are void of bulkheading; others have bulkhead elevations that are too low.
- Hurricane Sandy highlighted pump stations that are in need of water tight doors.
- Backflow of tides into the drainage system at the outfalls creates flooding when the system is full of tidal water instead of runoff.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- Debris and siltation in streams, waterways (Shark River) and Lakes (i.e. Fletcher/Wesley/Alberta) obstructs flood flows. Limited capacity causes evacuations, road closures, property damage.
- Local officials note areas along the Shark River with unstable banks.
- Erosion is an issue for coastal waterfront at Ocean Beach.
- Neptune Township is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 21 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +9.3ft NAAVD to prevent frequent overtopping of the berm from wave runoff.
- Neptune's beach (Ocean Grove area) is subject to erosion and the ongoing renourishment of the USACE project is of the utmost importance.
- Neptune Township's population is projected to experience modest growth through 2040. By the year 2040, it is projected to have a population increase of 11.6% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29% but on par with the County's overall projected increase of 10.6% for that same time period. Moderate to dense development is occurring and planned for waterfront areas.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Persons living and working in flood hazard areas do not always have enough time to prepare and evacuate floodprone areas.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- Despite being some distance inland, with no direct coastal frontage, Ocean Township has tidally influenced tributaries to Deal Lake that are susceptible to storm surge. During Hurricane Sandy, Ocean Township was impacted by a significant storm surge. Many structures need to be elevated or demolished.
- There are some pumping stations in low-lying areas that need water tight doors to minimize flood impacts in the future.
- Flooding is an issue from Deal Lake, Poplar Brook, Harvey Brook, and Whalepond Brook. Local officials feel that detention should be explored for Whalepond Brook, in particular, to detain peak flood flows.
- Culverts under certain roadways in the Township are undersized; this results in backwater flooding on the upstream side of the culverts. This is a particular issue for Poplar Brook.
- Power outages have been frequent occurrences in the Township during severe storms. This impacts telecommunications and electrical systems at public buildings and critical facilities, and disrupts local government operations (including the Emergency - Ocean Township's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of 5% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also lower than the County's overall projected increase of 10.6% for that same time period. There is a substantial amount of commercial redevelopment along Hwy 35. Residential development tends to be fill and age-restricted adult communities. Variances are required for any new construction in flood hazard areas.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Poplar Brook floods # \_\_\_\_\_ homes along Brookside Ave and the road itself (an evacuation route), located within the 10 year flood zone and are susceptible to flooding. The flooding is due either to a storm event, high tide or combination of both. Since the existing outfall of the brook is only into the Atlantic Ocean, as high tides comes in, the water elevation continuously backs up into the system seeking it's own level, thereby flooding streets, low lying areas, into the living areas of several homes on Brookside Ave. The floodprone homes include 1 on the Severe Repetitive List (SRL), 3 on the Repetitive Flood Claims (RFC) list, and most of the others have submitted at least two insurance claims to their insurance companies, NFIP or FEMA. We would also be protecting the

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Due to its location on a peninsula Oceanport is highly susceptible to storm surge.
- Oceanport was severely impacted during Hurricanes Irene and Sandy.
- Most of Oceanport lies within mapped storm surge hazard areas. Flooding is primarily from Parkers Creek, Oceanport Creek, Blackberry Creek, and Branchport Creek (Shrewsbury River tributaries). Borough Hall is in an area susceptible to storm surge and was wiped out during Hurricane Sandy. Meetings of the Mayor and Council and Planning Board are still being held at the Maple Place School.
- Most of the Borough was flooded during Hurricane Sandy. More than half (1,200) of the borough's 2,100 households had some sort of damage; about 800 of those homes were damaged due to flooding. The borough itself submitted more than 400 claims to FEMA for damages, while individuals submitted more than 700 flood insurance claims. As of fall 2013, 50 demolitions had been completed and applications for more were pending. About 200 homeowners were substantially damaged and were looking to elevate DPW is an area susceptible to storm surge.
- Debris/sediment accumulation on Turtle Mill Brook is believed to be impeding flood flows and causing flooding of roadways and adjacent properties.
- Stormwater infrastructure (particularly in the Port-au-Pecksection) does not allow for efficient and effective drainage and flooding occurs.
- Roadway flooding occurs in certain areas due to issues with grading, roadway elevations themselves, and lack of backflow prevention.
- Storm surge debris has accumulated in ditches and the stormwater drainage system, impeding todays flood flows and flooding roadways.
- Roadway drainage shortfalls create situations that cause flooding.
- Oceanport Township's population is projected to grow fairly significantly through 2040. By the year 2040, it is projected to have a population increase of 35.9% over 2010 values - one of the highest rates in the county. This is higher than the average rate of the Coastal Region as a whole (29%) and also much than the County's overall projected increase of 10.6% for that same time period. Oceanport is seeing new development in the form of larger subdivisions as well as age restricted housing developments and complexes, with accompanying commercial development in the vicinity. Redevelopment of Fort Monmouth will be occurring. Waterfront areas are seen as prime locations by developers. The Borough looks to redevelop the municipal center marina, retail, and mixed income housing. New developments and substantial improvements are regulated so that the first floors must be to the BFE+2.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Locations used in major storm events for police operations, public works and/or sheltering do not have emergency generators for power.

Landslide	0	#N/A	Catastrophic	4	Negligible	1	Less than 6 hours	4	Less than 6 hours	1	#N/A	#N/A
<b>Other Natural Hazards</b>												
Wildfire	Unlikely	1	Minor	1	Small	2	Less than 6 hours	4	Less than one week	3	1.7	L

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, and wave action.

**Key Risk Findings:**

- Local ordinances sometimes preclude structure elevations due to height restrictions; a system should be put in place to accommodate variances for flood mitigation purposes.
- The Borough lacks a means of notifying residents of impending severe weather in cases where methods of Media broadcasting or other conventional means of warning have been compromised.
- Flooding and erosion are a significant issue in the Marine Park area. Damages occur to the park and park accessways. The existing bulkhead has been unable to prevent storm surges from damaging infrastructure, but did prevent erosion to the park.
- The existing water and sewer system does not allow for efficient and effective drainage and flooding occurs. Storm drains become overwhelmed and flood the streets. When the system is impaired, water can enter structures at the grade level. The existing water and sewer system is antiquated, in need of upgrades, and has areas where materials are decomposing. Failure of sewer system would cause biological and environmental harm to the residents and property of the Borough of Red Bank.
- A study has been done on the Borough's critical facilities in hazard areas to determine existing level of protection, and various mitigation recommendations have been made. Plans for implementing these recommendations should be part of the mitigation strategy.
- Several commercial properties, Primary School, residential units including a 90 bed convalescent center, and a Hotel all within the flood zone.
- During Hurricane Sandy, storm surge flooding was observed along the immediate shoreline of the Navesink and Swimming Rivers. The marina area was heavily impacted. The Red Bank Primary School located on the banks of the Swimming River, was flooded. The flooring was damaged significantly. Students of the primary school were transferred to the middle school, where split sessions were held for middle and primary school students while repairs were being made. A
- The Chapin Hill nursing home and rehabilitation facility is located within the Swimming River floodplain. During Hurricane Sandy, storm surge entered the first floor of the building. The facility was also impacted during Hurricane Irene, when 80 residents were moved to the Salvation Army at Red Bank for temporary shelter.
- Red Bank's population is projected to increase by 10.1% by 2040, which is similar to the county-wide trend, but lower than the overall trend for Coastal areas of a 29% increase over the same time period.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

- Roosevelt's floodplain (Rocky Brook, and Assunpink Creek headwaters) is limited, and does not impact residential areas. Ordinances preclude any future development in areas susceptible to flooding.
- Wildfires are of particular concern to Roosevelt because of wildfire risk areas both within and surrounding the Borough, given the relatively few number of roads in and out of town for egress.
- Mitigation of the wind/snow component of nor'easters through forestry management practices could also provide some degree of wildfire mitigation (and conversely), depending on the nature and the type of the activity.
- Roosevelt's population is projected to remain essentially the same through 2040. By the year 2040, it is projected to have a population increase of just 0.9% over 2010 values. This is somewhat lower than the average rate of the Panhandle Region as a whole (1.6%) and much lower than County's overall projected increase of 10.6% for that same time period. Development restrictions in the Borough preclude most new development, and local opposition often limits other development. Open space preservation effort are predominant, and generally, there is one new house built every few years. There is one small industrial and commercial area with no development planned for either. Mapped flood hazard areas are constrained to Borough-owned lands that will not be developed.
- Climate change will contribute to more frequent and severe weather events.
- Property owners dispose of brush infrequently and tend to leave it in the woods adjoining their properties.
- Brush and dead trees accumulate in woodlands owned by the borough, the Monmouth County Park Service, NJDEP and private landowners.

Landslide	Possible	2	Catastrophic	4	Negligible	1	Less than 6 hours	4	Less than 6 hours	1	2.5	M
<b>Other Natural Hazards</b>												
Wildfire	Possible	2	Critical	3	Moderate	3	Less than 6 hours	4	Less than one week	3	2.8	M

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Social impacts of flooding could be reduced (lowered probability of deaths/injuries) with early flood warning for those living and working in the Shrewsbury and Navesink River floodplains.
- Debris/sediment in local streams and ponds impede efficient drainage of flood prone areas.
- Roughly half of Rumson lies within mapped storm surge hazard areas. Hurricane Sandy's storm surge on the Shrewsbury and Navesink Rivers inundated a large area of Rumson, not previously recognized by local residents as particularly susceptible to surge. By far, the larger areas inundated were on the south side of the Borough along the Shrewsbury.
- Rumson Fair Haven Regional High School and Rumson Middle School are designated shelters; however, backup power is needed for safe sheltering.
- Downed trees due to high winds during severe storms (including, but not limited to, Hurricanes Sandy and Irene) have blocked roadways and downed power lines.
- A high proportion of land in the Borough of Rumson is identified as a moderate wildfire risk area, of particular concern from an egress perspective given Rumson's location on a peninsula.
- Mitigation of the wind component of nor'easters, hurricanes, and tropical storms through forestry management practices could also provide some degree of wildfire mitigation (and conversely), depending on the nature and the type of the activity.

- Rumson's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of just 6.9% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and somewhat lower than County's overall projected increase of 10.6% for that same time period. The borough is almost fully built-out. New development tends to be demolition of single structures and replacement with two structures on the same lot.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Since Hurricane Sandy the Borough has generally become more proactive than reactive in its approach to disaster resistance and sustainability.
- Virtually all of Sea Bright lies within mapped storm surge hazard areas. Homes are repetitively damaged due to flooding and storm surge, as is the Downtown District. The Borough of Sea Bright was almost entirely inundated during Hurricane Sandy.
- A large number of homes were flooded during Hurricane Sandy where their first floors were below the base flood elevation. Some also incurred wave damage. Those that were substantially damaged or destroyed must be rebuilt to code, effectively elevating them, but those that were not substantially damaged that did not face the elevation requirement as a condition of rebuilding would be good candidates for an elevation project if they have not already opted to do so.
- Sea Bright is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 21 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanaasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +9.3ft NAAVD to prevent frequent overtopping of the berm from wave runoff.
- Route 36 is an evacuation route and must be protected from flooding surge and erosion. It is of particular importance in Sea Bright because of its location on the very narrow spit of land between the Shrewsbury River and the Atlantic Ocean. The Sea Wall extends along most of the eastern portion of the community, there are missing segments and discontinuity along the length of the wall. As a result, areas of the Borough are vulnerable and exposed to water damage and flooding during storm surges.
- Gaps in the bulkheads (physical gaps, differences in the level of protection, and sections of deteriorated condition) along the Shrewsbury River result in an inconsistent line of protection and subsequent flooding. The bulkhead along the Shrewsbury River is privately owned and varies in height. The subject properties regularly become inundated with water due to flooding, which creates public health hazards, causes loss of use and income, property damage, emergency response and unnecessary burden.
- The affects of high winds and flooding have taken their toll on the above-ground power utilities, and outages during severe storms are fairly common. Power outages affect residents, businesses, and the ability of the Borough to provide critical services and perform emergency functions. Above ground transmission systems undergo repeated cycles of damage, repair and reconstruction. Due to the constant exposure to storms, Sea Bright has had extensive damage to the utility service by falling poles and the loss of power from downed transmission lines. Underground utility service can be more reliable than overhead service. The transmission poles throughout the Borough are part of a larger grid system serving much of coastal Monmouth County and Sandy Hook. By increasing resiliency, there will be fewer outages.

## SEA BRIGHT, CONTINUED

- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- Adhering to the minimum required standards of the existing building code provides a base degree of protection from wind damage. However, many buildings in Sea Bright were constructed before today's codes and standards were put in place and, therefore, they lack this level of protection. Furthermore, there are ways to exceed minimum requirements for improved performance during severe storms.
- Sea Bright is located on the barrier; its beach is eroding. Hurricane Sandy destroyed the dune system in Sea Bright. The Borough has been rebuilding the berms to add protection for the beach, local residences and businesses.
- Sea Bright's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of 7.4% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and somewhat lower than County's overall projected increase of 10.6% for that same time period. Sea Bright is near fully developed. Waterfront development and infill development is common; as are residential structure elevations (particularly in the wake of Hurricane Sandy) to the BFE+2.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

<b>Other Natural Hazards</b>												
Wildfire	Unlikely	1	Minor	1	Small	2	Less than 6 hours	4	Less than one week	3	1.7	L

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Sea Girt is a 1.1 square mile almost fully built-out coastal community. Virtually all of Sea Girt is within mapped surge haard areas. During Hurricane Sandy the most extensive flooding was in the area north of Stockton Lake, in the area generally between Crescent Park and the National Guard Training Center. Wreck Pond did overflow its banks, but floodwaters remained generally in the first block from the lake. Flooding of the JCP&L Stockton Substation and associated power outages was a major stumbling block for the Borough.
- Flooding is an issue in some areas because of a stormwater management system that cannot accommodate today's periods of high rainfall/runoff during severe storms; tidal backflow is also an issue.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.
- Protection and management of low lying areas and houses susceptible to flooding and damage from tidal waters is imperative to the Borough's sustainability and disaster resistance.
- The affects of high winds and flooding have taken their toll on power utilities, and outages during severe storms are not uncommon. Power outages affect residents, businesses, and the Borough's CIS, EOC, and local shelters - hampering the ability of the Borough to provide critical services and perform emergency functions particularly when telecommunications systems are impacted.
- Ordinances regarding allowable height of homes sometimes preclude the ability of a homeowner in the floodplain to elevate their structure.
- Not all stormwater retention projects identified by the Wreck Pond Regional Stormwater Management Committee in the Subregion 12 watershed have been implemented.
- Accumulation of sediment and debris at Wreck Pond and Black Creek impede flood flows.
- While the Borough knows which emergency facilities are located in which hazard areas, it does not know the design level of protection for each; identifying gaps and mitigating will protect critical facilities and allow the Borough to provide critical functions.
- The beach and dune system provide shore protection and flood control and should be maintained/renourished.
- JCP&L's Stockton Substation is located on the shore of Stockton Lake, in the floodplain.
- Sea Girt is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 2.1 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +8.3ft NAAVD to prevent frequent overtopping of the berm from wave runoff.
- Sea Girt's coastline is subject to erosion and the ongoing renourishment of the USACOE project is of the utmost importance.

## SEA GIRT , CONTINUED

- Sea Girt's population is projected to remain essentially the same through 2040. By the year 2040, it is projected to have a population increase of just 0.4% over 2010 values. This is substantially lower than the average rate of the Coastal Region as a whole (29% and also much lower than County's overall projected increase of 10.6% for that same time period. Some residential infill development is ongoing and expected to continue.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- The Borough sustained almost 14 days with out power and getting messages to the Borough residents and persons of interest was crucial to the life and safety well being of our residents. We believe we have some of the necessary infrastructure such as antenna mounting and generator power to house such means of communication. We are currently working with the Borough Engineering staff on proper placement and locations of such. The Borough has and had no means of contacting residents as well as persons driving through the town during this Hurricane of any impending danger or hazardous situation.
- The Borough notes 189 homes in flood zones that are below the BFE.
- The emergency roadway north of the Pavilion is a low spot where flooding from large storms has occurred. Also the height of the pavilion and the ability of water to flow under that in large storms creates flooding and damage in the north end of town. This is all due to tidal surge. The beachfront pavilion also becomes damaged as well as the neighboring storage units for operation along the beachfront from surge.
- The Baltimore Blvd outflow pipe gets clogged with sand and debris due to its location and therefore backs up catch basin drainage for the middle easterly portion of town
- There are critical infrastructure buildings within the Borough that are not able to be used during a disaster or a loss of power. The Borough of Sea Girt would like to add a generator to its Department of Public Works buildings. These building are critical to the operation of our DPW. It houses the mechanic shop, fueling station for the natural gas vehicles, six garage bays for vehicles that are housed and charged inside the building. We had numerous needs over the course of the two week period we had no power within the Borough during Hurricane Sandy. Vehicles that needed mechanic work and or needed to enter and exit the garages with equipment were unable to do so or have work done to them. The loss of equipment use and or ability to operate out of the DPW yard was critical to the life and safety during the storm. Every vehicle was put into service and the DPW yard without power was a significant loss to our efforts to protect the citizens within the Borough. 2. The Borough of Sea Girt has an Emergency Operations Center within the Borough that houses the Emergency Management Department and its offices. During Hurricane Sandy – power was lost to this building and thus the effectiveness of the use of this building was compromised. The Borough wishes to install and have generator power added to this building. This building while in the beachfront area is almost two feet above the required flood elevation of 15 feet. The generator would be housed on the roof almost 15 feet above the base elevation of the building. This building is the base for a majority of Emergency Management Operations year round and especially during the highest times of population with in the Borough from April to October. This building also houses two repeaters and base station communication for the Emergency Management of town wide operations. Emergency Equipment, radios, lighting, vehicles and equipment specific to rescue during flooding is housed in this building. The addition of generator power to this building will improve the effectiveness of the Emergency Management Department within the Borough. The Borough would also house one of our requested emergency alert sirens that the Borough is looking to install. We believe this building is critical to the effect protection of life and safety during hazardous conditions that may exist within the Borough. of Sea Girt has an Emergency Operations Center within the Borough that houses the Emergency Management Department and its offices. During Hurricane Sandy – power was lost to this building and thus the effectiveness of the use of this building was compromised. The Borough wishes to install and have generator power added to this building. This building while in the beachfront area is almost two feet above the required flood elevation of 15 feet. **Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- Some flooding occurs in the Borough during severe storms and periods of high rainfall/runoff due to stormwater infrastructure insufficiencies; specific areas of concern include Haddon Avenue, Monroe Avenue, Trafalgar Place, and Newman Springs Road. It is noted that the Borough does not have jurisdiction over Newman Springs Road (it is a County road).
- Backflow prevention is lacking, and tidal waters can flow back into the storm sewer system.
- Debris and sediment accumulation in receiving waterways and creeks impedes flood flows.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation (Much of the Borough's southeastern portion lies within mapped storm surge hazard areas (Parkers Creek Branch, a tributary to the Shrewsbury River). During Hurricane Sandy, surge was generally in areas nearest to Parkers Creek Branch (much smaller area than what is potentially susceptible). New developments observed flood conditions along Campbell Court, Blades Run, and Sunnybank Drive.
- Shrewsbury Borough's population is projected to experience moderate growth through 2040. By the year 2040, it is projected to have a population increase of 11.8% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) but mirrors the County's overall projected increase of 10.6% for that same time period. Some residential infill and commercial redevelopment is expected, with commercial being along Route 35.

- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.
- Police department, dispatch center, evacuation shelter and OEM EOC are on limited back up power in the event of power outage
- The First Aid Squad from is located in an area that is prone to flooding. Although the building itself does not flood the access road floods frequently reducing accessibility to the building. The town is considering moving the squad to a more desirable location.

**Summary of PRI Results for Shrewsbury, Township of**

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

- Critical facilities, including the Township EOC and local shelters, experience telecommunications and electrical system failure during severe storms (due to wind related power failures, such as downed trees on power lines). This renders the systems inoperable and the Township is unable to provide critical services.
- Some flooding occurs in the Township during severe storms and periods of high rainfall/runoff due to drainage system insufficiencies; stormwater management is seen locally as a key aspect of mitigating typical effects of hurricanes, tropical storms, nor'easters
- Shrewsbury Township's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of just 4.5% over 2010 values. This is much lower than the average rate of the Central Region as a whole (31.1%) and also lower than the County's overall projected increase of 10.6% for that same time period. The Township is built-out and does not have capacity for growth.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- Inefficient flow of water into and out of Wreck Pond and Lake Como causes flooding in Spring Lake and our bordering municipalities; a multi-jurisdictional solution is required (involving not only affected municipalities, but those in the upper watershed contributing runoff to the Borough's receiving waterbodies).
- Accumulation of sediment and debris at Wreck Pond and Black Creek impedes the efficient flow and storage of stormwater, and contributes to flooding.
- Spring Lake is part of the USACE Sea Bright to Manasquan, New Jersey, Beach Erosion Control Project. The project covers the 21 miles of coastline from Sea Bright south to Manasquan (except for three miles of shoreline from Lake Takanasee in Long Branch south through Deal, Allenhurst, and Loch Arbour to the Deal Lake outfall). It involves a 100 foot wide beach berm at elevation +7.3 ft NAVD, with a width from the project baseline of 100ft. A two foot berm cap, 80ft wide from the baseline, was designed at elevation +9.3ft NAVD to prevent frequent overtopping of the berm from wave runoff.
- Spring Lake's coastline is subject to erosion and the ongoing renourishment of the USACE project is of the utmost importance.
- Spring Lake's population is projected to remain essentially the same through 2040. By the year 2040, it is projected to have a population increase of just 0.3% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also much lower than the County's overall projected increase of 10.6% for that same time period. Most new development in this one square mile community involves demo-rebuilds or renovations
- Virtually all of Spring Lake is within mapped storm surge hazard areas. During Hurricane Sandy, however, most flooding was observed in areas nearest to Wreck Pond and Lake Como.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- High winds downing trees on powerlines during severe storms interrupts power on an increasingly more frequent basis in the Borough.
- Existing development in floodprone areas and areas susceptible to storm surge has incurred first floor flooding, and damages to utility systems.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation
- While not on the immediate coast, much of Spring Lake Heights is in mapped surge hazard areas. However, during Hurricane Sandy, most flooding was observed within the first block of the Wreck Pond tributaries.
- Spring Lake Heights' population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of just 1.7% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) and also lower than the County's overall projected increase of 10.6% for that same time period.
- Spring Lake Heights is essentially built out; the majority of development is residential in nature and occurs as part of home additions and improvements.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, and surge.

**Key Risk Findings:**

- Development within the Pine Brook Watershed is exacerbating existing stormwater issues.
- Flows along the Pine Brook repeatedly undercut portions of Water Street, causing slumping of the street into Pine Brook. Similarly, along Jumping Brook.
- Downed trees and powerlines are historically an issue during extreme wind events including severe storms such as hurricanes and tropical storm, nor'easters, and winter storms.
- Areas of heavy sedimentation are noted along some watercourses (Whale Pond Brook; Jumping Brook)
- Flood-prone roadways/intersections under State jurisdiction, including: County Highway 13A, County Highway 16, and Hope Road.
- Flash flooding conditions in area streams during/after storms
- Power outages during storms create dangerous conditions at key intersections (Hope Rd & Sycamore Ave, Sycamore Ave & Shrewsbury Ave, Asbury Ave & Essex Rd, Asbury Ave & Shafto Rd)
- Sanitary sewer pump stations lose power during severe storms
- The NJFFS has mapped several areas of very high to extreme wildfire risk; some of these are close to key access roads and developed areas.
- Eight critical facilities are in mapped wildfire risk areas (4 child care facilities and 3 senior care facilities in low or moderate risk areas, and the Tinton Falls Senior Residence in an area of mapped high/extreme risk).
- A Public Works facility is located in an area susceptible to flooding.

Tinton Falls has a fairly steady flow of new development and its population is increasing, so promoting disaster resistant development will be key to achieving sustainability.

Tinton Falls' population is projected to grow fairly significantly through 2040. By the year 2040, it is projected to have a population increase of 35.4% over 2010 values. This is somewhat higher than the average rate of the Central Region as a whole (31.1%) and also much higher than the County's overall projected increase of 10.6% for that same time period. Housing developments, subdivisions, affordable housing, and adult communities are high-density. Fort Monmouth redevelopment will consist of various phases of high-tech research and development offices.

- Storm surge hazard areas in Tinton Falls are generally within undeveloped areas of the Swimming River floodplain. During Hurricane Sandy, floodwaters generally were constrained to these areas.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion, and wave action.

**Key Risk Findings:**

- A section of Florence Avenue is not at a sufficient elevation, and is subject to flooding. This road is important for maintaining egress and ingress in the municipality.
- The intersection of Spruce Street and Center Street is not at a sufficient elevation, and is subject to flooding. These two roadways are located in a residential community and provide access to the park and residential structures.
- The Harris Garden Fire Company Building is located in a flood-prone area and the Borough is unable to provide firefighting services during flooding events.
- The existing shore protection features (bulkhead, beach area) are the borough's first line of defense against wave action, storm surge, and flooding during storm events. Gaps in the line of protection, variations in the design level, or unmitigated circumstance: that compromise the function of the overall system increase the vulnerability of people and property in the protected area.
- The existing storm drainage system causes flooding when water cannot efficiently pass into storm drains and system inlets.
- Debris and sediment accumulation in receiving waterways and creeks impedes flood flows.
- Many roads in the Borough of Union Beach are flood-prone. Ingress/egress becomes an issue. In addition, drivers who are unfamiliar with the area or who are caught unaware of flood conditions risk damaging personal property and life safety.
- The Army Corps of Engineers Shore Protection and Flood Control Project for Union Beach should be implemented and maintained to provide shore protection and flood control in the Borough.
- Union Beach's population is projected to remain virtually static through 2040. By the year 2040, it is projected to have a population increase of just 2.6% over 2010 values. This is lower than the average rate of the Bayshore Region as a whole (6.7%) and also lower than the County's overall projected increase of 10.6% for that same time period. Union Beach is near fully built out. Most new development is rehabilitation or infill, except along the shoreline, where the area north of Brook Avenue extending west to the intersection of Front Street and Union Avenue has been rezoned for medium density townhouses.
- The entirety of Union Beach is within mapped surge hazard areas, and nearly all of the Borough was inundated during Hurricane Sandy. The Borough incurred millions of dollars in losses, and roughly 250 homes were destroyed. The Borough's only school (Memorial School), which was being used as a shelter, had to be evacuated when it began taking on water. Ultimately, there was a foot and a half of water in the school was also flooded; temporary classrooms were needed for more than 700 students.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind.

**Key Risk Findings:**

- Flooding has significant impacts in Upper Freehold, with repetitive loss areas in need of mitigation.
- High winds during severe storms causes trees and limbs to fall, damaging property, interrupting electrical service, and blocking roadways.
- Accumulation of sediment, debris and fallen trees impedes flood flows. Examples are at Bridges U-15 Breza Road and U-52 Ellisdale Road.
- Scour has become an issue during periods of significant rainfall and runoff at: Bridge U-34 Sharon Station Road, Bridge U-53 Provinceline Road, and Bridges U-47 & U-48 Wainsmill Road.
- Upper Freehold's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of 5.6% over 2010 values. This is higher than the average rate of the Panhandle Region as a whole (1.6%) but lower than the County's overall projected increase of 10.6% for that same time period. The Township's number one goal is farmland and open space preservation, though some residential subdivisions are planned. Limited commercial development occurs on a single structure type basis (i.e., small plazas with allowable retail uses such as convenience stores, offices, hair salons, nursery schools, etc). Stormwater and floodplain management ordinances are enforced.
- Climate change will contribute to more frequent and severe weather events.
- The general public's understanding of natural hazards and mitigation possibilities could be improved. The community's overall level disaster resistance would increase if a greater number of households undertook low-cost or no-cost, small-scale mitigation activities.

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge, coastal erosion.

**Key Risk Findings:**

- All previous projects either completed, or omitted from the next mitigation strategy.
- JCP&L's Glendola Substation was flooded during Hurricane Sandy, knocking out power to a large portion of the Township.
- Wall's population is projected to experience moderate growth through 2040. By the year 2040, it is projected to have a population increase of 17.5% over 2010 values. This is lower than the average rate of the Central Region as a whole (31.1%) but higher than the County's overall projected increase of 10.6% for that same time period. Development in single family subdivisions is typical, along with single demo rebuilds, and commercial development is steady with rehabilitation of existing office and retail spaces. No new high-density residential developments are planned. The majority of flood hazard areas are already zoned for open space, or single family residential development and no major waterfront developments are ongoing or proposed in flood hazard areas.
- Moderate areas of Wall Township lie within mapped storm surge hazard areas. During Hurricane Sandy, flooding was observed generally in the floodplains of the Shark River, Manasquan River, and Wreck Pond Brook.
- Wall has several areas of high or extreme wildfire risk, some of which could potentially threaten development.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

Summary of PRI Results for West Long Branch

Hazard	Category/Degree of Risk										Hazard Ranking	
	Probability	PROBABILITY INDEX VALUE	Impact	IMPACT INDEX VALUE	Spatial Extent	SPATIAL INDEX VALUE	Warning Time	WARNING INDEX VALUE	Duration	DURATION INDEX VALUE		PRI Score
<b>Atmospheric Hazards</b>												
Extreme Temperatures	Highly Likely	4	Minor	1	Large	4	More than 24 hours	1	Less than one week	3	2.7	M
Extreme Wind	Highly Likely	4	Limited	2	Large	4	More than 24 hours	1	Less than 24 hours	2	2.9	M
Hurricane & Tropical Storm	Likely	3	Limited	2	Large	4	More than 24 hours	1	Less than one week	3	2.7	M
Lightning	Highly Likely	4	Minor	1	Negligible	1	Less than 6 hours	4	Less than 6 hours	1	2.2	L

**Mitigation Strategy: Mitigate Highest Hazards**

Nor'easters, Hurricanes & Tropical Storms will be mitigated through addressing component hazards of flooding, wind, surge.

**Key Risk Findings:**

- Certain areas of flooding in West Long Branch Borough have been identified by the Borough as a result of drainage issues on a multi-jurisdictional level (West Long Branch, Long Branch, Monmouth County, and Monmouth University).
- Sedimentation and debris accumulation along Turtle Mill Brook impede stormwater and result in flooding.
- West Long Branch's population is projected to experience minimal growth through 2040. By the year 2040, it is projected to have a population increase of 6.4% over 2010 values. This is much lower than the average rate of the Coastal Region as a whole (29%) but higher than the County's overall projected increase of 10.6% for that same time period.
- West Long Branch is not on the immediate coast but is subject to storm surge flooding via Turtle Mill Brook, a tributary to the Shrewsbury River. While a large portion of the northern area of the Borough lies within mapped storm surge hazard areas, flooding during Hurricane Sandy remained largely constrained to the areas immediately adjacent to the Turtle Mill Brook. Some development was impacted. Joine Avenue was flooded in the vicinity of Victor and Oceanport Avenues.
- West Long Branch is essentially built-out, though some minor subdivisions are planned for the last remaining open space parcels.
- Sea level rise and climate change will contribute to more frequent and severe flooding and surge events over a larger area.
- Climate change will contribute to more frequent and severe weather events.

**APPENDIX 4.1 – LEGAL AND REGULATORY TOOL DESCRIPTIONS**

## APPENDIX 4.1 – LEGAL AND REGULATORY TOOL DESCRIPTIONS

Descriptions of Various Legal and Regulatory Capabilities Considered	
Capability	Description
Building Code	Building codes regulate construction standards and are developed for specific geographic areas of the country. They consider the type, frequency, and intensity of hazards present in the region. Structures built to applicable building codes are inherently resistant to many hazards such as strong winds, floods, and earthquakes, up to a certain level of severity. Due to the location specific nature of the building codes, these are very valuable tools for mitigation. In the State of New Jersey, the current building code in place is the International Building Code 2009 – New Jersey Edition. This code is applicable state-wide and local municipalities may not adopt more stringent or additional provisions at their discretion.
Zoning Ordinance	Zoning is a useful tool to consider when developing a mitigation strategy. It can be used to restrict new development, require low-density development, and designate specific uses (i.e., recreational) in the hazard prone areas. Private property rights must be considered, but enacting a zoning ordinance can reduce or potentially eliminate damages from future hazard events.
Subdivision Ordinance	Subdivision ordinances offer an opportunity to account for natural hazards prior to the development of land as they formulate regulations when the land is subdivided. Subdivision design that incorporates mitigation principles can reduce the exposure of future development to hazard events.
Special Purpose Ordinance	A special purpose ordinance is a form of zoning in which specific standards dependent upon the special purpose or use must be met. For example, many special purpose ordinances include basic development requirements such as setbacks and elevations. The special purpose ordinance is a useful mitigation technique particularly when implemented to reduce damages associated with flooding and coastal erosion. Special purpose ordinances identified by jurisdictions include stormwater management, erosion, floodplain, steep slope, setback ordinances and standards for roads, bridges and drainage structures.
Growth Management Ordinance	Growth management ordinances are enacted as a means to control the location, amount, and type of development in accordance with the larger planning goals of the jurisdiction. These ordinances often designate the areas in which certain types of development is limited and encourage the protection of open space for reason such as environmental protection and limitation of sprawl. The State Policies for Comprehensive Planning given in the New Jersey State Development and Redevelopment Plan encourages coordination of growth management plans and policies with hazard mitigation and emergency response planning.
Site Plan Review Requirements	Site plan review requirements are used to evaluate proposed development prior to construction. An illustration of the proposed work, including its location, exact dimensions, existing and proposed buildings, and many other elements are often included in the site plan review requirements. The site plan reviews offer an opportunity to incorporate mitigation principles, such as ensuring that the proposed development is not in an identified hazard area and that appropriate setbacks are included.
Comprehensive Plan <i>(sometimes called a “Master Plan”)</i>	A comprehensive plan is a document which illustrates the overall vision and goals of a community. It serves as a guide for the community’s future and often includes anticipated demographics, land use, transportation, and actions to achieve desired goals. Integrating mitigation concepts and policies into a comprehensive plan provides a means for implementing initiatives through legal frameworks and enhances the opportunity to reduce the risk posed by hazard events.
Capital Improvement Plan	Capital Improvement Plans schedule the capital spending and investments necessary for public improvements such as schools, roads, libraries, and fire services. These plans can serve as an important mechanism to manage development in identified hazard areas through limited public spending and can be used as a to develop a match for mitigation projects.
Economic Development Plan	Economic development plans offer a comprehensive overview of the local or regional economic state, establish policies to guide economic growth, and include strategies, projects, and initiatives to improve the economy in the future. Furthermore, economic development plans, similar to capital improvement plans, offer an opportunity to reduce development in hazard prone areas by encouraging economic growth in areas less susceptible to hazard events.
Emergency Response Plan	Emergency response plans provide an opportunity for local governments to anticipate an emergency and plan the response accordingly. In the event of an emergency, a previously established emergency response plan can reduce negative effects as the responsibilities and means by which resources are deployed has been previously determined.

## APPENDIX 4.1 – LEGAL AND REGULATORY TOOL DESCRIPTIONS

Post-Disaster Recovery Plan	A post-disaster recovery plan guides the physical, social, environmental, and economic recovery and reconstruction procedures after a disaster. Hazard mitigation principles are often incorporated into post-disaster recovery plans in order to reduce repetitive disaster losses.
Post-Disaster Recovery Ordinance	Post-disaster recovery ordinances are often produced in conjunction with post-disaster recovery plans. The ordinances are enacted after a hazard event to guide redevelopment in order to reduce future damages and mitigate repetitive loss.
Real Estate Disclosure Ordinance	A real estate disclosure ordinance requires individuals selling real estate to inform potential buyers of the hazards to which the property and/or structure is vulnerable prior to the sale. Such a requirement ensures that the new property owner is aware of the hazards to which the property is at risk of damage.

**APPENDIX 4.2 – STATE RESOURCES**

*State Resources*

Emergency management in the State of New Jersey is under the direct control of the **Governor**, who is conferred specific emergency powers under the New Jersey Constitution and statutes. The Superintendent of the State Police, a Division within the New Jersey Department of Law and Public Safety, is the **State Director of Emergency Management**.

The **Emergency Management Section** facilitates the flow of information to and from the various Bureaus supervised and serves as a conduit for communication with other Divisions. The Section is also responsible for planning, directing and coordinating emergency operations within the State which are beyond local control.

The **Recovery Bureau** supervises the Public Assistance, Mitigation and Finance Units.

- The Preparedness Unit disseminates preparedness information in advance of a disaster or potential disaster.
- The Mitigation Unit has the mission of enhancing State, county, and municipal risk reduction through the development and implementation of mitigation strategies. The Unit undertakes hazard mitigation planning and the review of mitigation projects in advance of potential disasters, and is also activated during and immediately after disasters to evaluate existing and proposed mitigation measures in the affected areas. They make applicants aware of FEMA mitigation grant programs, and conduct training sessions and workshops and participate in public meetings to facilitate grant processes.
- The Finance Unit supports the fiscal functions of both the Public Assistance and Mitigation Units. It ensures timely reimbursements and fiduciary responsibility.

The State has an **Emergency Operations Center** which is activated and staffed whenever a disaster occurs, or is predicted to occur. The State’s Emergency Operations Plan addresses the State’s response to any disaster or emergency and provides the basis for coordinated emergency operations involving disaster planning, response, recovery and mitigation.

The NJOEM office has evolved from a small agency with limited planning, training, and response capabilities to its present status as an integral part of State government. The State Hazard Mitigation Officer is the representative of State government acting as the primary point of contact with FEMA, other federal agencies, and county and local units of government in the planning and implementation of pre- and post-disaster mitigation programs and activities required under the Stafford Act. The New Jersey State Hazard Mitigation Officer is Acting Sergeant First Class Michael Gallagher of NJOEM.

NJOEM has prioritized support for the Mitigation Unit. A Mitigation Unit manager, Civil Engineer and Regional Manager were hired to manage the increased workload and responsibilities of the NJOEM Mitigation Unit. Additional planning assets are also scheduled to be hired in the very near future. The projected additions to the Mitigation Unit will bring a total workforce to 15 staff members. The Mitigation Unit also has seven to nine Contract staff members on staff to assist with DR4086 including specialists in EHP, BCA, and Planning.

New Jersey has several funding sources for conducting hazard mitigation projects. For example, grants for flood mitigation projects may be obtained through the New Jersey Office of Emergency Management for planning and projects.

Capital needs of the state are primarily funded through three methods, which may be used singularly or in combination. They are:

- Pay-as-you-go capital outlays used primarily for renovations and preservation of state properties, highway, and mass transit improvements and environmental projects.
- General obligation bond funds, used to finance more expensive capital construction projects such as new facilities and must yield substantial benefits for the present and future generations (these funds must be authorized by the state’s voters)
- Lease or lease-purchase is an alternate method of financing capital construction by allowing the state to occupy a facility and, over a defined period of time, secure ownership.

**Table 4.2-1** (as provided in the 2014 New Jersey State Hazard Mitigation Plan) summarizes New Jersey’s pre- and post-disaster hazard management policies, programs, and capabilities. **Table 4.2-2** (also as provided in the 2014 New Jersey State Hazard Mitigation Plan) summarizes Funding Sources Available for Mitigation Activities

Table 4.2-1  
Summary of Pre- and Post-Disaster Hazard Management Policies, Programs, and Capabilities

Agency	Hazard	Program	Capability		Effect on Loss Reduction			Provides Funding for Mitigation	Description of Policies, Programs, Funding
			Pre-Disaster	Post-Disaster	Support	Facilitate			
New Jersey Department of Community Affairs	All		√	√	√	√	√	DCA provides administrative guidance, financial support, and technical assistance to local governments, community development organizations, businesses, and individuals to improve the quality of life. DCA offers a wide range of programs and services that respond to issues of public concern including fire and building safety, housing production, community planning and development, and local government management and finance. DCA's programs and services are provided through, among others, the following Divisions: • Division of Codes and Standards • Division of Community Resources • Division of Fire Safety • Division of Local Government Services • Office for Planning Advocacy	
New Jersey Department of Education (DOE)	All		√	√	√	√	√	New Jersey DOE has oversight and review authority over all public schools in New Jersey. The DOE does not own any property or facilities. All public schools are owned by their respective school districts.	
New Jersey Department of Environmental Protection (NJDEP)	All		√	√	√	√	√	NJDEP coordinates with FEMA, USEPA, NJOEM, NJDSS, and the New Jersey Department of Military and Veterans Affairs, and the NJSP to participate in state, county, and local planning initiatives. NJDEP participates, as a member, in the Regional Catastrophic Planning Team.	
Department of Environmental Protection (NJDEP)	All	Water Pollution Management Element (WPME)	√	√	√	√	√	WPME is responsible for protecting New Jersey's ground and surface waters from pollution caused by improperly treated wastewater and its residuals primarily through the implementation of the New Jersey Pollutant Discharge Elimination System (NJPDES) permit program. For funding, see New Jersey Environmental Infrastructure Financing Program.	
New Jersey Department of Environmental Protection	All	Division of Water Supply and Geoscience (DW&GS)	√	√	√	√	√	DW&GS works to ensure that adequate, reliable, and safe water supply is available for the future. This goal is accomplished through the regulation of ground and surface water diversions, permitting of wells, permitting of drinking water infrastructure, monitoring of drinking water quality, and technical support for water systems to achieve compliance with all federal and State standards. In addition, Water Supply staff act in a support role during an emergency situation to provide technical assistance, as needed to re-establish	

**APPENDIX 4.2 – STATE RESOURCES**

New Jersey Department of Environmental Protection	All									<p>safe and adequate public water supplies. Additionally, DW&amp;GS provides operator licensing and training support as well as financial assistance through the DW State Revolving Fund program. For further funding information, see New Jersey Environmental Infrastructure Financing Program.</p> <p>NJEIFP is a revolving loan program for the construction of drinking water facilities, wastewater treatment facilities, sludge management systems, combined sewer overflow abatement, stormwater, and other non-point source management projects. The program also offers funding to publicly and privately-owned drinking water systems for the construction or upgrade of drinking water facilities, transmission and distribution systems, storage facilities, and source development. NJEIFP also offers a disaster relief fund that will be able to provide short-term or bridge loans to entities that are in need of an upfront cash flow.</p>
New Jersey Department of Environmental Protection	Flood, Severe Storm, Nor'easter, Hurricane/Tropical Storm									<p>Flood, Severe Storm, Nor'easter, Hurricane/Tropical Storm</p>
New Jersey Department of Environmental Protection	Flood, Severe Storm, Nor'easter, Hurricane/Tropical Storm									<p>The Task Force reviewed and provided comments on the new Flood Control Act regulations and supports pre- and post-hazard mitigation. The Task Force is as an advisory body for flooding issues.</p>
New Jersey Department of Environmental Protection	Flood, Severe Storm, Nor'easter, Hurricane/Tropical Storm									<p>The Bureau leads the State's efforts as the State NFIP Coordinator and Community Rating System (CRS) support. In addition, the Bureau's responsibilities include the funding of construction and operation of federal/State/local flood control mitigation projects throughout the State, including the 24-hour operation of the Pompton Lakes Dam Flood Gates. The Bureau has</p>

**APPENDIX 4.2 – STATE RESOURCES**

New Jersey Department of Environmental Protection	Flood, Severe Storm, Nor'easter, Hurricane/Tropical Storm	Open Space and Land Acquisition Programs	✓	✓	✓	✓	✓	✓	also taken a role on the development and adoption of New Jersey Flood Hazard Area mapping, as well as an active partnership with FEMA on their FEMA Map Modernization Program efforts. The Bureau also provides Community Assistance Program/State Support Services Element funding to meet negotiated objectives for reducing flood hazards in NFIP communities. The program requires that participating communities identify, prevent, and resolve floodplain management issues before the issues require compliance action by FEMA.
New Jersey Department of Environmental Protection	Flood, Severe Storm, Nor'easter, Hurricane/Tropical Storm	Passaic River Basin Flood Advisory Commission	✓	✓	✓	✓	✓	✓	Green Acres/Blue Acres Program - Green Acres and Blue Acres Program acquisition funds are used for the acquisition of repetitive loss and severe repetitive loss structures. Created by Executive Order 23 on April 23, 2010, the Advisory Commission's charge is to provide recommendations to the Governor including (but not limited to): expanding and expediting Passaic River floodway property buyouts, prioritizing land acquisition and acquiring natural flood storage areas, operating the Pompton Lake Dam floodgates, clearing river of debris, evaluation of regulatory programs, enhancing public involvement, information and outreach for flood response, and identifying methods to phase out or prevent future development in flood-prone hazard areas.
New Jersey Department of Environmental Protection	Coastal Erosion, Hurricane/Tropical Storm, Severe Storm, Nor'easter	Bureau of Coastal Engineering	✓	✓	✓	✓	✓	✓	The Bureau maintains a close relationship with the U.S. Army Corps of Engineers regarding all phases of coast protection. The State has continued funding the non-lapsing Shore Protection Fund for shore protection projects associated with the protection, stabilization, restoration or maintenance of the shore including monitoring studies and land acquisition. Through continued State funding for federal flood control projects through annual State appropriations under the HR-6 Flood Control project budget the Bureau maintains an active series of coastal flood and shore protection projects. The Bureau proactive responsibilities include beach nourishment, construction of shore protection structures, coastal dredging and aids to navigation. The Bureau has reactive responsibilities resulting from coastal storms. Many of the coastal engineering projects involve coordination with the U.S. Army Corps of Engineers in both the Philadelphia and the New York Districts.
Department of Environmental Protection	Geologic Hazards, Earthquake, Drought	New Jersey Geological and Water	✓	✓	✓	✓	✓	✓	Evaluates geologic, hydrogeological, and water quality data to manage and protect water resources, identify natural hazards and contaminants, and provide mineral

**APPENDIX 4.2 – STATE RESOURCES**

										resources including offshore sands for beach nourishment. Information provided by the survey includes GIS data and maps of geology, topography, groundwater, and aquifer recharge. In addition the data track wellhead protection areas, aquifer thicknesses, properties and depths, groundwater quality, drought, geologic resources, and hazards (such as earthquakes, abandoned mines, karst-influenced sinkholes, and landslides).
New Jersey Department of Environmental Protection	Flood, Severe Storm, Nor'easter, Hurricane/Tropical Storm	Division of Land Use Regulation (DLUR)	✓	✓	✓	✓	✓	✓	✓	DLUR has developed rules and regulations to ensure a safer community by reducing flood losses and insurance claims in vulnerable coastal areas. The Division coordinates with the Bureau of Dam Safety and Flood Control and NFIP-participating communities on adopting and maintaining their Flood Damage Prevention Ordinance. The Division enforces compliance with State land use regulations through notices, administrative actions, and penalties.
New Jersey Department of Environmental Protection	Fishing Failure	Division of Fish and Wildlife Service	✓	✓	✓	✓	✓	✓	✓	NJDEP coordinates with the U.S. Department of Commerce, NOAA/National Marine Fisheries Service (NMFS) and the U.S. Department of the Interior, Fish and Wildlife Service in fishery mitigation programs. The Governor may apply to the NMFS for financial assistance to address fishery failures.
New Jersey Department of Environmental Protection	Wildfire	Division of Parks and Forests / Forest Fire Service	✓	✓	✓	✓	✓	✓	✓	The Fire Service Section provides a full-time and a part-time staff of wildland firefighters. Staff provides continuing mechanical thinning and prescribed fire used to reduce hazardous wildland fuel accumulations Statewide, particularly in high-risk areas. The Forest Fire Service encourages community acceptance and inclusion of Firewise concepts in municipal and regional planning; develops and implements effective silviculture strategies that improve the health of forests and reduce the amount of fuels available for wildland fires from dead and dying trees. The Fire Service also strives to educate the public through NJOEM and the New Jersey Forest Fire Service outreach programs and hazard mitigation workshops.
New Jersey Department of Transportation (NJDOT)	All	511 Traffic Monitoring	✓	✓	✓	✓	✓	✓	✓	The traffic monitoring system, 511NJ, is a free service for the public that supplies traffic information about the New Jersey Interstates, State Highways, New Jersey Turnpike, Garden State Parkway, Atlantic City Expressway, and all bridge and tunnel crossings to motorists. The system combines traffic data into up to date condition reports that are always available and accessible via text, voice, or internet service to commuters.
New Jersey Department of	All	Geographic Information	✓	✓	✓	✓	✓	✓	✓	The department uses GIS to create maps that are used in several areas including planning and highway

**APPENDIX 4.2 – STATE RESOURCES**

Transportation		Systems (GIS)								construction. The maps that are created using this information aid other agencies, including law enforcement, in finding solutions to reduce traffic incidents. The GIS data can also be used to identify geographical changes after a natural disaster, so that any anomalies or problems can be addressed.
New Jersey Department of Transportation	All	Capital Program	✓	✓	✓	✓	✓	✓	✓	NJDOT uses GIS to create maps that are used in several areas including planning and highway construction. The maps that are created using this information aid other agencies, including law enforcement, in finding solutions to reduce traffic incidents. The GIS data can also be used to identify geographical changes after a natural disaster, so that any anomalies or problems can be addressed.
New Jersey Department of Transportation	All	Reverse Lane Strategies (or contraflow operations)	✓	✓	✓	✓	✓	✓	✓	NJDOT has three contraflow plans in place. The New Jersey Turnpike Authority and the South Jersey Transportation Authority also have one plan each (Garden State Parkway and Atlantic City Expressway). When activated, for a temporary period of time, NJDOT and its partners expand the lanes available for all travel in an outbound direction (away from the anticipated area of danger) and facilitate its usage for outbound vehicular travel.
New Jersey Department of Transportation	All	County Diversionary Route Plans	✓	✓	✓	✓	✓	✓	✓	Diversion plans are a compilation of predetermined diversion routes developed to improve coordination between State and local agencies when incidents occur. These Diversion Plans offer the Incident Commanders viable alternate routes to utilize during incidents.
New Jersey Department of Transportation	All	Local Aid and Economic Development	✓	✓	✓	✓	✓	✓	✓	NJDOT is committed to advancing transportation projects that enhance safety, renew aging infrastructure, and support new transportation opportunities at the county and municipal level. The Transportation Trust Fund and the Safe, Accountable, Flexible, Efficient Transportation Equity Act (SAFE-TEA) legislation provide the opportunity for funding assistance to local governments for road, bridge, and other transportation projects. NJDOT has established a number of local aid programs that provide financial support to counties and municipalities for capital improvements to transportation infrastructure.
New Jersey Department of Transportation	All	Office of Maritime Resources - Dredged Material Management	✓	✓	✓	✓	✓	✓	✓	NJDOT provides interagency support, program planning, and policy recommendations on maritime issues to the Governor. NJDOT serves as the primary advisory body for the support of New Jersey's \$50 billion maritime industry, which includes ports and terminals, cargo movement, boat manufacturing and sales, ferry operations, marine trades, recreational and commercial boating and maritime environmental

**APPENDIX 4.2 – STATE RESOURCES**

										resources. Management of dredging activities in New Jersey is generally divided into three main geographic areas – New Jersey/New York Harbor, Delaware River/Delaware River Ports and the State’s Navigation Channels. This program also promotes coordination and cooperation among federal, state, regional, and non-governmental agencies.
New Jersey Department of Transportation	Hazardous Substance Release									NJDOT, through the Division of Multimodal Services, is responsible for the oversight and / or support of several modes of transportation including general aviation, maritime, light rail, and freight rail; making it a multi-modal focused organization.
New Jersey Department of Transportation	All									The long-range planning process identifies goals, policies, strategies, and actions to improve the movement of people and freight and support economic growth during these difficult times. There are three MPOs in New Jersey composed of locally elected officials and representatives from each geographic urban area. Each of them is a forum for continuing, coordinated transportation planning with its portion of federal funds in the TIP. NJDOT is a voting member of each of the three regional MPOs – the North Jersey Transportation Planning Authority, the South Jersey Transportation Planning Organization, and the Delaware Valley Regional Planning Commission.
New Jersey Department of Transportation	All									The Division of Right of Way and Access Management is not specifically tasked with hazard mitigation activities. However, the eminent domain/property acquisition process and the sale of surplus government property should be of interest to post-disaster impacted communities seeking redistribution of land assets for transportation infrastructure protection.
New Jersey Department of Transportation	Severe Winter Weather, Nor’easter									NJDOT works to make winter travel as safe as possible. NJDOT has 13,295 lane miles of interstate, U.S., and State routes under its jurisdiction that it strives to keep open and passable at all time during winter weather. The goal during a winter storm is to maintain the roads for safe travel, at safe speeds, by using anti-icing materials, and, when appropriate, removal of snow with plows.
New Jersey Department of the Treasury	All									The ERU is the State Treasurer’s representative and coordinating agency for all of the Department of Treasury’s roles and responsibilities in and to Emergency Management. The ERU acts as the lead for the Department of the Treasury and deployment coordinator for the Department in Planning, Mitigation, Response, and Recovery. The Division Coordinates and delegates mitigation and corrective action policies, programs and projects within the Division of

**APPENDIX 4.2 – STATE RESOURCES**

											Administration and to other Divisions of the Department.
New Jersey Department of State, Office for Planning Advocacy	Natural hazards		✓	✓	✓	✓	✓	✓	✓	✓	Supports and coordinates planning throughout New Jersey to protect the environment; mitigate development hazards; and guide future growth into compact, mixed-use development and redevelopment projects while fostering a robust long-term economy. The Office implements the goals of the State Development and Redevelopment Plan to achieve comprehensive, long-term planning; and integrates that planning with programmatic and regulatory land-use decisions at all levels of government and the private sector.
New Jersey Economic Development Authority	All	✓	✓	✓	✓	✓	✓	✓	✓	✓	The NJEDA supports business growth in New Jersey and has been active in post-Superstorm Sandy recovery and rebuilding efforts. The NJEDA provides businesses with low-interest financing.
New Jersey Department of Law & Public Safety, Office of Emergency Management	All	✓	✓	✓	✓	✓	✓	✓	✓	✓	Through ESF 14, Long-Term Recovery Planning, NJOEM will work with the Office of Homeland Security and Preparedness to have a plan for long-term planning and recovery prior to a disaster or emergency. One of the areas of planning includes mitigation. This coordination will allow for another Statewide plan to incorporate mitigation principles and planning.
New Jersey Department of Law & Public Safety, Office of Emergency Management	All	✓	✓	✓	✓	✓	✓	✓	✓	✓	The Mitigation Unit, within the Emergency Management Section, has the mission of enhancing State, county, and municipal risk reduction through the development and implementation of mitigation strategies. Hazard mitigation, by definition, is any sustained action that prevents or reduces the loss of property or human life from recurring hazards. The Mitigation Unit accomplishes this task by implementing and administering several grant-based programs in conjunction with FEMA.
New Jersey Department of Law & Public Safety, Office of Emergency Management	All	✓	✓	✓	✓	✓	✓	✓	✓	✓	The Preparedness Unit is responsible for disseminating preparedness information in advance of a disaster or potential disaster.
New Jersey Department of Law & Public Safety, Office of Emergency Management	All	✓	✓	✓	✓	✓	✓	✓	✓	✓	The Public Assistance Unit accepts and reviews applications for funds for emergency work submitted by local individuals, households and businesses as well as from local governments during and immediately after a disaster.
New Jersey Office of	All	✓	✓	✓	✓	✓	✓	✓	✓	✓	In March 2006, Executive Order No. 5 created OHSP as a cabinet-level agency within state government. The

**APPENDIX 4.2 – STATE RESOURCES**

Homeland Security and Preparedness (OHSP)									executive order defined the office’s mission as the agency responsible “to administer, coordinate, lead, and supervise New Jersey’s counterterrorism and preparedness efforts.” Further, the executive order charged OHSP with coordinating “the emergency response efforts across all levels of government, law enforcement, emergency management, nonprofit organizations, other jurisdictions, and the private sector, to protect the people of New Jersey. OHSP is the lead agency in preparing the State’s Threat and Hazard Identification and Risk Assessment (THIRA).
New Jersey Department of Agriculture (NJDA)	Animal Disease and Crop Failure		√	√	√	√	√	√	NJDA coordinates with the USDA, the National Association of State Departments of Agriculture, the Northeastern Association of State Departments of Agriculture, and the Communications Officers of State Department of Agriculture to participate in national and regional planning and crisis communications initiatives regarding agriculture and agricultural livestock. Agricultural groups such as the New Jersey Agricultural Society and New Jersey Farm Bureau, as well as individual agricultural commodity groups, participate in routine communications with NJDA on issues of response to manmade agricultural emergencies. NJDA coordinates with both governmental agencies and industry groups and maintains emergency response procedures for agricultural emergencies, including serving as a central communications points for those agencies and groups.
Rutgers	Flood, Severe Storm, Nor’easter, Hurricane / Tropical Storm, Coastal Erosion		√	√	√	√	√	√	The Coastal Training Program provides up-to-date scientific information, access to technologies and skill-building opportunities to professionals responsible for making decisions about coastal resources.
Rutgers	Natural hazards		√	√	√	√	√	√	The Office of the New Jersey State Climatologist (ONJSC) is situated within the New Jersey Agricultural Experiment Station at Rutgers, The State University of New Jersey. The ONJSC mission is three-fold: (1) gather and archive New Jersey weather and climate observations, (2) conduct and foster research associated with New Jersey’s weather and climate, and (3) provide critical climate services to all seeking assistance.
Rutgers	Flood/Severe Storm, Nor’easter, Hurricane /		√	√	√	√	√	√	The Bloustein School conducts mitigation planning, data gathering, and technical studies in support of Statewide hazard mitigation. The school develops

**APPENDIX 4.2 – STATE RESOURCES**

	Tropical Storm	Planning and Public Policy								
Stevens Institute of Technology	Flood, Severe Storm, Nor'easter, Hurricane / Tropical Storm	Coastal Engineering Research Laboratory	✓	✓	✓	✓	✓	✓	geospatial and analytical tools to support community engagement, policy reform, and State and regional planning efforts.	The university conducts fundamental and applied research on the design, implementation, and monitoring of shore protection structures, systems, and beach fill projects.
U.S. Geological Survey (USGS)	Flood, Severe Storm, Nor'easter, Hurricane/Tropical Storm		✓	✓	✓	✓	✓	✓	USGS maintains a network of gauges across New Jersey that continuously measure tidal levels. USGS provides data to the Department of Environmental Protection for drought determinations	
U.S. Army Corps of Engineers (USACE)	Coastal Erosion, Flood, Severe Storm, Nor'easter, Hurricane/Tropical Storm		✓	✓	✓	✓	✓	✓	Silver Jackets, developed by USACE is the State-level implementation program for the National Flood Risk Management Program. The program's goals are to leverage information and resources from federal, state, and local agencies; improve public risk communication through a united effort; and create a mechanism to collaboratively solve issues and implement initiatives beneficial to local communities.	
New Jersey County Offices of Emergency Management	All		✓	✓	✓	✓	✓	✓	County OEM assists the State with distributing dedicated local infrastructure funding for selected local infrastructure projects.	
Interagency: OAG, NJOEM; OHSP, NJDEP and BPU		Energy Resiliency Program	✓	✓	✓	✓	✓	✓	A portion of Superstorm Sandy HMGP funds will be used to support statewide energy resilience. The energy allocations result from an ongoing collaboration between New Jersey, the U.S. Department of Energy's National Renewable Energy Laboratory (NREL), and the Federal Emergency Management Agency (FEMA).	

**Notes:**  
 As defined in FEMA 386-3:  
 Support: Programs, plans, policies, regulations, funding, or practices that help the implementation of mitigation actions.  
 Facilitate: Programs, plans, policies, etc., that make implementing mitigation actions easier.

**Table 4.2-2  
Funding Sources Available for Mitigation Activities**

Funding Source	Description of the Funding Opportunity
<p>FEMA Federal Disaster Mitigation Funding that require an approved Hazard Mitigation Plan</p> <p>Flood Mitigation Assistance (FMA)</p>	<p>Availability: Pre-Disaster</p> <p>Description: To implement cost-effective measures that reduce or eliminate the long-term risk of flood damage to buildings, manufactured homes, and other structures insured under the National Flood Insurance Program (NFIP).</p> <p>Funding: In fiscal year (FY) 2013, there is \$120 million available in a nationwide competition.</p> <p>The FMA combines the previous Repetitive Flood Claims and Severe Repetitive Loss Grants into one grant program.</p> <p>Availability: Post-Disaster</p>
<p>Hazard Mitigation Grant Program (HMGP)</p>	<p>Description: To provide funds to states, territories, Indian tribal governments, and communities to significantly reduce or permanently eliminate future risk to lives and property from natural hazards. HMGP funds projects in accordance with priorities identified in state, tribal, or local hazard mitigation plans, and enables mitigation measures to be implemented during the recovery from a disaster.</p> <p>Funding: For states with a FEMA-approved Standard State Mitigation Plan, HMGP funds are available based on up to 15% for amounts not more than \$2 billion.</p> <p>An update to HMGP is that FEMA allows increasing the 5% Initiative amount up to 10% for a Presidential major disaster declaration for tornadoes and high winds at the discretion of the grantee. The increased initiative funding can be used for activities that address the unique hazards posed by tornadoes. To qualify for this funding, the grantee must, in its State or Indian Tribal (standard or enhanced) Mitigation Plan or other comprehensive plan, address warning of citizens (ensuring 90% coverage), further the safe room concept in construction or rehabilitation of residences or commercial structures, and address sheltering in mobile home parks. The plan, also, must explain how the grantee will implement an ongoing public education program so that citizens are aware of warning systems and their meaning and the availability of in-home shelter designs. Similar information should be included in the subgrantee's Local or Indian Tribal Mitigation Plan.</p> <p>Availability: Pre-Disaster</p>
<p>Pre-Disaster Mitigation (PDM)</p>	<p>Description: To provide funds to states, territories, tribal governments, and communities for hazard mitigation planning and the implementation of mitigation projects prior to a disaster event. Funding these plans and projects reduces overall risks to the population and structures, while also reducing reliance on funding from actual disaster declarations.</p> <p>Funding: Nationwide competition, total funding available – FY 2013 is \$23,700,000; FY 2012 was \$36 million, FY 2010 was \$24 million, FY 2007 was \$100 million.</p>

**APPENDIX 4.2 – STATE RESOURCES**

<p><i>Other Federal Grant Programs</i></p>	<p>Fire Management Assistance Grant Program</p>	<p>Availability: Post-Disaster</p>
<p>Reimbursement for Firefighting on Federal Property</p>	<p>Description: Assistance for the mitigation, management, and control of fires on publicly or privately owned forests or grasslands that threaten such destruction as would constitute a major disaster.</p> <p>Funding: Provides a 75% Federal cost share and the State pay the remaining 25% for actual cost.</p> <p>Availability: Post-Disaster</p>	<p>Description: Provides reimbursement only for direct costs and losses over and above normal operating costs.</p> <p>Availability: Pre-Disaster</p>
<p>National Dam Safety Program</p>	<p>Description: National Dam Safety Program (NDSP). The NDSP, which is led by FEMA, is a partnership of the states, federal agencies, and other stakeholders to encourage individual and community responsibility for dam safety. The NDSP, which was formally established by the Water Resources and Development Act of 1996, includes:</p> <p>Funding: Grant assistance to the States: Provides vital support for the improvement of the State dam safety programs that regulate most of the 79,500 dams in the United States. Funding available in FY 2011 was \$11 Million.</p> <p>Availability: To state, local, and conservation organizations</p>	<p>Description: Funding to states for outdoor recreational development, renovation, land acquisition, and planning.</p> <p>Funding: The fund is authorized at \$900 million annually, a level that has been met only twice during the program's 40-year history. The program is divided into two distinct funding pots: state grants and federal acquisition funds. In fiscal year 2005, the federal acquisition pot received \$166 million and the state grants program received \$92.5 million for a total of \$258.5 million. In fiscal year 2006, the federal pot received \$114.5 and the state grants received \$30 million. FY 2007 was similar to the year before receiving \$113 million for federal acquisition and \$30 million for state grants.</p> <p>Availability: Participation in Forest Legacy is limited to private forest landowners.</p>
<p>Land and Water Conservation Fund</p>	<p>Description: Federal program in partnership with states supports efforts to protect environmentally sensitive forest lands. Designed to encourage the protection of privately owned forest lands, Forest Legacy is an entirely voluntary program. To maximize the public benefits it achieves, the program focuses on the acquisition of partial interests in privately owned forest lands. Forest Legacy helps states develop and carry out their forest conservation plans. It encourages and supports acquisition of conservation easements, legally binding agreements transferring a negotiated set of property rights from one party to another, without removing the property from private ownership. Most Forest Legacy Program conservation easements restrict development, require sustainable forestry practices, and protect other values.</p>	<p>Description: Funding to states for outdoor recreational development, renovation, land acquisition, and planning.</p> <p>Funding: The fund is authorized at \$900 million annually, a level that has been met only twice during the program's 40-year history. FY 2007 was similar to the year before receiving \$113 million for federal acquisition and \$30 million for state grants.</p> <p>Availability: Participation in Forest Legacy is limited to private forest landowners.</p>

**APPENDIX 4.2 – STATE RESOURCES**

	<p>Funding: To qualify, landowners are required to prepare a multiple resource management plan as part of the conservation easement acquisition. The federal government may fund up to 75% of project costs, with at least 25% coming from private, state, or local sources. In addition to gains associated with the sale or donation of property rights, many landowners also benefit from reduced taxes associated with limits placed on land use.</p> <p>Availability: Pre and Post-Disaster</p>
<p>Transportation Trust Fund</p>	<p>Description: Transportation Trust Fund funds grants through a competitive application-based process administered by the Local Aid District Offices.</p> <p>Funding: \$78.75 million in funding was available in fiscal year 2008 by the Municipal Aid Program.</p> <p>Description: County Aid Program- Administer the County Aid Program for road and bridge infrastructure improvements under county jurisdiction. Each County receives an annual formula based allotment that takes into consideration county road lane mileage and population. The County Aid Program is funded through the Transportation Trust Fund and provides funding for eligible costs of projects included in the county's approved Annual Transportation Program.</p> <p>Funding: \$78.75 million in funding was available in the fiscal year 2008 through the County Aid Program.</p> <p>Availability: Pre and Post-Disaster</p>
<p>Hurricane Sandy Coastal Resiliency Competitive Grant Program</p>	<p>Description: The program will use competitive grants to award funding for science-based solutions by States, local communities, non-profit organizations and other partners to help restore key habitats and bolster natural systems, enabling these areas to withstand the impact and better protect local communities from future storms.</p> <p>Funding: \$100 million in competitive grants.</p> <p>Availability: Pre Disaster</p>
<p>Department of Homeland Security Grant Program (HSGP)</p>	<p>Description: The Homeland Security Grant Program (HSGP) plays an important role in the implementation of the National Preparedness System by supporting the building, sustainment, and delivery of core capabilities essential to achieving the National Preparedness Goal of a secure and resilient nation. The FY 2013 HSGP supports core capabilities across the five mission area of Prevention, Protection, Mitigation, Response, and Recovery based on allowable cost. HSGP is composed of three interconnected grant programs including the State Homeland Security Program (SHSP), Urban Areas Security Initiative (UASI), and the Operation Stonegarden (OPSG). Together, these grant programs fund a range of preparedness activities, including planning, organization, equipment purchase, training, exercises, and management and administration.</p> <p>Funding: SHSP – total funding available for FY 2013 - \$354,644,123; UASI – total funding available for FY 2013 - \$558,745,566; and OPSG – total funding available in FY 2013 - \$55,000,000.</p>

**APPENDIX 4.2 – STATE RESOURCES**

<p>Emergency Management Performance Grand Program (EMPG)</p>	<p>Availability: Pre Disaster</p> <p>Description: Grants are available to State, local, territorial, and tribal governments in preparing for all hazards. The Federal Government, through the EMPG Program, provides necessary direction, coordination and guidance, and provides necessary assistance, as authorized so that a comprehensive emergency preparedness system exists at all levels for all hazards.</p>
<p>U.S. Small Business Administration Loan Programs</p>	<p>Funding: Total funding available in FY 2013: \$332,456,012</p> <p>Availability: Post Disaster</p> <p>Description: Small Business Administration (SBA) provides low-interest disaster loans to homeowners, renters, business of all sizes, and most private nonprofit organizations. SBA disaster loans can be used to repair or replace the following items damaged or destroyed in a declared disaster: real estate, personal property, machinery and equipment, and inventory and business assets.</p> <p>Funding: Homeowners may apply for up to \$200,000 to replace or repair their primary residence. Renters and homeowners may borrow up to \$40,000 to replace or repair personal property—such as clothing, furniture, cars, and appliances – damaged or destroyed in a disaster. Physical disaster loans of up to \$2 million are available to qualified businesses or most private nonprofit organizations. As of October 7, 2013, SBA has approved \$828.5 million in loans to homes and businesses in New Jersey.</p>
<p>Community Development Block Grant – Disaster Recovery (CDBG-DR)</p>	<p>Availability: Post Disaster</p> <p>Description: Disaster Recovery funds are made available to States, units of general local governments, Indian tribes, and Insular areas designated by the President of the United States as a disaster area. These communities must have significant unmet recovery needs and the capacity to carry out a disaster recovery program. Grants are available to rebuild the affected areas and provide crucial seed money to start the recovery process.</p> <p>The State has developed various programs using CDBG-DR funds to help homeowners, renters, businesses, and communities impacted by Superstorm Sandy. For more information on these funding programs, refer to the following table or visit <a href="http://reNewJerseyStronger.org">reNewJerseyStronger.org</a></p> <ul style="list-style-type: none"> <li>• CDBG-DR Homeowner Assistance Programs</li> <li>• CDBG-DR Rental Housing and Renter Programs</li> <li>• CDBG-DR Economic Revitalization</li> <li>• CDBG-DR Support for Governmental Entities</li> <li>• CDBG-DR Supportive Services Programs</li> <li>• CDBG-DR Planning, Oversight, and Monitoring</li> </ul> <p>Funding: FY 2013 - \$16 billion to assist recovery from Superstorm Sandy.</p>

**APPENDIX 4.2 – STATE RESOURCES**

<p>U.S. Army Corp of Engineers Flood Plain Management Services Program</p>	<p>Availability: Pre or Post Disaster</p> <p>Description: The Flood Plain Management Services Program provides a full range of technical services and planning guidance that is needed to support effective flood plain management.</p>
<p>U.S. Environmental Protection Agency</p>	<p>Funding: None</p> <p>Availability: Post Disaster</p> <p>Description: The EPA has allocated funding to the State of New Jersey for improvements to wastewater and drinking water treatment facilities impacted by Superstorm Sandy. The State has created programs to maximize this investment by leveraging available funds to offer low interest loans with opportunities for principal forgiveness. These loans will help fund the repair of Sandy-damaged infrastructure and improve resiliency of the State’s environmental infrastructure. The State has also created the Short-term Statewide Assistance Infrastructure Loan Program (SAIL), which is designed to provide facilities with short-term cash flow assistance for Sandy recovery project expenses that will ultimately be financed through other federal grant programs, including FEMA’s Public Assistance reimbursement program.</p>
<p>U.S. Department of Health and Human Services – Social Services Block Grant</p>	<p>Funding: \$229 Million to the State of New Jersey for improvements to wastewater and drinking water treatment facilities impacted by Superstorm Sandy.</p> <p>Availability: Post Disaster</p> <p>Description: Post-Sandy funding will be applied to support services with a focus on physical and mental health, as well as the recovery needs of children and families.</p> <p>Funding: The U.S. Department of Health and Human Services (HHS) allocated \$226 million to New Jersey as part of the Sandy Supplemental Social Services Block Grant (SSBG).</p>
<p>Sources: FEMA 2013b, c, d, e</p> <p>Notes:</p> <p><i>CDBG-DR Community Development Block Grant – Disaster Recover</i></p> <p><i>EMPG Emergency Management Performance Grant Program</i></p> <p><i>FEMA Federal Emergency Management Agency</i></p> <p><i>FMA Flood Mitigation Assistance</i></p> <p><i>FY Fiscal Year</i></p> <p><i>HHS U.S. Department of Health and Human Services</i></p> <p><i>HMGP Hazard Mitigation Grant Program</i></p> <p><i>HSGP Homeland Security Grant Program</i></p> <p><i>NDSP National Dam Safety Program</i></p> <p><i>NFIP National Flood Insurance Program</i></p> <p><i>OPSG Operation Stonegarden</i></p> <p><i>PDM Pre-Disaster Mitigation</i></p> <p><i>SBA Small Business Administration</i></p> <p><i>SHSP State Homeland Security Program</i></p> <p><i>UASI Urban Area Security Initiative</i></p>	

**APPENDIX 4.3 – FEDERAL RESOURCES**

### ***Federal Resources***

FEMA has developed a large number of documents that address implementing hazard mitigation at the local level. Key resource documents are briefly described.

*Local Mitigation Planning Handbook.* This handbook is the official guide for local governments to develop, update and implement local mitigation plans. While federal requirements have not changed, the Handbook provides revised and expanded guidance, offering practical approaches, tools, worksheets and local mitigation planning examples for how communities can engage in effective planning to reduce long-term risk from natural hazards and disasters. The Handbook can be found on the FEMA web site at: <http://www.fema.gov/library/viewRecord.do?id=7209>

*Mitigation Ideas: A Resource for Reducing Risk to Natural Hazards, January 2013.* The purpose of this document is to provide a resource that communities can use to identify and evaluate a range of potential mitigation actions for reducing risk to natural hazards and disasters. The focus of this document is mitigation, which is action taken to reduce or eliminate long-term risk to hazards. Ideas for mitigation actions are presented for the following natural hazards: drought, earthquake, erosion, extreme temperatures, flood, hail, landslide, lightning, sea level rise, severe wind, severe winter weather, storm surge, subsidence, tornado, tsunami, and wildfire. This resource can be found on the FEMA web site at: [http://www.fema.gov/media-library-data/20130726-1904-25045-0186/fema\\_mitigation\\_ideas\\_final508.pdf](http://www.fema.gov/media-library-data/20130726-1904-25045-0186/fema_mitigation_ideas_final508.pdf)

*Integrating Hazard Mitigation into Local Planning: Case Studies and Tools for Community Officials.* The purpose of this document is to provide succinct and practical information to local government officials on how to best integrate hazard mitigation into the full range of community planning activities. It is intended for those who are engaged in any type of local planning, but primarily community planners and emergency managers that bear responsibility for hazard mitigation planning. This resource can be found on the FEMA web site at: [http://www.fema.gov/media-library-data/20130726-1908-25045-0016/integrating\\_hazmit.pdf](http://www.fema.gov/media-library-data/20130726-1908-25045-0016/integrating_hazmit.pdf)

*How-to Guides.* FEMA has developed a series of nine “how-to guides” to assist States, communities, and tribes in enhancing their hazard mitigation planning capabilities. The first four guides mirror the four major phases of hazard mitigation planning used in the development of the Monmouth County Multi-Jurisdictional Hazard Mitigation Plan. The last five how-to guides address special topics that arise in hazard mitigation planning such as using benefit-cost analysis and integrating man-made hazards. The use of worksheets, checklists, and tables make these guides a practical source of guidance to address all stages of the hazard mitigation planning process. They also include special tips on meeting DMA 2000 requirements.

*Post-Disaster Hazard Mitigation Planning Guidance for State and Local Governments.* FEMA, DAP-12, September 1990. This handbook explains the basic concepts of hazard mitigation, and shows State and local governments how they can develop and achieve mitigation goals within the context of FEMA’s post-disaster hazard mitigation planning requirements. The handbook focuses on approaches to mitigation, with an emphasis on multi-objective planning.

*Mitigation Resources for Success CD.* FEMA 372, September 2001. This CD contains a wealth of information about mitigation and is useful for State and local government planners and other stakeholders in the mitigation process. It provides mitigation case studies, success stories, information about Federal mitigation programs, suggestions for mitigation measures to homes and businesses, appropriate relevant mitigation publications, and contact information.

*A Guide to Federal Aid in Disasters.* FEMA 262, April 1995. When disasters exceed the capabilities of State and local governments, the President's disaster assistance program (administered by FEMA) is the primary source of Federal assistance. This handbook discusses the procedures and process for obtaining this assistance, and provides a brief overview of each program.

*The Emergency Management Guide for Business and Industry.* FEMA 141, October 1993. This guide provides a step-by-step approach to emergency management planning, response, and recovery. It also details a planning process that companies can follow to better prepare for a wide range of hazards and emergency events. This effort can enhance a company's ability to recover from financial losses, loss of market share, damages to equipment, and product or business interruptions. This guide could be of great assistance to Monmouth County industries and businesses located in hazard prone areas.

### ***Important Websites***

The following are important websites that provide focused access to valuable planning resources for communities interested in sustainable development initiatives.

- <http://www.fema.gov> - Web site of the Federal Emergency Management Agency includes links to information, resources, and grants that communities can use in planning and implementation of sustainable measures. Most notably:
  - <http://www.fema.gov/what-mitigation> - To learn more about mitigation and how to make it work for you.
  - <http://www.fema.gov/multi-hazard-mitigation-planning> - For information about multi-hazard mitigation planning.
  - <http://www.region2coastal.com/> - For the latest information about flood risk in coastal New York and New Jersey.
- <https://www.floodsmart.gov/floodsmart/> - The official site of FEMA's National Flood Insurance Program.
- <http://mitigationguide.org/> - "Beyond the Basics: Best Practices in Local Mitigation Planning", a website developed as part of a multi-year research study funded by the U.S. Department of Homeland Security, and led by the Center for Sustainable Community Design within the Institute for the Environment at the University of North Carolina at Chapel Hill.
- <http://www.planning.org> – Web site of the American Planning Association, a non-profit professional association that serves as a resource for planners, elected officials, and citizens concerned with planning and growth initiatives.
  - <https://www.planning.org/nationalcenters/hazards/mitigationplanning.htm> - Includes information about hazard mitigation planning prepared by the association's Hazards Planning Research Center.
- <http://www.ibhs.org> – Web site of the Institute for Business and Home Safety, an initiative of the insurance industry to reduce deaths, injuries, property damage, economic losses, and human suffering caused by natural disasters. Online resources provide information on natural hazards, community land use, and ways you can protect your property from damage.

**Federal Technical Assistance and Funding**

The Federal government offers a wide range of funding and technical assistance programs that communities can access to assist in their long-term recovery. Some of these programs are geared to disaster preparedness and mitigation planning, while the focus of others is the long-term vitality of the communities. **Table 4.3-1** presents a summary of Federal funding sources available for mitigation activities. Further information on these and other Federal programs can be found in the Catalog of Federal Domestic Assistance (CFDA) available online at [www.cfda.gov](http://www.cfda.gov).

<b>Table 4.3-1 Federal Funds Available for Mitigation Activities</b>	
Funding Source	Description
<i>Funding that Requires an Approved Hazard Mitigation Plan:</i>	
Flood Mitigation Assistance Program (FMA)	<i>Availability:</i> Pre-disaster <i>Description:</i> To implement cost-effective measures that reduce or eliminate the long-term risk of flood damage to building, manufactured homes, and other structures insured under the National Flood Insurance Program (NFIP)/ <i>Funding:</i> In FY 2007, there was \$31 million available in a nationwide competition.
Hazard Mitigation Grant Program (HMGP)	<i>Availability:</i> Post-disaster <i>Description:</i> To provide funds to States, territories, Indian Tribal governments, and communities to significantly reduce or permanently eliminate future risk to lives and property from natural hazards. HMGP funds projects in accordance with priorities identified in State, Tribal or local hazard mitigation plans, and enables mitigation measures to be implemented during the recovery from a disaster. <i>Funding:</i> A State has a FEMA-approved Standard State Mitigation Plan, HMGP funds are available based on up to 15 percent for amounts not more than \$2 billion.
Pre-Disaster Mitigation Program (PDM)	<i>Availability:</i> Pre-disaster <i>Description:</i> To provide funds to states, territories, Indian Tribal governments, and communities for hazard mitigation planning and the implementation of mitigation projects prior to a disaster event. Funding these plans and projects reduces overall risks to the population and structures, while also reducing reliance on funding from actual disaster declarations. <i>Funding:</i> Nationwide competition, total funding available - FY 2007 was \$100 million
<i>Other Available Federal Funds:</i>	
Fire Management Assistance Grant Program	<i>Availability:</i> Post-disaster <i>Description:</i> Assistance for the mitigation, management, and control of fires on publically or privately owned forests or grasslands, which threaten such destruction as would constitute a major disaster. <i>Funding:</i>
Community Development Block Grant	<i>Availability:</i> Pre-or post-disaster <i>Description:</i> Federal grant provided to CDBG “entitlement communities” (typically, municipalities with populations over 50,000 and urban counties with populations over 200,000) and to all states. <i>Funding:</i> Varies
Reimbursement for Firefighting on Federal Property	<i>Availability:</i> Post-disaster <i>Description:</i> Provides reimbursement only for direct costs and losses over and above normal operating costs
National Dam Safety Program	<i>Availability:</i> Pre-disaster <i>Description:</i> The NDSP was formally established by the Water Resources and Development Act of 1996. Led by FEMA, the NDSP is a partnership of the states, federal agencies, and other stakeholders to encourage individual and community responsibility for dam safety. <i>Funding:</i> Provides vital support for the improvement of the state dam safety programs that regulate most of the 79,500 dams in the United States.

**APPENDIX 4.3 – FEDERAL RESOURCES**

<p>Land and Water Conservation Fund (LWCF)</p>	<p><i>Availability:</i> To States, local and conservation organizations  <i>Description:</i> Funding for outdoor recreational development, renovation, land acquisition, and planning.  <i>Funding:</i> LWCF is authorized at \$900 million annually, a level that has been met only twice during the program’s 40 year history. The program is divided into two distinct funding pots: State grants, and Federal acquisition funds. In FY 2005, the federal acquisition pot received \$166 million and the state grants program received \$92.5 million for a total of \$258.5 million. In FY 2006 the federal pot received \$114.5 million and the state grants received \$30 million. FY 2007 was similar to the year before, receiving \$113 million for federal acquisition and \$30 million for state grants.</p>
<p>The Forest Legacy Program (FLP)</p>	<p><i>Availability:</i> Participation in Forest Legacy is limited to private forest landowners.  <i>Description:</i> Federal program in partnership with States, supports State efforts to protect environmentally sensitive forest lands. Designed to encourage the protection of privately owned forest lands, FLP is an entirely voluntary program. To maximize the public benefits it achieves, the program focuses on the acquisition of partial interests in privately owned forest lands. FLP helps the States develop and carry out their forest conservation plans. It encourages and supports acquisition of conservation easements, legally binding agreements transferring a negotiated set of property rights from one party to another, without removing the property from private ownership. Most FLP conservation easements restrict development, require sustainable forestry practices, and protect other values.  <i>Funding:</i> To qualify, landowners are required to prepare a multiple resource management plan as part of the conservation easement acquisition. The federal government may fund up to 75 percent of project costs, with at least 25 percent coming from private, State or local sources. In addition to gains associated with the sale or donation of property rights, many landowners also benefit from reduced taxes associated with limits placed on land use. In 2008, NJ has one project funded: Sparta Mountain South at \$2,474,000.</p>
<p>Transportation Trust Fund (TTF)</p>	<p><i>Availability:</i> Pre- and post-disaster  <i>Description:</i> Grants are funded by the TTF through a competitive application based process administered by the Local Aid District Offices.  <i>Funding:</i> \$78.75 million in TTF funding was available in the FY 2008 Municipal Aid Program.  <i>Description:</i> The County Aid Program is funded through the TTF and provides funding for eligible costs of projects included in the County’s approved Annual Transportation Program. The program is intended for road and bridge infrastructure improvements under county jurisdiction. Each County receives an annual formula based allotment that takes into consideration county road lane mileage and population.  <i>Funding:</i> \$78.75 million in TTF funding was available in the FY 2008 County Aid Program.</p>

**APPENDIX 6.1 – MONMOUTH COUNTY SANDY LETTERS OF INTENT**

Applicant Name	Program	Type	Title	Amount
Asbury Park	HMGP	E-Building	Elevation of 75 homes.	\$7,500,000.00
Asbury Park	HMGP	G	Generator for Wastewater Treatment Plant	\$330,000.00
Aberdeen Township	HMGP	E-Other	Road Elevation	\$525,000.00
Allentown	HMGP	D	Sewer Line Improvements	\$1,333,333.67
Allentown	HMGP	D	Retrofit of Wastewater Treatment Plant	\$446,810.00
Allentown	HMGP	G	Generator for Wastewater Treatment Plant	\$466,830.00
Allentown	HMGP	D	Retrofit of Water Treatment Plant	\$680,225.00
Asbury Park	HMGP	G	Generator for City Hall	\$395,000.00
Asbury Park	HMGP	G	Generator for Senior Center	\$290,000.00
Atlantic Highlands	HMGP	G	Generator for Observatory Place	\$46,500.00
Atlantic Highlands	HMGP	D	Residential Bluff Stabilization	\$340,523.00
Atlantic Highlands	HMGP	D	Roadway Bluff Stabilization	\$772,668.75
Atlantic Highlands	HMGP	E-Building	Elevations of 5 homes	\$407,750.00
Avon (Avon By The Sea)	HMGP	E-Building	Elevation of 113 homes.	\$28,700,000.00
Brielle	HMGP	E-Building	Elevation of 225 homes.	\$24,127,500.00
Bradley Beach	HMGP	E-Building	Elevation of 74 homes.	\$16,200,000.00
Deal	HMGP	D	Shoreline Protection	\$408,000.00
Atlantic Highlands- Regional Sewerage Authority	HMGP	E-Other	Retrofit and elevation of critical components	\$250,000.00
Atlantic Highlands- Regional Sewerage Authority	HMGP	E-Other	Elevation & retrofit of critical systems	\$100.00
Farmingdale	HMGP	G	Generator for Critical Facilities and Barriers	\$166,332.00
Fair Haven	HMGP	G	Generator for Borough Hall	\$30,800.00
Fair Haven	HMGP	G	Generator for Public Works	\$20,200.00
Highlands Borough Housing Authority	HMGP	G	Generator for Jennie Parker Manor	\$63,000.00
Highlands Borough Housing Authority	HMGP	G	Generator for Ptak Towers	\$98,000.00
Highlands	HMGP	E-Building	Elevations of 918 homes and 152 commercial buildings.	\$145,400,000.00
Belmar	HMGP	D	Seawall and Dunes	\$8,395,000.00
Belmar	HMGP	F-Building	Elevation of 114 homes.	\$11,001,900.00
Belmar	HMGP	D	Silver Lake Flood Mitigation	\$1,548,173.00
Belmar	HMGP	D	Lake Como Flood Mitigation	\$1,458,200.00
Belmar	HMGP	G	Generator for Emergency Evacuation Center	\$170,200.00
Belmar	HMGP	D	L Street Bulkhead	\$2,726,000.00
Manalapan (Township Of)	HMGP	A/D-Building	Acquisitions	\$3,585,750.00
Spring Lake Heights	HMGP	A/D-Building	Acquisitions	\$3,933,200.00
Spring Lake Heights	HMGP	E-Building	Elevation of 12 homes.	\$600,000.00
Spring Lake Heights	HMGP	E-Other	Pump Stations Elevations	\$450,000.00
Spring Lake Heights	HMGP	D	Utility Elevations	\$20,000.00
Freehold Boro	HMGP	G	Generator for Fire Station	\$100,000.00
Englishtown	HMGP	G	Generator for Water Treatment Plant	\$100,000.00
Neptune City	HMGP	G	Generators for Critical Facilities	\$300,000.00
Neptune (Township Of)	HMGP	A/D-Building	Acquisitions	\$4,000,000.00
Neptune City	HMGP	CS	Saferoom	\$75,000.00
Neptune (Township Of)	HMGP	E-Building	Elevation of 23 homes.	\$5,750,000.00
Neptune (Township Of)	HMGP	A/D-Building	Acquisitions	\$92,500.00
Neptune (Township Of)	HMGP	G	Generator for Critical Facilities	\$85,000.00
Keansburg Borough	HMGP	A/R	Relocation of Police Headquarters	\$2,812,500.00

Keansburg Borough	HMGP	G	Generator Installation and Pump Station Improvements	\$2,062,500.00
Keansburg Borough	HMGP	E-Building	Elevation of 130 homes.	\$11,700,000.00
Keansburg Borough Housing Authority	HMGP	G	Generator for Senior Facility	\$750,000.00
Little Silver	HMGP	E-Building	Elevation of 114 homes.	\$1,800,000.00
Lake Como (Como)	HMGP	D	Water Distribution Center Upgrade	\$2,700,000.00
Lake Como (Como)	HMGP	WR	Wind Retrofit of Municipal Complex	\$75,000.00
Lake Como (Como)	HMGP	G	Generator for Municipal Building	\$80,000.00
Lake Como (Como)	HMGP	G	Generator for First Aid Emergency Shelter	\$40,000.00
Lake Como (Como)	HMGP	G	Generator for School Emergency Evacuation Shelter	\$70,000.00
Lake Como (Como)	HMGP	G	Generator for Public Works Building	\$40,000.00
Lake Como (Como)	HMGP	E-Building	Elevation of 100 homes.	\$10,000,000.00
Loch Arbour Village	HMGP	D	Dune System and Upgrade to Public Shoreline	\$3,000,000.00
Keyport	HMGP	E-Building	Elevation of 95 homes.	\$2,850,000.00
